

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

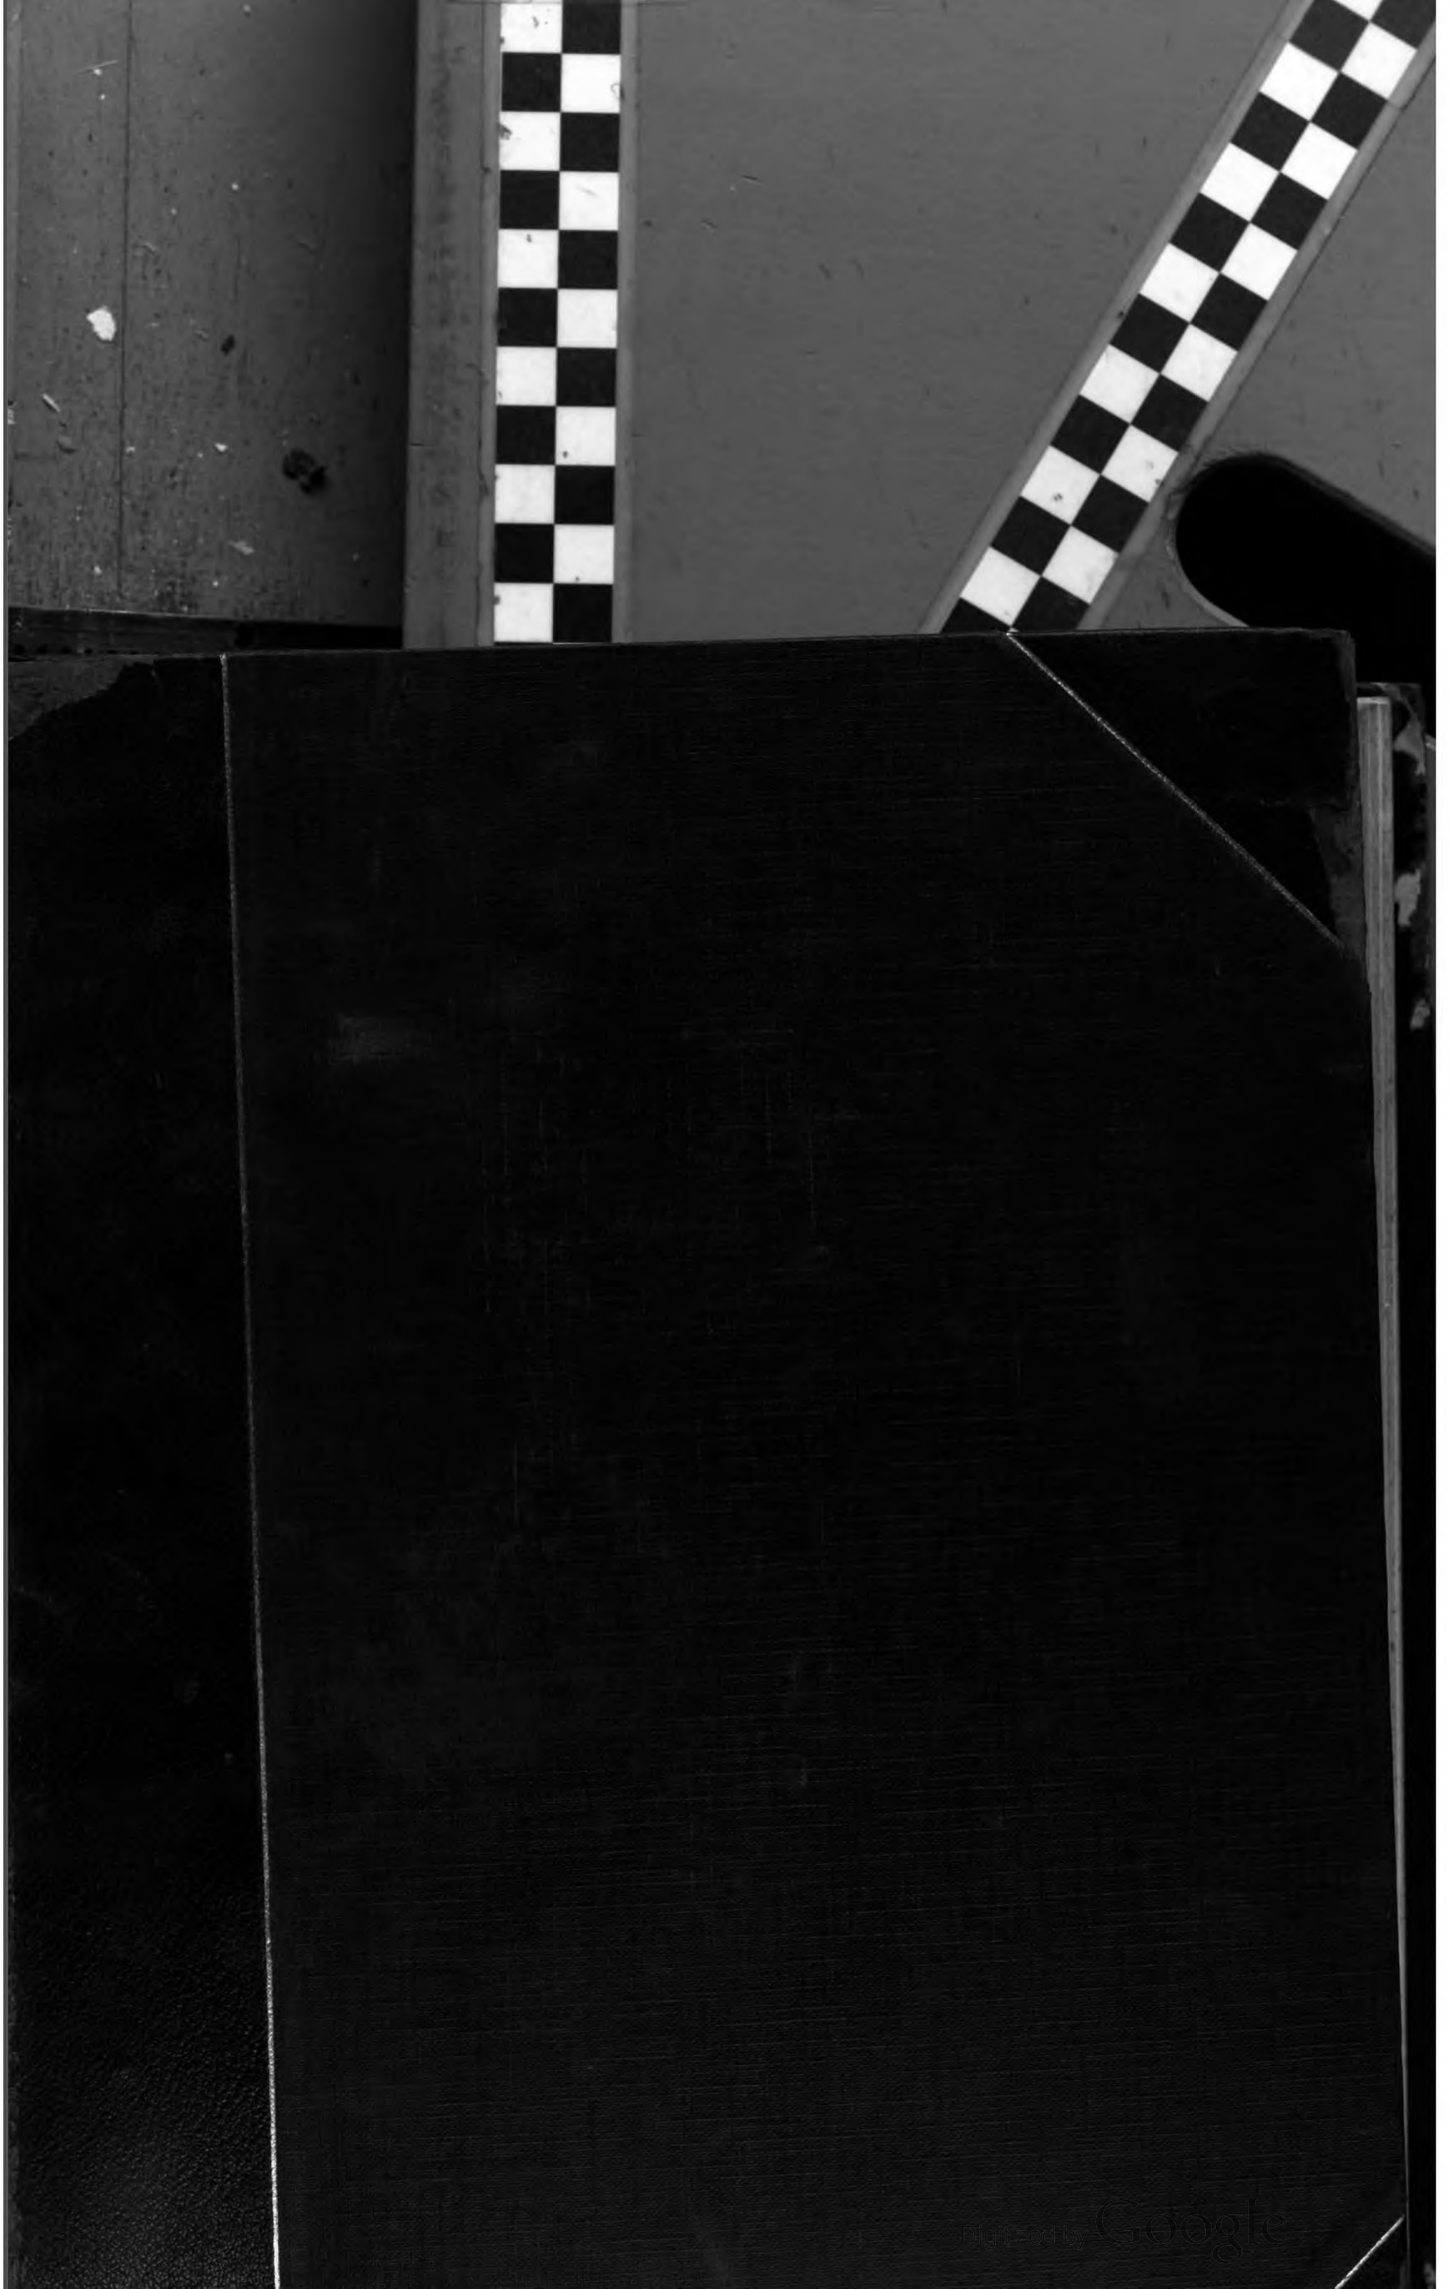
Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

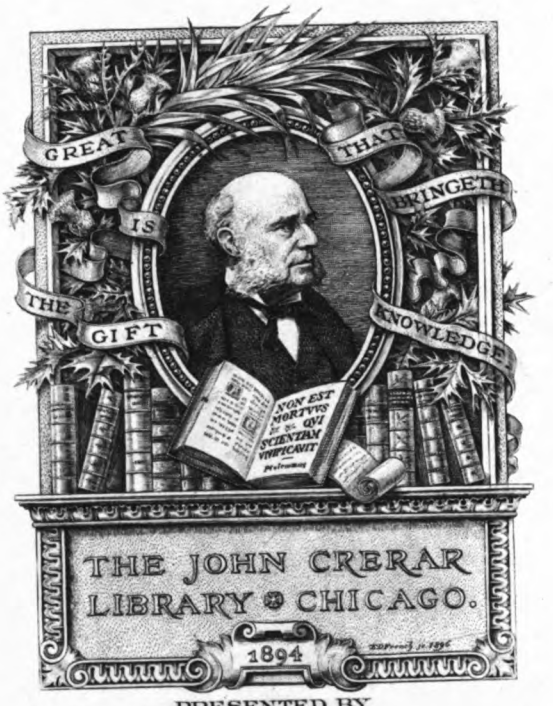
We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.



+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.



+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

DEALERS, JOBBERS AND GARAGEMEN

Dan Morgan's Customers Buy Full Sets

Mr. Car Owner:

If you need a new spark plug, let me suggest a full set of CHAMPIONS, and keep the rest of your old ones that are still working for your spares. **There goes a satisfied customer.** I just fitted his car with a full set of CHAMPIONS when he thought he needed only one, but he knows now that a single plug could not give "Full Service to his Engine," and that it is real economy to buy a full set, for your engine can only give full service when each cylinder is doing its share. If you are to get the best firing conditions, you must have a full set of plugs of exactly the right design for your engine. Your cost is nothing compared to your saving in gas and oil, as the increased mileage per gallon with a new set will show this saving for you within a few hundred miles driving. After this, you will be making money on your investment.

Mr. Dealer, Dan Morgan's customers appreciate this suggestion. Why not continue the good work to *your* trade?

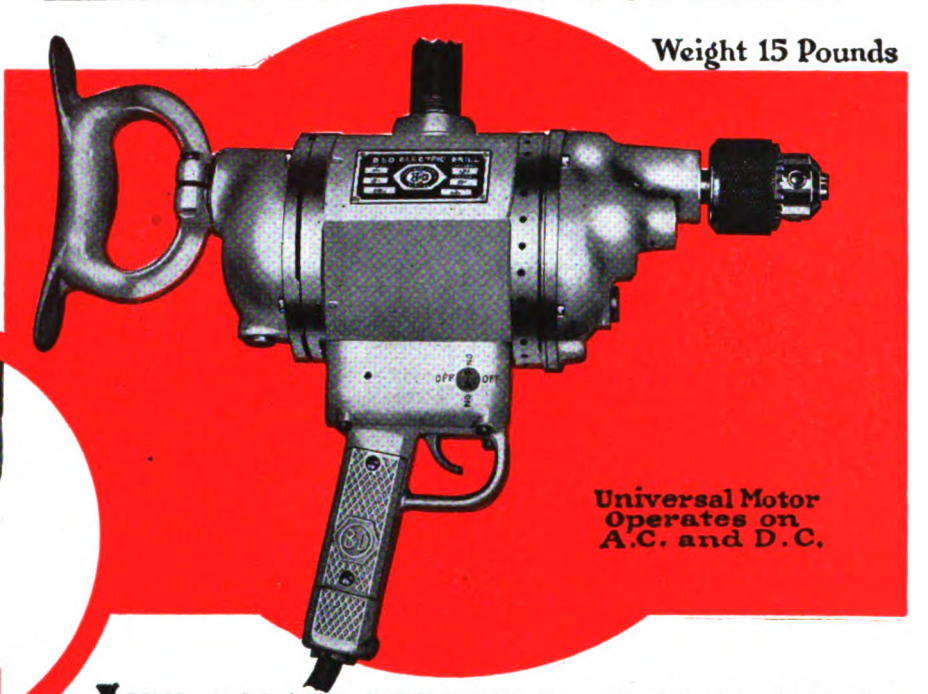
BLACK & DECKER



SPECIAL HALF-INCH DRILL

"With the Pistol Grip and Trigger Switch"

$85.00

Weight 15 Pounds

"THE WELL EQUIPPED SHOP GETS THE BUSINESS"

Universal Motor Operates on A.C. and D.C.

By removing two screws cover plate of switch handle may be lifted off, exposing terminal block to which electric cable and motor leads are attached by means of SCREW TERMINALS. Cable may be renewed quickly and easily without soldering.

A little thing which means a lot to the busy mechanic.

LIKE all BLACK & DECKER Portable Electric Drills this SPECIAL HALF-INCH DRILL is powerful, durable, comfortable to handle and perfectly controlled.

"The Pistol Grip and Trigger Switch" not only provides a large comfortable grip and instant control of the switch, but reduces the breakage of expensive drill bits, because the switch may be operated at critical times, such as when bit is breaking through the work, without disturbing the position of your hands. *"The Pistol Grip and Trigger Switch"* control is instinctive—practically automatic.

THE BLACK & DECKER SPECIAL HALF-INCH DRILL fits the BLACK & DECKER BENCH DRILL STAND, or POST DRILL STAND, and can be secured from your regular jobber.

SPECIFICATIONS

HOUSING—Aluminum Alloy.
MOTOR—Universal. Operates on Direct or Alternating Current.
AIR COOLED—Die Cast Aluminum Alloy fan keyed to armature shaft.
GEARS—Double Reduction, stub tooth, chrome nickel steel heat treated. Run in grease like an automobile transmission. (No brass gears are used on any Black & Decker tools).
CONTROL—*"With the Pistol Grip and Trigger Switch."* Improved switch handle with removable plate and screw terminals.
CHUCK—Three-jaw geared nut chuck for straight shank drills up to ½ inch.
NO LOAD SPEED—475 R. P. M.
NET WEIGHT—15 pounds.
EQUIPMENT—Drill is complete with 15 feet duplex electric cable, attachment plug, combination spade handle and breast plate, detachable side handle.
PRICE 110 VOLTS - - $85.00
(For Denver and West add $2.00 transportation charges.)
Can be supplied for 220 or 32 volts at small additional cost.

LEE Tire Dealers have many reasons for congratulation.

First: they have the only *Puncture-proof* pneumatic on the market. In addition, they have a complete line of consistently high-grade regular pneumatics. They are backed by a liberal manufacturing and sales policy that is uniformly generous to the consumer and fair to the dealer. These features are not combined in any other line of tires, yet all are covered by the **LEE Exclusive Dealer Sales Franchise.**

Fabric, Cord, Puncture-proof—a different type of tire for each kind of use. None but Lee Dealers can render anything like this selective service.

Right Traffic Control Will Help Sell Cars and Trucks

Dealers Will Find It Worth While to Be Active in Their Communities to Prevent Danger and Congestion, Also Too Much Regulation, Leading to Hysteria

DOWN the boulevard bowls a motor car. Father is at the wheel and the whole family is with him. Wonderful driving along the boulevard, father says. But the boulevard eventually runs into a business street that hooks up on the farther side of the downtown section with another boulevard extending out to the district where Uncle John lives. Father finds it tough going through the business section. Traffic is heavy and not regulated any too well. Father's trip to Uncle John's is spoiled. He storms about the delays and difficulty of driving. When he finally gets back home in the evening he tells all his neighbors about his experience and says he has a good mind to give up the car. He does what everyone does—makes a lot of fuss about something that has annoyed him.

Sales resistance created! Father won't give up the car, but he won't drive as much as he would if it was easier to get to the far side of town, where Uncle John and other relatives and friends live. Father's story of his driving troubles impresses some neighbors and friends who had been thinking of buying cars. They decide to use taxicabs for a while longer and let somebody else worry about driving.

SO much for Incident No. 1. Now for No. 2.

In a residential district a swiftly moving light truck approaches a street intersection. There is no dummy cop, no guiding line on the pavement and no "Slow" sign, but there are trees and shrubbery that obstruct the view. The truck driver, taking a chance, clips the corner at the left and smashes into a full-loaded passenger car coming his way. Everybody gets a shaking up, the car and truck are damaged and the newspapers remark that the people in the car "miraculously escaped death."

More sales resistance! Something else for people to talk about who say motoring is dangerous. Another reason why a person or two and maybe more, who saw the accident or read about it, decides to get along without a car.

There is Incident No. 2. Now let's look at No. 3.

There have been two or three serious motor car accidents in Yourtown, we'll say. The newspapers have given them a good deal of publicity and editorially are demanding punishment of speeders. The judges tighten up on traffic violation cases and begin to hand down stiff sentences, which the newspapers and popular clamor approve. The town gets excited about "automobile criminals."

Still more sales resistance! Fair-minded citizens of Yourtown want life and property protected on the streets and they want reckless driving repressed, but hysteria puts penalties on drivers who are far from reckless in the handling of their cars. There is a wave of popular sentiment against the motor car in the city streets. More prospective sales and possible sales go a-glimmering.

These three incidents picture three of many things that may occur to build up unnecessary sales resistance for the automotive trade. They suggest that safe but sane regulation of traffic on city streets and country highways, regulation that concedes the purpose of the motor vehicle to take persons and commodities to their destinations conveniently and speedily, is the concern not merely of public officials but of the automotive trade. They suggest that *in any city or town, any county or State where traffic control is not what it should be, either failing to assure safe yet prompt movement of vehicles or hedging them about with burdensome regulations, the automotive trade should be active to demand reform and to help bring it about.*

Some cities of the country have highly effective systems of traffic control, protecting both motorists and pedestrians but at the same time giving cars and trucks the right to travel at reasonably rapid rates. Some States have practical regulations for rural highways, setting up the necessary safety standards without making a mockery of the speed capabilities of the automotive vehicle.

During the next few months Motor World will print occasional articles on the traffic problem, describing the systems prevailing in some of the more progressive cities and States for the benefit of automotive tradesmen desiring to take a hand in their local traffic problems and otherwise suggesting public spirited and also profit encouraging activities for dealers along

Digitized by Google

traffic lines. This article introduces the series and presents the suggestions of Fred M. Rosseland, chief of the Public Safety Division of the National Safety Council, regarding Fundamentals of Traffic Control from a Safety Standpoint. Mr. Rosseland says:

No edition of a newspaper seems complete nowadays without one or more accounts of automobile casualties. Every city has a traffic problem —the larger the city the greater the problem—which must be adequately met, first to save lives and limbs, next, to prevent costly congestion and delay, and finally, to avoid daily accounts of fatal and near-fatal automobile accidents exerting a negative influence on the wider use of automotive vehicles.

In a comparatively stagnant market an automobile sales manager may have a number of good reasons for "slow" sales; and from an economic standpoint he is probably right. But how many sales managers consider the important psychological bearing of automotive accidents on their business?

Two Angles of Problem

There are two angles to the problem of traffic control from the accident prevention viewpoint that are important in any consideration of the subject.

First, we have the indisputable fact that congestion of automobile traffic—usually because of lack of adequate system—is not only the cause of accidents imperiling lives and limbs, but is also taking the joy out of motoring. A driver, whether of five months' or five years' experience, finds little pleasure in driving in congested streets and highways at a speed varying between 6 and 10 miles, and with frequent stops. To drive a car that can do 25 miles an hour comfortably and safely under such conditions means a continual strain on brain, body and nerves.

The Danger Element

Secondly, we have the proposition that a husband and father, whether or not an experienced driver, feels that he is placing the lives of his loved ones in jeopardy when he ventures forth into crowded street traffic. Many a family foregoes the pleasure of an automobile because of the feeling that the streets are too congested for safe driving. The owner of the car may be otherwise courageous but no one would accuse him of cowardice for feeling as he does. The number of people killed each year in automobile accidents, the greater number injured through the same cause annually, and the still larger number less seriously injured in accidents not recorded, are often alone sufficient to make a thinking man hesitate before he invests in an automobile.

The physical and mental discomfort of "piddling" along at a slow rate, with much use of the brakes and the psychological effect of newspaper reports and eye-witness contacts with accidents represents a serious handicap to the automobile salesman which will help to increase sales resistance until a determined concerted effort is made to control traffic.

The business people as well as the public at large benefit from public safety work directed at traffic conditions. Entirely aside from humanitarian motives, or what not, automobile dealers, from a business standpoint if no other, will interest themselves in the work to make the public thoroughfares safer now being carried on by the National Safety Council, local safety councils and public officials. Every community should be organized for public safety, as it is only through energetic work properly directed that traffic can be properly controlled.

Adequate traffic regulations should be made and enforced. To enforce legal restrictions adequately it is necessary to have mass opinion behind them. It is in the power of automobile and truck dealers to help create this atmosphere by instigating and actively participating in public safety activities. Good and just laws must be made for those who own and operate cars. Good and just laws must be made for pedestrians and other users of the streets. And harmony must be uppermost in bringing to the attention of the automobile buying and operating public the importance of public safety.

And the lesson of this is that every safe drivers' club, every public safety movement for fewer accidents in the home, at the bathing beach, on the street and elsewhere should have the stanch support of all business men. A prospective customer may hold the accident hazard of crowded, uncontrolled traffic as a prohibitive argument against his owning an automobile. If the dealer can show the progress being made to safeguard this selfsame individual this objection is readily met. Safety activities, whether industrial or public, require co-operative action and bring benefits to all. Why not try it?

The job is not difficult. City governing authorities usually welcome suggestions from citizens. Particularly are they likely to welcome assistance and advice from an aggressive, well organized association of automotive tradesmen, who are likely to have some first-hand knowledge of the things that should be done to improve traffic conditions.

MOTOR WORLD'S next traffic article, to appear shortly, will tell about the traffic control system and street safety campaign in Detroit, whose activities and ideas have been the model for several other cities. The article will be attractively illustrated.

Big City Traffic Control at Work

This is one of the towers that control the uptown-downtown-crosstown flow of traffic on Fifth Avenue, New York. Colored signal lights on the towers, which are manned by traffic policemen, flash the "Go" and "Stop" signals to vehicles and other officers on the ground control the pedestrian crowds

You Can Be One of the Better Sort of Tire Dealers—It Pays

A Remarkably Good Story of a Fort Wayne Dealer Who Puts Sound Merchandising Effort Into His Business and Reaps Real Profits

H. H. PIERCE, owner of the Pierce Tire Co., Fort Wayne, Ind., is a firm believer in telling folks about your business if you want to sell goods.

As the result of this belief Pierce features these forms of promotion work:

Newspaper advertising.
Direct mail advertising.
Window displays.
Telephone solicitation.
Personal canvassing.

And as the result of this continued telling of folks about his business his trade has doubled within the past year or so.

Let us examine the various forms of promotion work engaged in by Pierce to see what he does in order that other tire dealers may gain pointers from his experience.

NEWSPAPER ADVERTISING. Pierce uses one insertion a week in the local newspapers, using good size space for each insertion. Contrary to the usual custom of tire dealers, Pierce uses the Thursday issues of the local newspapers instead of the Sunday issues.

"The reason I use the Thursday issue," says Pierce, "is because on Sunday the papers are so jammed with all sorts of advertising that my ads have to compete with a whole lot of other advertisers. On Thursdays this isn't the case. On Thursdays the papers run merely their regular normal amount of advertising, and so the competition isn't so strong. Also, I've found by inspection of the papers that comparatively few other automotive concerns use the papers on Thursdays. So my tire ads stand practically without competition. Of course, I might use the Monday papers, when the advertising is very limited. If I did so the ads would stand out just that much stronger, of course. But I figure that Monday is a mighty busy day for most people. Some of them don't get back from week-end trips until about noon Monday and, consequently, have no time to read the papers. And others have a busy day of it answering the big Monday mails and so on. Consequently I figured that though competition for my ads would be smaller on Mondays, there would be fewer people to read them, and there you are. Now Thursday comes at the psychological time of the week for a tire ad. It is just when people are figuring on week-end trips and are in the mood for buying new tires for the trip, and it is the time of the week when there is no particular rush. So I run my ads on Thursday, and the results are very satisfactory, indeed."

Pierce, it might be noted here, uses the regular ready-made ads furnished by the tire manufacturer, and these are inserted in the newspapers on a fifty-fifty basis, the tire manufacturer paying half the cost of the insertion. Pierce figured that the tire companies employ expert copy writers who are skilled in turning out copy that will sell the tires, so it is much the best plan to use the ready-made ads than to try to frame up ads of his own.

DIRECT MAIL ADVERTISING. "I am a firm believer in the efficacy of direct mail advertising," says Pierce. "The company manufacturing the tires I sell sends me all the letters, bearing the name of my firm and address at the top, that I want. These letters are carefully prepared and when properly filled in look like personally typed messages.

Prepares Own Lists

"I send out several hundred of these letters each week to lists which I get up myself out of my knowledge of the town by reference to the telephone book. I check up carefully on these letters and find that the results they achieve are quite satisfactory. I do not buy the lists of local and county license holders from the list companies which make a specialty of furnishing these names, as I've found by experience that circularization to these lists is not always as result-getting as where I send letters to the lists that I prepare myself.

"It is very seldom that we send any direct mail advertising to present patrons. Practically all of our direct mail advertising goes to people who should patronize us but who don't. We find that where regular patrons, or people who have previously patronized us, do not come in for a long time we can do better in getting their patronage back by calling them up on the phone or by going around to see them personally.

"We rely very heavily on direct mail advertising in getting business and would feel that we were passing up a mighty good bet if we failed to send out a considerable quantity of letters to live prospects from month to month."

WINDOW DISPLAYS. The window displays at the Pierce Tire Co. are always interesting and are always fresh and clean.

As a general thing the displays are made up from the regular equipment sent out by the manufacturers of the tires handled by the firm. Once in a while some local touch is given to the windows by the use of an appropriate local photograph, or a window card calling attention to some local event which is hooked up with the store, but as a general thing the displays are the standard ones suggested by the promotion departments of the tire manufacturers.

Pierce believes that effective window displays are very important in the merchandising of tires.

"We are on an important corner," says Pierce, "with local and tourist automobiles passing the store on both streets. Consequently it is certain that a big

Digitized by Google

percentage of all these passing motorists will see our show windows. Now if our windows are attractive, clean and fresh in appearance, it is a certainty that these passing motorists will be very favorably impressed by our store and will feel like stopping and patronizing us if they are in the market for tires or for any of the accessories we handle.

"But, on the other hand, if our show windows were dingy, unattractive and not properly dressed, these motorists would pass on without even giving a thought of stopping and patronizing us.

"I may be wrong in the matter," continued Pierce, "but it is my opinion that an attractive window display is of more importance in the selling of tires than an attractive store. It is the window display which, quite frequently, gets the people into the store. And it is quality, price and salesmanship which sells the people after they are in the store, and not the store's appearance. Of course, an attractive store is of great importance and is a big help in selling tires, but I consider attractive window displays of more importance."

Weekly Window Displays

It is interesting to note that part of the routine in the conduct of the Pierce Tire Co. is *a weekly change of the window displays, a weekly washing of the window glass, a daily dusting of the articles shown in the windows and a nightly lighting of the displays.*

TELEPHONE SOLICITATION. The telephone is used extensively by the Pierce Tire Co. in securing business. Every week Pierce prepares a list of prospects who can best be reached by the telephone, and either Pierce or his secretary calls up every person on this list during the week and solicits their business.

It is mainly solid truck tire business which is solicited over the phone, as it has been found by experience that personal solicitation is more effective in selling pneumatics.

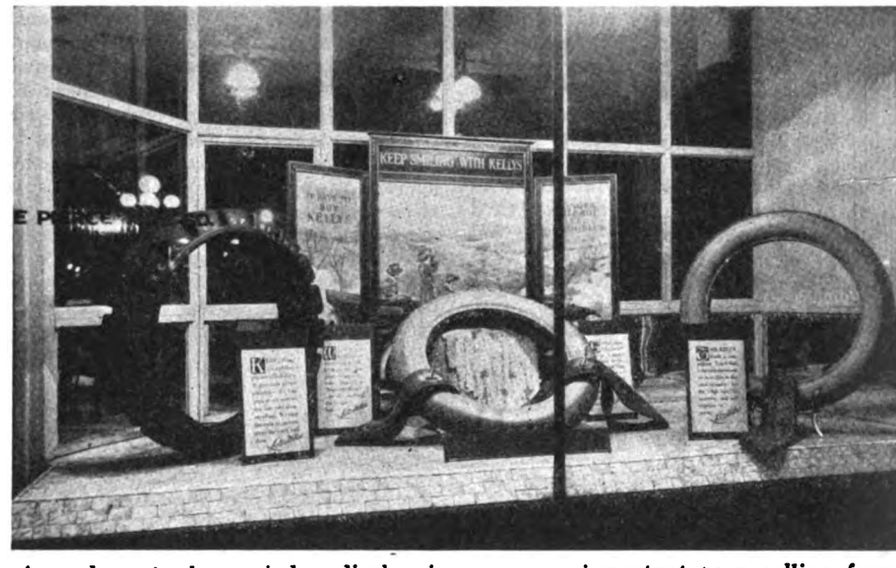
Two classes of prospects are called on the phone. The first of these are former customers who haven't purchased anything at the store for some time and who should be in the market. The second class consists of prospects who have never purchased anything at the store.

Selling by Phone

In soliciting the first class over the phone, this is the line of conversation generally used:

"This is the Pierce Tire Co. Of course, you would get extra long mileage out of the tires you've bought from us, but we're wondering if you aren't just about ready to buy some new tires."

The result of this sort of an opening is that the prospects thus called nearly always give a definite time when they will be in the market for tires. A note is then made of this date—if no immediate sale is made—and these prospects are solicited again at the proper time either by the phone or by a personal call.



Then the second class of prospects are called. This is the sort of an opening that is used with these prospects: *"This is the Pierce Tire Co. We'd like to have you try out some of the long mileage truck tires we're selling."*

This opening nearly always leads to a further conversation which generally ends in an appointment for Pierce or one of his salesmen to go around and see the prospect. And, of course, numerous sales are made as the result of these calls.

Spare moments when there are no store customers to wait on or office work to be done are utilized by Pierce and his assistants in phoning prospects.

The telephone is a very important and very successful phase of the promotion work conducted by this tire company.

Good Window Displays Sell More Tires

A good, neat, clean window display is even more important as a selling force than a big store, says H. H. Pierce, owner of the Pierce Tire Co. in Fort Wayne. This is one of Pierce's windows, using only the tires and merchandising material furnished by the factory

PERSONAL CANVASSING. Although the Pierce Tire Co. does a large amount of personal canvassing, this is never done on an indiscriminate basis. It is either done in a certain section, such as an office building, where the tenants are all particularly prosperous, or is done on the basis of a definite list prepared by Pierce from the telephone book.

Also all prospects who have sent dates when they may be in the market for tires are solicited at the proper time, their names being kept in the proper order by the use of a simple card index file.

When personally canvassing for business Pierce uses a regular buiness card and generally opens his sales talk in about this fashion:

"Good morning, Mr. So-and-So, I've come to save you money on your tires."

This introduction generally brings forth some such answer as this from the prospect:

"How?"

"By selling you more mileage for the money," Pierce then replies.

And with this start Pierce goes into an exposition of the superior qualities of the tires he handles.

"I've found," says Pierce, "that in personal solicitation of this character, the most effective argument in selling tires is that of superior quality which, of course, means more mileage.

"In selling quality to prospects I bear heavily on two points—first, the method of manufacture and the goods going into the tires; and, second, the mileage which users of the tires we sell are constantly rolling up.

"In putting over the first point with sufficient emphasis, the books and advertising literature sent out by the tire manufacturers are of very great help, while in putting over the second point in a telling manner, the typed records of some of the mileages attained by local users of the tires I sell is also extremely effective.

"It is my experience in selling tires that nowadays tires are bought on a quality basis and not a price basis. A man, for instance, is willing to pay the top price for a tire when he knows that in putting it on his car he is ridding himself of tire troubles for many thousands of miles. So many men have had trouble with tires which they purchased on a strictly price basis that the higher class trade, at least, wants to steer away from tires which are offered on a price basis alone."

Direct Selling

Pierce and his salesmen are constantly engaging in personal solicitation work of this sort, and this personal canvassing is held responsible by Pierce for a big share in building up the business of the company to its present point.

So much for the main promotion methods used by the Pierce Tire Co. and now for the consideration of some other phases of the business.

Pierce keeps two sets of prospect cards, the first set indexed alphabetically and the second set indexed according to the

Digitized by Google

date on which the prospect is to be again solicited for business.

By keeping these two sets it is possible to find a prospect's card whenever it is needed, as, for instance, when a prospect calls up on the phone and tells the store to send out a tire and then rings off without giving sizes or other information. Also by having the cards indexed according to the times when the prospects are to be again called on, the store has a constant incentive to get out and hustle, as each day there is a live list of prospects thus revealed who ought to be solicited.

On these prospect cards there are the name and address of each prospect, kind of car and size of tires used and make of tires now on the car, condition of the tires and any remarks which will help in selling the prospect, such as time when prospect is to be called on and so on.

As soon as these cards are made out, they are placed in their proper position in the files at once. In this way there is no accumulation of cards on desks or around the store awaiting proper attention.

Pierce keeps a perpetual inventory in his store, using for this purpose a card for each size and grade of tire carried in stock—about 120 in all.

On this card—which has been adapted by Pierce from the forms used by factory tire branches—there is space for receipts and dates when tires are received and space for daily sales with dates and order numbers on which all data about sales appear.

These cards are checked up with the stock on hand every two weeks—this work taking from a half hour to an hour. And in this way Pierce at all times can tell the exact condition of his stock. Discrepancies between goods actually on hand and which the inventory shows should be on hand appear at once, and records are then gone over to see where the trouble is. Through the working of this system Pierce has kept an absolutely correct check on his stock for years without any lost tires at all.

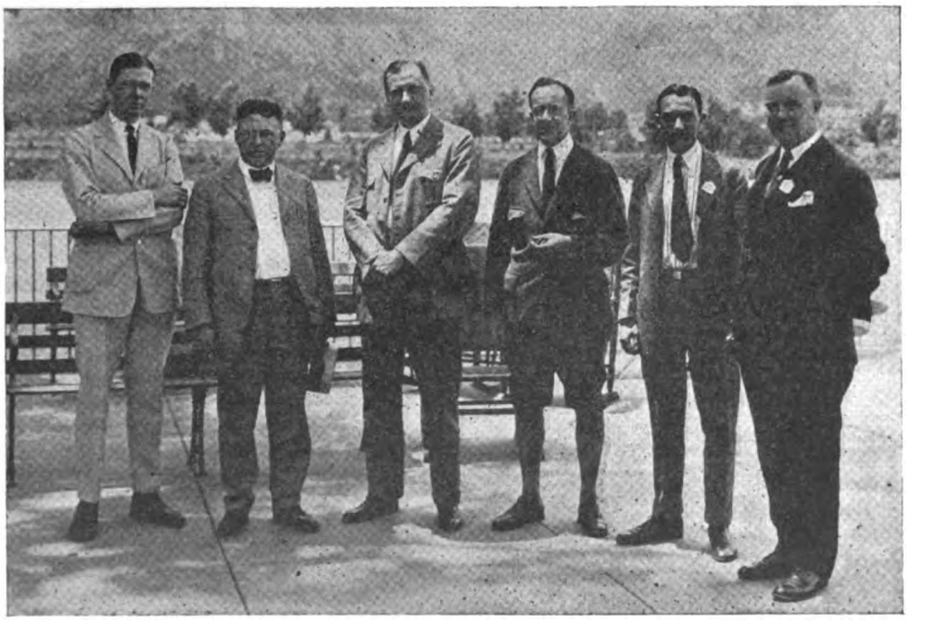
When a sale is made, an order or sales record is made out in duplicate. If the sale is for cash, the original of this order is stamped paid and handed to the customer. If the sale is not for cash, the original is still given to the customer with a notation about terms of payment. The duplicate goes to Pierce's desk for entry on his perpetual inventory records.

Pierce makes the needed entries on his perpetual stock record each day, thus keeping it up to date. The duplicate sales slips from which the stock records are made are then filed in numerical order. Then when any discrepancy on the stock record does occur, it is a simple matter to refer at once to the right sales record in order to get first hand information which will lead to the correction of the inventory.

Accounts receivable are also made up by Pierce from his duplicate sales records. Where these duplicates show that the sale was on credit, a bill is immediately made out by Pierce in duplicate, the original being mailed to the purchaser at once and the duplicate going into Pierce's accounts receivable file. These bills are all numbered in duplicate and are filed numerically so that it is impossible for any accounts receivable to get lost. Also when customers send in their checks with the bills in payment, the account can be at once located by number and the duplicate bill marked paid.

In this way when statements of account are rendered each month, Pierce goes through the duplicate bills for the month and sends out statements to those people who haven't paid. Long past due accounts are transferred to a separate sheet so it isn't necessary to go over more than a couple of months' bills in order to render the statements.

This bookkeeping and prospect-following is all handled by Pierce in an hour or so of work each day. He has found the system successful in cutting down office work to a minimum and in keeping an accurate check on stock and in getting results. Perhaps it would be found equally successful by other tire dealers.



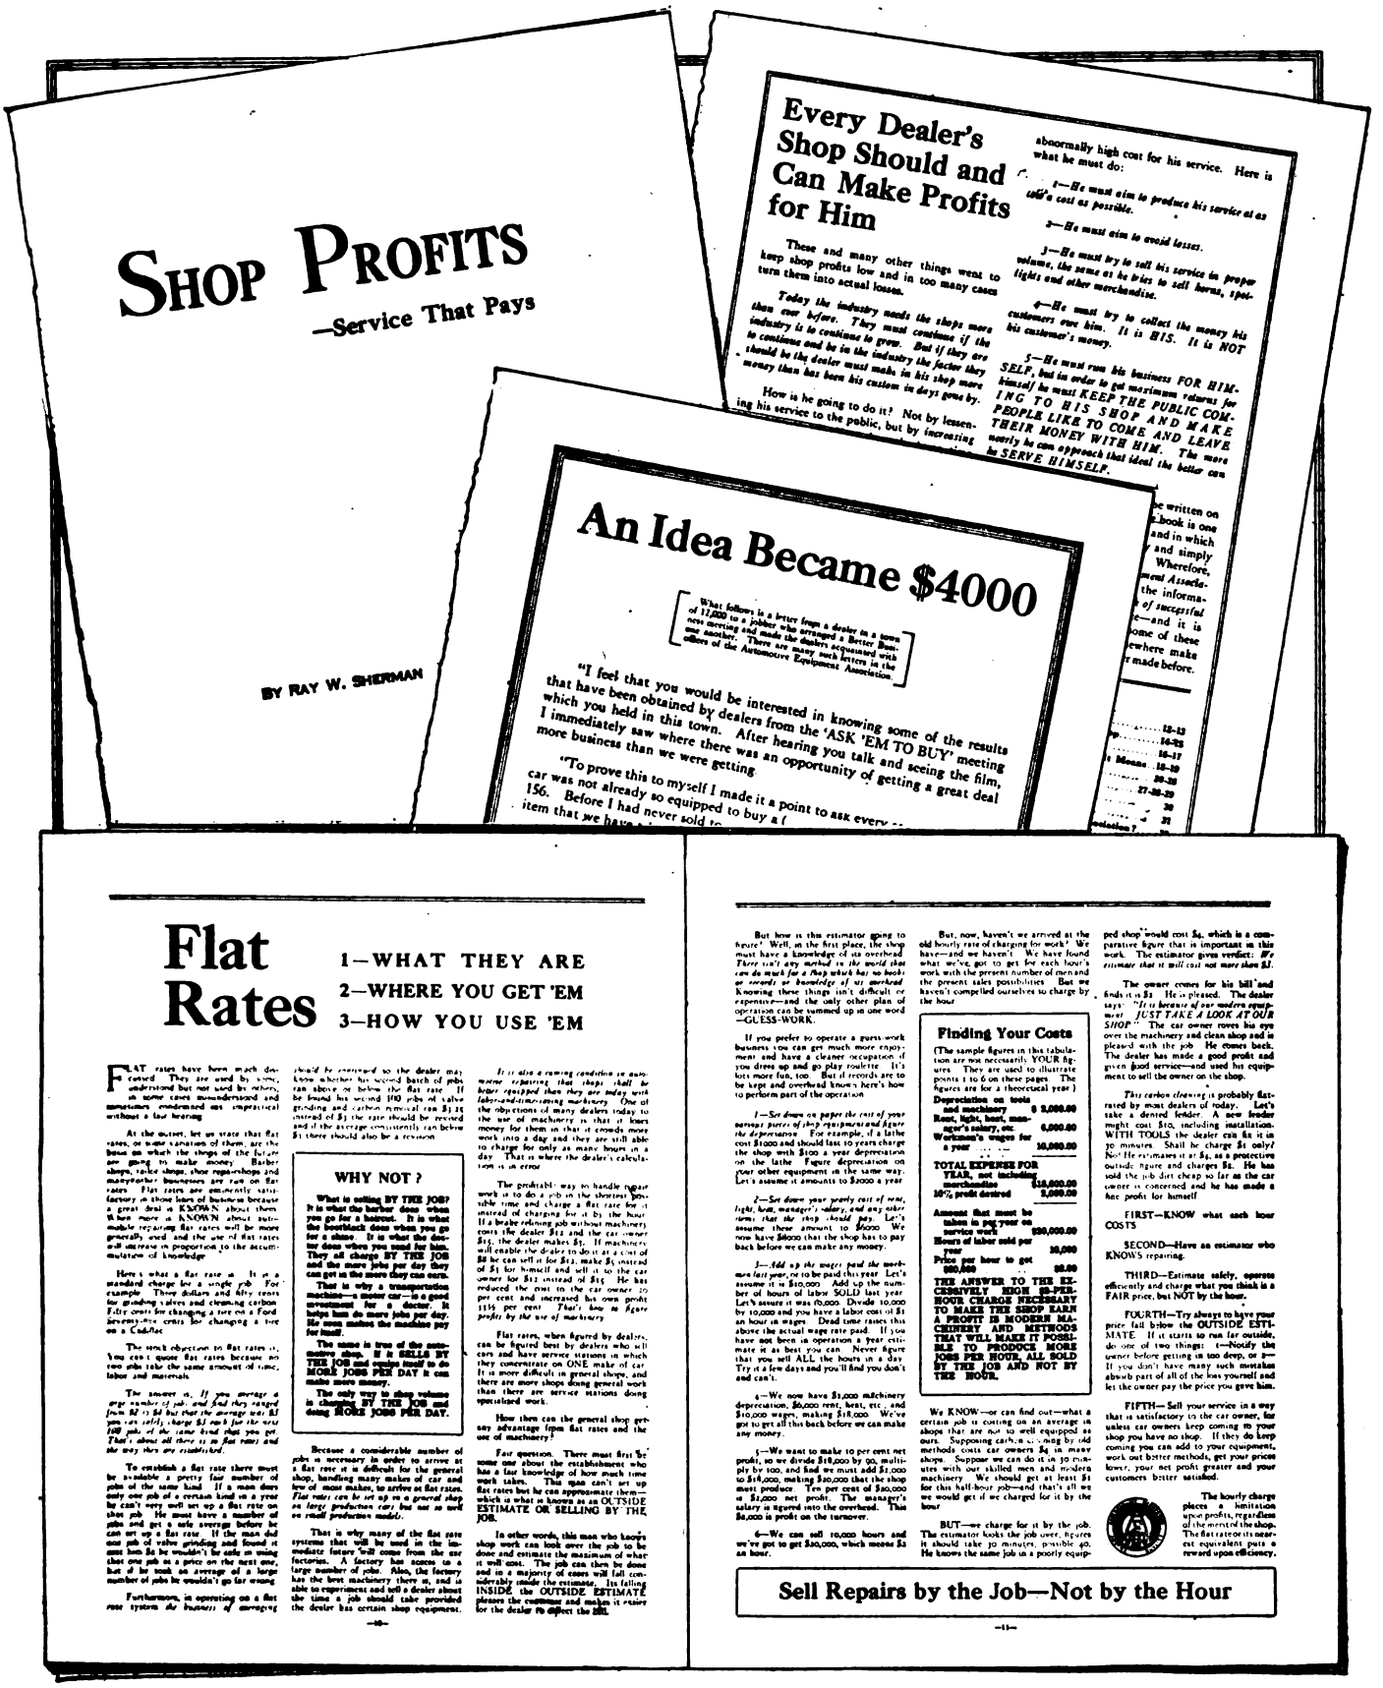
A. E. A. Handbook Result of Three Years' Work

THE Standards Handbook of the Automotive Equipment Association, which was shown at the Colorado Springs Convention and which has been mailed to members, represents three years' work on the part of the standardization committee headed by Fred R. Hall. It is intended to acquaint the trade with approved practices in labelling, packing and shipping products of the industry and to bring about elimination of unnecessary sizes and styles of various articles.

The book has three sections. The first tells the story of the A. E. A., giving detailed information about its organization, code of fair trade practices and the like. The second section is devoted to standard and recommended commercial practices, giving information on unit packages, inner packages, shipping cases, better packing in order to increase the merchandising possibilities of accessories, more complete marking of unit packages, inner cartons for re-shipping purposes, etc.

The standardization work is expected to be of direct benefit to dealers, reducing the number of sizes and styles they will have to carry in stock and facilitating the handling of their stocks.

In the third section is reprinted pages containing standard and recommended practices of the Society of Automotive Engineers. This section gives among other information the proper nomenclature of all parts of the automobile.



STANDARDIZATION COMMITTEE OF THE A. E. A.

This committee, which has been at work three years on the task brought to completion by the publication of the Standards Handbook, posed for a picture on the lake front at the Broadmoor Hotel, where the Colorado Springs convention was held. From left to right the members are: Charles P. Hughes, A. E. A. secretary of committees; W. A. White, Orr Iron Co., Evansville, Ind.; George B. Shearer, Jr., Gaul, Derr & Shearer Co., Philadelphia; Fred R. Hall, Northwestern Chemical Co., Marietta, Ohio; R. A. Picard, Metal Stamping Co., Long Island City, N. Y. The man at the right is F. E. Sparks of the American Chain Co., Chicago, chairman of the Railroad Classification Committee

How a Jobber Put New Life Into a Drooping Summer Sales Curve

The Story of a Summer Selling Plan That Singled Out and Revived Dormant Customers and Increased Sales

GOOD merchandisers are planning now the things they are going to do to stimulate buying when the usual slackening of trade comes late in the summer. Many of them have learned from past experience that much of the summer slump can be avoided in the sale of accessories and shop equipment if a strong selling campaign is instituted and aggressively pushed.

Such plans, to be successful, do not necessarily need to be new or brilliant. All is needed is some simple system of getting the selling message to the customer.

Advertising of the direct mail type has been particularly successful in lessening the customary late summer slump in the automotive equipment business. But, because of the cost of such efforts, it is most important that the mailing lists contain no dead wood and that the "copy" anticipates the needs of the buyer and presents the products that meet those needs intelligently.

THE following plan employed by the Auto Parts Co., St. Louis, jobber of automotive equipment, will serve as an example of how such a plan can be applied in practice, and to show how admirably it worked out. It is given here not as a new system of reviving business, but simply with the hope that it may contain some suggestions that will be of value to others, especially to those firms who may have a goodly number of unresponsive customers on their mailing lists.

The Auto Parts Co. believes in advertising, and maintains a regular campaign throughout the year. In addition to this, two catalogs are issued and two formal circular letters are mailed as a follow-up plan each year. These are mailed to the trade within the nearby territory. Naturally, the company maintains a carefully arranged card index file of all firms in the territory. These also record the sales which have been made to each customer, and each bears an index number which corresponds to a separate file which holds the correspondence, etc. There is nothing new about this, but the system made it easy for the Auto Parts Co. to determine just which ones were the *paying customers*.

Last summer, while looking for needless expenses, the company decided there were too many dead ones on this mailing list, and that they should be destroyed. It was argued that the saving of postage would pay for the work. Something like $750 could be thus saved to the firm in printing and postage. Out of 3000 dealers in Missouri and Illinois, who were on the mailing list, less than half were known to be buying anything from the house. While others were sending in as many as four or more orders a week.

P. H. Hale, the advertising manager, did not see the wisdom of this plan. He had never been contented with the follow-up plan of his firm, and he had several plans in his mind that he felt sure would produce results, if the trade was properly canvassed. All he asked was a free hand to go after the business. After some discussion, plans were agreed upon, and he was told to go ahead within certain limits.

The first move was to separate the cards. This was done without removing them from the regular filing cabinet. Clerks checked the file cards in red and blue inks. Any card showing even one sale within a year's time was marked with a blue check. While the rest were checked in red ink. To all dealers listed on the blue-checked cards a series of regular Government post cards were sent, twice a month. Each one of these boosted some regular specialty handled by the house. Brevity characterized these cards, which carried the name and prices in bold type. *The idea was to try to catch the dealer's eye with something* which he was likely to need. Only staples were thus offered at the regular list prices, and these were goods that were sure to be carried regularly in stock.

To reach the trade listed on the red-checked files, a carefully prepared letter was sent out. Hale tried to put himself in the customers' place when he wrote it. He had previously prepared a list of goods offered at attractive prices. The house had been searched for the best goods to place on this list, and several family meetings had threshed out the question of what was likely to take with trade.

The letter was as brief as it could be made. It stated that the firm carried a large assortment of goods in stock. No space was wasted in boosting the firm's standing. The past advertising was supposed to have long since established their reputation. The announcement was made that hereafter a regular bulletin of special bargains would be issued about twice a month to the trade. Several of the

Summer Selling

RIGHT now some jobbers and some dealers are preparing selling campaigns to be launched just as soon as the first signs of summer business stagnation appear.

They are planning to cash in on experiences of the past by going to customers with a selling appeal offering desirable items at good prices just when the "dog days" begin to weaken the "pep" and energy of the automotive equipment merchants and the interest of the buyers.

This story tells how the Auto Parts Co., a St. Louis jobber, revived interest and sales during the Summer months with direct mail effort to a carefully selected and classified mailing list.

Digitized by Google

firm's specialties were mentioned and prompt service was assured on all orders.

The result accruing from the plan of attack on the hitherto indifferent trade, was gratifying. *It proved beyond a doubt that there was business to be had if one went after it in the right way.* It also showed what could be done even in dull times.

But this experiment did more than make a neat little profit for the firm, *it opened up new accounts* which naturally could be expected to increase in size. It encouraged the firm to go after bigger things, and to branch out on new lines. Any live firm would do the same when they see business coming its way. It is the lack of vision, or confidence, on the part of some that makes them hang back at this time. Half-hearted methods will avail nothing. Some may have tried some such plan recently and failed to get results. If so, something was wrong with the system. There was a weak point in the offer, or the prices were off somewhere.

Why not call a family meeting of your force and freely discuss the whole thing? Some family meetings are a farce because the heads of the firm will not tolerate any adverse criticism from their subordinates, and no one dares oppose any suggestion from the boss. It may not be pleasant to have a salesman shoot holes in a pet hobby, but if the man's remarks are honestly given they deserve to be considered. He may have an angle of vision which the boss had failed to see. It is not unlikely that his view is practical, but possibly might be improved upon. He is perhaps closer to the practical side of the business than others, because he is bucking up against actual conditions every day. In a general way success can be achieved by common-sense methods and a knowledge of the actual needs of the trade.

Here are the actual results, in cash, of the plan the Auto Parts Co. tried out: At the end of the first month, which was September, 1921, it was found that 42 new customers had been gained from the list that had been checked in red. Had the list of unresponsive dealers been junked and only the regular customers solicited, *this business would have been lost to the firm.* There were new cards made out for these 42 new customers and they were checked in blue ink. *They ceased to be a liability and henceforth were an asset to the firm.*

The orders received could not be called big orders, nor were they uniform. They averaged $7.67 each, or a total for the month of $322.14. The campaign was continued, and the following month, October, showed an increase. The number of customers amounted to 51 new ones. In addition to this, 16 of the new September customers sent in repeat orders. How many others drove into St. Louis and purchased goods direct cannot be determined, though some are known to have done so. The cost of what the firm terms their advertising follow-up system was normal.

Each bulletin issued represented an outlay of only $40 in all. This included postage, stationery, addressing, running the sheets off on a duplicating machine, and general clerk hire, etc., all of this work having been done in the office, without any extra help or expense.

The orders continued to come in regularly, despite the fact that it was getting near the end of the year. In November 43 new customers were added to the list, and 31 repeat orders were received. The average amount of each order increased to $8.27 with the usual number of large and small orders. The month of December brought in an additional 43 new customers, which, like the others, were checked in blue ink. The repeats for the same period were 35 orders. The average being $8.06 an order. All of which satisfied the firm as to the results.

The total for the four months' effort resulted in 106 new customers in Illinois and 73 in Missouri, or 179 in all. As there were 1750 names on the mailing list of the so-called dead ones, this is a trifle over 10 per cent of the prospects who received the bulletin. Not so bad, considering all things. All, too, at a time when the croakers are crying loudly that there was no business to be had. While the timid were saying that it was wasting time and money trying to stir up business.

But this is not all the company accomplished. The response from their regular customers, which they canvassed with the regulation post cards, was most gratifying. These were also issued semi-monthly and were merely a form of brief reminder of staples always carried in stock. The total for the four months was 786 orders directly traceable to these cards. These orders were in addition to other orders that had been received from these same customers during this period. It can, therefore, be readily seen that all of this business would have been lost to the firm, had they not followed up their past advertising with their bulletin. Summed up briefly, all this goes to prove that business can be secured if you go after it in the right way.

The alert merchandiser is not going to let business slumber this summer. He is planning NOW the things he is going to do to keep his customers awake and interested with a special summer selling appeal

---

Trask Steamer in Canada

DETROIT, July 2—The Detroit Steam Motors Corp., manufacturing the Trask Detroit Steamer, will open a plant at Windsor, Ont., under the name of the Windsor Steam Motors, according to A. B. Muir of this city. The company intends to enter not only the Canadian domestic market, but to avail itself of the Canadian British tariff preference in seeking export sales, Muir said.

What Foreign Trade Means to Business

Does It Matter Here if an Austrian Family Buys Less Bread or a Man in India Gets Along With Fewer Shirts?— It Does, and So Do Many Other Things That Are Translated into the Language of the Every-day Business Man in This Story

By JAMES DALTON

WHEN James R. Howard, president of the American Farm Bureau Federation, was asked recently by a New York Banker what were the greatest agricultural problems confronting the American farmer, he responded:

Transportation, including merchant marine;

Industrial production;

International exchange;

The balancing of European budgets;

German reparations;

Solution of the Russian problem.

Howard is a shrewd, far seeing man and he has visualized the inescapable interdependence of world commerce. He knows that if every man, woman and child in Austria, for example, can dig up enough cash to pay for two loaves of bread a week where they have been buying only one, it will mean higher prices for the wheat grower in Kansas.

He knows that if each of the male natives of India buys two cotton shirts a year instead of one, it will mean a stronger market for American cotton.

Too many people are prone to regard the farmer as a hick just because he wears overalls. As a matter of fact the average of hicks is higher in the cities than in the country.

You can find more farmers, for instance, than you can business men who can tell you exactly what the collapse of Communism in Russia means to America. They have a very clear idea of what it will spell, ultimately, not only for themselves but for industry generally.

Farmer Studying National Problems

The farmer has found it profitable to study national and world problems in relation to his own products and his own markets. The rank and file of men in the automotive and other industries would find it worth their while to take time every day to keep abreast of what is going on.

It may be difficult for the automobile or truck dealer in Oscaloosa or Cottontown, Ga., to figure out what concern it is of his whether the natives of India buy more shirts or the natives of Austria more wheat, but it is likely to make a material difference in the volume of his sales. If wheat and cotton prices go up 10 cents or 10 per cent it may be the determining factor in purchases of cars and trucks by the growers or planters in his territory. There are great stretches of the country where it may mean comparative prosperity or depression.

Leaders of the automotive industry sometimes get a bit discouraged because so little interest is manifested by the rank and file in problems of the highest importance. The Indianapolis sweepstakes may be more interesting than the financing of highway construction, but the relative importance is as 0 to 100.

Need More Dealer Interest

Many dealers from all parts of the country will go to Indianapolis to watch the "speed demons" in their merry-go-round, but when the Chamber of Commerce of the United States gave over one of the sessions of its recent annual convention at Washington to a consideration of highway financing, one of the most vital problems of the industry, the attendance numbered thirty-five. Twenty-four men were there when the meeting was called to order, and the rest drifted in later. Representatives of the automotive industry numbered a few more than the representatives of the brick and cement interests. Not even one dealer from Washington was present.

These meetings of the Chamber of Commerce offer little in the way of jazz entertainment, but they provide a carload of food for thought. The session at Washington was regarded by President Harding as of sufficient importance to justify him in breaking up an extraordinarily busy day at the White House so that he could address the convention. His coming may have been due to the fact that previous speakers had voiced polite disgust at the proposal to build a tariff wall around the country and in discussing European conditions had expressed sentiments reminiscent of League of Nations advocates, but he came nevertheless.

Two members of the Cabinet, Secretaries Hughes and Hoover, also were speakers.

The convention had one of those well known "keynotes," and it was world trade. The same key was struck at Atlantic City last year. It is significant that the greatest commercial organization in the world considered foreign problems more pressing than domestic questions in the midst of a deep business depression, and stuck to the same general theme when the country was recovering its prosperity.

One of the most striking addresses of the convention, even including the President and the Cabinet officers, was made by Howard of the Farm Bureau Federation. He applied the problems of Europe, the tariff and transportation to the farmer and demonstrated how they are affected, but the speech could have been made with equal logic by a representative of the National Automobile Chamber of Commerce, with a slightly different application.

Every automotive dealer should know something about all phases of transportation, and he should know a great deal about highway transport.

Every automotive dealer should know something about the relation of European problems to American exports, because the volume of exports determines the degree of prosperity the country shall enjoy. If the total volume of exports rises 15 per cent, it will mean an even greater increase in the volume of automotive sales in this country, for the increase in earnings works back all along the line from exporter to producer. It is safe to say that quite a few cents of every dollar of profit in the field of foreign trade are spent for something automotive.

Our Obligation to Europe

Listen to Howard for a minute:

"So keenly do the farmers of the country realize not only our moral obligations to Europe in the time of their distress, but our own economic dependence upon their welfare that we insist upon such liberal grants of credit as can be safely

Digitized by Google

accorded them, and object to any tariff barriers which would prevent an easy flow of world commodities." he says.

"In recent years exports, particularly when compared to our total population, have been falling off due to increased domestic demand. We are still, however, exporting more than one-half our total cotton, almost one-fourth our wheat, as well as vast quantities of other cereals and pork products.

"There is no limit to the agricultural possibilities of America, and we ought always to produce a food surplus. Our national safety, in fact, depends upon it. But if we produce a surplus we must have for that surplus not only a market but a profitable market. It is because that market lies almost exclusively in Europe that the American market has so vital an interest in the reconstruction of Europe.

"Men may theorize about national self sufficiency and point to the certainty of home markets as compared with foreign, but trading between nations proceeds inevitably and it is not within reason to presume that it will ever end. Indeed, it never should. National seclusion would spell national decadence. The man who takes no part in the affairs of his community is no less undesirable than the nation who wraps her cloak of righteousness about her and withdraws from world society.

"I think it will be fairly clear from what I have stated that the agricultural interests of our country will not be best served by tariff walls so high as to become artificial barriers to the freest possible exchange of commodities. It is only as Europe can sell to us that they will be able to absorb our agricultural surpluses.

"So nicely are those human relationships which we call economics adjusted that every human affair throughout the world affects every one of us just as every particle of matter in the universe affects every other particle. Thus the reparations adjustments of Germany are reflected in every farmstead of America. Our interest in foreign finance and foreign exchange is as great, and possibly greater, than any banking or exporting house.

Improvement of Farm Prices

"The improvement in farm prices are to a marked degree coincident with an improvement in foreign exchange as indicated by easier exchange rates. For example, take May wheat in the Chicago pit December 7, which was low point for that period at 1.09½, compared with May at 1.41½, the improvement was 29 per cent. Between those same dates British sterling advanced 9 per cent, the French franc 23 per cent and the Italian lire 26 per cent.

"Thus the agricultural gloom of December dispelled by the smiles of May is directly reflected in the mirror of international exchange."

After that it might be interesting to know what Silas H. Strawn, chairman of the board of Montgomery, Ward & Co., the big Chicago mail order house, has to say on the subject. Here is a summary:

"More than one-third of the people of the United States live upon farms or are dependent upon agriculture. Their prosperity depends not so much upon the amount which they produce as upon the price which they receive for their products. While to a certain extent the price is influenced by domestic demand, the foreign demand is the determining factor. This is as true of the United States as it is of Great Britain or any other large producing country.

"In proportion to the reduction of the price of farm products, is the purchasing power of the farmer diminished. The inability of the farmer to buy ramifies through every industry and embraces every article of human consumption. For a hundred years our whole economic development has been adjusted to meet a continuously increasing foreign trade.

"To isolate ourselves, and cut off our foreign trade, would result in such intensive competition as to precipitate an economic panic in this country the like of which has never been seen."

The following summarizes the views of C. H. MacDowell, president of the Armour Fertilizer Works, Chicago, and it will be seen they closely parallel those of Howard and Strawn:

"The recovery and maintenance of a steady European market for our raw materials is one of our most important problems. Foreign commerce is our economic safety valve. Ill informed or locally selfish interests make it out that less than 10 per cent of our commerce is foreign; that it is not important, so why worry about it—take care of our home requirements and be happy; on to the ball game! We are practically self-contained—they say—and we are, if we care to pay the price. Both we and Europe would pay dearly by our adopting such a policy. We can easily go a good way along this road without knowing it, and then wonder what ails us.

"There is but one broad market to-day for our surplus cotton, copper, wheat, oil, coal, packinghouse products, naval stores, our sulphur, timber, phosphate rock and many other things. This market is Europe.

"Take cotton. More than 50 per cent of our crop is usually shipped to Europe. What effect did the decreased European buying power have on the distribution and price of American cotton in 1914 or late in 1920 and during part of 1921? How did it affect the 1921 crop? Our cotton growers became demoralized. Hard times and an almost complete elimination of buying power followed.

"How has increased European consumption of our cotton affected prices and Southern feelings since then? Values have advanced. The planter is feeling better and more hopeful. He is planting cotton.

Southern Prosperity

"The prosperity of the cotton South is dependent on a broad European market. Both Southern and Northern industrial prosperity is intimately connected with the buying power of the cotton grower. America is vitally interested in shipping cotton to Europe. If the South cannot market its cotton when grown on a fairly large scale, at a profit to the grower, it will reduce production and we will pay more for our shirts.

"And so it is with other raw materials. Large production through export decreases the cost of what we consume at home. A full export demand helps many sections not directly interested in the material exported."

Dwight W. Morrow of J. P. Morgan & Co. feels the same way about it. He says:

"Under the present organization of society, where large scale production is the practice in every civilized country in the world, our foreign and our domestic trade are so inextricably bound together that no man can tell how much of the domestic trade that he engages in is a part of the processes which go into our foreign trade.

"The most arresting economic fact in the history of the last 150 years has been the widening of the areas of exchange by the increased means of communication. One hundred and fifty years ago the work of any one man would affect only the few people in the neighborhood. Almost everything that man consumed was produced close to his home. With the coming of the railroad and the steamship and the telegraph and the telephone our economic areas have kept growing wider and wider. Our foodstuffs are no longer produced in the community in which we live; the product of our own labor may go to the remote corners of the world."

The average automobile dealer will admit without argument that he is interested in anything which concerns his business. Can he contend, in justice to himself, that he has no interest in the big problems of the world and nation even though, from a cursory examination, they may seem far afield from his shop or showroom?

The World—and Your Business

A BRISK demand from abroad may raise the price of cotton 10 per cent. This 10 per cent may start buying of automobiles, trucks, tractors and equipment in a great section of the country where buying had been at a standstill—for lack of the very profit that the 10 per cent higher price provides.

This is one illustration—just one—of the effect of foreign trade on domestic business. Yet a great many business men think of foreign commerce—if they ever think of it at all—as something far away from their interests. This story has been written with the hope of bringing the subject a little nearer home.

Editorial Notes

Giving Away Profits

A TRIP out into the smaller towns and cities—and some not so small—reveals that even in the past two months of heavy demand many automobile dealers have been giving away part of their profits, not only by over allowances on used cars but by "throwing in" extras as inducements for new car purchases. Every little while some one rises up to say that the trade has ceased to give away tires and bumpers and like accessories, but when we find dealers doing it in times such as the present selling season there is no use pretending that the millennium has arrived.

This is a type of foolishness that might be discussed in dealer meetings as profitably as long trading. Extra equipment should be and can be sold with nearly every new car and many used ones. Giving it away is not only cutting into the legitimate profit on the car but throwing away the chance for added profit on the accessories. It wouldn't happen if dealers would know each other well enough to understand that none can afford such practices.

A Closed Equipment Show

UNDOUBTEDLY it has been with mixed feelings that the industry has received the news that the 1922 business exhibit of the Automotive Equipment Association, in Chicago, will be a "closed show." None but members and their employees will be admitted. This means, in effect, that manufacturer members of the A. E. A. will show their products to jobber members. The rest of the trade will be out in the cold.

The closed show was agreed upon for this year as an experiment. Jobber members unanimously favored it at their divisional meeting at the Colorado Springs convention. Members on the manufacturers' side were fairly well divided, but, without a vote in the convention, accepted the jobbers' recommendation and let the tentative closed show decision stand. The jobbers felt that an exhibit conducted by the association should be for the benefit of association members, that it should not be open for the transaction of business by non-member jobbers. Manufacturers who sided with the jobbers declared they had all they could do, during the five days' exhibit to talk with the representatives of member jobbing houses interested in their exhibits. Other manufacturers felt that after they had financed the show by purchase of space they ought to have the privilege of exhibiting to all interested jobbers, regardless of their association affiliations.

Previously it has been the custom to issue exhibit guest tickets both to manufacturers and jobbers recommended by members. Only member manufacturers were exhibitors, but the entire trade, to the extent that it was interested, could view the exhibits and talk business.

The closed show idea is in sharp contrast to most of the shows in the automotive industry, which are open not only to the trade but to the public. The automobile shows, of course, are intended to appeal to the public and are local in character. Even the "National" shows in New York and Chicago, which draw men in the trade from various parts of the country, are local in their appeal to the people generally. The automotive equipment show has been a national trade show, but it will lose that identification when it caters exclusively to an association membership.

There are some members of the A. E. A. who have argued that at certain hours of certain days the show should be open to the retail trade. This would serve only a virtually local purpose, as retailers would not travel long distances to attend such an exhibit. However, the suggestion shows how far some manufacturer members are from favoring a closed show of the kind decreed for the next exhibit. They didn't say much at the convention, but they expressed themselves in private and there is nothing uncertain about their opinions.

At a time when the A. E. A. is doing a work in the interest of the entire trade as well as its membership, through the merchandising campaign, a closed business exhibit will probably seem out of place to many men in the industry, as it does to some of the membership. The show itself, however, rather than opinions regarding it, will prove whether the closed plan is a mistake.

Equipment Time Sales

THE small dealer and garage trade is benefiting by the growing practice among jobbers of extending credit on shop equipment sales. Jobbers are finding that many a small customer is a thoroughly good risk for a time payment purchase of machinery often running into several hundred and often two or three thousand dollars. Such a sale provides the shop operator with the equipment he needs better to serve his customers and make a profit for himself. At the same time the jobber increases his volume of equipment sales and generally of replacement materials sales, because the better equipped shop does more work and needs more of the items the jobber sells. Sometimes the dealer or garageman becomes also a better accessory customer because time-saving machinery gives him more time for selling merchandise.

If you need a piece of machinery and haven't the ready money to buy it with ask your jobber about credit accommodations if he hasn't already offered them to you. Under the right circumstances a time-payment transaction on a piece of equipment that is actually needed is good business for both jobber and shop operator.

Make the Used Truck an Asset, Not a Liability

A Conservative Appraisal Is the Best Insurance Against Loss, Says This Louisville Dealer

Editor Motor World:—Much has been written and little said on the subject, and many a factory and dealer is in trouble—the factory because the dealer cannot order more trucks, the dealer because he cannot replenish his bank account, supplementing it by further loans from the bank. Bankers have come in some sections to think that a stock of used cars or trucks is a liability instead of an asset, and for the benefit of some of the newcomers in the business, my experience has been about as follows:

Don't trade in a piece of junk, except as junk. Allow me to state that very few business firms ever part with a truck until it is practically junk. After the fourth or fifth year of a motor truck, it has seen its best days (though there are exceptions). You should know when you are trading it in that the reason you are getting it is because it is past successful operation economically.

My head mechanic would often come and say, "Mr. Schultze, that truck you took in is a bird—with a little work done on it, I can tune up the carbureter and probably put in a new needle valve, grind the valves, take up the bearings, give it a coat of paint, and you can make two or three hundred dollars out of the deal."

Now take my advice, and when he says that, get a gun and shoot him, because nine out of ten times when he takes off his carbureter and magneto he finds they are shot, and thirty to fifty dollars will have to be invested in them to put them in shape, and the connections will all be so badly worn that he will have to put in new ones. When he drops the crankcase to tighten up his bearings, he finds scored cylinders or else the crankshaft out of round, badly worn pistons, bearings practically gone, and by the time he gets through with this job, putting it in condition by regrinding the cylinders and new pistons, with the work of truing up the crankshaft and putting it in first class condition, it will have cost you $250 to $300, and you cannot get more than $50 over what you paid for it.

Try to hold all trade-ins as near to $300 as possible. This, of course, doesn't apply to all deals. Some dealers claim that they come out even and usually make money on trade-ins. If they included 10 per cent for overhead and 5 per cent for selling cost they have usually lost money.

Some factories ask $800 to $1,000 more for a two-ton than other real competitors and then confidentially give their dealers the right to ship these trucks to the factory, where they, no doubt, go to the graveyard, and the graveyard is the only solution, in my opinion, of the used truck over five years of age. It is out of the way, forever, it won't give the factory or the dealer any troubles, and a new truck will be sold to replace it. Many business firms buy these trucks merely to help out. Their expense of operation is so enormous and they soon forget the price they paid for it, and they begin to figure that trucks are too expensive for their business, and your trade-in has lost you and the factory a truck user.

Another great temptation is removed from the dealer. His bankers will often ask him for a statement of his assets, and he in perfect honesty will value these cars at what he took them in. When he really is forced to sell them at one-half the price, he has made a misstatement to his bank, without intending to, which as soon as they find out will very greatly cripple him in his business relations.

The truck manufacturers should hold meetings every three months to devise means and ways of meeting the situation from a business standpoint, for as the dealer gets in further, the worse off he gets. The manufacturer must look upon the dealer as his best business asset, help him in every way possible and particularly emphasize the fact that he must sell motor trucks profitably.

The factories that urge the dealers to put excess trucks on the floor, getting him tangled in his finances, are merely digging two graves—theirs and the dealers.

The trade-in proposition, if not handled properly, may make it necessary for motor truck manufacturers to put in branches. The only proper method of considering this is from the standpoint of getting these old trucks out of the way forever, and it is far better for both to lose a little money on them and wreck them and thereby create another new sale and profit, than it is for the factory to sidestep the trade-in and put it on shoulders that cannot bear the burden.

At the present time I know of fifteen two-ton trucks that I could sell in Louisville on trades. If I tried to sell them, say a two-ton truck at $2,500, I could not afford to allow more than $350 on a trade-in, but the man that is asking $3,400 for a similar design of truck can offer $900 for the same trade. In nine out of ten cases, the purchaser will fall for just this situation and buy the higher priced truck to get the bigger trade allowance.

The factory should urge dealers to hold prices, cut out the trading, except at a very nominal price, and should co-operate in every way with the dealer to help him sell trucks to people that will stay sold.—Sid Schultze, car and truck distributor, Louisville.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

Say It With Orders

If You're Out on the Road
A-Bucking the Goad,
Scouting for "Biz" in Your Borders,
And Need More "Green Moss"
To Carry On—Write the Boss—
But Listen, Buddy—"Say It With Orders."

When Business Is Bad
And You Would Be Glad
To Make Yourself Solid as Solder,
You'll Surely Be Right
The Harder You Fight
And Continue to "Say It With Orders."

When You're Well on the Way
To Increase in Your Pay,
Avoid Pulling Strings Like the "Warders."
You'll Suffer a Loss
By Arguing With the Boss.
Here's the Secret—Just "Say It With Orders."

With the House of Success
The Opinion Will Be "Yes."
"We Would Make Our Activities Broader."
Then YOU'LL Be the Bird
With Whom the Boss Has a Word
If You've Constantly "Said It With Orders."—O. J. COE, Manager, United Motors Service, Atlanta, Ga.

Schedule of Flat Rate Operations for the Hupmobile Model R

Time Limits and Mechanical Procedure to Be Followed to Complete Work in the Limits Given

Group 15—Wheels (Continued)

13—Replace one hub cap 0.2
- A—Remove old and install new hub cap.
- B—Front wheel hub cap must be packed with cup grease.
- C—Turn down and repack until grease comes out inside of wheel hub.

15—Replace one rear wheel assembly 2.0
- A—Block up rear axle securely so tire is clear of floor and remove tire and rim.
- B—Remove hub cap and nut and pull wheel.
- C—Disassemble bearing, dust washer and retainer and tire rim clamp bolts.
- D—Assemble bearing, dust washer and retainer and tire rim clamp bolts to new rear wheel assembly, using new parts if needed.
- E—Lubricate bearing with cup grease.
- F—Install wheel with key ways of shaft and wheel lined up.
- G—Tighten wheel on taper, then drive key in position.
- H—Install new rear wheel key if needed—must be tight fit.
- I—Install axle shaft nut—must be tight fit.
- J—Install cotter and hub cap.
- K—Install tire and rim and tighten securely.
  Brake band must not drag and wheel and tire must run true when job is completed, within ⅛ in. and ¼ in. respectively.

16—Replace one rear wheel hub or brake drum on both 1.7
- A—Block up rear axle securely so tire is clear of floor.
- B—Remove hub cap and nut and pull wheel.
- C—Disassemble bearing, dust washer and retainer.
- D—Remove hub and brake drum.
- E—Install new hub and brake drum as required using new bolts and nuts.
- F—Rivet ends of bolts slightly.
- G—Assemble bearing, dust washer and retainer and lock securely—use new parts if necessary.
- H—Lubricate bearing with cup grease.
- I—Install wheel with key ways of shaft and wheel lined up.
- J—Tighten wheel on taper, then drive key in position.
- K—Install new rear wheel key if needed; must be tight fit.
- L—Install axle shaft nut—must be tight fit.
- M—Install cotter and hub cap.
  Brake band must not drag and wheel must run true within ⅛ in. at felloe band when job is completed.

22—Stop grease leak from rear wheel 2.0
- A—Block up rear axle securely so tire is clear of floor.
- B—Remove hub cap and nut and pull wheel.
- C—Remove old felt washer retainer and washer.
- D—Install new washer. If fitted with old style one piece washer retainer replace with new style two piece retainer.
- E—Drill 13/64 in. hole ⅝ in. deep for lock screw.
- F—Spot-face ⅝ in. diameter.
- G—Tap ¼ x 28 SAE thread ½ in. deep.
- H—Lock retainer with lock washer and hex head ¼ x 28 SAE cap screw ½ in. long under head.
- I—Clean grease from wheel, brake drum, brakes and adjacent parts with gasoline.
- J—Drill ¼ in. hole through bottom of axle housing, outside of hole, to come flush with inside of rear spring leaves.
- K—Install felt washer No. 40230 over axle shaft against end of housing.
- L—Install wheel with key ways of shaft and wheel lined up.
- M—Tighten wheel on taper, then drive key in position.
- N—Install new rear wheel key if needed—must be tight fit.
- O—Install axle shaft nut—must be tight fit.
- P—Install cotter and hub cap.

40—Adjust front wheel bearings ... 0.4
- A—Raise front axle so tire clears floor.
- B—Remove hub cap and cotter key.
- C—Tighten nut so wheel will just balance when stopping.
- D—Back nut off one notch. Left hand thread on left steering knuckle.
- E—Install cotter key.
- F—Fill hub cap with cup grease and install.

41—Tighten both rear wheel nuts ...0.5
- A—Remove hub caps and cotter keys.

This flat rate schedule started in the June 21 issue, was continued in the June 28 issue and is concluded in this issue.

This is the eighth flat rate schedule published in Motor World. The others were: Paige, Overland Four, Studebaker, Dodge, Dort, Buick and Chandler.

- B—Tighten each nut with special long wrench.
- C—Cotter key securely and replace hub cap.

42—Fit oversize key in one rear wheel 1.0
- A—Block up rear axle securely.
- B—Remove hub cap cotter key and nut and pull off wheel.
- C—Clean up key ways in both hub and shaft with file if necessary.
- D—Fit oversize key tight in keyways and with not over 1/64 in. top clearance in the hub.
- E—Remove key and drive wheel tight onto shaft.
- F—Drive in key.
- G—Install nut—must be tight.
- H—Install cotter key securely.
- I—Install hub cap.

43—Stop grease leak from one front wheel 0.5
- A—Block up front axle securely.
- B—Remove wheel.
- C—Replace old felt washer with new one, using new retainer if needed.
- D—Lubricate—install wheel—adjust bearings and cotter key nut—must have 1/64 in. end play.
  Wheel must balance when stopping.

44—Change tire and rim assembly ..0.4
- A—Raise tire clear of floor.
- B—Remove valve stem, cap and nut.
- C—Remove clamp nuts.
- D—Remove tire and rim.
- E—Install tire and rim.
- F—Install clamps securely. Rim must run true within ¼ in. when job is completed.
- G—Install valve stem nut and cap.

45—Replace one rim tire or tube 0.3
- A—Remove rim from tire and tube.
- B—Assemble rim in tire and tube using new parts as ordered. (Use operation 44 if required.)

46—Tighten rim lugs on one wheel.. 0.2
- A—Raise wheel clear of floor. Rim must run true within ¼ in. when work is completed.
- B—Tighten all lugs and valve stem nut and cap securely.

47—True up rim on one wheel 0.3
- A—Raise wheel clear of floor.
- B—Mark point where rim runs out.
- C—Loosen lugs on opposite side of wheel from mark.
- D—Tighten lugs near mark. Rim must run true within ¼ in. when work is completed.
- E—Tighten all lugs and valve stem nut and cap securely.

Group 15A—Wire Wheels

1—Tighten all wheels on hubs 0.3
- A—Tighten all hub caps securely. See that lock in each hub cap is out so that it fits in notch in wheel hub.

2—Replace one hub cap 0.2
- A—Remove old hub cap. Right wheels and spare require caps with right hand thread—left wheels require caps with left hand thread.
- B—Install new hub caps—must be tight. See that lock in cap is out so that it fits in notch in wheel hub.

3—Change one wheel and tire assembly 0.3
- A—Raise wheel clear of floor.
- B—Remove hub cap and wheel.
- C—Install spare wheel and tire assembly.
- D—Install hub cap—must be tight. See that lock in cap is out so that it fits in notch in wheel hub.

4—Replace one wheel 1.0
- A—Raise wheel clear of floor.
- B—Remove tire lock ring and valve stem cap, nut and spacer.
- C—Remove tire and tube.
- D—Remove hub cap and wheel.
- E—Install new wheel—grease taper fit between wheel and hub.
- F—Install hub cap—must be tight. See that lock in cap is out so it fits in notch in wheel hub.
- G—Mount tire and tube.
- H—Install tire lock ring.
- I—Inflate tire to proper pressure.
- J—Install valve stem spacer, nut and cap.

5—Repair one wheel 0.5
(May require operation 3 once or twice)
- A—Send to maker's service representatives with purchase order covering necessary repairs.
- B—Get back when repaired and notify owner.

6—Line up front wheels. (Use operation 1) 0.5

7—Replace one or both bearings on one front wheel. (Use operation 6) 0.7

8—Stop grease leak from front wheel 0.5

9—Replace one front wheel hub. (Use operation 6) 0.7

10—Tighten rear wheel axle shaft nuts. (Use operation 41) 0.3

11—Fit oversize key in one rear wheel hub. (Use operation 42) 1.0

Digitized by Google

12—Stop grease leak from one rear wheel 2.0

13—Replace one rear wheel hub or brake drum or both. (Use operation 16) 1.7

14—Stop grease leaks from one rear hub cap 0.5

A—Remove hub cap.
B—Remove rear wheel to axle shaft nut.
C—Pack end of keyway in hub and shaft with waste.
D—Install axle shaft nut—must be tight.
E—Install hub cap—must be tight. See that lock in cap is out so it fits in notch in wheel hub.

Group 16—Lubrication

1—Dope all Alemite fittings without pulling any spring bolts 1.0

A—Clean outside of following Alemite fittings thoroughly and dope with standard or high pressure Alemite gun.
12. spring bolts.
4. front axle.
1. steering gear housing.
1. steering column (may possibly require four gunfuls).
2. clutch and brake pedals.
1. clutch release bearing—cars over R 55,000 (four half turns of gun only).
2. universal joints only when provided with Alemite fittings—(do not fill so full that grease enters leather boot).
4. brake shafts on rear axle (May possibly require one full gun).
1. Grease must come through both sides at each spring bolt.
2. Jack up front axle when greasing steering knuckle pivot pins—grease must come through thrust washers.
3. Grease must come out at both ends of each brake shaft cross tube.
4. If grease can be felt in universal boots remove by inserting screw driver under small end of boot and squeezing out grease.

2—Clean one spring bolt to permit lubrication 0.3

A—Remove nut and star washer.
B—Drive bolt out far enough to expose cross hole at center.
C—Clean cross hole and force grease through with high pressure Alemite gun.
D—Remove Alemite fitting and turn bolt so cross hole is at one side, that is, not on top or bottom.
E—Drive bolt into place and replace Alemite fitting, star washer and nut. Spring action must be free.
F—Dope thoroughly—grease must come through on both sides.

3—Clean one steering knuckle pivot pin to permit lubrication 0.8

A—Block up front axle securely.
B—Remove lock pin and pivot pin. Pivot pin must be driven upward on cars below R 20,000.
C—Clean grease passages thoroughly.
D—Reassemble, riveting lock pin securely.
E—Dope thoroughly—grease must come out at thrust washers.

4—Dope rear axle and transmission 0.3

A—Remove filler plug on axle housing.
B—Fill to level ¾ in. below bottom of filler hole and replace plug securely. Drain down to above level if necessary.
C—Remove transmission filler plug.
D—Insert wire through filler hole—must go down 8½ in.
E—Fill to depth of 4 in. to 5 in. from bottom and replace filler plug securely.

5—Dope both front wheels 0.4

A—Remove hub cap from one wheel and install special hub cap in which Alemite fitting is mounted.
B—Dope until grease just starts to come through felt washer on inner side of wheel.
C—Replace standard hub cap securely.
D—Repeat above on other wheel.

6—Dope both universal joints 0.4

A—If joints are equipped with Alemite fittings dope until grease can just be felt inside leather boot.
B—On joints having standard plugs proceed as follows:
1. Remove plug and install Alemite fitting.
2. Dope until grease can just be felt inside leather boot.
3. Remove Alemite fitting and replace plug securely.
4. Repeat on other joint.
C—If grease can be felt in boot, remove by inserting screwdriver under small end of boot and squeezing out grease.

7—Dope fan—cars before R 56,000 approximately 0.5

A—Remove fan assembly from car.
B—Disassemble and pack hub full of grease.
C—Reassemble — bearings must have 0.10 in. end play.
D—Replace fan assembly on car, adjusting belt to proper tension. Tighten spindle nut securely.

8—Oil fan—cars after R 56,000 approximately 0.1

A—Remove filler plug.
B—Fill fan hub full of clean cylinder oil.
C—Replace plug securely.

9—Lubricate clutch release bearing .. (See operation sheet 4 or 5 of group 10)

10—Oil spring leaves 0.3

A—Jack up frame sufficiently to take all weight off of one spring.
B—Oil leaves freely, using long oil gun.
C—Remove jack and repeat on the other three springs.
D—Wipe off surplus oil.

11—Graphite spring leaves 2.5

A—Block up frame securely to take all weight off one spring.
B—Remove rebound clip bolts.
C—Spread spring leaves and coat thoroughly with graphite and oil or a prepared graphite and oil or graphite and grease compound.
D—Replace rebound clip bolts securely —rivet ends slightly.
E—Repeat on the other three springs.

12—Lubricate clutch studs 0.6

A—Remove lower and center toe boards.
B—Oil all six studs thoroughly with clean cylinder oil.
C—Push down clutch pedal a few times while oiling each stud.
D—Replace toe boards securely.

13—Replace one Alemite fitting 0.2

14—Grease and oil everything ..... 2.5 (Does not include changing engine or lubricating electrical equipment.)

A—Clean outside of following Alemite fittings thoroughly and dope with standard or high pressure Alemite gun.
12—Spring bolts.
4—Front axle.
1—Steering gear housing.
1—Steering column (may possibly require four gunfuls.)
2—Clutch and brake pedals.
1—Clutch release bearing — cars over R 55,000 (four half turns of gun only).
2—Universal joints only when provided with Alemite fittings—do not fill so full that grease enters leather boots.)
4—Brake shafts on rear axle. (May possibly require one full gun.) Grease must come through both sides at each spring bolt.
2—Jack up front axle when greasing steering knuckle pivot pins —grease must come through thrust washers.
3—Grease must come out at both ends of each brake shaft cross tube.
4—If grease can be felt in universal boots, remove by inserting screwdriver under small end of boot and squeezing out grease.
B—Remove filler plug on axle housing.
C—Fill to lever ¾ in. below bottom of filler hole and replace plug securely. Drain down to above level if necessary.
D—Remove gearset filler plug.
E—Insert wire through filler hole—must go down 8½ in.
F—Fill to depth of 4 in. to 5 in. from bottom and replace filler plug securely.
Dope both front wheels.
G—Remove hub cap from one wheel and install special hub cap in which Alemite fitting is mounted.
H—Dope until grease just starts to come through felt washer on inner side of wheel.
I—Replace standard hub cap securely.
J—Repeat above on other wheel.
Dope both universal joints.
K—If joints are equipped with Alemite dope until grease can just be felt inside leather boot.
L—On joints having standard plugs proceed as follows:
1. Remove plug and install Alemite fitting.
2. Dope until grease can just be felt inside of leather boot.
3. Remove Alemite fitting and replace plug securely.
4. Repeat on other joint.
M—If grease can be felt in boot, remove in inserting screwdriver under small end of boot and squeezing out grease.
Dope fan—cars before R56,000 approximately.
1. Remove fan assembly from car.
2. Disassemble and pack hub full of grease.
3. Reassemble—bearings must have .010 in. end play.
4. Replace fan assembly on car, adjusting belt to proper tension. Tighten spindle nut securely.
N—Oil fan—cars after R56,000 approximately.
1. Remove filler plug.
2. Fill fan hub full of clean cylinder oil.
3. Replace plug securely.
O—Lubricate clutch release bearing—cars under R55,000.
1. Remove filler plug from transmission and fill with cylinder oil to within 2 in. of top.
2. Install special filler plug in which tire valve is mounted.
3. With engine running apply 100 lb. air pressure to transmission and push down clutch pedal repeatedly until noise in clutch release bearing, if any, disappears. This may require air pressure for as much as three minutes.
4. Remove special filler plug and replace standard plug securely.
Oil spring leaves.
P—Jack up frame sufficiently to take all weight off one spring.
Q—Oil leaves freely, using long oil gun.
R—Remove jack and repeat on the other three springs.
S—Wipe off surplus oil.

Group 17—Frame

1—Replace frame 50.0
2—Rerivet one bracket or one end of one cross member without disassembling 1.2
3—Straighten one end of one side rail without disassembling ... 4.0
4—Straighten one end of one side rail when disassembling is required 6.3

Group 18—Body—Open

1—Tighten body to frame bolts 0.8
2—Stop rattle at one door 0.2
3—Replace one half of one door hinge 0.4
4—Shim body to get correct clearance around one door 1.0
5—Stop any body squeak ....
6—Stop rattle of robe rail 0.4
7—Replace robe rail 0.4
8—Tighten toe and floor boards 0.3
9—Stop rattle at dash 0.6
10—Install any necessary tacks in body upholstering 0.5
11—Replace one door 3.0
12—Repair upholstery ....
13—Repair body ....
14—Paint body only ....
15—Paint body and chassis ....

Digitized by Google

16—Paint car complete ....
17—Replace one door bumper 0.2
18—Replace either roadster baggage compartment lock 1.0

Group 18A—Bodies—Closed

1—Tighten body to frame bolts. (Use operation 18-1) 0.8
2—Overhaul one door lock ....
3—Replace one door hinge ....
4—Overhaul one window lift—slide type ....
5—Overhaul one window lift—crank type ....
6—Stop rattle at one window guide ..
7—Repair or replace robe rail .... ..
8—Tighten toe and floor boards ... 0.5
9—Stop rattle at dash. (Use operation 9) 0.6
10—Replace one windshield glass .. ..
11—Replace one window glass .... ..
12—Repair upholstery ....
13—Repair body ....
14—Paint body only ....
15—Paint body and chassis ....
16—Paint car complete ....
17—Replace one door bumper 0.3
18—Replace old style with new style door bumpers ....
19—Replace coupe deck lock 1.0

Group 19—Windshield

1—Tighten windshield to body 0.4
2—Replace windshield to body cushions 1.0
3—Stop squeak at windshield to body bracket ....
4—Replace one windshield glass... ..
5—Replace any part of windshield requiring disassembling 2.0
6—Replace windshield assembly.... 1.0
7—Replace lower windshield weather strip 0.3

Group 20—Top

1—Dress top and curtains 2.7
2—Repair top or side curtains .... ..
3—Replace necessary curtain fasteners on top, body, windshield or curtains 0.8
4—Replace top complete ....

Group 21—Fenders and Running Boards

1—Remove one front fender 1.2
2—Install one front fender 1.8
3—Remove one rear fender—touring or sedan 0.8
4—Install one rear fender—touring or sedan 1.2
5—Remove one rear fender—coupe or roadster 1.5
6—Install one rear fender—coupe or roadster 1.5
7—Enamel one fender 2.7
8—Bump out and re-enamel one fender 4.7
9—Bump out fender on car 1.0
10—Tighten all fender bolts 1.0
11—Take rattle out of one fender... 1.5
12—Take squeak out of one fender.. 0.5
13—Replace headlamp tie rod 0.5
14—Replace one runningboard assembly 2.0
15—Replace one runningboard bracket 0.7
16—Replace one runningboard binding 0.6
17—Replace one runningboard matting 2.0

Group 22—Hood, Hood Sills and Splash Pans

1—Line up and fit hood 0.5
2—Remove hood 0.2
3—Install hood 0.5
4—Install one piece of hood lace .. 0.3
5—Replace one hood corner leather or fastener bumper 0.3
6—Replace one hood handle or fastener clamp bracket 0.5
7—Replace or tighten one hood fastener 0.3
8—Enamel hood ....
9—Bump out and re-enamel hood .. ..
10—Tighten bolts in one hood sill .. 0.3
11—Replace one hood sill 0.5
12—Enamel one hood sill or front splash guard ....
13—Remove one front splash guard 0.4
14—Install one front splash guard ..0.6
15—Bump out and enamel one splash guard ....
16—Tighten front splash guard 0.4
17—Tighten engine to frame pan ... 0.4

Group 23—Tire Carrier

1—Replace tire carrier assembly, one bracket or cross tube 3.0
2—Replace tire carrier ring 1.0
3—Replace or straighten cross tube rod 0.5
4—Take rattle out of cross tube .. 0.4
5—Straighten cross tube on car ... 0.5
6—Replace spare rim clamp bolt .. 0.6
7—Take rattle out of tire carrier.. 0.4
8—Replace one tire wheel carrier brace 0.3

Group 24—Miscellaneous

1—Wash and polish—open car 1.7
2—Wash and polish—closed car .. 2.0
3—Simonize—open car 3.3
4—Simonize—closed car 4.7
5—Inflate all tires 0.2
6—Install license tags on new car .....No charge
7—Replace license tags 0.2
8—Take out rattle by tightening .. 7.0

A—Tighten all spring rebound clips—eight rear and six front. Shorten spacers if necessary.
B—Tighten all spring to axle clip nuts—sixteen.
C—Tighten all spring shackle bolts—four each front and rear. Spring action must be free and nuts properly locked—use new star washers if necessary.
D—Shim all four spring front bolts as required.
E—Tighten tie rod clevis bolts and clevis clamp bolts. Steering must be as free as before tightening.
F—Tighten radiator to frame.
G—Tighten hood ledges to frame.
H—Tighten head lamp bracket to fender bolts.
I—Tighten all fender bolts.
J—Tighten running board brackets to frame and running boards to brackets. Be sure spacers are tight.
K—Tighten body to frame bolts.
L—Tighten gasoline tank brackets to frame bolts.

Standard-8 Uses Airplane Lubrication System

THE Standard 8, Model 98, is using an airplane system of lubrication. The oil is carried in a separate crankcase. This separate department is a 3-gallon container, anchored to the frame, under the right front fender. Oil flows by gravity through a flexible tube to the crankcase, whence it is pumped upwards to the cylinders, bearings, rods and other moving parts. It then drops to the base of the engine and is pumped back into the container, being cooled and refiltered before again making its circuit through the engine. Another feature of the system is that the oil tank can be filled without lifting the hood. The oil filler and gage are in the hood board, and are visible at all times.

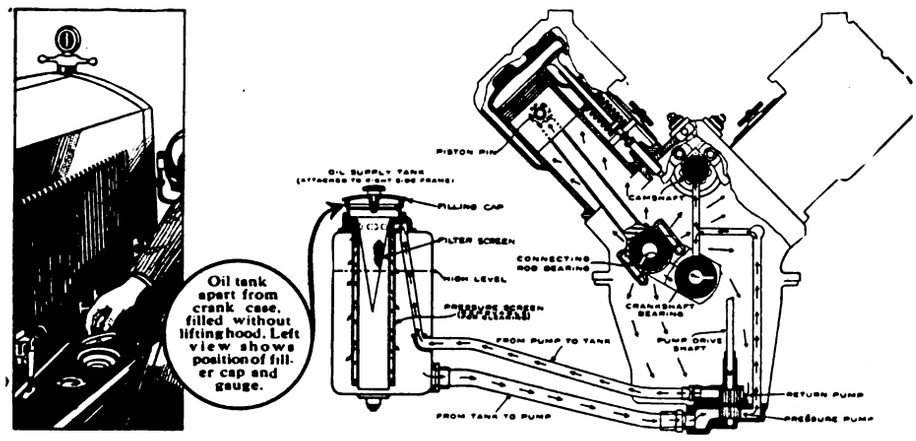

Diagram showing operation and principle of airplane lubrication, as used on the Model 98 Standard 8

Counter Register Eliminates Lost Records

A System That Protects the User from Loss Through Failure to Bill Customers for Labor and Material

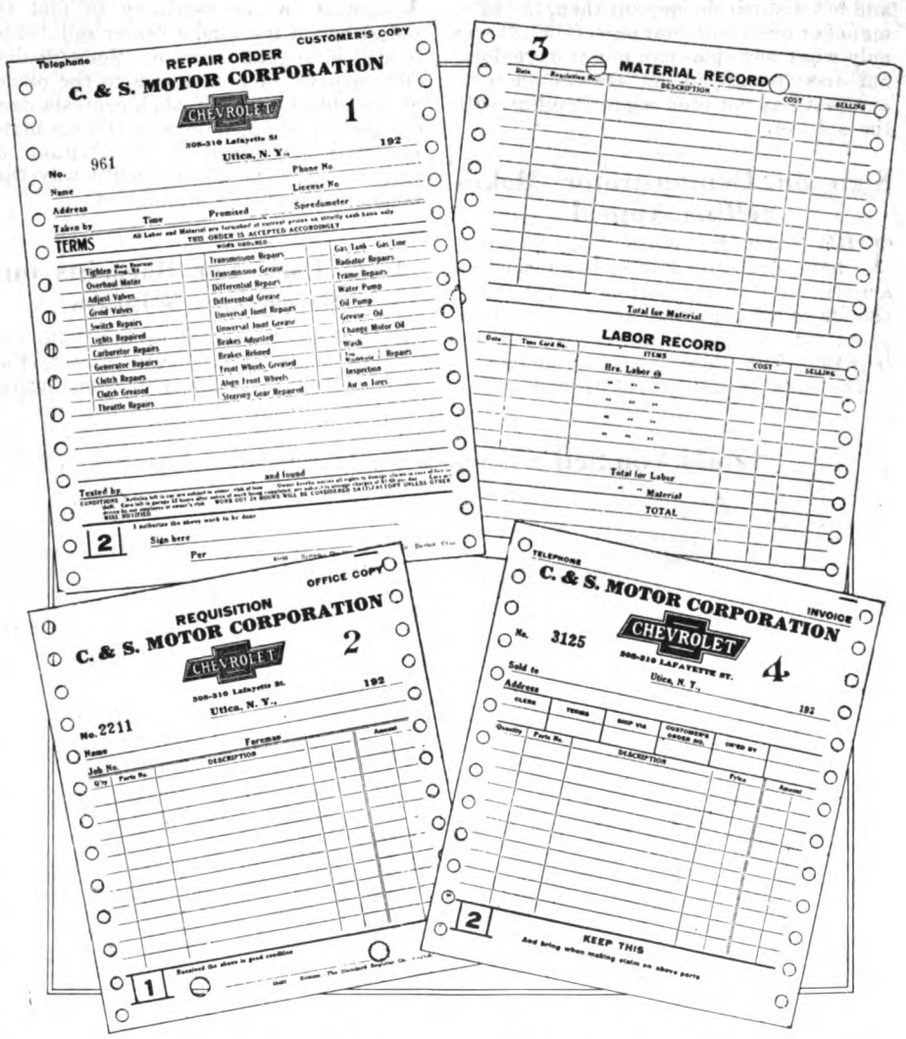
A RIGID check on the sale of parts and labor is maintained by the C. & S. Motor Corp., Utica, N. Y., through the use of Standard counter manifold registers. The original record of every transaction is made on these registers. Leaks resulting from lost records have been entirely eliminated.

Three registers are used in the service and parts departments, and each provides triplicate records. The repair order is made out on one, a second is used for parts requisitions, and the third is used for invoices and counter sales of parts and accessories; also is used combined with a cash drawer.

The face of the repair order is shown at 1 in the illustration. This order is signed by the customer. The original goes to the office, the duplicate to the customer showing him what he signed for, and the triplicate, which is printed on heavy manila paper, is placed in an open face holder and attached to the car, as instructions to the foreman or mechanic what work to do.

Time cards bearing a number and mechanic's name are made out in the shop as work is done. These cards are forwarded to the office. Material required for the work is drawn from the stockroom on the requisition shown at 2. The original of this requisition goes to the office, the duplicate is placed in the holder containing the triplicate of the repair order, and the third is retained by the stockroom for its perpetual inventory record. This form has two amount columns so that both the cost and selling price of the material may be inserted.

The reverse of the office copy of the repair order is shown at 3. This form is filled out in the office from the time cards and the parts requisitions. When the job is completed, the shop copy of the order and the copies of the parts requisitions in the holder with it, are forwarded to the office. The invoice is made out on the form shown at 4. Only two items show on the invoice, total labor and total material, which are taken from reverse side of office copy of repair order. The material charges are supported by the duplicate or customer's copies of the requisitions, which are attached to the invoice.



The form at 4 is also used to record parts and accessory sales over the counter. Articles sold in this way are itemized on this form. In making inventory records, the stock clerk disregards the copies that record material sales without itemizing the articles sold. This material is covered by the shop requisitions and inventory records on it is made from them.

The form shown at 4 is also used to cover the purchase of material from other merchants for use in repairing customers' cars. Unless a memorandum is made at the time the material is purchased, there is a possibility that the customer will not be charged with the material. By making out a memorandum bill to him on the counter sales register at the time the material is purchased, as per job number, this possibility is avoided as the copy of this bill goes to the office and is entered on the reverse side of the office copy of the repair order.

With this system, the C. & S. Motor Corp. incurs no losses due to failure to bill customers for labor on material purchased. The forms on each register are numbered consecutively. If the office loses its copy of a record, the gap in the numbers shows the loss. And the information on the lost copy can be obtained from the duplicate in the shop or parts department.

In this installation of Standard registers, no provision is made for a locked-in record. In some models of this make of register, a copy of all transactions, consecutively numbered, is made which rewinds, and the record is locked in the machine. The management has the key to the register and can inspect it at any time and make comparisons with the original. This prevents changing the record after the form has been removed from the machine.

Forms Used by Service and Parts Departments

These forms are all made out in triplicate. 1—The repair order; 2—the parts requisition; 3—Reverse of repair order; 4—Invoice used for labor and material sales

Urged Buyer to Finance His Own Purchase

Suggesting Use of Bank Book as Collateral Security Helps This Salesman

H. RAYMOND AUGUR, sales manager for the Williams Motor Sales Co., Dodge dealers, Springfield, Mass., finds that his previous experience in a savings bank is an asset in car selling. He has an angle on thrift and the systematic disposal of monthly income that he is enabled to make helpful to his customers on numerous occasions. In such a simple matter as showing a prospect how he can pay in a stipulated amount immediately without losing interest at the bank, he has been enabled to close a deal in a number of instances. The party would say, "I don't want to draw out my money now, for the interest won't be declared for several weeks, and I shall lose six months' interest." By explaining that he could easily employ his bank books as collateral for a loan and not disturb the deposit then, the sales manager overcame that objection. It was only what any salesman might have done, but such points do not always occur to one that has not been made familiar with the subject.

Sign on Demonstrator Makes Selling Appeal

THE Crawford Auto Co., Birmingham, dealer in Fords, has placed an artistic sign on the bottom of the windshields of all cars that are used as demonstrators in small towns near Birmingham. The sign is easily removed.

The sign reads: "$181.07 and $35.80 per month for twelve months buys me. I'm from Crawford's; Phone Main 4391; 2225 1st Avenue, Birmingham, Alabama. Ford Dealers."

Don Maring, manager of Crawford's, explains the usefulness of this sign as follows: "The people in the small mining and rural towns around Birmingham do not know that a car can be bought on time, and they do not know when a car comes into the town whether it is a demonstrator or a private car. This little sign tells the whole story and is an introduction for the salesman to all the prospective customers in the towns."

Oldest Car Contest

IT is always interesting to institute a contest in the territory to find the oldest car of the kind a dealer sells which is still in regular service. Some dealers offer a prize of a new tire to the owner of the oldest car. By such contests dealers get some splendid advertising material and also focus local attention on the cars they handle in such a way that business usually is stimulated.

Lists Used Car Bargains on Salesroom Window

THE Fort Wayne Overland Auto Co., 126 West Washington Street, Fort Wayne, Ind., has this sort of an inscription painted on its main show window:

"USED CAR DEPARTMENT.

"To-day's best offers: ——"

This is painted in brilliant colors and quite large so that it is sure to attract attention. Then, each day, the concern lists some new offers or some old offers with different phraseology for listing them. In this way the most prominent sort of a display is given to the used car advertising, and the advertisements are kept constantly new and fresh and interesting.

Phone Calls Ask If Service Satisfies

THE Columbus Buick Co. calls on the telephone all owners who have had work done in the service station and inquire if it was satisfactory. In about two or three days after the car has left the service station an office employe, a girl who is noted for her tact, does this work. She tells the owner if it is not satisfactory to bring the car back for further work. It is found that this system is a good thing toward building up good-will among the owners of Buick cars.

Used Truck Rentals Help Pay

A TRUCK dealer in Little Rock, Ark., who has a few used trucks on hand, is making them help pay the overhead on handling them by renting them to parties of young people who wish to go on week-end picnics. By advertising this feature of his business and keeping in touch with the wholesale organizations of his town, he has been able to secure several jobs week-ends for his used vehicles. The parties pay a good rental for the trucks which includes payment for the time of the driver.

Sign on Used Car Gives Buyer Facts

IT would help you a lot in selling more used cars if a tag were attached to each used car on which would appear all these things:

Original price and present price.

Present condition and description of work done to bring car into its present good condition.

Complete pedigree (if possible).

Oil and gasoline mileage purchaser can expect to get.

Putting everything down in black and white like this would visualize the whole proposition to prospects much more successfully and would, therefore, help a lot in selling more cars.

Could You Sell a Huckster a Truck Like This?

This Ruggles truck is a traveling store in Columbus. The body was mounted on a 1-ton chassis. C. H. White, the Columbus fruit and vegetable dealer, fitted the truck with an electric bell which he rings to attract attention, instead of shouting his wares. The special body is 5 ft. high with glass windows on all sides. It was painted marble white, which gives it a neat, clean appearance and considerable attractiveness when contrasted with the vari-colored fruits and vegetables

Emergency Road Service Builds Tire Business

Combination of Aggressive Merchandising and Good Service Insures Permanent Business

TWELVE miles from Denver, on their way to Estes Park, with both road and weather conditions favorable, and with an early start and high hopes for a perfect day in the mountains; but stranded because needing a tire. Such was the recent fate of a Denver motorist, his family and some Eastern guests on their way to one of Nature's scenic treasure spots in the Colorado Rockies.

But the gloom didn't last long. A fifteen-minute walk to a farmhouse, a telephone call to one of Denver's alert tire firms and a half-hour of waiting for the delivery and placing of the needed new tire brought back all the cheerfulness with which that Sunday morning had begun, and the beckoning grandeur of the glistening mountain peaks became even more alluring than before.

The emergency road service that made these folks happy was supplied by Peters-Tucker-Littlefield, Inc. And the car owner was so impressed by the promptness and efficiency of the service that he soon bought two more tires; and he is now counted upon as one of the firm's steady customers. This concern provides free road service anywhere within the city limits, and takes care of distant emergency calls at surprisingly moderate charges.

This service, tire prices, allowances and other features of the business form the basis of monthly circular letters to a select but extensive list of individual motorists, supplemented by occasional newspaper advertising and attractive window displays. About 3000 dealers are also circularized every month, and special letters are sent to some 1500 commercial houses.

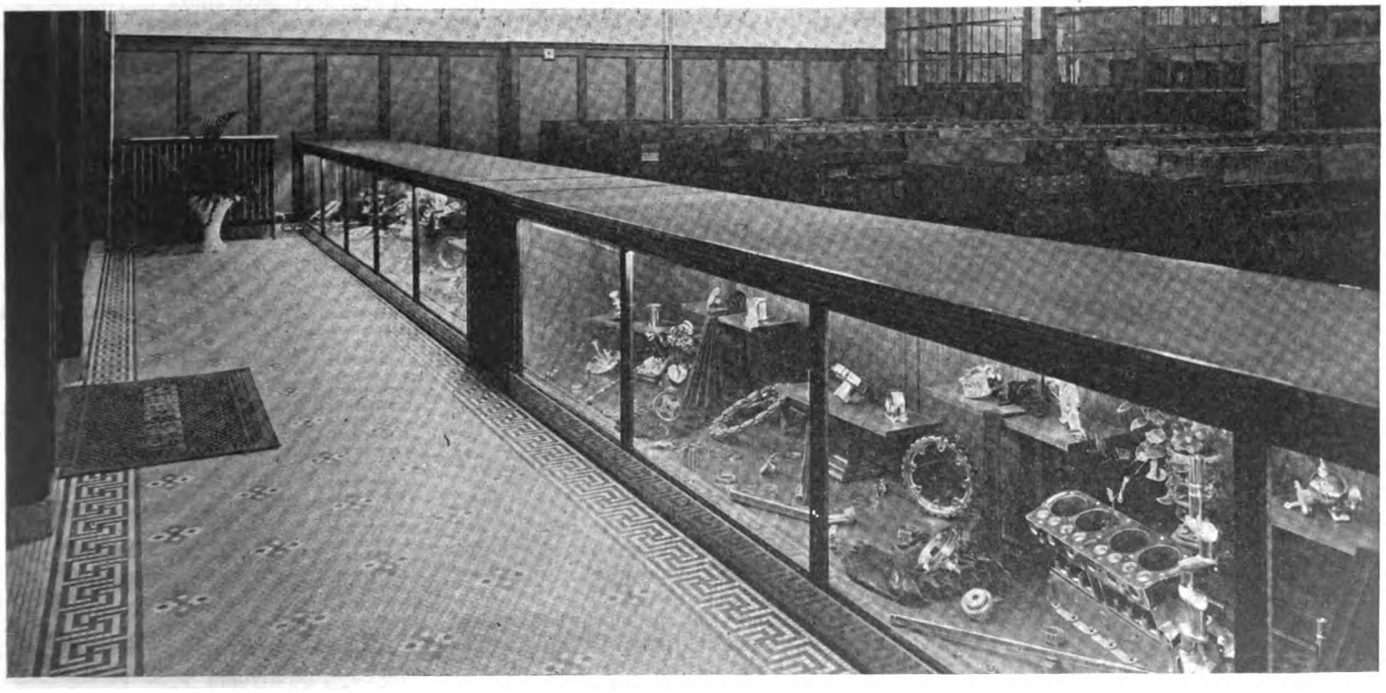
And there is plenty of hustling all the time by the members of the firm, who bring in business by calls in person and by telephone.

One of the letters used by this dealer follows:

"Dear Sir:

"With —— Tires now as low as $16.95 and up according to size, and —— Fabric Tires as low as $10.40. With —— Cord Tires as low as $20 and up according to size, and —— as low as $9.85—tire expense is no longer a serious proposition.

"And to reduce the cost still more, we make a generous allowance for your old tires, provided they are still in condition to be renovated for used cars offered for sale by dealers, whom we supply.



"There, it is false economy to hold on to your old tires too long. Why not hand them in as part payment and enjoy the gratification of new tires? The cost is now insignificant compared with the satisfaction, safety and service new tires provide.

"Better and more of it, OUR ROAD SERVICE FREE—that is, free, of course, excepting necessary repairs to tires and tubes, for which, however, our charges are so moderate you no longer wonder why the firm of Peters-Tucker-Littlefield is so rapidly forging to the front.

"The best tires for the money, the best service and NATURALLY the greatest following.

"If you are not already a patron, we assure you it will give us great pleasure to add your name to the growing list of those who realize that trading with us is mutually profitable."

Effective Use of Waste Space

Here is an excellent example of the effective use of space that is more or less wasted in many establishments. It is the parts salesroom of the Mendenhall Motor Co., Ford dealer in St. Louis. The counter has the usual hard finish top upon which parts are grouped for the purchaser, while the space under the counter has been turned into a beautiful display case by placing glass in the front of it and equipping it with electric lights

Gearset Operations on the Overland Four

Removing and Replacing Countershaft, Countershaft Gear, Bushings, Idler Gear Shaft, Gear and Bushing

REMOVING and replacing any one of the six units, countershaft, countershaft gear, countershaft bushings, idler gear shaft, idler gear and idler bushing can be done separately in the following time limits:

Removing and replacing countershaft	2.5 hr.
Removing and replacing countershaft gear	2.5 hr.
Removing and replacing countershaft bushings	2.8 hr.
Removing and replacing idler gear shaft	2.8 hr.
Removing and replacing idler gear	2.8 hr.
Removing and replacing idler gear bushing	3.0 hr.

1—With chain fall take the weight of the car off the springs.

2—Remove two ⅝ in. nuts from the spring bolts.

3—Drive out the bolts.

4—Remove cotter pin from brake rod and service brake pedal clevis pin.

5—Remove clevis pin.

6—Remove wing nuts from hand brake lever rod.

7—Disconnect speedometer cable from speedometer drive shaft.

8—Block up the torsion tube and roll out the rear end.

9—Drain the oil from the gearset and engine base by removing two plugs.

10—Remove 5/16 in. cap screws and nuts from the clutch pedal pads and remove the pads.

11—Remove the two floorboards.

12—Remove the clutch and foot pedal springs.

13—Remove the clutch pedal by taking out the ⅜ in. lock bolt, washer and nut.

14—Remove key from clutch fork shaft.

15—Disconnect foot brake rod from foot brake pedal and remove pedal.

16—Remove four 5/16 in. cap screws from gear shift box and lift out gear shaft box.

17—Remove gearset cover.

18—Block up gearset case.

19—Remove cap screws holding gearset assembly to engine base.

20—Remove gearset assembly and replace one starting motor cap screw.

21—Remove wire locking four clutch shaft bearing retainer cap screws and remove cap screws.

22—Drive out clutch shaft and bearing toward front of gearset case.

23—Pull out universal joint assembly and main shaft by driving out end of main shaft.

23—Remove three nuts and one castellated nut holding universal joint assembly to gearset case.

24—Pull out universal joint assembly and main shaft by driving out end of main shaft.

25—Lift out sliding gears.

26—Remove cotter key in case holding countershaft.

27—Drive out countershaft from front to rear.

28—Lift out countershaft gears, as shown in Fig. 1. If idler gear or gear shaft is to be replaced, drive out shaft from rear. Assemble new gear on idler shaft and replace shaft in gearset case.

If countershaft bushings are to be replaced, drive bushing out of gear and replace. Fit shaft to bushings and allow 0.003 in. clearance, before replacing gears in gearset.

If idler gear shaft or gear is to be replaced, drive out idler gear shaft, driving from rear to front of gearset.

If idler gear bushing is to be replaced, drive out old bushing and replace, fitting bushing to shaft with about 0.003 in. clearance before assembling in gearset.

29—Place countershaft gears in position.

30—Drive in countershaft and replace cotter pin.

31—Replace universal joint assembly and main shaft in case at the same time placing sliding gears on main shaft. Tap universal joint lightly until the bearing and shaft are in position.

32—Put on three lock washers and nuts and one castellated nut holding universal joint to gearset housing. Cotter pin castellated nut.

33—Replace clutch shaft assembly and tap lightly until in place.

34—Replace front annular bearing retainer and fasten with four cap screws and lock washers.

35—Lock cap screw washer with wire.

The hub of the driven disk in the clutch must be centrally aligned so that the clutch shaft will enter splines of driven disk.

36—Remove starting motor cap screw and replace gearset, pushing clutch shaft through as far as possible.

37—Put brake pedal on clutch operating shaft and put key in shaft. Put on clutch pedal and depress. This will pull the gearset into place.

38—Bolt gearset securely to engine base.

39—Install starting motor and bolt securely.

40—Connect speedometer cable.

41—Roll rear end in place (two men necessary).

42—Let body down so that springs line up with shackles and put in shackle bolts.

43—Let down body and remove chain falls.

44—Replace clutch cover plate.

45—Replace gear shift box, making sure that gearset gears and shifting gears are in neutral.

46—Fasten emergency and foot brake rods and attach springs.

47—Replace pedal pads, fastening with bolts, lock washers and nuts.

48—Put in floor boards.

Better Mechanics

ARTICLE No. 247

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

To Remove and Replace Gearset Unit

(The time for this operation is 1.8 hr.)

1—With chain fall, take weight of car off springs.

2—Remove two ⅝ in. nuts from spring bolts.

3—Drive out bolts.

4—Remove cotter pin from brake rod and service brake pedal clevis pin.

5—Remove clevis pin.

6—Remove wing nut from hand brake lever rod.

7—Disconnect speedometer cable from speedometer drive shaft.

8—Block up torsion tube; roll out rear end.

9—Drain oil from gearset and engine base by removing drain plugs.

10—Remove 5/16 in. cap screws and nuts from clutch pedal pads and remove pads.

11—Remove two floor boards.

12—Remove clutch and foot pedal springs.

13—Remove clutch pedal by taking out ⅜ in. lock bolt, washer and nut.

14—Remove key from clutch shaft fork.

15—Disconnect foot brake rod from foot brake pedal and remove pedal.

16—Remove four 5/16 in. cap screws from gear shift box and lift out box.

17—Remove gearset cover.

18—Block up gearset case.

19—Remove cap screws holding gearset case to engine.

20—Remove gearset case.

The hub of the driving disk in the clutch must be aligned so that clutch shaft will enter splines of driven disk.

21—Replace gearset, pushing clutch shaft through as far as possible.

22—Put brake pedal on clutch operating shaft and put key in shaft. Put on clutch pedal and depress. This will pull gearset in place.

Digitized by Google

23—Bolt gearset securely to engine base.
24—Install starting motor and bolt securely.
25—Connect speedometer cable.
26—Roll rear end in place (two men).
27—Let down body so that springs line up with shackles and put in shackle bolts.
28—Put on shackle bolts nuts and cotter pins.

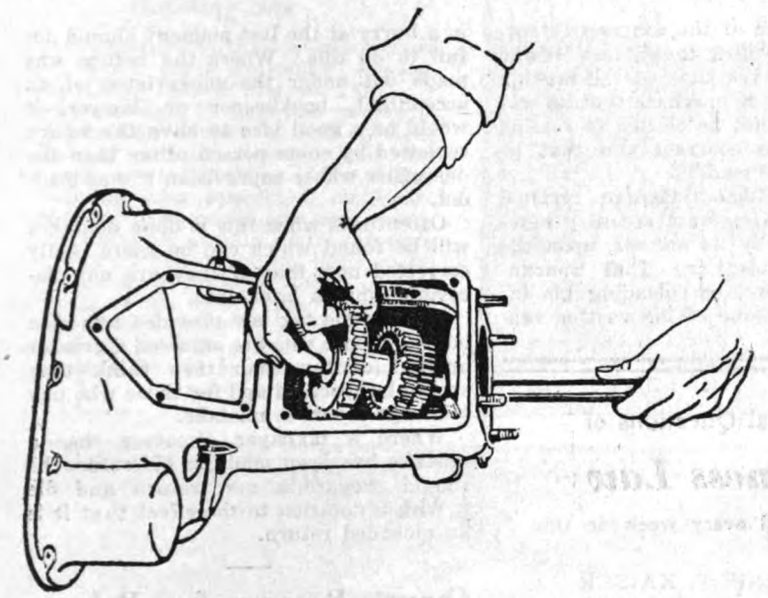

Fig. 1—Removing the Overland Four countershaft gears from the gearcase

4—Remove gear shift box.
5—Remove split pin from shifter form shaft holding shaft to housing.
6—With drift punch, drive out shifter fork shaft far enough to remove shifting fork on shaft, as in Fig. 2.
7—Assemble new shifter fork on shaft.
8—Drive shaft to position and pin.
9—Put on gear shift housing.
10—Replace four lock washers and cap screws and tighten.
11—Connect brake rod to hand brake lever with wing nut.
12—Install floor boards.

To Remove and Replace Gearshift Lever

(The time for this operation is 0.3 hr.)

1—Unscrew ball from top of gear shift lever.
2—Pull out cotter pin from gear shift lever spring retainer.
3—Remove the gear shift lever spring retainer and spring.
4—Remove gear housing cap.
5—Drive out pin with drift punch and remove gear shift lever.
6—Assemble gearshift lever in position.
7—Insert pin.
8—Put on gear shift housing cap.
9—Put on gear shift lever spring.
10—Put on gear shift lever spring retainer and cotter pin.
11—Screw the gear shift lever ball in place.

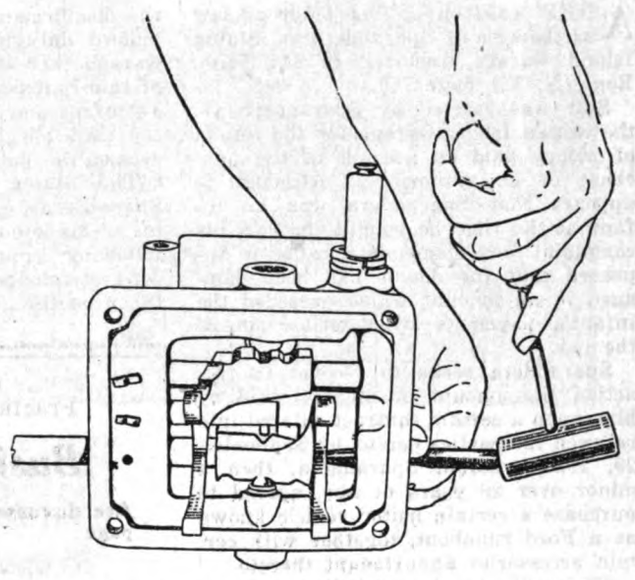

Fig. 2—Removing the shifting fork from the Overland Four gearset

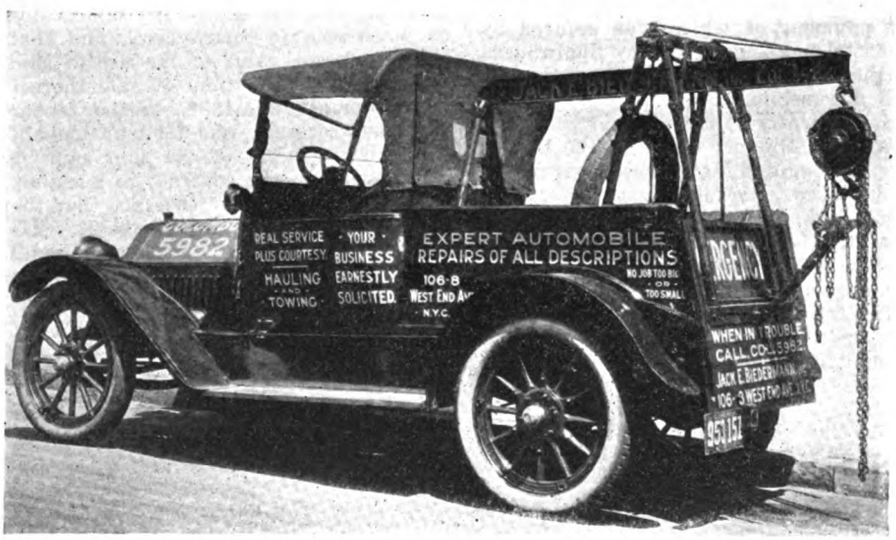
29—Let down body and remove chain fall.
30—Replace clutch cover plate.
31—Replace gearshift box, making sure that the gearset gears and gear shifting forks are in neutral.
32—Fasten emergency and foot brake rods and springs.
33—Replace foot pads fastening with bolts, lock washers and nuts.
34—Put in floor boards.

To Remove and Replace Gearshift Housing

(The time for this operation is 0.3 hr.)



1—Remove floor boards.
2—Remove hand brake adjusting wing nut.
3—Remove brake rod from lever.
4—Remove four 5/16 in. cap screws and lock washers from gear shift housing.
5—Remove gear shift housing.
6—Place gearset sliding gears and gear shift lever in neutral.
7—Place gear shift housing in position on gearcase.
8—Tighten with four 5/16 in. lock washers and cap screws.
9—Install brake rod, adjusting with wing nut.
10—Put in floor boards.

To Remove and Replace Gearshift Lock

(The time for this operation is 0.5 hrs.)

1—Remove floor boards.
2—Remove hand brake wing nut.
3—Remove four 5/16 in. cap screws, holding gear shift box to gearset case.

This Service Car Makes 'em Look

Jack E. Biedermann, who has a repairshop in New York, has constructed this towing car, which is painted a bright green with white lettering. The hoist is so placed in the car that it can be used for lifting, towing or pulling. A complete set of service tools and equipment is carried in tool chests in the rear of the car and these are kept in the boxes at all times so that the car is ready to respond to any kind of a call at a minute's notice. The lettering forms an attractive advertisement and with the bright colors attracts attention

Care Should Be Used in Selling Minors

Interesting Decision in New York Dismisses Minor's Complaint in Staten Island Garage Case

A NEW case on an old point of law is the case of Sparandera vs. Staten Island Garage, reported in 117 Misc. Rep. (N. Y.) page 780.

Suit was started by Sparandera vs. the Staten Island Garage for the return of money paid on account of the purchase of an automobile. Although it appears that Sparandera was an infant at the time he bought the car, his complaint was dismissed because it appeared that the dealer had been damaged in an amount which exceeded the infant's payments by deterioration of the car.

Sparandera seeks to recover in this action the amount of moneys paid by him, upon a certain contract entered into between the parties hereto, on September 29, 1920, wherein Sparandera, then a minor over 20 years of age, agreed to purchase a certain motor vehicle known as a Ford runabout, together with certain accessories appurtenant thereto.

The contract price, including war tax, freight and fuel, was $524.88, and the amount of the accessories purchased, including charges for fire and theft insurance, covering said automobile for one year was $181.34, or a total purchase price of $706.22. On this last-mentioned amount Sparandera paid to the Staten Island Garage the sum of $235.46 on September 29, 1920, the date of the delivery of automobile and accessories in question, and for the balance of said purchase price, amounting to $470.76, Sparandera executed and delivered to the garage his 12 certain promissory notes in writing, each for the sum of $39.23, the payment of which was secured by a chattel mortgage given by Sparandera to the Staten Island Garage upon the said automobile.

Subsequently at the office of the Commonwealth Finance Corp., at 100 Broadway, Borough of Manhattan, Sparandera paid three monthly installments of $39.23 each, during the latter part of the months of October, November and December, 1920, in payments of notes then due, aggregating the sum of $117.69.

The total payments made by Sparandera under his contract, including a horn, amount to $358.15. The automobile from the date of its purchase on September 29, 1920, to February 28, 1921, a period of five months, was in the possession of Sparandera. It appears that prior to the commencement of the action Sparandera rescinded the contract under consideration and demanded the return of the amount of moneys paid on account thereof, and tendered the said automobile to the garage, which demand and tender were refused by the latter, and it further appears in the complaint, undenied by answer, that at the time of the disaffirmance of the contract "Sparandera duly notified the Staten Island Garage that at the time of the making of said contract of purchase that he was an infant and that he elected to rescind the said alleged contract and that he deemed the same void."

The Staten Island Garage resisted Sparandera's claim for a recovery herein, as disclosed by its answer, upon the following grounds: (a) That Sparandera is estopped from pleading his infancy on the ground of his written representation made to the garage that he was 21 years of age; (b) that an infant cannot recover upon an executed contract; and (c) that at the time Sparandera tendered the automobile to the Staten Island Garage, it had deteriorated in value, and was not of the same value as when sold to Sparandera; and that the reasonable value of the use of said property from the time of sale thereof on September 29, 1920, to the tender made as aforesaid, was $500, an amount which is in excess of the sum paid by Sparandera on the contract in question.

The court said that the fact that the infant represented himself to be 21 years of age when he signed the contract could not be used against him, and further, as it appeared that the automobile had materially depreciated in value and the depreciation amounted to more than the infant had paid to the dealer, the infant was not entitled to the return of the money he had paid in on account of the purchase price of the car. The infant's complaint was therefore dismissed.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Check Up Those Tax Returns

Every business man who filed his income tax return on or before April 1 should now examine the copy which he kept to see if everything is correct. Those men who made out their returns in a hurry at the last moment should not fail to do this. Where the return was made out under the supervision of an accountant, bookkeeper or lawyer, it would be a good idea to have the return reviewed by some person other than the one under whose supervision it was made out.

Oftentimes when this is done mistakes will be found which can be more easily corrected now than if they are not discovered until a later date.

The income tax law provides remedies both for those who are assessed a greater amount of tax than they think they should be assessed and for those who pay too large a sum in mistake.

Where a taxpayer discovers that a mistake has been made in his return he should prepare a new return and file it with a notation to the effect that it is an amended return.

Cannot Recover for Balance on Running Account

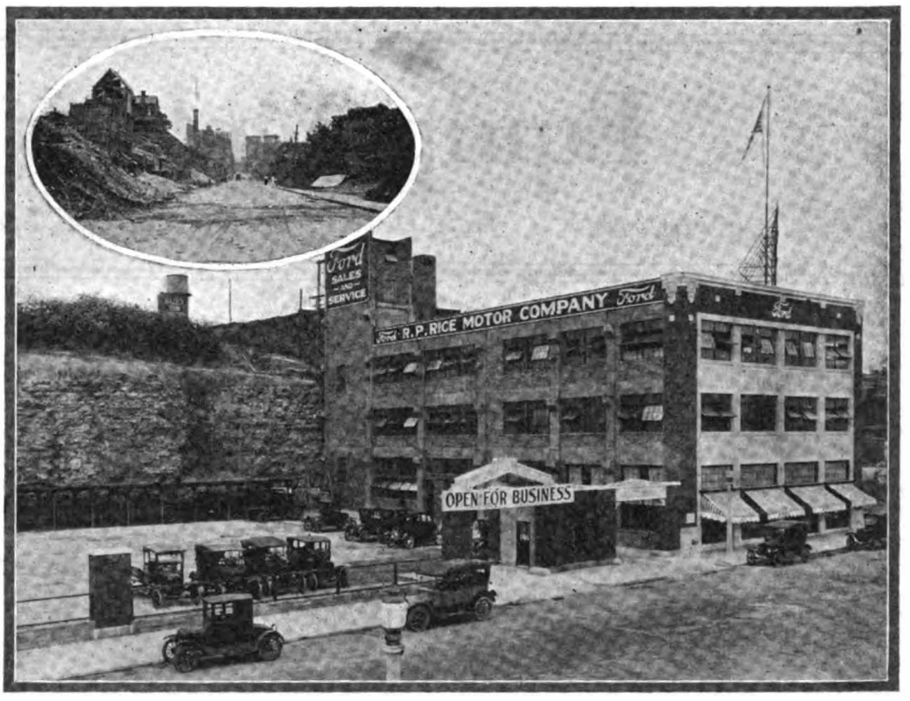
If a dealer keeps an open continuous running account with a customer and recovers judgment for less than the full amount, he cannot thereafter recover judgment for the balance, according to the St. Louis Court of Appeals.

A dealer was engaged in selling automobiles and automobile parts, accessories and supplies, and conducted a repairshop.

An account was opened with a customer for various items, consisting of repairs, parts, accessories, gasoline, oil, etc. The dealer claimed that although the sum of $396.35 had been paid, this constituted only a small part of the account.

When suit was instituted for the balance, however, the court held that by accepting the smaller amount the dealer had waived its claim for the balance and could not recover any more on the bill; having recovered once on the account, it forfeited its rights to a further recovery.—Pepper vs. St. Louis, 187 S. W., page 109.

Washington Court Rules on Chattel Mortgages



In a recent Washington case, the Supreme Court of that state decided that where there is a chattel mortgage which covers a certain specified automobile in the stock of an automobile dealer, and the mortgagee gives no permission to the dealer to sell the mortgaged automobile, the mortgage is not a mortgage on a shifting stock of goods void as to third parties but is one which allows them to procure good title.—Hardin vs. State Bank of Seattle. 205 Pac. 382.

Ideas for That New Building

Foresight Used in Selecting This Building Site

The small picture in the upper left-hand corner shows what Baltimore Avenue, Kansas City, looked like in 1916. It required courage to buy this property. The R. P. Rice Motor Co. had to move the side of a hill to erect their new sales and service building. But before the building was completed, Baltimore Avenue had been paved and was carrying considerable traffic that formerly used Main Street. Now the Rice building is on a main highway and is located close to the heart of the city. The large parking space at the side of the building is especially popular because of its convenience to the business section

Salesrooms Like This Make Selling Easier

This is the salesroom of the R. P. Rice Motor Co., Kansas City, Mo. It is divided into two sections by a strip of carpet running from the entrance down the center of the room. At the right some comfortable furniture is arranged around a table. Car and tractor displays occupy the left side of the salesroom

Novel Stockroom Location Speeds Deliveries

This view into the stockroom of the General Auto Supply Co., Harrisburg, Pa., is taken from the salesroom floor. The stock is carried on the main floor and on the mezzanine balcony. The shipping room is located at the rear of the stockroom. This arrangement simplifies delivery. Stock may be taken from the shelves and delivered over the counter or to the shipping room without lost motion

Digitized by Google

Equipment to Sell

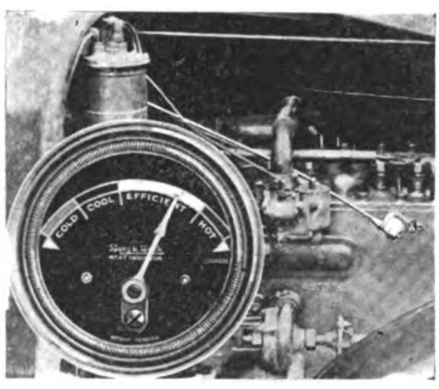
New Devices for the Car and Truck

Mirra Piston Pin

Burton-Rogers Co., 755 Boylston Street, Boston.

The pistons are machined from solid bar steel, S. A. E. specifications and the grinding is done on centers. The grinding is done to limits of .0002 in. They are especially hardened by a process which removes scale from the inside of the pin.

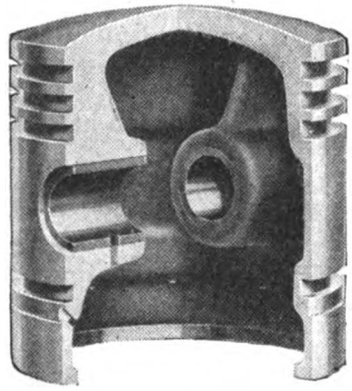
Hete-Pruf Piston Ring



The Zinke Co.,
1315 Michigan Avenue, Chicago.

The ring is a one-piece step cut piston ring with machined or quick seating surface and ground sides. It is claimed to be proof against heat action up to 700 deg.

Borg & Beck Heat Indicator



Borg & Beck Co.,
920 South Michigan Avenue, Chicago.
Price $8.50.

The heat indicator records the temperature existing in the engine on a dial gage installed on the instrument board. The actuating unit is clamped directly against the engine and contains a sensitive thermostat which is small in size but positive in action and any slight variation of the temperature of the engine causes it to expand or contract in direct proportion to the degree of heat or cold. The temperature ranges are designated on the dash indicator by contrasting colors. Indication on the dash is effected by a small gear segment and pinion which is self-connected when a turning motion is given to a flexible shaft, which connects the pinion with the pointer on the face of the dial.

Dowmetal Pistons

Dow Chemical Co., Midland, Mich.

The pistons are made from Dowmetal which is claimed to be the lightest of all commercial metals. The metal is made by electrical treatment of the natural solution called brine, which is pumped from certain wells in Michigan. The metal is approximately one quarter the weight of cast iron. Prices range from $6.75 to $11 per piston.

Klaxon Model 16 Horn for Cadillac 61

The Klaxon Co., Newark, N. J.
Price $25.

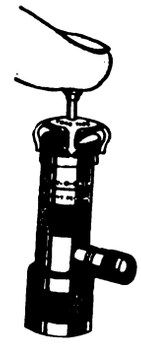
A new model electrical motor driven horn now standard equipment on the Cadillac 61. The adjustment on this model is made absolutely rigid by two adjusting lock nuts on either side of the motor. Wear is taken up by a simple kind of a lock nut. The shaft of the motor armature revolves on ball bearings at both ends. The back shell of the instrument exposes all the vital parts, so that cleaning can be accomplished. The note of the new horn is high pitched and very penetrating.

Rexoid Transmission Lining for Fords

Thermoid Rubber Co., Trenton, N. J.

The transmission lining is treated with a compound which is insoluble in oil so that the compound will remain in the fabric retaining in the lining the braking power and preventing contamination of the oil supply. Packed in cartons, each containing the lining and rivets necessary to reline the transmission of one car.

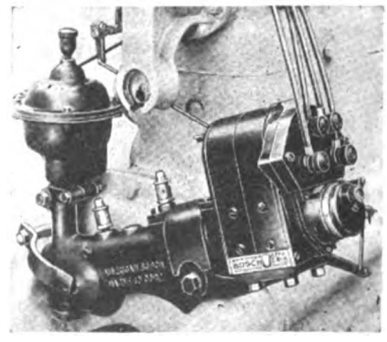
Empire Valve Cap



Empire Sales Co., 90 Silliman Avenue, Bridgeport, Conn.

This dust cap is made from solid brass rod, heavily knurled on the outside. The rubber cushion on the inside of the cap is made from material which will seal the air in the tube, even if the valve inside should leak. Ears will not break off when inserting or removing the valve inside.

Test-O-Cap Dust Cap and Tire Gage



Griest Mfg. Co., New Haven, Conn.
Price $6 per set of four.

A combined dust cap and gage which is operated by pressing the button on the top. If the arrow rises the tire has sufficient air and if it does not move at all, the air supply is too low. If the arrow point on the cap rises above the bottom edge of the red band, the tire is over-flated. The tire is inflated from the side.

Bosch Magneto Attachment for Fordson Tractor

American Bosch Magneto Corp., Springfield, Mass.

A new fitting for equipping the Fordson tractor with Bosch magneto. A Bosch governor has also been brought out which can be mounted directly on the Bosch magneto fittings, being driven by the camshaft gear, which is the same gear used for driving the magneto. The magneto fitting is supplied with or without the governor, and with either ZR or DU type of magneto. It fastens on the front of the engine. Bosch impulse starter coupling, or Bosch adjustable coupling, can be made part of the equipment.

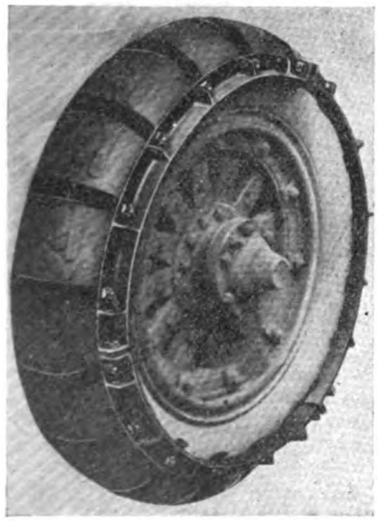
Digitized by Google

Handy Governor for Fords and Fordsons

Handy Governor Corp., Dearborn, Mich.
Price $15

The governor is operated entirely by the speed of the inlet gases passing through the manifold to the engine. The inlet gases impinge upon the flat plate which acts on the throttle valve. This valve is offset so that the gases exert an effort tending to close it. As the pressure changes on the throttle valve, the valve moves accordingly to permit the proper quantity of gas to enter the engine to maintain the proper speed. It is made in three models—one for Ford cars, one for Ford trucks and one for Fordson tractors, all the same price.

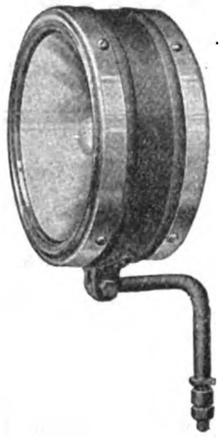
Standley Foot Rest No. 347



Standley Mfg. Co., Boone, Iowa.
Price 50 cents.

A foot rest to be placed in back of the accelerator pedal. It is made of pressed steel formed to fit the arch of the shoe and elevate the heel from the footboard. Finished in black baked enamel.

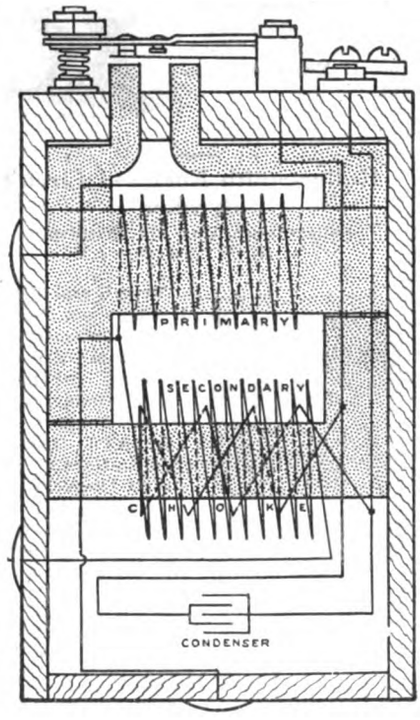
Foley Traction Rim for Pneumatic Tires



Foley Traction Rim Co., 109 Tenth Street, Minneapolis

The traction device consists of a number of bands of iron bolted to a rim on each side of the tire. The rims are in three sections and bolted to each other so that the device can be put on or taken off without unfastening the cross bands.

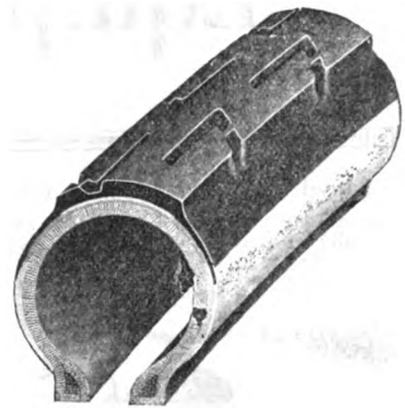
K-D Drum Type Headlamp for Fords



K-D Lamp Co., Cincinnati, Ohio
Price $10 per pair in black and nickel

A drum shape head lamp for Fords, the body being drawn in one piece from suitable gage metal. All plated parts are brass and the bracket is a special forging, with a single bracket support for attaching to all Fords made since 1915. Adjustments can be made up or down or sideways. For all-nickel finish the price is $15, and dimmer bulbs $2 per pair extra. The diameter of the door is 9-in.

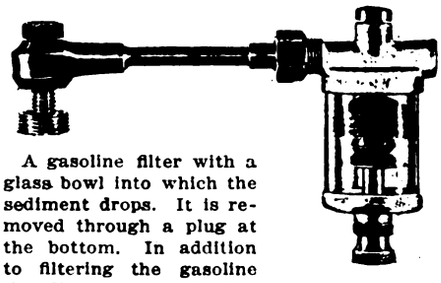
Varley Coil Unit for Fords



Autocoil Co., 151 Exchange Place, Jersey City, N. J.

A high tension ignition system for Fords employing four transformers utilizing current from the Ford flywheel magneto. The system is designed by Richard Varley. The flux has two paths, one through the leg containing the secondary winding and the other through the horns, air gap and armature. Under the secondary winding is another winding called the "choke" coil which, when its circuit is closed, and the primary energized, the current induced in it restrains the flow of flux under the secondary and forces some of it through the armature. At a suitable point in the current wave the magnetization of the horns overcoming the tension of the armature spring separates the contacts thus opening the choke coil circuit. It is said that the sparks obtained by the use of the new transformer have great heat value. One trouble claimed to have been overcome is the pitting of contacts and this is obviated by the fact that only induced current passes through the contacts and this is so small that pitting is inappreciable.

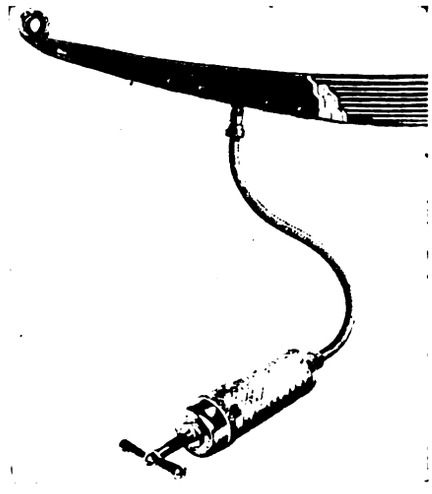
Amazon Cord Tire



Amazon Rubber Co., Akron, Ohio
Price $14.50 for 30 x 3½

The cord tires are made in both ribbed and non-skid tread and the range of sizes includes the 30 x 3½ Clincher Ford and light car size, as well as regular straight side 3½, 4½ and 5-in. sizes.

Van Gasoline Filter



Harris Co., Inc., 89 State Street, Boston.
Price $3.

A gasoline filter with a glass bowl into which the sediment drops. It is removed through a plug at the bottom. In addition to filtering the gasoline the filter shows whether the vacuum tank is functioning properly.

Alemite Lubricating Spring Cover

Bassick Mfg. Co.,
2650 North Crawford Avenue, Chicago.

A spring cover of all metal construction being made of lead-coated, non-rusting steel. There is no fabric or leather and the covers do not need to be removed to be refilled. An Alemite connection is fitted at the bottom and grease forced in by the use of the regular Alemite gun. Made in individual sets for all makes and models of cars.

Equipment for the Shop

New Machinery and Tools

Lloyd Portable Electric Drill

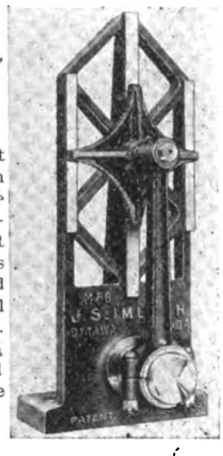
Lloyd Dynamo Works, Bremen, Germany.
Imported by G. W. McIver & Co.,
113 State Street, Boston.

Price $95 for ⅝ in. size.

The drill is of the universal motor type with aluminum casings, hemp cable, positive switch, S.K.F. bearings and Samson chuck. The motor is provided with a cooling system. It is made in ¼, ⅜, ½, ⅝ and ⅞ sizes together with drill stand. One-quarter in. price $40; ⅜ in. size price $59; ⅝ in. size $95; ½ in. size $70; ⅞ in. size $115; drill stand $35. All drills are equipped with 110 volt universal motors which will operate on either alternating or direct current.

Standard Auto-Lite Focuser

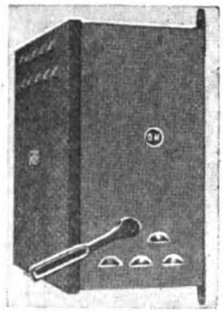
Fifield Bros. Co., 337 Water Street,
Augusta, Me.



A device for testing the focus of head lamps. It consists of a cylindrical barrel one end of which is placed against the headlamp lens. The light is reflected by a mirror placed at an angle of 45 deg. onto a screen which has a hood with an aperture at the top through which the image is seen by the operator. The shape and position of the image indicate the correct or incorrect focus of the headlamp.

Twistest Connecting Rod Alignment Jig

J. S. Imlach,
324 Catherine Street,
Ottawa, Canada.

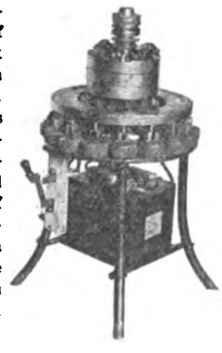


Price $24.

A tool that will test connecting rods both ways at the same time and which will magnify any errors that exist. Price includes one stock mandrel and indicator. Mandrel sizes to 2⅜ in. $5.50. Indicators, sizes to 1¼ in., $4 each. A Ford special Twistest price $12.

Roller-Smith Enclosed Circuit Breaker

Roller-Smith Co., 233 Broadway,
New York City.

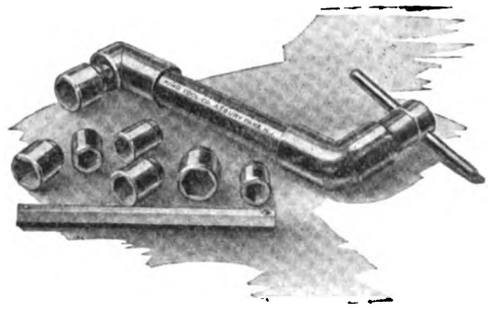


Type E and T circuit breakers are fully enclosed for safety and protection. The circuit breakers themselves are the industrial and standard type with certain necessary modifications. The circuit breakers are to be had in plain overload, under voltage, thumb grip, one and two time limit attachment.

Madison Unit Remagnetizer for Ford Magneto

Madison Battery & Service Co.,
250 State Street. Madison, Wis.

Price $75.

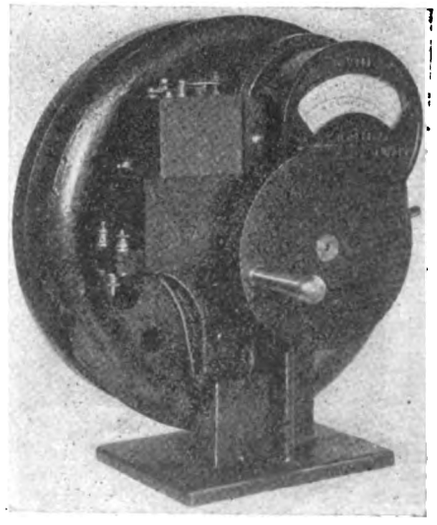


The device will remagnetize a set of Ford magnets without disassembling them from the flywheel. The current used is taken from the standard Ford storage battery and it is stated that the amount of time used is approximately the same as in starting the car. The single magnets from other magnetos can also be magnetized. The magneto support is spring mounted so that the magnets are drawn down by the pull of the coil and the springs raise the magneto clear when the current is turned off which gives the magneto a pounding action as often as the current is switched on and off.

Onli-1 Socket Wrench

King Tool Co., Asbury Park, N. J.

Price $7.50.



A socket wrench using two bevel gears, one on the handle shaft turning the main shaft in the tube, this in turn turning the socket shaft. If the nut is too tight to respond to the turn of the handle, the whole wrench can be made rigid from handle to socket by a simple adjustment of the socket pin. A set of six sockets fits sixteen sizes of bolts and nuts and there is an extension bar for unusually inaccessible places.

Allen Coil Tester for Fords

Allen Electric Mfg. Co., 2987 Franklin Street,
Detroit, Mich.

Price $65

The device uses genuine Ford magnetos and magnets and the coil is placed where it is easy to get at. It will test the magneto in the car and has a separate connection for horn and spark plugs. An alternating current ammeter registers the current output. The price without magnetos and magnets is $53.

Repairshop Shortcuts

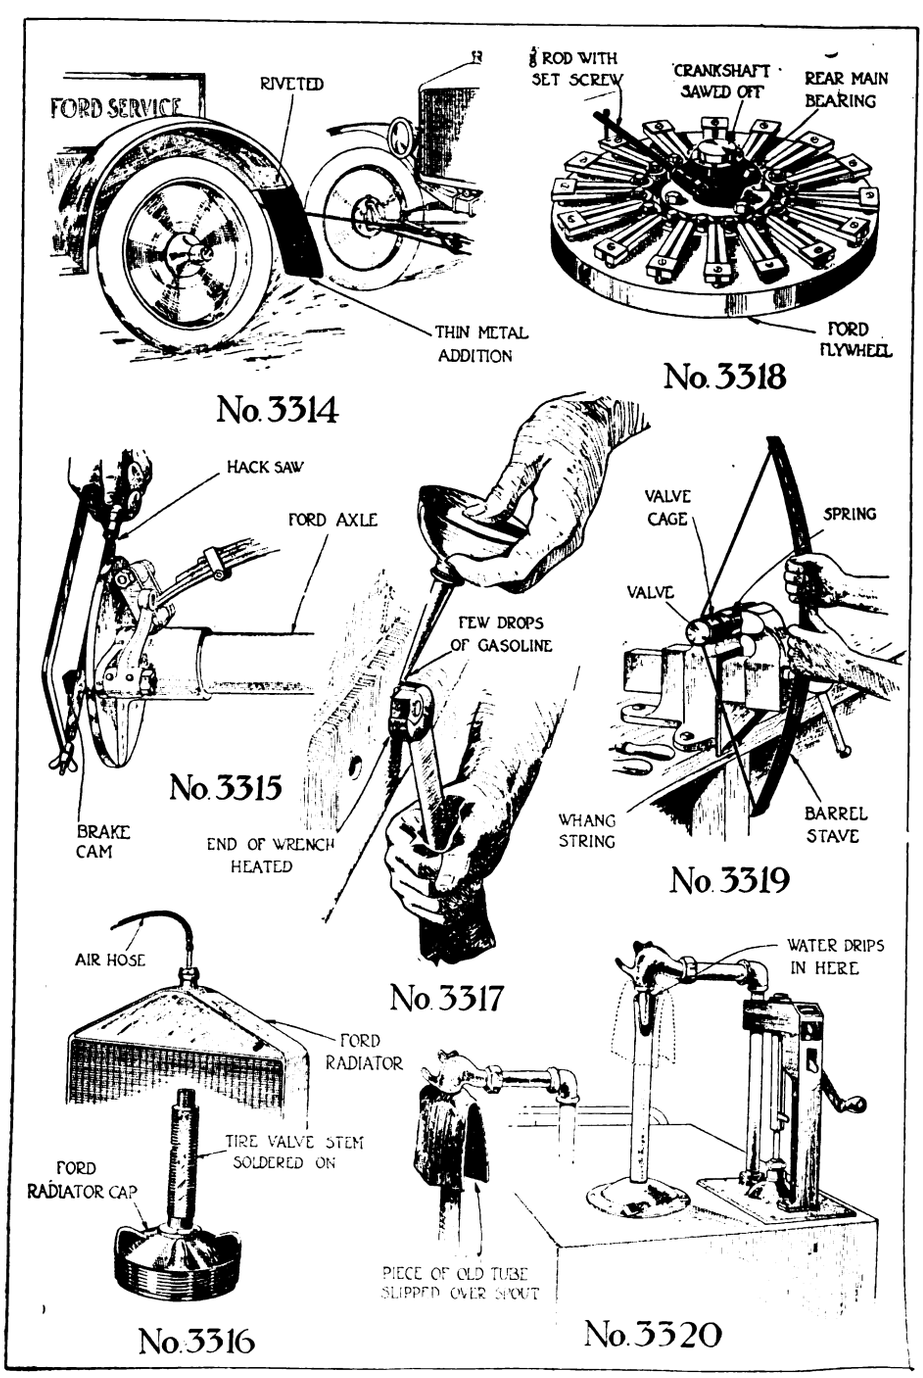
Have You Time to Think?

MAYBE it is a coincidence and maybe it is a reason, but it generally happens that the shops which are making profits are bristling with practical ideas and schemes to save time and do jobs better. The shops that are just rambling along seem barren of any such contrivances. Perhaps the shop head who takes time to think will find that the use of his brain will accomplish a good deal more than the work of his hands. Brains and hands can both make profits.

Each week Motor World publishes a page with seven practical ideas. If you really do not have time to think yourself, let these readers help you. Use some of these ideas as they are presented or with changes to meet your needs. If you have some good ideas, send them in. We pay $1 each for those accepted.

No. 3314—Keeping Mud from a Crippled Tow—To prevent mud being thrown on a towed car, light pieces of metal are riveted to the rear fenders of the tow car so that they hang down considerably lower than the regular fenders. If desirable, the lower end of these flaps can be braced to the regular fender with rods.—C. R. Stoflet, Kobe & Smith Auto Co., Scottville, Mich.

No. 3315—Removing Ford Brake Cam—A Ford brake cam is removed by sawing about one-third the way through the cam after removing the wheel. A blow with a hammer will break the cam off and the old piece can be taken out with the cam lever on it and put in a vise so that the rivets can be removed.—Fred S. Tatman, Manager, Cain's Garage, White Hall, Ill.



No. 3316—Testing Ford Radiators—A Ford radiator is tested by soldering a valve stem into a Ford radiator cap and plugging up the inlet and outlet and the overflow. Air pressure can then be applied through the valve.—R. M. Mallory, Mallory Motor & Auto Supply Co., Bucklin, Kan.

No. 3317—Removing a Frozen Nut—A nut which is frozen fast to a bolt is sometimes removed by heating the wrench. This heat expands the nut away from the bolt. Kerosene will assist in loosening it—Albert F. Stahle, New York City.

No. 3318—Lining Up Ford Magnets—Ford magnets are lined up on the flywheel by using an old connecting rod, sawing off the rod part and extending one of the bolts with a piece of ⅜ in. rod fitted with a set screw which is adjustable up and down to make the alignment.—Reader.

No. 3319—Grinding Buick Valve Cages—Buick valve cages are ground by holding the valve stem in a vise and turning the cage around with a bow made of a barrel stave and a whang string long enough to go around the valve barrel once.—C. J. Cross, H. H. Beltner, Overton, Neb.

No. 3320—Keeping Rain Out of a Gasoline Tank—Rain is kept out of a gasoline tank by using a piece of tube which is placed over the spout. The tube must be evenly balanced to prevent its slipping off the spout when it is hinged back.—Wm. Huppenbauer, New Brunswick, N. J.

No Big Drop Expected This Summer

SEASONAL DECLINE PROBABLE IN JULY

June Production May Prove to Be as Large as That of Last Month

NEW YORK, July 3—There is substantial reason to believe that production of passenger cars and trucks for June exceeded a quarter million.

A preliminary survey of the shipping figures for the first three weeks of the month indicates that the total will be larger than in May, when it reached 256,000.

It is almost certain to be as large. Output for the second quarter, therefore, will approximate 725,000.

Even to those within the industry it seems almost unbelievable that so many motor vehicles could have been absorbed in three months. With the country just recovering from a long period of depression, sales have been larger than ever before for a like period.

Seasonal Decline Inevitable

In the face of the tremendous business of the quarter just closing, it seems inevitable that there will be a seasonal decline this month. Spotty retail sales conditions in certain sections indicate that it already has begun, but there are no signs that it will approach the proportions of a slump.

The falling off in sales already apparent has been largely the result of local conditions and is by no means general. It has been in certain sections of the South and in some industrial cities. On the other hand, trade still is brisk in Tennessee and North Carolina and in many of the manufacturing centers.

Buying of passenger cars in the farm districts, up to this time, has been chiefly by business and professional men. The real farm market has not opened, and when this agricultural buying gets under way, it may do much to hold up the volume of business. July is certain to be a big month, although production will be smaller because several factories will close for inventory the first half of the month and all will be down over the Fourth.

No matter what happens in the remaining months of 1922, distributors and dealers will have had one of the best years in their history, and many of them will do better than ever before.

The parts and accessory branch of the business still is running at top speed. Many manufacturers have commitments running through September and some of them into October. Vehicle manufacturers are displaying caution, however, and will govern production by demand. In the face of an unprecedented demand, there is no disposition to be reckless.

SOME CITIES REPORT

MILWAUKEE, July 1—Dealers say that the retail demand is more spotted, having skimmed the cream of prospects, but that the June volume nearly equals May which was the heaviest month. A seasonal decline is looked for in July and August, but no marked slump is expected.

DES MOINES, July 1—Any change in retail conditions noticeable is toward slackening, but it is very slight and applies only to cities and larger towns. The farmer and small town business is showing signs of improvement.

ST. LOUIS, July 1—Retail automobile sales are holding up remarkably well and June will be as big as April and May for most dealers. A decline is expected in July.

BERKELEY, CAL., July 1—Retail automobile sales are keeping up with last month. Sales of Fords and medium priced cars are best.

PHILADELPHIA, July 1—Automobile sales are holding up fairly well. No decline as yet. Used cars are selling well.

Review of Country

NEW YORK, July 3—Motor World correspondents throughout the country have secured a review of the present conditions in the automobile sales field in their respective cities. These statements bear out in a measure the reports received by the Detroit manufacturers and are given above and on the following page.

GARLAND TAKES OVER WINTON IN NEW YORK

NEW YORK, June 28—The Winton Co. has announced that the Garland Automobile Co. of New York has taken over the Winton car sales in the metropolitan district. The Winton building at Broadway and 70th Street has been sold to the Studebaker Corp. and possession will be given on July 1.

After renovations, which are expected to be completed within thirty days, the building will be used as a supplementary salesroom and new car delivery department by the New York Studebaker branch.

DURANT MAY OBTAIN LOCOMOBILE RIGHTS

Likely to Be Bidder When Plant Is Put Up at Public Sale

NEW YORK, June 29—There is substantial reason for believing that the Locomobile, or a modification of it, will be added in the near future to the line of cars controlled by Durant Motors, Inc.

Bids for the property have been asked by the receivers of the Locomobile company, and when the day of the sale arrives one of the bidders undoubtedly will be Durant Motors. The situation is similar to that which resulted in the purchase of the Elizabeth plant from the Willys Corp. when it was auctioned off by the receivers under the direction of the Federal courts.

If Durant obtains the Locomobile plant and the right to manufacture the car, drastic reductions will be made in manufacturing costs so that the price can be reduced to a figure where it can compete with Cadillac and Lincoln.

Locomobile now has a six-cylinder engine while the power plants of Cadillac and Lincoln are eight-cylinder, but it would not be difficult to change the engine.

Rest of Line Competes

The Durant four and six will compete with the Chevrolet and the Buick, the most popular of the lower priced General Motors lines. The Star will compete with Ford with the prices exactly the same.

The present price of the Locomobile open models is $7,600, and if Durant brought it into the Cadillac price class he would have to make a reduction of more than 50 per cent.

While Locomobile has had an enviable record as an automobile, the company has been in almost constant financial difficulties and it has been found impossible to reorganize on a satisfactory basis since it was thrown into a receivership several months ago.

Truck Merger Completed

NEW YORK, July 1—Completion of the merger of the Selden and Atlas truck companies under the name of the Industrial Motors Corp. has been assured by the depositing for exchange certificates of more than 80 per cent of the Atlas stock and 70 per cent of both classes of Selden stock. It is stated that negotiations are progressing for the acquisition of other truck and parts companies, and that announcement of the completion of these negotiations may be made soon.

Sales Run Strong in Trade Centers

CHICAGO

CHICAGO, July 1—Retail sales of automobiles in Chicago continue at a high volume. Taken week by week, there has been some fluctuation through June. Sales for the week ending June 24 fell somewhat below sales for the preceding week. This week, however, shows unusual activity in virtually all lines, and it appears that the total for the week is likely to exceed any week this month. Some dealers are having a number of cancellations because of their inability to make deliveries. These sales usually are not lost to the industry, because the purchaser immediately buys some other car upon which he can get prompt delivery.

FORT WAYNE

FORT WAYNE, IND., July 1—Business has taken a spurt in this locality. Dealers in popular priced cars state that they cannot get enough cars to supply demands. Deliveries on certain models, particularly sedans, are not guaranteed under a month. Not only are the dealers experiencing greatly increased business, but all the manufacturers turning out automotive equipment are also feeling the same spurt. Part of the increase in local business is undoubtedly due to the impetus given by the beginning of actual construction work on the big truck plant of the International Harvester Co. here.

SPOKANE

SPOKANE, WASH., July 1—No material reduction in retail sales. Many firms will establish new high retail records this year, while others will be hampered because of the inability of their factories to supply the demand. Lower price cars are doing land office business. The president of the Spokane Automobile Chamber of Commerce expects the heavy retail sales to continue during July.

KANSAS CITY

KANSAS CITY, MO., July 1—Motor car dealers almost unanimously say that sales of passenger cars have been better the past week than any time this year, and that June has been a good month. This is true both of firms selling high priced cars and those selling low priced cars. Special conditions have helped some firms to build a really important volume of business in the past two or three weeks, such as announcements of new models and the entrance of new firms into the distribution, and the extraordinary efforts at publicity and selling that accompany such changes.

But both for those who have these special reasons for expecting increasing trade, and for the old established companies, the volume has been steadily growing in June. General conditions are largely responsible, with a bountiful wheat harvest in process of gathering and corn looking fine, and money already flowing more freely from the agricultural districts.

A difference of opinion is expressed, however, as to the comparison of this June's trade with last year's. Most dealers estimate it as larger, some say it is smaller. Dealers here are not expecting any retarding of trade, because they hear too much about the increases in other lines of business, especially contracting, which reflects better money conditions and readiness of business men to go ahead with expansion projects.

BUFFALO

BUFFALO, July 1—Retail automobile sales in this city have shown no sign of falling off, according to information obtained from Executive Secretary C. C. Proctor of the Buffalo Automobile Dealers Association.

"This retail business during June," he said, "was easily 100 per cent better than in the corresponding month of last year. The same thing is true with reference to the business done by Buffalo's automobile retailers during May of this year, and their business in April was at least 45 per cent better than in April, 1921.

TOLEDO

TOLEDO, July 1—Automobile sales have declined here only slightly in the last two weeks. Some dealers report that they are holding up as good as they have for the last two months. All are considerably behind in the delivery of cars. The demand for light used cars is big now. The Willys-Overland branch here reports that sales are considerably ahead of deliveries, and while declining slightly in the last 10 days, are far ahead of the same period in other years.

For the last month, sales have been going almost as good as the early spring months.

BOSTON

BOSTON, July 1—Distributors and dealers report that there seems to be no let-up in buying. April was good because it followed the show in March. May was even better, and June has been exceptionally good. From the way the sales are coming along now the dealers feel there will not be the usual summer slump in July and August, which all of them looked for, nor do they expect cancellations to any extent.

DETROIT

DETROIT, July 1—Retail buying in the Detroit district is declared by dealers to be normal for this time of the year, not as good as earlier in the spring and tapering off with the approach of summer months. Deliveries on standard lines of cars are still from two to six weeks behind, but are expected to be fully caught up on all models by Aug. 1.

Sales of used cars have slowed down considerably since June 1, and a number of dealers have declined to accept any more cars in trade. The shortage of new cars through the spring aided materially in keeping used car stocks low, but these have been slowly increasing during June. Used car prices are high. Summer months will witness a special effort to clean out used stocks in preparation for fall business.

Dealers will open the fall season with a closed car show which is expected to line up a large volume of business for the fall months.

LOUISVILLE

LOUISVILLE, KY., July 1—Automobile sales are keeping up the high mark set in April and May, according to a report issued to-day by the Louisville Automobile Dealers Association.

Sales for the first five days of last week amounted to 364 cars, of which 143 are new cars and 221 were used cars. This period is in excess of any week yet established this season, although it counts sales for only five days. With the probable sales of Saturday included, the total will no doubt exceed 400 for the week, which is 12 per cent more than any week of the season. Of the 143 new cars sold, 19 were in the high priced class, 26 in the medium priced class and 98 in the low priced class.

DENVER

DENVER, July 1—Although some dealers report that there is a beginning of a slight sales decline and expect moderate trade in July, June far surpasses May and also last June, and some say it is the best month in two years or more. New car sales are holding stronger than used cars and July is predicted to exceed last July. The general feeling is optimistic for the following months.

LOS ANGELES

LOS ANGELES, July 1—Registrations for June undoubtedly will be larger than the same month a year ago, but it may not equal May. This would not be unusual, as June customarily shows a decline.

WOMEN'S CLUBS HEAR HIGHWAYS DISCUSSED

Pyke Johnson Speaks of Influence and John C. Long of Safety

CHAUTAUQUA, N. Y., July 1—"Highways Benefit the Home" and "Highway Accidents Are Preventable," were the themes developed by Pyke Johnson and John C. Long of the National Automobile Chamber of Commerce, speaking before the biennial convention of the General Federation of Women's Clubs in session here.

Fresh food is made available for the city children, better schools and wider social opportunities are provided for the country boys and girls, as a result of improved highways and motor transportation, Johnson pointed out,

Guarding of danger points, prosecution of the careless driver, ample playgrounds and education in the schools will eliminate accidents, Long indicated.

Long said:

If every woman in America would enroll for the degree of Doctor of Safety, the accident question would soon be solved. Twenty-eight cities reduced their motor fatalities last year. Massachusetts cut down the number of traffic injuries 50 per cent. The four main symptoms and their remedies are these:

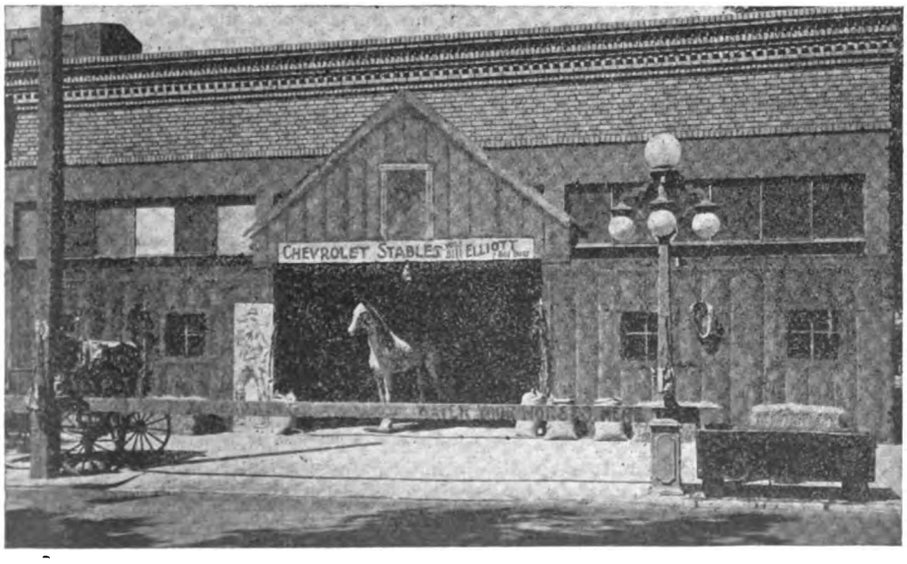
1. Danger spots, such as curves, blind corners, busy intersections. Sufficient guarding by patrolmen or by signs is an immediate remedy, with improvement of the physical design of the danger spot as an ideal remedy. That is, a sharp curve may be protected, but it should ultimately be eliminated.

2. Prosecuting the careless driver—Citizens Complaint Bureaus, like those in Detroit and Syracuse, are needed to facilitate complaint against and prosecution of the reckless minority who are making the entire community pay the price of their heedlessness.

3. Playgrounds — The school department should be consulted as to whether there is enough play space and whether there are enough play instructors to justify telling the children not to play in the streets. Pending the building of more playgrounds, if needed, certain streets should be roped off as play areas.

4. Education in the schools—Children are naturally irresponsible, but through traffic games, playlets, and other instruction they can be trained habitually to conduct themselves properly in traffic.

FILM SHOWS HOW TO ADJUST CLUTCH



CHICAGO, June 30—A motion picture showing how a clutch adjustment should be made and detailing the operations of removing, overhauling and setting up a clutch, has been prepared by the Borg & Beck Co. of Chicago. This film is available for exhibitions at trade association meetings, dealer conventions and service conferences.

The idea was conceived by William Mack, sales manager, who believes that many owners and service station managers consider the clutch somewhat of a mystery because it is entirely hidden from view.

Lincoln Salesroom Moved

DETROIT, June 30—The Detroit city salesroom of the Lincoln Motor Co. has been removed to the Ford sales and service headquarters at Highland Park.

Celebrating "The Days of '49"

This picture shows how the salesroom of the W. I. Elliott Co., Sacramento, was decorated to represent an old-time livery stable during the "Days of '49" celebration there recently. The "property" used included some bales of hay, a few sacks of barley, stable lamps, old harness, an old dilapidated buggy, and the wooden horse shown in the picture. The old watering trough, where the riders watered their horses daily during the celebration, added a touch of realism

HUFFMAN TO PROCEED WITH MANUFACTURING

On Creditors' Petition, Bankruptcy Proceedings Are Dismissed by Court

ELKHART, IND., June 29—Bankruptcy proceedings instituted last October against the Huffman Brothers Motor Co., manufacturers of passenger cars and trucks, have been dismissed upon motion of the creditors who filed the petition for the appointment of a trustee.

L. R. Huffman, treasurer and general manager of the company, states that it has on hand approximately $500,000 worth of materials which will be turned into finished products as rapidly as possible. The organization was continued during the months of comparative inactivity, and the company is ready to proceed with manufacturing. Production will continue to be under the direction of R. E. Chiddester. W. L. Huffman, president of the company, will remain actively connected with the business.

While the plant has been in the hands of a trustee, the company has been designing new models and is now prepared to manufacture a larger truck than heretofore. It will have a capacity of 2½-3 tons. It is understood also that an original design in closed cars has been worked out.

The price lists of the company's products follow:

TRUCKS

	Old Price	New Price
Model B 1½-2 ton.....	$1,995	$1,795
Model C 1½-2 ton.....	1,795	1,695
Model D 2-3 ton.....	....	2,895

PASSENGER CARS

	Old Price	New Price
Touring	$1,795	$1,395
Sedan	....	2,295

TWO MILLER SERVICE STATIONS ARE SOLD

AKRON, July 1—The Miller Rubber Co. has sold its tire service stations in Akron and Canton, Ohio, to the Instant Tire Service Co., an Ohio corporation. The new company acquires the entire fleet of service cars in both cities and continues the tire service offered local motorists. In these stations experiments looking toward improved service were tried out and the results broadcasted to all dealers throughout the country.

Service on Miller tires is now given exclusively by dealer sales and service agencies throughout the United States. The company has completed its service work and does not intend opening service stations in other cities.

Peerless Better Than in May

CLEVELAND, July 1—The Peerless Motor Car Co. reports that its sales records for the first half of June were better than for the same period in May. Cities reporting exceptionally good June business include Chicago, Philadelphia, San Francisco, Cleveland and Boston.

Digitized by Google

CAR THEFTS KEEPING UP WITH PRODUCTION

Of 37,554 Automobiles That Were Stolen in 1921 Only 21,273 Were Recovered

ST. LOUIS, June 30—Automobile thefts seem tc keep right along with automobile production, according to statistics of 28 "index" cities for which complete four year figures have been kept by the National Automobile Dealers Association.

Those 28 cities show that 37,554 motor vehicles were stolen in 1921 and 21,273 recovered. The number unrecovered was 40 per cent of the total, the highest noted in the four years, indicating that the thieves not only are keeping abreast of the production, but forging ahead of the police department and the legislative bodies in means devised to safeguard the owner.

New York again heads the list with total number stolen, with Chicago a close second. Chicago recoveries, however, were greatly in excess of the recoveries in New York. Twenty-one cities showed a greater number stolen in 1921 than in 1920. Cleveland, Portland, Oregon; Seattle, Salt Lake City, Columbus, Ohio; York, Pa., and Richmond, Va., showed fewer thefts in 1921 than in 1920.

Enforcement of Laws Needed

"The greatest handicap under which the police are laboring in the recovery of stolen vehicles," according to C. A. Vane, general manager of the association, "is lax enforcement of laws to punish motor vehicle thieves. Courts are unduly lenient with this class of offenders. Charges are continued against such law-breakers until the patience of the witnesses is exhausted, finally resulting in dismissals and *nolle prosequis*."

A tendency was also noted during the 1921 depression, for owners of insured vehicles to conspire for the disappearance of the vehicles in order to collect the insurance. Numerous cities over the country reported the recovery of motor cars from quarries, pits and rivers that had been reported stolen and which the police declare were clearly disposed of, with the connivance of the owner.

PERCENTAGE OF UNRECOVERED STOLEN CARS REACHED HIGH MARK IN 1921

ST. LOUIS, June 30—Statistics compiled by the National Automobile Dealers Association for four years show that in 1918 21 per cent of the automobiles stolen were not recovered; in 1919, 26 per cent; in 1920, 29 per cent, and in 1921, 40 per cent. These percentages are deduced from returns from 28 index cities, which are given in the following table:

	STOLEN				RECOVERED			
	1918	1919	1920	1921	1918	1919	1920	1921
New York	3,340	5,527	5,179	6,808	2,578	3,124	2,717	3,451
Chicago	2,611	4,447	5,974	6,799	1,954	3,447	4,340	4,438
Detroit	2,639	3,481	3,300	3,732	1,934	2,529	2,563	2,410
Cleveland	2,076	2,338	2,649	2,304	1,816	1,786	1,765	1,532
Los Angeles	1,629	1,688	1,654	2,333	1,499	1,365	1,152	1,725
Kansas City	1,144	1,661	801	1,577	606	794	341	1,153
Portland, Ore.	1,088	1,528	465	338	990	1,378	418	303
Denver	901	1,440	858	1,862	627	1,187	661	1,711
San Francisco	1,122	1,354	1,186	1,652	1,082	1,304	1,156	1,608

GASOLINE HEARINGS WILL BEGIN JULY 15

WASHINGTON, June 30—Hearings on the Senate gasoline investigation, being held by the Senate Manufacturing Committee, will begin on July 15. This is the last date on which refineries and gasoline manufacturing concerns can submit figures on their production, costs and profits. The Committee held its first hearing on the 23d when questionnaires were forwarded to big manufacturing oil concerns demanding full information as to profits, costs and charges.

More than 500 of these questionnaires were sent to every producer in the United States. The present plan is that any producer may supplement his report by personal representation before the Manufacturing Committee. None of the results of these preliminary investigations will be made public until the oil concerns themselves are permitted to submit their financial figures for inspection. Gilbert E. Roe, attorney, has been appointed to represent the committee and conduct the investigation for the Government.

Wills Denies Ford Rumor

DETROIT, July 2—Emphatic denial is made by C. H. Wills that Henry Ford proposed to purchase the plant of C. H. Wills & Co. at Marysville. He declared the rumor was based upon a visit made to the plant by Henry and Edsel Ford. This visit was due, Wills declared, simply to the fact that friendship formed when he was in charge of production for Ford was being continued.

Hudson-Essex Exceed 1921

DETROIT, June 29—The output of the Hudson Motor Car Co. and Essex Motors reached a new high level on June 20 when they turned out 305 cars in nine hours. The largest previous production for a single day was on April 7 when 300 cars were turned out in a little over ten hours.

On June 21, with less than six months of 1922 gone, Hudson and Essex exceeded their total 1921 production of 27,143.

MASON TIRE OBTAINS OWEN BEDFORD PLANT

Pays $275,000 For It—Output Will Be Increased Through Purchase

CLEVELAND, June 29 — Under an order approved to-day by Referee in Bankruptcy Carl D. Friebolin, the Mason Tire & Rubber Co. became the owner of the plant of the Owen Tire & Rubber Co. at Bedford. The Mason company paid $275,000 for the 14-acre Owen tract, which is located at Bedford, Ohio, a suburb of this city.

O. M. Mason, president of the Mason Tire & Rubber Co., says that the acquisition of the Owen plant will enable his corporation to increase its production 1500 tires a day. Many small sized tires will be made at the Bedford plant, but no tubes will be manufactured. The tube room will be used for the manufacture of golf balls. Production will be under way within two weeks. The number of employees will be 200 at the start and within a few weeks the number will be increased to 500.

At the Kent, Ohio, plant of the Mason company production of tires is at the rate of 3500 per diem, excluding solids, and 5000 tubes a day since March 1, and the plant has been oversold about 50 per cent.

BUICK NOW OCCUPIES OLD SCRIPPS PLANT

All Shipments of Closed Cars Will Be Made Hereafter from Detroit

DETROIT, July 2—The taking over of the former Scripps-Booth plant by the Buick Motor Co. marks the preparation of this unit of General Motors to meet the demand for closed cars on an immediate delivery basis. Capacity for 400 closed cars a day is provided for, 10,000 monthly, or a total equal to the production of all models in the former plants of the company.

There is 350,000 sq. ft. of floor space in the former Scripps-Booth plant, including two large pent-houses now under construction, in which will be located the enameling equipment. The plant hereafter will be known as plant No. 75 of the Buick factory and will be fitted throughout with modern assembling equipment, conveyors and other aids to large production.

All closed cars will be assembled there and shipments to dealers made direct from Detroit. The chassis will be built at the Flint plants of the company and shipped to Detroit, where they will be assembled and the bodies set up. Enameling and upholstery work will be specialties of the new plant, attention having been given to place this on a highly efficient basis.

Greater Efficiency Possible

Formerly the bodies were shipped to Flint by a truck fleet from the body factories in Detroit and fitted to the bodies in connection with the regular assembly work on all models. In addition to the traffic delays and the repeated handling of the bodies, the joint assembly of closed and open models prevented highest production efficiency.

The Scripps-Booth plant was built by the Saxon Motor Car Co. It was later taken over by Scripps-Booth, but during the war was occupied by the quartermaster's department. At the close of the war it was occupied for the manufacture of Scripps-Booth cars. Scripps-Booth service is now being handled in one of the buildings of the Northway engine unit of the corporation.

DRUMPLEMAN EXPECTS TRADE TO BE STEADY

DETROIT, June 30—After a trip which included 19 cities in eastern states, William J. Drumpleman, sales manager of the Rickenbacker Motor Car Co., said he expected a steady, conservative flow of business for the remainder of the year, but without the heavy buying experienced during the spring which would have been abnormal at any other season.

Factory production in July will be absorbed by orders already on hand, Drumpleman said, but August probably will show a seasonal falling off. Baltimore was the only city he visited in which there had been a decline in sales. In Washington there has been a decided increase. Eastern demand is running steadily to closed cars, he declared, although open models are being readily absorbed.

In consideration of the increase in closed car demand, the Rickenbacker company has made arrangements to extend its factory facilities for production of cars of this class.

NEW JERSEY FORMS GOOD ROADS BODY

NEWARK, N. J., July 1—The Good Roads Association of New Jersey has been organized to stimulate interest in the $40,000,000 highway bond issue which will come up for a referendum vote at the November election.

The organization, which is incorporated, is composed of men prominently identified with other civic organizations throughout the state, including the state grange. Harry Meixell, secretary of the motor vehicle conference committee, has been made secretary. The organization is non-political in character.

"1,650 CARS IN JULY" IS COLUMBIA SLOGAN

DETROIT, June 29—Columbia Motors Co. had as dinner guests at the Columbia Club this week bankers and representatives of parts makers who will supply materials for the new Columbia light six. The purpose was to urge adequate deliveries to meet the production plans of the company. The slogan of the evening was "1650 cars in July or bust."

President J. G. Bayerline was the host of the supply men. Those who spoke were W. E. McConnell of the Detroit National Bank of Commerce; W. N. Nesbit, Peninsular State Bank; John G. Painter, Detroit Pressed Steel Co.; Norman I. Taylor, Albee Corp.; W. A. Fredericks, vice-president and chief engineer Continental Motors Corp., and E. F. Kellum, purchasing agent of Columbia.

STEARNS PRODUCING SIX-CYLINDER CAR

CLEVELAND, June 30—After having been for seven years exclusively in the four-cylinder field, the F. B. Stearns Co. is now producing a six which will be marketed along with the four. Both cars are equipped with Knight sleeve valve engines. Following are the prices of the new six:

2 passenger roadster	$2,700
5 passenger phaeton	2,700
7 passenger phaeton	2,850
Coupe	3,500
Coupe-brougham	3,500
Sedan	3,700

The prices of the four-cylinder model remain as before.

G. M. WILL ERECT NEW SERVICE HOME

Oakland and Buick Organizations in New York to Use It Jointly

NEW YORK, July 1—Alfred P. Sloan, Jr., vice-president of the General Motors Corp. in charge of operations, announces that arrangements have been completed with the Argonaut Service Corp. for the erection of a thoroughly modern and complete service building in the heart of the automobile district in New York, for the joint use of the Buick and Oakland organizations.

The building will be located on the east side of West End or 11th Avenue, occupying the block between 55th and 56th Streets, extending back 100 feet in depth. It will be of reinforced concrete, six stories high, with a total floor space of 140,000 sq. ft., and will represent an investment on land and building of almost $750,000.

To Rush Work

The work will be rushed to completion by early fall. When completed the building will house the entire service, parts and new car delivery departments of the Oakland Motor Car Co. and also the parts department and machine shops of the New York branch of the Buick Motor Co., which will move from the present quarters. This will not affect the score of sub-service stations of the Buick company which are located at convenient points over greater New York City. The building will be equally divided between these two divisions of General Motors Corp. and will be so constructed that the two organizations will be entirely separate.

Oakland owners in New York City have heretofore been compelled to take their cars to Long Island City for service and parts.

The inconvenience of the two present locations to both owners and dealers of Buick and Oakland cars has been recognized by General Motors Corp. for a long while and this new modern, up-to-date plant will be an important unit in line with the broad service policy of the corporation.

Another New Building

NEW YORK, June 28—The estate of J. Wertheim will erect a three-story building adapted to the automobile trade in the block bounded by Fifty-seventh and Fifty-eighth Streets, Broadway and Eighth Avenue. Showrooms for passenger cars will occupy the Broadway frontage and truck salesrooms will face Eighth Avenue. In the center of the building will be a large court, permitting the movement of cars into the various showrooms without disturbing the store fronts.

A building was started by Wertheim on this site two years ago, but after the foundation was built Wertheim died and the property has been idle since then.

GEORGIA TO CONDUCT PUBLICITY CAMPAIGN

Will Use Newspapers to Educate Public on High Character of Industry

ATLANTA, July 3—In order to promote the interests of the automotive industry, and to educate the buying public to the fact that the dealers engaged in the business throughout Georgia represent the highest type of merchants, the Georgia Automotive Dealers Association will inaugurate the latter part of this month a state-wide advertising and publicity campaign, using practically all of the larger newspapers throughout the State.

The campaign will be of an educational nature entirely, and will call for an investment of several thousand dollars during the remainder of the present year.

Dealers Regarded as "Profiteers"

Discussing the advertising plans of the association, P. A. Megahee, of Atlanta, secretary, said:

The public still seems to look upon the automotive dealers as "profiteers," getting all they can for nothing and giving little in return, when as a matter of truth the majority of automobile dealers and manufacturers who remain in the business to-day are clean-cut, high class business men. We know this, but the public does not seem to, and therefore the Georgia organization will invest several thousand dollars during the coming year in newspaper advertising to educate the public to this truth.

It is the plan of the association to run paid advertising in the Sunday newspapers over the State each week in which the effort will be made to "sell" the public confidence in the industry and its stability. These ads will be supplemented by continuous publicity stories serving a similar purpose.

Members in Good Standing Eligible

Members of the association in good standing only will be allowed to participate. With each ad will be published the names of all dealers and accessory merchants contributing to the costs of the campaign, which aggregate about $100 each per half year. Already approximately half of the members have subscribed, and it is believed that about 75 per cent of them will ultimately do so.

In order to make this campaign truthful and really effective it has also been ruled by the association that hereafter no dealer will be admitted to membership whose application is not endorsed by at least two other dealers of his community and one banker in the town or city where his business is located. At the beginning of the new year the entire membership will be submitted to this same test. These facts will be brought out in the advertising that is to be published.

Another feature of the campaign is a complaint committee that will include several responsible dealers. Any complaint made by a customer about the treatment accorded him by any dealer in the association will be investigated by this committee. If the customer is in the right the dealer will be compelled to remedy the situation to the satisfaction of the customer, and failing to do so will be expelled from the association.

FORD OUTPUT 79,496 BETTER THAN IN 1921

DETROIT, June 30—Production of the Ford American and foreign plants in June, excluding the Ford Motor Co. of Canada, will carry the total production for 1922 to date over the half million mark. Excluding any of June's output, the American and foreign plants have turned out exactly 409,309 cars and trucks, while the total for the same period in 1921 was 329,813. This established a lead of 79,496.

Of the May production of 134,762, the Kearny, N. J., plant led with 14,706, about 3000 more than the April total. Detroit produced 11,524, with third place about equal for Philadelphia, Buffalo and Chicago, with 6500 each. The business of the Buffalo plant is declared to have shown considerable increase. The highest single day's assembly mark was made May 31 when 5099 cars were built. This mark was moved up on June 5 to 5,281.

Tractor production at the River Rouge in May reached 8950 and 155 were built at the Cork, Ireland, plant. The River Rouge output represents an increase from 7466 in May. Total production of Fordsons for the year to the end of May was 25,011. The total for the same period in 1921 was 20,936.

Without the receipt of any additional orders, the Lincoln Motor Co. plant will be at capacity for four months to meet the business now on hand, the company reports. Despite demand, it is declared, production will be kept down to a point where it is possible to give each car painstaking attention. The present production rate is approximating 35 daily.

Star Incorporated in Michigan

DETROIT, June 29—Articles of incorporation of the Star Corporation of Michigan were filed in Lansing this week. Capitalization is for $20,000, but this amount is to be increased, it was declared. The Michigan company will be the sales organization for the Star cars made at the Lansing plant of Durant Motors. It was announced that a distribution plan entirely new in the automobile field would be made public soon.

Penn and Belmont Merged

LEWISTOWN, PA., June 26—Hilton W. Soffield, president of the Penn Motors Corp. of Philadelphia, announces consolidation of the Penn Motors Co. and the Belmont Motor Co. The plant of the former company at Riverton, N. J., burned in June, 1921.

PARENTI PLANT SOLD TO HANOVER MOTORS

Pennsylvania Company Will Manufacture Small Car to Supplant Motorcycles

BUFFALO, June 29 — The Marine Trust Co., which has been acting as trustee for the benefit of creditors of the Parenti Motors Corp., has reported to the creditors that the committee which was appointed some time ago to raise money for the redemption of the property was unable to obtain sufficient funds for that purpose.

The Trust company, therefore, called the creditors' committee together to consider various bids which had been submitted for the property. At this meeting the trustee reported a number of bids ranging from $85,000 to $225,000. A resolution was passed, authorizing the trustee to accept an offer made by the Hanover Motor Car Co. of Hanover, Pa., manufacturer, heretofore on a royalty basis, of a small automobile, built around a two-cylinder air cooled engine, which is intended to take the place of motorcycles and motorcycle side cars, at a cost to the consumer of about $250. A number of these cars have been recently on the streets of Buffalo.

To Complete Parenti Car

It is reported that the Hanover people will move their jigs, machinery and equipment into the Parenti plant about July 1. It is also understood that an effort will be made to complete the manufacture of the materials on hand at the Parenti plant into completed cars, under an arrangement with a number of former stockholders of the Parenti company.

Von Elm Leaves A. E. Laboratories

NEW YORK, June 30—William Von Elm has retired from the A. E. Laboratories, Inc., Brooklyn. Von Elm intends to remain in the industry and continues at the head of the Universal Catalog Committee and a member of the board of directors of the Automotive Equipment Association. The recent convention gave Von Elm a striking Swiss watch in recognition of his work on the catalog committee.

Packard Increases Schedule

DETROIT, June 29—Announcement is made by Alvan Macauley that a production schedule of 2000 Packard single six cars a month has been determined upon, in addition to the twin six and truck output. This schedule would make the production exactly twice the volume decided upon when the new single six was announced in April.

Standard Parts in Black Ink

CLEVELAND, July 1—Business at the Standard Parts Co. has developed to such an extent that operations in April and May resulted in black ink returns. Profits were not large, but the company has not operated in red ink since March.

NEW FIRM HANDLES MAXWELL-CHALMERS

Changes Made in New York—Branch Is Dropped for Distributorship

DETROIT, June 29—The Colt-Stewart Co. has been formed in New York City by William L. Colt and William D. Stewart to take over the distribution of Maxwell-Chalmers cars in the New York territory. Aside from the importance of the men composing the new company, the change is important also in that it marks the discontinuance in New York of the former Maxwell-Chalmers branch and places their business in the hands of a distributor.

William L. Colt has been identified with the automobile business since 1904 when he joined the Cleveland Motor Car Co. In an executive capacity, five years later, he organized the Colt-Stratton Co. in New York as general Eastern distributor for the Cole Motor Car Co. of Indianapolis. This concern attracted the attention of Dodge Brothers by its success and in 1914 it was named metropolitan dealer for the Dodge car.

Managed Willys Division

Dodge and Cole were handled jointly by the company until 1917 when Colt withdrew from active work in the company to accept the position of eastern division manager for the Willys-Overland Co. from which he retired to form the Colt-Stewart Co. for the purpose of taking over the Maxwell-Chalmers sales.

During Colt's association with Willys-Overland he formed the close association with Stewart, who in 1917 was made manager of the New York branch of the Willys-Overland Co. Stewart joined the Willys organization in 1916 after a varied business experience, and after fourteen months of service was appointed to the New York managership.

In announcing the change in its New York distribution, Vice-President A. E. Barker of Maxwell-Chalmers said that the new company would follow out the same general policies that were in force during the branch operation. The business will continue at the same address and the same sales organization will remain as formerly.

Harroun in Receivership

DETROIT, June 30—Harroun Motors Corp. has been placed in receivership by Judge Tuttle in Federal Court, the Guaranty Trust Co. being appointed to act pending further action on claims by creditors which may result in bankruptcy proceedings and the naming of a trustee. An immediate inventory of the plant will be taken by the receiver to determine the assets which are said to be less than half of its liabilities.

William C. Butler, vice-president and secretary of the trust company, said that inasmuch as the plant has been idle for almost four years no attempt would be made by the receiver to operate it, but merely to conserve it in the interest of creditors and stockholders. Indications were, he said, that it would be sold as soon as necessary preliminary work was concluded.

Ford May Production Aggregated 144,469

DETROIT, July 1—Total production of the Ford Motor Co. for May was 144,469 cars, trucks and tractors, divided as follows:

Cars, American, 121,073; foreign, 7170; Canadian, 6579.

Tractors, American, 8950; foreign, 155.

Lincoln cars, 602.

Grand total, 144,469.

WEBSTER TO EUROPE; DAUGHTER MARRIED

COLORADO SPRINGS, June 30—Delegates to the Automotive Equipment Association's recent convention were interested in the news that Miss Dorothy Webster, daughter of the Commissioner, was married June 28, at the Broadmoor to Henry B. Ryan of Chicago. There was interest, too, in the forthcoming two months' tour through Europe and Northern Africa of Commissioner and Mrs. Webster and Mr. and Mrs. R. R. Englehart of Davenport, Iowa. Englehart, a former president of the A. E. A., is head of the Seig Co., jobber.

There were several wedding anniversaries at the hotels, including the fourteenth of Mr. and Mrs. Nelson H. Oliver and the sixth of Mr. and Mrs. Earl V. Hennecke.

Injunction on Lug Selling

PHILADELPHIA, June 29—Upon petition of the Hudson Motor Specialties Co. the Federal court for the northern district of Ohio has granted it a perpetual injunction restraining the Simmons Manufacturing Co., The Lake Erie Accessories Co., the M & M Co. and the American Signal Co. from using or selling lugs for power plant support for motor vehicles embodying the inventions described in patent No. 1,263,899, as well as from using in conjunction with the manufacture or sale of any motor support, or lugs for power plant support, the name "Crankcase Repair Arm."

Buick Has Record Day

DETROIT, June 28—Buick Motor Car Co. shipped 822 cars on June 23, the largest single day's shipment in the company's history. The company has been operating on a part time schedule for the past month, pending changes in its manufacturing policy which include the operation of the Scripps-Booth plant.

Orders on sport models run several months ahead, dealers taking orders on a delivery basis of eight weeks. The factory is likewise far behind on closed car deliveries.

TIRE DEALERS FEEL LACK OF PROTECTION

Business Demoralized, Declares Secretary of Wisconsin Trade Associations

MILWAUKEE, July 3—A mass meeting of tire dealers of Wisconsin, called under the joint auspices of the Milwaukee and the Wisconsin Tire Dealers Association, as a preliminary to the "open forum" convention held in Cleveland, adopted vigorous resolutions seeking remedial relief from the situation in which the dealers declare themselves to be in the prosecution of their business.

The local and state associations for several months have been making investigations of the situation on their own account, and in support of similar efforts undertaken by the national association.

"Our Wisconsin mass meeting brought out that never before in the history of the tire business have such demoralized and chaotic conditions existed as now," said Samuel A. Rowe, secretary of both associations and one of the leading tire dealers of Milwaukee. "Confidence and faith in the tire manufacturers and in the industry itself are shattered. No one knows from one day to the other what will happen next, and whatever happens, using as a criterion developments in the recent past, the distributor of and dealer in tires will be the sufferer and the loser of money, prestige and general business.

No Opportunity to Recoup Losses

"Thousands of dollars have been lost through write-off in value of merchandise on dealers' shelves, and there seems to be no opportunity to recoup the losses; particularly so when the manufacturers up to the present time have refused even to confer with the associated dealers. No protection has been given dealers in the several recent declines in prices, and manufacturers have shielded themselves behind the excuse that the prices had not been changed, but they had lengthened the trade discount to dealer and manufacturer."

Biflex Increases Plant

CHICAGO, June 30—The Biflex Products Co. has increased its capacity 150 per cent by the purchase of additional buildings and land from the Chicago Hardware Foundry Co. adjoining the Biflex plant. The additional floor space obtained will be used in the production of Biflex bumpers. This is the second expansion in a year as the Biflex company did not remove its offices and foundry from Waukegan to its larger home in this city until May 1, 1921.

New Martin-Parry Plant

YORK, PA., June 30—The Martin-Parry Corp. announces that it will duplicate in Los Angeles an assembling and service plant recently opened in a new building in San Francisco.

DURANT TO DOUBLE NUMBER OF SHARES

New Plan Will Permit Exchange for Securities in Parent Organization

NEW YORK, July 2—Stockholders of Durant Motors, Inc., decided at a special meeting here to increase the capital stock from 1,000,000 to 2,000,000 shares and thus provide for an exchange of stock of the several divisional corporations for the securities of the parent company. This exchange can be made at the option of the stockholders at any time between Aug. 1, 1924, and Aug. 1, 1926.

The plan is designed to facilitate the acquisition by the corporation of large interests in its allied companies. For this purpose approximately 500,000 shares will be required. The balance of the stock will be available for such use as the directors may determine to be for the best interest of the corporation.

The stockholders decided also to increase the directorate from five to nine members. From the standpoint of the industry the most interesting addition to the board was A. H. Sarver, who was president of the Scripps-Booth Corp., a subsidiary of the General Motors Corp. until it was liquidated recently. He is a widely known figure in the automotive field.

Sarver on Directorate

The directors in addition to Sarver and W. C. Durant are: T. W. Warner, Carroll Downes, who now is president of the Durant Motor Car Co. of Michigan; W. W. Murphy, who has been Durant's assistant since General Motors' days; C. F. Daley, H. W. Alger, who is vice-president of the Michigan company; W. R. Willett, who is at the head of the Durant Motor Car Co. of Indiana, and F. W. Hohensee, chief engineer.

After their selection the directors organized by electing the following officers: President, Durant; vice-presidents, Warner and Downes; treasurer, Murphy, and secretary, H. F. Herbermann.

The Durant Motor Car Co. of New Jersey, which will have charge of the production of the Star in the recently acquired plant of the Willys Corp. at Elizabeth, now is being incorporated with a capital of $10,000,000. The stock will have a par value of $10 with the conversion privilege. It will be headed by Hohensee as president, but the other officers have not been determined.

A large force of men now is at work in the Elizabeth factory getting it ready for production at the earliest possible moment.

Emil W. Estberg Dies

MILWAUKEE, June 28—Emil W. Estberg, one of the veterans of the automotive trade in Wisconsin, died in Columbia Hospital after a brief illness, following an operation. He was 55 years of age.

Estberg was born in Waukesha, Wis., and came to Milwaukee in 1905, engaging in business as one of the first dealers in the state, handling the old Pope-Toledo line. For several years he has been president of the Estberg-Deland Motor Co., handling the Chalmers and Maxwell. Mr. Estberg was one of the charter members of the original dealers association. now the Milwaukee Automotive Dealers Association, and held many offices.

CARS FOR RESHIPMENT INCREASED BY 30,000

WASHINGTON, July 2 — Additional figures on the number of automobiles in Europe, which it is feared will be resold in America unless prevented by the Graham "anti-dumping" bill, have been submitted by the Department of Commerce to the Senate Finance Committee.

In response to a request from the committee, Secretary Hoover secured telegraphic information that a total of 8699 automobiles were available in France, England and Italy for immediate reexport to the United States. This cable advice has been supplemented by a more complete survey made by W. C. Huntington, commercial attaché of the department in Paris, which shows that in addition to the 8699 reconditioned cars there are more than 30,000 automobiles which could be reconditioned and resold in America.

REO PLANT VISITED BY PENNSYLVANIANS

DETROIT, June 28 — Pennsylvania Day was observed at the Reo Motor Car Co. plant at Lansing this week with the appearance of a large delegation of distributors and dealers from the central part of the state who staged a drive-away from the factory of more than 100 cars, speed-wagons and the new Reo taxi.

George G. McFarland, president of the Harrisburg Automobile Co., headed the delegation. A luncheon was tendered them by the company at the Reo Club house on their arrival, and the afternoon was spent in an inspection of the plant. Dinner was served in the Kerns Hotel in the evening, following which a musical program was given by the Reo orchestra and glee club.

E. V. HARTFORD DIES; LONG IN INDUSTRY

NEW YORK, July 3—Edward Vassalo Hartford, an outstanding figure in the automotive industry whose accomplishments will be long remembered, died Friday at his city home here. He was buried from the home of his parents at Orange, N. J. He was 52 years old and is survived by a widow and two children.

As the manufacturer of the Hartford shock absorber which he put on the American market in 1904, the producer of one of the early electric starters, together with various other inventions, Hartford scored high in his efforts to better the modern motor car and the service it supplies.

PAIGE NOW PAYING COMMON DIVIDENDS

First to Be Disbursed Since Dec. 10, 1920—Company in Good Condition

DETROIT, July 1—With the payment of a cash dividend of 6 per cent on its common stock on July 10, the Paige-Detroit Motor Car Co. will resume payments on this stock which have been suspended since Dec. 10, 1920, when a 1 per cent dividend was distributed.

In connection with the resumption of payments, the company notes that since 1914 it has distributed to its holders of common stock payments of 227 per cent in cash and 263 1/3 per cent in stock. The year 1915 was the largest cash dividend period when 59 per cent was paid, and 1916 the largest stock dividend year when 130 per cent was distributed.

President H. M. Jewett said the present production of the company is at the rate of 200 cars daily, this including the two Paige models and the new Jewett. The company's bank loans have been cleared away, Jewett said.

"Our only obligations are those of a current nature," Jewett says. "Liberal allowance has been made for depreciation. Inventories have been written down to cost and we are turning over our inventories now every 30 days or at an even shorter interval. Conditions seem to justify the dividend for the common stock."

STANDARD PRODUCING NEW MODEL 75 TRUCK

DETROIT, July 3—A new model 75 light delivery speed truck is being manufactured by the Standard Motor Truck Co. to sell for $1,330. It has a capacity of 1¼ tons exclusive of the body allowance, and has 35 x 5 pneumatic cord tires.

Drive is by worm type Timken axle. Practically the same line of units is used in this truck as is used in the heavier models. These include a Continental 3¾ x 5 engine, Brown-Lipe disc clutch, Timken axle and Ross steering gear. The wheelbase is 134 in.

Dorris Prices Down

ST. LOUIS, June 29—The Dorris Motor Car Co. announces sharp price reductions effective July 1. The list follows:

	Old Price	New Price
7 passenger touring.....	$4,785	$3,950
4 passenger touring.....	4,785	3,950
4 passenger coupe.....	5,800	4,985
7 passenger sedan.....	7,190	5,750

Hudson-Essex Reduced

DETROIT, July 1—Reductions of $50 each were made to-day by the Hudson Motor Car Co. on four models of the Hudson and Essex. Hudson four-passenger phaeton was reduced to $1,645, touring to $1,695, and coach to $1,745. The Essex coach price was lowered to $1,295. The cabriolet was reduced $100, to $1,195.

ASSOCIATION ACTIVITIES

Outing in Philadelphia

PHILADELPHIA, June 29.—Close to one hundred members of the Automobile Accessories Business Association and their guests started out in gaily decorated automobiles this morning and proceeded to the Betzwood Farms Inn at Betzwood, Pa., where the annual June outing was held amid ideal surroundings. A jazz orchestra, vaudeville numbers, community singing and outdoor sports contributed to the program.

There were baseball games organized under the old method of "choosing up" and competitive field sports as follows:

Tug of war, Manufacturers *vs.* Jobbers, two pulls out of three, won handily by the jobbers.

Pitching quoits, elimination contest, winners—Willetts, Williams, Davis and Dickel.

Sack race for married men, winner—Willetts.

Sack race for single men, winner—Boldwin.

Fat men's race, winner—John Monihan.

Hundred yards' dash, winner—Rosenfeld, paced by Irons.

Standing broad jump, winner—John Irons.

Throwing indoor baseball, winner—John Irons.

There was a buffet luncheon served at noon.

An especially good dinner was served at 6 o'clock. A feature of the outdoor exercises was a tire-changing exhibition on the lawn by Charles Payne, of the United States tire agency. He used old tires, removing a straight-side 31 x 4 in 7 seconds and putting it on again in 17 seconds, using no regular tire tool, and next astonished the gathering by using only his hands and taking off a 30 x 3½ tire in 5 seconds and replacing it in 12 seconds.

Following this feat, President W. H. Metcalf, of the association, announced that Payne will be entered in a competitive contest with Karl Mitz, a Goodyear service station dealer at Drayton, N. D., who claims that, with his bare hands he can apply a 30 x 3½ clincher tire faster than any other dealer in the world.

Caley, Executive Secretary

CHICAGO, June 30.—Following the organization of the National Motorists Association here, the board of governors elected Fred H. Caley of Cleveland, as executive secretary and F. E. Ertsman of Chicago as assistant secretary. Caley is president of the Ohio State Automobile Association and Ertsman is secretary of the Illinois State Automobile Association. Executive offices for the new organization will be opened at Washington within a week, it is announced.

The board of governors elected the following executive committee: R. H. Kennerdell, Pennsylvania; Henry Paulman, Illinois; M. E. Noblet, Indiana; Mayor McInnich, St. Joseph, Mo., and Alex Johnson of Louisville, Ky.

Entertain Camden Dealers

PHILADELPHIA, June 30.—A large gathering of members of both the Motor Truck Association of Philadelphia and their guests, the Camden Automobile Dealers Association attended the eighth annual outing of the former organization at Kugler's Mohican Club. A long procession of automobiles headed by R. Arthur Bittong, chairman of the entertainment committee, and a bus containing a fife and drum corps, filed to the ferry under the guidance of a squad of motorcycle police and was borne across the river, where the Camden contingent was picked up. Each car flew blue and yellow pennants and American flags.

There was a baseball game between the Motor Truck Association, whose battery was Barrett, c., and Koitzsch, p.; and the Camdenites, who had Adams on the mound and Hess behind the bat. The game, which was won by the Philadelphians by the score of 21 to 7, was featured by phenomenal stops of hot grounders by Bittong, shortstop for the Philadelphians, with his nose and foot. Carrigan knocked out a home run and at one time all four balls brought by the association were lost in the surrounding jungle.

New Kansas Manager

SALINA, KANS., July 1.—At a meeting of the board of directors of the Automobile Trade Association of Kansas, called by President Frank E. Siason, Phil E. Zimmerman, of Lindsborg, was selected to succeed A. L. Oliger, resigned, as secretary-manager.

Zimmerman at one time was very well known in the motor world, having been successively general salesman, advertising man, and general manager of the Hagstrom Corp., which manufactured spark plugs and other accessories. From 1913 to 1918 he was district sales director over five states for the Schwinn interests of Chicago. He has the promotion of two record tours to his credit and has annually refereed the world's championship motorcycle races at Dodge City races.

Boston Proposal Unpopular

BOSTON, July 24.—The Boston Chamber of Commerce has started a plan to organize an Automobile Trade Board in connection with its activities, and has had a representative interviewing dealers in cars and tires throughout the Boston territory. It is going to be a difficult task because many of the dealers who joined the Chamber of Commerce a couple of years ago when a big drive was on for members state that they have found the chamber was of no assistance to them.

Some of the leading dealers point out that while the automobile industry is one of the largest in the country, and that many of the dealers are members of the Chamber of Commerce, when elections were held for a place on the board of directors no representative of the motor trade was given a place on the governing body.

And when the dealers have been fighting legislation they got no assistance from the association, which has gone out and worked for other legislative programs, say some of the Boston motor leaders. Therefore instead of joining an automobile trade board some of them are going to drop their membership.

Activity Planned in Memphis

MEMPHIS, TENN.—The Automobile Dealers' Association of Memphis, headed by Owen M. Lilly, is planning much active work for the last lap of 1922. Lilly succeeded Steve Butler, who recently became president of the Memphis Chamber of Commerce. H. W. Osoinach is secretary.

Chamberlain in Salt Lake City

SALT LAKE CITY, June 22.—The Intermountain Automotive Trades Association with headquarters in this city, has made arrangements which will permit employees of automobile companies to hear the Percy E. Chamberlain lectures on service which will be given in the Barrett Hall for four evenings. It is expected that practically every automobile firm in the city will be represented Three hundred employees have already been enrolled.

CHANGES IN THE TRADE

De Graaf Motor Car Co. of Plainfield, N. J., has taken on the sale of the Peerless in that territory.

North Side Welding Works & Garage, Kalamazoo, Mich., has taken the agency for the Durant cars in Kalamazoo County.

Lasser Motor Co., Chevrolet dealer in Newark, N. J., has been appointed dealer for Elizabeth and adjacent territory. The company will operate agencies in both cities.

B. D. Jones, who was formerly with the Watson-Buick Co., has been appointed sales manager for the **Pacific Nash Motor Co.,** Ogden, Utah, succeeding **C. E. Cookerly,** resigned.

Robert L. Duffus, formerly manager of the Kalamazoo, Mich., factory branch of the Packard Motor Car Co., has become general sales manager of the **W. O. Harlow Motor Sales Co.,** that city, handling Oakland cars and Republic trucks.

Andy Lustbaum of Long Branch, N. J., Peerless and Maxwell distributor for Monmouth County, has opened a sales room in Asbury Park. **Frank S. Nea,** formerly representative for the Peerless in Passaic, N. J., has joined the staff at Asbury Park as sales manager.

Standley Manufacturing Co., Boone, Iowa, has opened a branch house in New York which carries a complete stock of the Standley line quoted f.o.b. New York City. The address of the company is Standley Manufacturing Co., Nelson Avenue and Manley Street, Long Island City, N. Y.

W. J. Keegan has gone on the road for the **Perfection Spring Co.** Keegan has spent five years in the Perfection spring factory, principally on the jobbing sales end, taking care of customers' interests, although he has also spent considerable time in the production department. He will travel principally in the southern territory.

H. H. Brenner, many years general sales manager of the **I. J. Cooper Rubber Co.,** is succeeded by **R. B. Crane,** director of sales of the Cooper Corp. Brenner retains his interest in the Cooper organization, but is giving his personal attention to his own company, the **Brenner Automobile Supply Co.,** with stores at St. Louis and Kansas City.

Kalamazoo Buick Sales Co. has been formed to succeed the **Stevens-Buick Sales Co.** and will handle the Buick cars in Kalamazoo, Mich., and vicinity. Those interested in the new company are D. B. Williams, former sales manager of the Handley-Knight Co., Kalamazoo; A. B. Connable, Sirk Wykkel, Peter Servaas and Ed. Beach.

Sidney B. Bowman, president of the **Sidney B. Bowman Automobile Co.,** New York, handling the Kissel and Gardner lines, announces the promotions of **Harry Spangler** to the new position of assistant to the president, and of **Ralph R. Schrenkeisen** to retail sales manager. Spangler was formerly retail sales manager. Both Spangler and Schrenkeisen have been with the Bowman organization for a number of years. Increased business is responsible for the expansion of the organization.

CHANGES IN THE TRADE

H. A. White Auto Co. has been selected as distributor in the Memphis, Tenn., territory for the Durant.

Conant Automobile Co. has been organized at Houston, Tex., to handle the Durant cars in that section.

Edward J. Epsten of the Epsten Lithographing Co. has secured the distribution of the Columbia at Omaha.

Franklin Automotive Electric Co., Toledo, has been organized with F. T. Dickinson as manager for the distribution of batteries.

Gambill Motor Co., Chicago distributor of the Marmon and Hupmobile, has established a northside branch at 4017 Sheridan Road.

Lancia Motor Car Co., Boston, has been incorporated by George Piscopo, to handle the Lancia in the New England territory.

Doggett Brothers, Shelby, N. C., which has the agency for the Studebaker, has bought the garage of **Roberts-Laughridge Motor Co.**

Frank Drouillard, formerly assistant superintendent of Maxwell in Detroit, is now Maxwell dealer in the Pontiac, Mich., territory.

F. B. Smalley Co., Toledo, has taken on the agency for the Ruggles truck for fourteen counties in northwestern Ohio and southern Michigan.

Carl Swenson, of the Swenson Auto Co., Denver, has secured the franchise for the Transport truck for the Rocky Mountain territory.

Fred D. Rudisell, formerly branch manager of the Firestone Tire & Rubber Co. at Omaha, has opened up a tire service station in that city.

Wills Sainte Claire Co. of Illinois has moved into new headquarters at 2330 South Michigan Avenue. **Dayton Keith** is president of the company.

McCarty-Greene Motor Co., Chandler distributor at Birmingham, Ala., will also take on the Cleveland line. T. B. McCarthy is president of the company.

Dashiell Motor Co., Dodge Brothers distributor in Chicago, has moved from 2420 South Michigan Avenue to larger quarters at 2542 South Michigan Avenue.

August Hennebolt, for the last four years in charge of the shop department of the Motor Sales Co., Pueblo, Col., has acquired the Nash agency for that territory.

Edgewater Motor Sales Co., Chicago, has been organized to handle Earl and Liberty lines. **James Betourna** is president of the company and **J. A. Henry** is secretary.

Chambers Motor Co. has been appointed authorized Ford dealers in Memphis, Tenn. The service station is in charge of **Mike Elam** and sales department is managed by **Charles T. Everts.**

Murphy-Ijams Motor Co. has been appointed distributor for Nashville and middle Tennessee, southern Kentucky and northern Alabama for the Marmon cars. **J. W. Austin** is director of sales.

D. & W. Motor Sales Co., Chicago, Hupmobile agency, has been purchased by **Harry W. Cassleman**, president of the West Side Nash & Stearns Co. The new purchaser will continue to handle Hupmobile cars.

A. H. McIntyre, for the past year traveling representative in the East and Canada for the Haynes Motor Car Co., with headquarters at Boston, has resigned to accept a similar position for the Jordan Motor Car Co.

J. H. Ham has been made distributor for the Packard car for Charlotte, N. C., and surrounding territory. **H. L. Kurfees** is general sales manager of the Ham organization. Ham is also local distributor for the Earl car.

Geo. W. Andrews has been appointed general manager of the **W. V. Faunce Motors Co.**, Chicago distributor of the Oldsmobile. He succeeds **J. S. Feneley**, who has gone to Pittsburgh to open an Oldsmobile distributing branch.

Stevens-Duryea Co. has opened a factory branch at 2439 South Michigan Avenue, Chicago. The same company had a factory branch at that address until 1915. **Bruce E. Adams** is manager and **Webb S. Adair** is service manager.

John M. Duff, Jr., Philadelphia, has organized a company for the sale of the Nash under the name of the **Duff Nash Motor Co.** For several years Duff was associated with the retail sales department of the Philadelphia-Nash Motor Co.

Landman-Griffith Co., Toledo distributors of the Maxwell-Chalmers line, has obtained the Packard agency for northwestern Ohio. **William Love**, former Packard dealer, relinquished the agency a few weeks ago. **Warren E. Griffith** is president.

John T. Fisher Motor Co., Memphis, Tenn., has succeeded the **Reo-Memphis Co.** handling the Reo cars and trucks. Fisher was formerly president and general manager of the Union Motor Car Co. and is president and manager of the new organization.

Walter M. Bliss, former manager of the Goodyear tire branches at Boston and New York, and later with the Franklin Motor Car Co. at Boston, is now New England traveling representative for the Hudson and Essex lines, with headquarters at Boston.

Kenneth W. Gardner, who was associated with the Dunbar-Sanders Co. of Boston for a year and with the Albee Corp, for a similar time, is leaving the **Franklin-Jacobs Co.**, in Pontiac, Mich., to become assistant to the Chevrolet advertising manager in Detroit.

Frank E. Wing, Boston, New England Marmon distributor, who has carried on the business under his own name as an individual for the past 18 years, has incorporated the F. E. Wing Co., Inc., for $300,000, of which he is the principal stockholder and executive.

Walter C. Boynton, formerly service manager of the Campbell-Ewald Co., has become a member of Norval A. Hawkins' sales, service and advertising section of the General Motors advisory staff. Frank G. Eastman is now devoting his attention exclusively to the advertising features of the staff work.

Murphy Motor Car. Co., headed by Thomas W. Murphy, for the past five years one of the leading used-car dealers of Portland, Ore., has been granted the franchise for the Auburn for that territory. Murphy will have the distribution for Oregon and southwest Washington and will handle the retail sales in Portland.

Simmons Handin Motor Co. of Chicago has been appointed distributor of Gray cars for northern Illinois. Simmons is one of Chicago's oldest dealers and Handin for some time handled retail sales for Ford Motor Co. in that city. He was later made branch manager of the Salt Lake City and Cincinnati plants of that company.

A. L. McCarley, agent for the Stanley steam car for the Portland, Ore., district, has secured the Templar car as an addition and will distribute it in Oregon and southwest Washington. **W. W. Wray**, who was head of the Wray Motor Co., former Templar distributor, has been named Templar sales manager for McCarley in Portland.

Southern Motor Co., Memphis, Tenn., has been appointed distributor for eastern Arkansas, northern Mississippi and that part of Tennessee west of the Tennessee River for the products of Edward V. Hartford, Inc., of New York City. The company has been in the automobile industry for about five years and for the last three has distributed the Cadillac.

Lambeth - Armfield Distributing Agency has been formed at Rockingham, N. C., to handle Dodge Brothers cars in Richmond, Union, Anson, Scotland and Robeson counties, North Carolina, and Chesterfield and Marlborough counties, in South Carolina. **Emsley Armfield**, formerly of Monroe, N. C., will be in charge. The other member of the firm is **J. A. Lambeth** of Charlotte.

Nash-McKeough Motor Co. has been formed by J. W. McKeough of Kenosha, Wis., former manager of sales for the motor truck division of the Nash Motors Co., to handle the Nash in the Toledo district. **R. W. Kinsey**, formerly sales manager of the Nash Milwaukee branch, will be sales manager. **C. J. Flanigan**, territory manager of the Chicago district, will have charge of the wholesale business.

Standardized Parts Corp., Memphis, Tenn., is now operating a central parts deport for five specialized units, having been appointed distributor for Continental engines, Timken axles, Borg and Beck clutches, Spicer universal joints and Brown-Lipe transmission and clutches. Its territory includes Memphis, western Tennessee, Arkansas, southeastern Missouri, southwestern Kentucky and northern Mississippi.

W. P. Cronin and **J. S. Waddell** have formed the **Cooper Tire Co.** of New England to handle that line in the New England territory. Cronin formerly sold the Racine, and also carries on a large accessory business. Waddell for a number of years was connected with the Firestone Tire & Rubber Co. at its Boston branch until a year ago. **Albert Waddell**, his brother, has returned from New York to join the new firm.

J. Louis Kelley of Beloit, Wis., widely known in the tire merchandising and advertising field of the Middle West, has joined the Chicago division of the B. F. Goodrich Rubber Co. in charge of a special sales promotion campaign in the northwestern states. His first activity will be to pilot a "Goodrich Special" through the Wisconsin lake and resort territory, later traveling through neighboring states for similar promotion.

Linford Motor Co., composed of all Ford dealers in Memphis, Tenn., has been granted a charter to handle the Lincoln and Ford automobiles. The company is headed by **George Abernathy**, formerly of the Abernathy Co. Other members are **Robert T. Chambers** of the Universal Motor Car Co.; **Horace H. Hull** of the Hull-Dobbs Motor Car Co.; **J. T. Merrin** of the Merrin-Graham Co.; **B. F. McCreery** of the McCreery-Pheland; **Harry L. Price** of the Price, Barwick, and **J. M. Walker** of the Universal.

H. L. Dickey has been appointed sales manager for the automotive division of the Anderson Co., manufacturer of automotive equipment. Dickey was formerly eastern manager for the Beneke & Kropf Manufacturing Co., Chicago, then sales manager for the Moto Meter Co., Long Island City, N. Y., and later central district manager for the Splitdorf Electrical Co., Newark, N. J. Plans for concentrating the manufacture of all the company's products in one factory are at present under serious consideration.

Eighteenth Annual Automobile Salon, National Automobile Chamber of Commerce, Commodore Hotel.

Chicago .....January
Annual Automobile Salon, National Automobile Chamber of Commerce.

HUPP DISTRIBUTOR APPOINTS DEALERS

HARTFORD, CONN., July 1—Wider distribution of Hupmobiles is planned by the L. & H. Motor Co. of this city which controls a large part of the State of Connecticut.

The company is appointing associate dealers to distribute cars. The first announcement is that of the Edward S. Clark Motor Co., this city. Several other dealers have been appointed associates and are authorized to sell wherever they can get an order, even if it is next door to the L. & H. Motor Co.

Thomas W. Campbell and Fred W. Lycett, heads of the concern, assert that within the next thirty days Hupmobile will have one of the largest, if not the largest, selling organizations in this state. Associate dealers necessarily do not have to carry a stock of cars since they can come to Hartford and get any model they desire.

Texas Co. Protects Product

DETROIT, June 29—An order restraining the sale of a type of oil refined and sold by the Texas Co. as "gun oil," as automobile motor oil, was issued by Judge Tuttle in Federal Court against David Berlin, an accessory dealer here. The order temporarily restrains the sale or the use of the Texas trade mark or name. The oil was purchased from the Government.

NEW HARTFORD PARTS HAS SPICER BACKING

HARTFORD, CONN., June 29—The Hartford Auto Parts Corp. has been organized to take over the plant of the defunct Hartford Automotive Parts Co., and is backed by the Spicer Manufacturing Co. of Plainfield, N. J.

The officer personnel is all from New Jersey and is as follows: President, Charles A. Dana, who is the directing head of the Spicer company; vice-president, John S. Berry; treasurer and secretary, Paul D. Hawkins. The directors are Charles A. Dana and Ezra P. Prentice of New York, and Leonore Carbaugh of Colonia, N. J. The reorganization assures the continuance of the works.

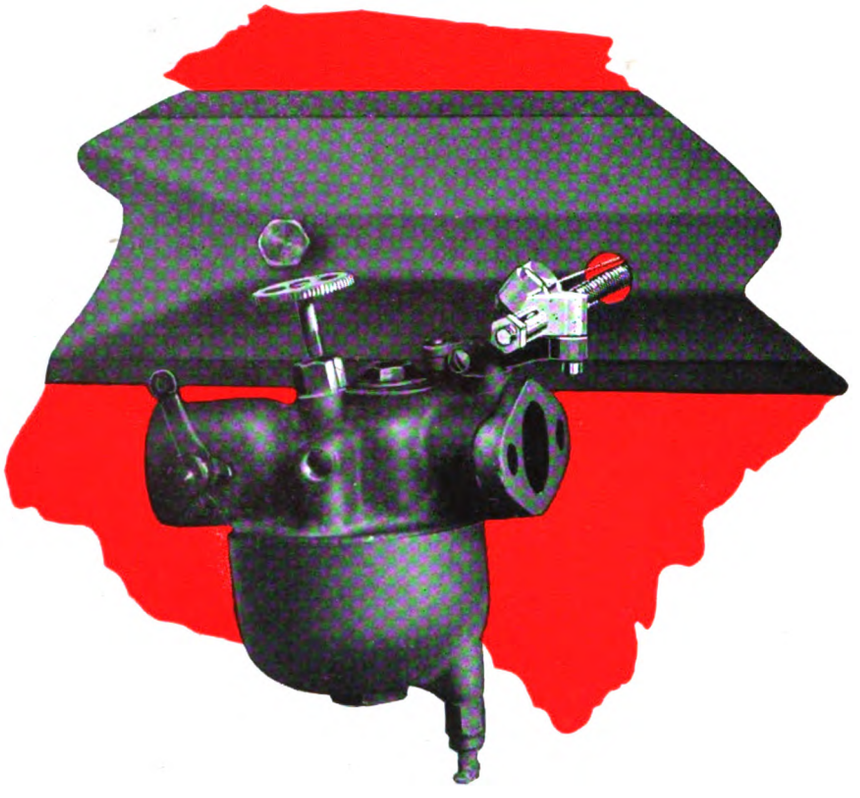
SIOUX

Trade Mark Reg. U.S. Patent Office

TOOL SET

A time-saver, labor-saver and profit-raiser.



You can accurately seat the valves of any standard motor with this outfit and do away with hours of grinding. Valves properly seated require only a few turns of the grinder.

SIOUX SERVICE Keeps the reamers and cutters sharp at no cost to you except carrying charges. When reamers or cutters get dull send them prepaid and direct to us with return postage and they will be sharpened and returned the same day received. We maintain a special department for this service. Demand Sioux Tools if you want Sioux Service.

Jobbers Everywhere Sell Them

One Carburetor Connection

Remember this: In buying an accelerator, the average Ford owner considers one point above everything else—simplicity. The less mechanism you have to explain to him, the more readily he buys.

With the Williams Accelerator, one connection at the carburetor, one at the hand throttle, and one at the toeboard, complete the installation. Pressure on the pedal is transmitted direct to the carburetor without passing through a series of joints and levers. Acceleration is always smooth and certain without the use of extra attachments.

Show your customer the Williams Accelerator. You can demonstrate it over the counter and not have to explain a lot of intricate parts. The result will be quicker and easier sales. The Williams Accelerator will fit any model of Ford car.

Order through your jobber; and ask him for the new Williams Accelerator display card, or get your cards from us.

NO-LEAK-O Piston Rings

THE ONLY GROOVE THAT CANNOT CLOG

Bring New Customers And Hold Old Ones

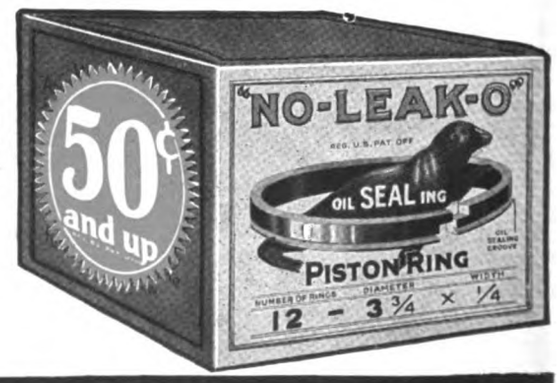
Automobile owners—*your* customers, present and prospective—are hearing about how No-Leak-O cuts running expenses. In the July 1st issue of the Saturday Evening Post for example, they will read how No-Leak-O Piston Rings save them *oil*.

No-Leak-O Piston Rings "won't leak because they're sealed with oil." A specially cut groove—the patented No-Leak-O "oilSEALing" groove—packs an oil film in between piston and cylinder walls which gives *perfect oil control and compression in each individual ring*.

Oil can't work up into cylinder heads to form carbon and no "unburnt" gas or kerosene can leak into the crank case to weaken lubrication.

For replacement jobs you need a dependable ring designed and made especially to give satisfaction on replacement jobs. No-Leak-O makes good on every replacement job.

Over 200 reliable jobbers carry No-Leak-O Piston Rings in all standard sizes and *over* sizes. Prompt service *always*.



Write for free booklet, "Know the Facts About Grooved Piston Rings." Also let us tell you about our liberal dealer proposition and how our National Advertising can increase your profits. Quick action on your part will mean bigger profits.

NO-LEAK-O PISTON RING COMPANY
Dept. T-40
BALTIMORE, MD.

One price during eight years of continued success

One design—for all cars—50c and up

Important—In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

WON'T LEAK
because they're sealed with Oil

The BUICK SEDAN protected by COX BUMPERS (*front and rear*)

These bumpers are virtually part of the Car. Buick Dealers sell them knowing that the splendid performance of their cars will be fully supported by these perfect-fitting collision guards.

The custom-made attachments (specially designed individually for each particular make of car) which accompany all Cox Bumpers, are a vital part of the Cox policy of Car Dealer Co-operation.

Buick Dealers, Studebaker Dealers, Cadillac, Packard, Dodge Brothers, Mitchell, Durant, Paige, Hudson, Nash, Lincoln, Ford, Wills-Sainte Claire—in fact Dealers handling any car—can recommend and sell Cox Bumpers with the utmost confidence and satisfaction.

They fit each car as though part of it—and the three beautiful loop-spring designs, in eight different finishes—the marvelous strength and resiliency of the Mo-lyb-den-um Steel of which they are made—the individualized folders prepared for each make of car, helping car sales as well as bumper sales—all have contributed to make Cox Bumpers extremely popular with Car Dealers all over the country.

Model 21

A supply of these special folders, relating especially to the particular car you sell, is awaiting your request. Write for a sample copy.

"*We have sold the Oldsmobile since 1916* and have found our dealings with the Olds Motor Works okey. Our sales have run ahead of last year. We are thoroughly convinced that the Oldsmobile is the best value for the money on the market today, and we would not give up the Oldsmobile contract for any other franchise."

FISHER & OCHAMPAUGH
(Fonda, N. Y.)
C. H. Fisher

The value of any manufacturer's selling franchise may safely be judged by the dealers the manufacturer *keeps.*

Square dealing, a better product than others can offer, a permanent dealer's contract, *an opportunity to make money and to grow* are some of the reasons why Oldsmobile dealers stick.

Fisher & Ochampaugh are only a fair example of the permanent sort of dealers representing Oldsmobile.

The opportunity to join this established, prosperous dealer organization may be yours today.

Logically, the better territories that are open will not remain so very long.

A prompt inquiry is almost necessary. Write, wire or telephone us for an appointment and complete information concerning your territory.

Who Is Going to Profit by the Merchandising Movement?

If It Can Add a Million Dollars to the Coming Year's Equipment Business Who Will Get the Million? Some Afterthoughts on the Colorado Springs Convention

By NEAL G. ADAIR

SEVERAL million people who are listening today to concerts and speeches over the radiophone were laughing a few years ago over predictions that wireless communication would be brought within reach of the masses. They looked upon the early experiments as pastimes of scientifically inclined gentlemen with more imagination than common sense. Now you can't find a radio fan anywhere who will admit that he had the slightest doubt, from the very start of wireless investigation, of the practicality of wireless telephony.

The more or less human race always receives new things that way. It lets its pioneers live in poverty and raises monuments to them after they are dead. The characteristic responsible for this kind of conduct is skepticism.

Just about a year ago the Automotive Equipment Association decided at its convention at Mackinac Island to try an experiment in sales promotion. It voted $40,000 for a campaign intended to suggest to retailers ways and means of increasing their profits by selling more automotive equipment—accessories for the car and truck, replacement articles and materials and small merchandise in general. If retailers sold more they would buy more, of course, which meant additional business for manufacturers and jobbers, justifying the campaign by an association made up of these two classes of the equipment industry.

The movement met the expected opposition in the form of skepticism. A good many members of the association, despite the fact that they were financing a major part of the campaign cost out of their own pockets, didn't think it would work. And *they didn't work*—in the campaign. A good many retailers were skeptical, too. They didn't take much stock in the association contention that the car and truck owner will buy extra equipment if you ask him to buy. They were too busy to bother with selling small stuff.

Yet the merchandising director of the campaign, Ray W. Sherman, estimates that in the first 10 months of the movement—Aug. 1, 1921, to June 1, 1922—between eight hundred thousand and a million dollars was added to the aggregate sale of automotive equipment in the United States and Canada because retailers were asking 'em to buy. A million dollars worth of small stuff that somebody made profits on!

There is no way to establish the estimate as fact. But it is certain that application of the merchandising idea by hundreds of manufacturers, jobbers and retailers and the salesmen they employ stimulated and augmented sales. Some business and the profit that goes with it were added to the receipts of a great many corporations, firms and individuals in the various branches of the automotive equipment business—and all this because some men in the trade were not skeptical when the campaign started and others got over their skepticism as the campaign progressed and they saw what some of their non-skeptical neighbors and competitors were doing.

SO the merchandising campaign entered upon its second year at the recent convention of the Automotive Equipment Association at Colorado Springs. There were no surface indications of opposition within the membership to the appropriation by assessment of members of $60,000 to keep the campaign going another twelve months. Here and there a skeptic aired his views in private, but his audiences were small and inclined to hurry away to important engagements elsewhere. As far as the asso-

Digitized by Google

ciation which is fathering it is concerned, the merchandising movement is a fact.

But what of the trade in general? Where does it come in on the general scheme?

It comes in, if it will, all the way along the line. The beauty of the campaign lies in the fact that a selfish movement—the A. E. A. members naturally are trying to build up their own business—becomes an unselfish movement when it gets into action.

WHEN an association of manufacturers and jobbers induces a great many retailers to put greater effort into retail selling, resulting in the sale of more goods, not all the additional goods sold are bought from these manufacturers and jobbers. Others also benefit. Thus the momentum of the campaign extends in a measure throughout the entire manufacturing and jobbing field. The additional profits that retailers earn by tying up with the campaign obviously are benefits extended outside the association, as there is no retail membership in the A. E. A.

Some members of the association, both manufacturers and jobbers, have criticized the movement because it helped competitors' business, but it is noticeable that the critics are not found in the ranks of the active campaigners, manufacturers and jobbers who have used advertising, speechmaking and motion pictures to interest the retail trade in the intensive selling idea and, in some cases, in their own products.

The help-the-other-fellow background of the campaign enfolds the consumer as well, the car and truck owner who yields to the retailer's plea to buy equipment. It is to the credit of the men controlling the movement that they have encouraged the sale only of utility merchandise, articles of equipment that will help the buyer, as one of the campaign slogans says, to get "full satisfaction from his car."

NO one pretends that there is anything new in the merchandising movement. Its two phases, to increase profits by selling more merchandise by asking people to buy it, and to increase profits by turning shop losses into profits, have been developed by leaders in the trade and promoted by the trade's business papers for years. The A. E. A. campaign, however, has the advantage of being a year 'round effort centered on a single subject with a remarkably effective means of contact with the retail trade through the army of jobber salesmen throughout the country.

The second year of the campaign will have the same tangible features—the kind that a man can get hold of—which marked the first 10 months. The "Ask 'em to Buy" film, which has been shown by A. E. A. workers and members in several hundred localities in this country and Canada, will be kept on the road, and the "Ask 'em to Buy" book, entitled, "A Greater Profit," will be available for retailers who want it. In addition, the new film, "Shop Profits," branding uncharged materials, lost tools, wasted time and uncollected bills as the shop operator's chief enemies and shop system, "Ask 'em to Buy" and "Ask 'em to Pay" as his best friends, will go the rounds, suggesting to dealers and garagemen things they can do to destroy these enemies and cultivate these friends of profits in the shop. There is another book, "Shop Profits," ready for distribution to men in the trade who ask their jobbers or the association for it. And a larger force of manufacturers, jobbers and their salesmen will be at work as volunteers helping the A. E. A. to carry the better business story around the country.

The "Shop Profits" feature will bring the garage equipment manufacturers and their jobbers more actively into the movement, as it is intended to pave the way for demonstration of the utilities of machinery in the shop, both to build profits and better to serve the car and truck owner.

AS for results, the trade itself, the men who will profit by sales promotion work if they undertake it, will have the say. If the campaign added a million dollars to equipment sales of the past year dealers and garagemen made $330,000 in gross profits on the additional business and manufacturers and jobbers had their share as well. Whatever business the campaign built last year, whatever it can build in the coming twelve months, it is something and somebody will profit by it.

Motor World is interested in the merchandising movement because it is a constructive work, intended to help men in the trade help themselves. It is not an uplift idea being tried out on the crossroads garageman, as some uninformed people have seemed to think. Some big city automobile dealers who never sold accessories before have put in departments and are carrying a large part of the overhead of their entire establishments on the profits.

There is nothing in the movement that will hurt any dealer's or garageman's standing with his customers. There is much in it that every dealer and garageman ought to know—and do.

Did the merchandising movement get to your town last year? It it didn't—or if it did—is it coming this year? Take the trouble to find out.

Making and Managing a High Powered Selling Force

This Story Tells How the Anderson-Smith Co., in San Francisco, Selects, Educates and Directs Salesmen—It Is Full of Interesting and Helpful Ideas for Every Dealer

By H. H. DUNN

THERE is a firm on the Pacific coast selling automobiles just as the retail grocer sells sugar or flour or potatoes, or any other NECESSITY of everyday life. To do this, it has established a school for salesmen, where its staff is trained to sell automobiles as a necessity, not as a luxury; where every salesman is taught to teach the prospect that he can afford an automobile, that he must have an automobile, and that the particular automobile this salesman is selling will increase the prospect's business, add to his convenience, and even prolong his life, altogether aside from the added pleasure it will give to him and his family. Instead of allowing the prospect to ask himself, "Can I afford an automobile?" the salesman proves to him that he cannot afford to be without one.

THIS system—which has been in force eighteen months—*has increased the sales of this particular passenger car by more than* 100 *per cent;* it has necessitated the *establishment of four retail stores* for this car in as many sections of the city, and it has *forced an increase in the sales staff* from eight to more than 40 men. In other words, it is a success, and it is still growing, for the management of the firm is advertising for more men who want to learn to sell automobiles on the day that this is written. The sales manager is not advertising for automobile salesmen. In his belief, the old methods of selling automobiles have gone into the discard. "The best salesman I ever had," said this sales manager, "was a lumberjack who came to me fresh from the pine woods. The next best was a 'soda jerker' from a corner drug store; the third a grease boy from a garage near our headquarters; the fourth a bank clerk, and the fifth a furniture salesman. You'll notice that no former automobile salesman even 'got in the money' in that race."

The firm is the Anderson-Smith Motor Co., with headquarters at 1600 Van Ness Avenue, at the outer end of Automobile Row, in San Francisco. The sales manager is Ray E. Brouillet, and he came to the automobile business from the efficiency end of a correspondence school. He never sold an automobile in his life until he started to sell them, eighteen months ago, for Anderson-Smith. Here, in his own words, is the story:

"To sell automobiles, the salesman must get the right prospect, at the right time, with the right automobile for that prospect's purposes. In other words, he must get the prospect at the moment of least sales resistance, and prove to him, clearly, convincingly, and truthfully, that the automobile he is selling will fill every demand the prospect may have. To do this, the automobile salesman of to-day must be trained differently from all his predecessors, must abandon old ideas of automobile salesmanship, and must follow new lines of approach, of argument, and of contract closing. The old salesman wanted to run the automobile business in general and the branch with which he was connected, in particular; THE NEW SALESMAN MUST BE RUN BY THE AUTOMOBILE BUSINESS. He must first of all convince himself that *he is selling the right automobile,* that *the automobile he is selling is a necessity,* and then he must convince his prospect of this fact. The automobile salesman to-day must be taught the business anew, and from the ground up, along new lines, to meet greater competition and to overcome sales resistance never dreamed of in the old days in which most of the present-day automobile salesmen grew up.

Making Salesmen

"The Anderson-Smith Motor Co., which sells the Chevrolet in four retail stores and its headquarters, in San Francisco, has established a school for automobile salesmen to produce a new type of automobile salesman. It also maintains a school for Chevrolet owners, for the satisfied owner is the best prospect for another sale of the same car. We pick salesmen from all walks of life; in fact, we prefer that they never have sold automobiles before, when they enter our school. We advertise for salesmen, just as the grocer, the department store manager, or the hardware dealer advertises for clerks. When the men respond to our advertisements, or when they apply for jobs, I sit down with each one of them, look him in the eye, and watch his every reaction. If he is not two-fisted, if he is not a fighter, if he is not a worker, if he does not *believe* that whatever he says is right, he never even gets into the school. He doesn't have to be finely dressed; he need not be highly educated; he does not necessarily have to know anything about automobiles, in fact, the best salesman we ever have had, was a lumberjack out of the pine woods, who knew as much about automobiles as he did about the top of Mount Everest, but he was a fighter and he believed in himself.

"When a man passes this personal test, he is given a self-analysis chart. As you will see further on, I do not believe in elaborate bookkeeping systems, card indexes, and all that sort of thing, but this chart has proved its worth many times over. On this chart he sets down his own appraisal of himself, and I take another chart, which the applicant never sees, and set down my own appraisal of him. Every salesman in our employ, and every man in our school for salesmen, makes out one of these charts, new and fresh, at the beginning of each year, and I make out a new one on him, for my own files, at the same time. The greatest use of these charts is that when a man finds something wrong with his 'sales curve,' when he is trying but not getting results, we sit down together and go over his own chart and mine, or such parts of mine as are necessary for this particular problem. There is not one of our 40 salesmen but has been helped by this chart; not one but is glad to fill it out at the beginning of each year, and anxious to talk it over with me if he has difficulties later on. Poor salesmen are made into good salesmen; good salesmen are made better, and the best salesmen

Digitized by Google

Where Motor Car Necessity Is Sold by Trained Salesmen

are enabled to chink up little holes of inefficiency which sometimes creep in.

"The new applicant does nothing for the first week but 'listen in' on sales arguments, approaches to prospects and closing of contracts, and read up on the Chevrolet. Then he goes around calling on prospects and closing contracts with different members of the trained sales force. Then he gets into the big lecture and study room, where he meets dummy customers to whom he sells cars. This is the toughest week of all, for there he meets men who are trained in sales resistance, who put up to him all the arguments ever thought of against buying a car. Comparisons of the Chevrolet with other cars are thrown at him, and he must meet them or drop out. When he loses an argument, he has me to back him; he can come to me at any time and get the answer to anything that puzzles him, or the reply to any argument.

"After he has completed this difficult section of the course, the new man is taught all about the mechanical angle of salesmanship. When he gets through

1—Main store of the Anderson-Smith Motor Co., San Francisco. The firm operates three other stores in the city, located so as to strategically meet the buyer. 2—Ray E. Brouillet, sales manager, who puts salesmen through a regular course of training before sending them out to meet prospects. 3—The forty salesmen at one of the twice-a-month dinners the company gives as get-together conferences for salesmen. 4—The school for Chevrolet owners, one of the methods of reducing sales resistance and making owners real boosters. The big idea behind this activity is to make every owner a prospect for another Chevrolet—and it works

Digitized by Google

with this he knows the Chevrolet from bumper to bumper and from tire to top. Here, again, trained salesmen train him, and he gets all the help he needs from the repair and service departments. When he has completed this part of the course, which is largely a matter of memory, and not so much of personality, he goes out to sell automobiles, equipped with a thorough knowledge, not alone of selling arguments for the Chevrolet, but of buying arguments *against* it. He knows how other men who are selling our cars overcome sales resistance; he knows his own points of vantage and the weak spots in his personal armor, and he KNOWS THE CAR. He is both salesman and demonstrator. He can help a Chevrolet owner who is in trouble or who has problems in the use of his car, and, in the automobile business as in no other, it is the truth that a 'satisfied customer is the best advertisement.'

"In the eighteen months that the Anderson-Smith Motor Co. has been training its own salesmen in this manner, sales have increased more than 100 per cent, and we have found it necessary to establish four retail branches in as many sections of San Francisco, the better to overcome sales resistance. We have gone into advertising and selling cars in three languages—Italian, Chinese and Japanese—besides English, and we have salesmen who speak all these languages. We have trained our salesmen not to be experts in psychology, not to be efficiency men in keeping records, but to SELL AUTOMOBILES.

"Under this method, we have brought bookkeeping to a minimum, records to the smallest possible space, and, incidentally, have saved hundreds of dollars in space and in cash. The efficiency of the salesman is all devoted to his prospect, not to his records of why he did or did not do this or that thing. The salesman is made to know that he is in business for himself. The firm furnishes him with a desk and a telephone, and all possible sales arguments and assistance. He is made to feel that the sales manager is another salesman, right at his shoulder at all times. The salesman buys his own car, and thereby he learns not only methods of operation, but economy and carefulness, for it is his own car he is driving, and not 'the boss's car.'

Keeping Prospect Records

"Detailed reports have been eliminated, and instead each salesman keeps one sheet containing ruled lines for each prospect, and small squares for each day of the month, showing at the same time just what results were attained with each prospect and just what the salesman did on every day of the month. These sheets the salesman keeps, but at stated periods, the results are transferred to a master sheet which I keep in a small file. This obviates all the waste of time—which is large—in filling out cards, filing them in an index and then going through the index. We divide our prospects into three classes:

"1. *Active*: The man who wants an automobile, needs an automobile, is prepared to buy an automobile, and who must be convinced that the Chevrolet is the car for him.

"2. *Inactive*: The man who wants an automobile, needs an automobile, but must be shown how he can buy an automobile, on partial payments, or how he can raise the money to pay cash for one.

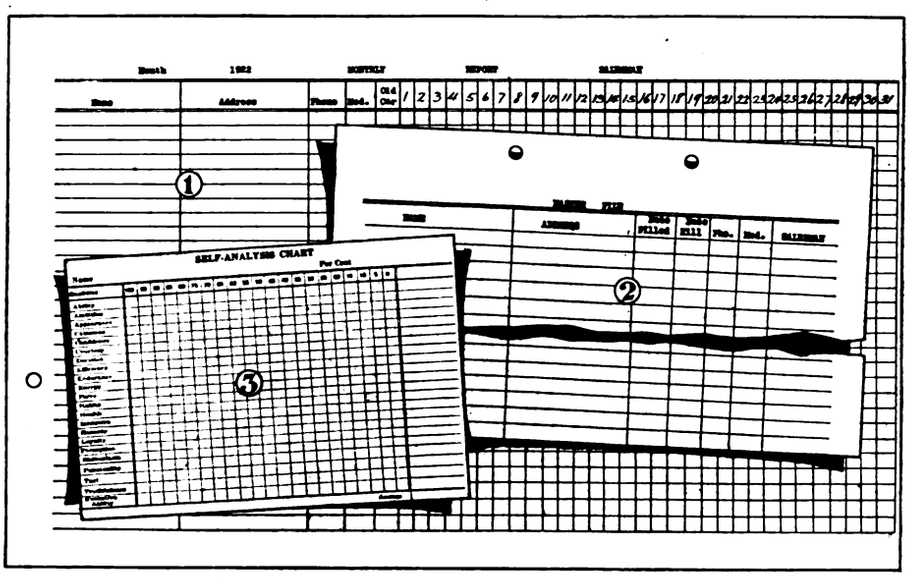
"3. *Future*: The man who has a car, but at some virtually fixed date in the near future, will need another. Chevrolet owners form a large part of this class, since we have taught them how to get the utmost out of their car, how it can serve them best, and when to replace it.

"Every day I take the salesman, his own sheet and my master sheet, and we have a 'boiling out' of the prospects. If this salesman is worn out on one prospect; if he is up against what he has come to believe is a 'stonewall,' the prospect is transferred to another salesman, who will make a fresh campaign for a sale. Briefly summarized, there are only three things that I particularly care about hearing a salesman say to a prospect:

"'How do you do?'

"'When will you buy a car?'

"'GIVE ME THE ORDER.'



"There is too much oratory and too little work in the life of the average automobile salesman to-day. It is—as someone else has said—the 'crapshooter who rushes in where poker-players fear to bet' that sells automobiles. Sometimes I deliberately pick a fight with an applicant for a salesmanship position, if he seems to be worth it, just to prove how much initiative and pep and punch he has. I pick the fast and furious men who come to me, and when I advertise it is always a call for 'two-fisted' men who are 'not afraid of a fight!' That is the kind of men who sell automobiles, and who are selling them every day in every month.

Using Owner Influence

"When the new man is given prospects he gets, first, a list of owners of Chevrolets. Thereby, he gets a chance to make friends of present owners of the car he is selling. He becomes a sort of inspector; he advises Chevrolet owners as to the condition of their cars, their needs, and often he prolongs the life of a car by a few words of advice, because he KNOWS the car and can give the proper kind of accurate advice and information about it, all of which he has learned in our school for salesmen. When the applicant has become a salesman he gets a 'floor-day' two or three times a month, and is given a chance to show just what he can do inside. As a prospect is brought up to the time of signing his contract, the helping hand of the sales manager, or even of other and more experienced salesmen, is extended to the salesman who is closing the deal. This is one school in which the pupil always has the advantage of the help of his teachers throughout his career.

"Our salesmen, too, are trained in the purchase and 'trading in' of used cars. *The best automobile salesman in the world to-day is the motorist with a used car which he wishes to trade in.* He immediately takes the offensive, while the salesman is automatically placed on the defensive. The salesman, in every individual sales campaign, must at all times be master of the situation; he must be the 'boss' of every deal, and he is trained to so contrive and move himself about that he is in that position with the used car owner. Our method is for the salesman to keep off all arguments as to the value of the used car, but to bring every argument to bear to increase, in the mind

Forms Used in Selecting Salesmen and Directing Work

1—There are no card indexes in the sales manager's department. Instead, every salesman keeps one of these sheets and records on it every prospect, every selling attempt and every sale. At the end of the month the reports are filed. 2—From the salesmen's reports the data are taken for this master file kept by the sales manager. It shows the final disposition of every prospect. 3—Every salesman fills out a self-analysis chart at the beginning of each year. The sales manager also fills out one for each salesman and when sales lag the salesman and the sales manager go over them together—with good results

Digitized by Google

of the car owner, the value of the new car. Then we bring the used car owner and the appraiser—our credit man who knows cars and terms—together in our office. Then we SELL HIM THE NEW CAR and buy the old car. This is the secret, from the dealer's point of view, of handling the used car."

Every once in a while, Sales Manager Brouillet puts out a written sales talk to his salesmen. He has produced twelve, so far, and here is one of them:

"Transportation is one of the five necessities of life.

"We require food, fuel, clothing, shelter and transportation. Without transportation the other necessities could not be distributed.

"Transportation moves the seed to the farms and the crops away. It moves food and clothing to merchants' stores and distributes them among the people who need them. It moves materials for building purposes.

"Without transportation there would be no progress.

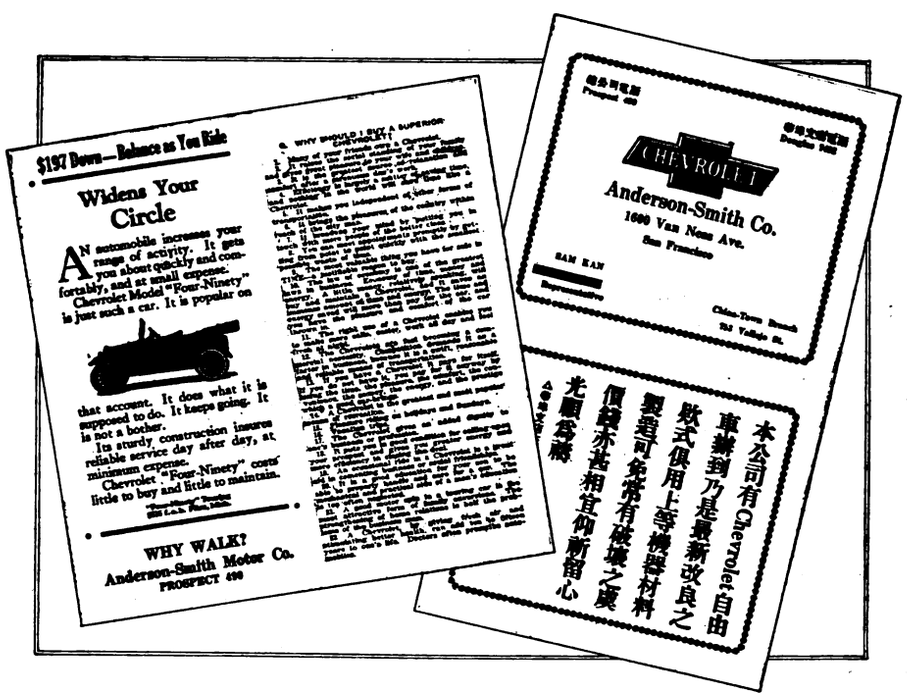
"And foremost of the transportation mediums of the present and future stands the automobile.

"It stands foremost because it gives every man the advantage of directing to the best market the commodity he sells, whether it be a product of the soil or factory, or man's own labor.

"With these indisputable facts before us, it is difficult to understand how any man can see anything but great success for the automobile business.

"It stands foremost because it is closer to the needs of the individual than any other means of efficient transportation ever has been.

"Every dealer must look upon our industry as providing one of the necessities of life, and encourage others to see it in the same light.



"The automobile is a necessary means of transportation and *can be sold as such* every business day of the year."

Keeping Owners Satisfied

The school for Chevrolet owners, maintained by the Anderson-Smith Motor Co. has proved more than profitable; it is considered one of the best investments they have made. The average attendance has been 175 at each meeting, and the meetings are held every Monday evening during the late fall, winter and early spring, in some one of the San Francisco salesrooms. Investigation preceding the establishment of this school showed that the average Chevrolet owner lacked knowledge regarding the care of his car, some not even knowing of the existence of instruction books. The first lecture, delivered by a representative of the Chevrolet Motor Co., from the Oakland, Cal., factory, covered construction, manufacture and classification and quality of materials used. The second dealt with the carburetor and was given by an expert in this detail. The third, by a storage battery expert, covered the function, operation and care of storage batteries in general and of the one used on the Chevrolet in particular. The fourth covered lubrication; the fifth, ignition; the sixth, a review of all previous lectures. At each lecture, a period was set apart for questions and discussions by the owners. A typewritten copy of each lecture was given each owner present.

"This school for owners," said Brouillet, "already has resulted in a number of replacements to those in attendance, and a large number of new sales to friends of those who attended the lectures. The school plan has established a closer relation between the firm and the individual customer, and has been the means of giving solutions of a number of perplexing service questions to the owner, which, otherwise, might never have been solved, or which might have grown larger and resulted in greater sales resistance on the part of the owner, when he came to get a new car, or of the friends of the owner whom he might influence in their purchase of a new car."

These results would seem to prove that the education of the automobile salesman, and of the automobile owner may be made to go hand in hand, to the great and permanent advantage of the dealer, distributor and manufacturer.

Left—Sales arguments are prepared for the salesmen by the Anderson-Smith Co. Here is one of them. Right—Reducing sales resistance among the Chinese by advertising to them in their own language is just one of a dozen odd lines of successful salesmanship.

Selling the Power Farming Idea

"WE tell our prospective farmer customer that he is just as much a manufacturer as Henry Ford, the difference being that he is manufacturing food products and Mr. Ford automotive products," says W. H. McGlamery, head of the McGlamery Auto Co., Ford dealer in Greensboro, N. C., "and, we have very little trouble in convincing him that it will be impossible for him to continue with the old primitive methods and means of high labor costs, and also the lower prices, which he must necessarily, under the present conditions, get for his products." This presentation of the power farming idea has been extremely successful in the merchandising of tractors by the McGlamery outfit and recently resulted in the sale of a complete Ford unit consisting of a car, a truck and a tractor to one farmer.

"We are completely determined to put across the idea of power farming as rapidly as it can be done," says McGlamery, "because in doing so, we are firm in our opinion that inasmuch as the tractor is a money-maker for the farmer, we believe in a short time he will have more money to spend with us in buying more Ford products, as well as the fact that he will have more money to spend with other merchants." McGlamery has three exclusive Ford salesmen and advertises extensively. A full page ad in a Greensboro paper recently told the story of McGlamery's sale of a complete Ford unit, consisting of a car, truck and tractor, to a farmer.

Sells Spark Plugs to Gasoline Customers

HERE'S the way one successful middle western accessory dealer sells more spark plugs: "I do a considerable business in gas," said this dealer, "and whenever one of my employees or myself makes a gas sale we always take a new spark plug from our pocket and suggest to the gas buyer that it would be a good plan to get an extra spark plug for use in case of emergency. In this way we make sales to fully forty per cent of our gasoline customers. And as we wouldn't get this business otherwise we feel that it is a very well worth while stunt."

Harnessing the Selling Power of Satisfied Ownership

This Story Tells How the Herold Motor Car Co., Reo Distributor in Cincinnati, Sells the Local Performance of Its Product With Letters and Salesmen's Calls

By DONALD D. BLANCHARD

JIM JONES, plumber, buys a motor truck. He finds it economical, reliable and in every way satisfactory. The dealer who sold it to him has done his part by selling a truck of suitable capacity and equipped with the right body, and by rendering prompt and efficient service on it. Naturally Jim Jones is a satisfied owner.

Such satisfied owners are the most important factors in the unusual success that the Herold Motor Car Co., Cincinnati, Ohio, has had in distributing Reo trucks. Sales Manager Kibby uses them as his most important selling argument. He depends on their testimony so completely that he has practically discontinued demonstrations.

This is how Kibby's owners help him sell trucks.

WHEN the prospect wants evidence of the performance of the truck, Kibby suggests that he visit some owners with him or talk to them over the telephone. Usually it is possible for Kibby to provide names of owners in businesses that are the same or similar to the prospect's business. There is hardly a class of business in the territory that doesn't use one or more Reo trucks.

Kibby has so much confidence in what his owners will say that he suggests that the prospect ask these questions:

How do you like the Reo truck?

Has the service rendered by the Herold Motor Car Co. been satisfactory?

If you were buying another truck, what make of truck would you buy?

If the answers to any one of these questions were unfavorable, it would be sufficient to kill the sale. But Kibby knows that his owners are boosters. He has sold them the right size of truck with the right equipment, and his service department has kept it on the road day in and day out. He depends on his owners to furnish the big punch in his selling talk—*and they do.*

This use of satisfied owners is being developed along vocational lines. The Herold Co. has undertaken the canvass of the Cincinnati territory by classes of business. The first to be investigated is the plumbing trade. When this trade has been covered, other lines of business will be canvassed in turn.

The classified telephone directory is used as the basis of this vocational selling campaign. Here are listed all the individuals and companies engaged in the various vocations. It is probably a 100 per cent. complete vocational list, because it is difficult to conceive of a business without a telephone. If a business has a telephone, it is listed in the classified directory.

Kibby divides these lists between his salesmen. He estimates that one-half of their time can be devoted to this vocational investigation. The information to be obtained on these visits is indicated by the ten items on the "Business Report," which is shown in the illustration. These reports are turned in to the sales manager each day.

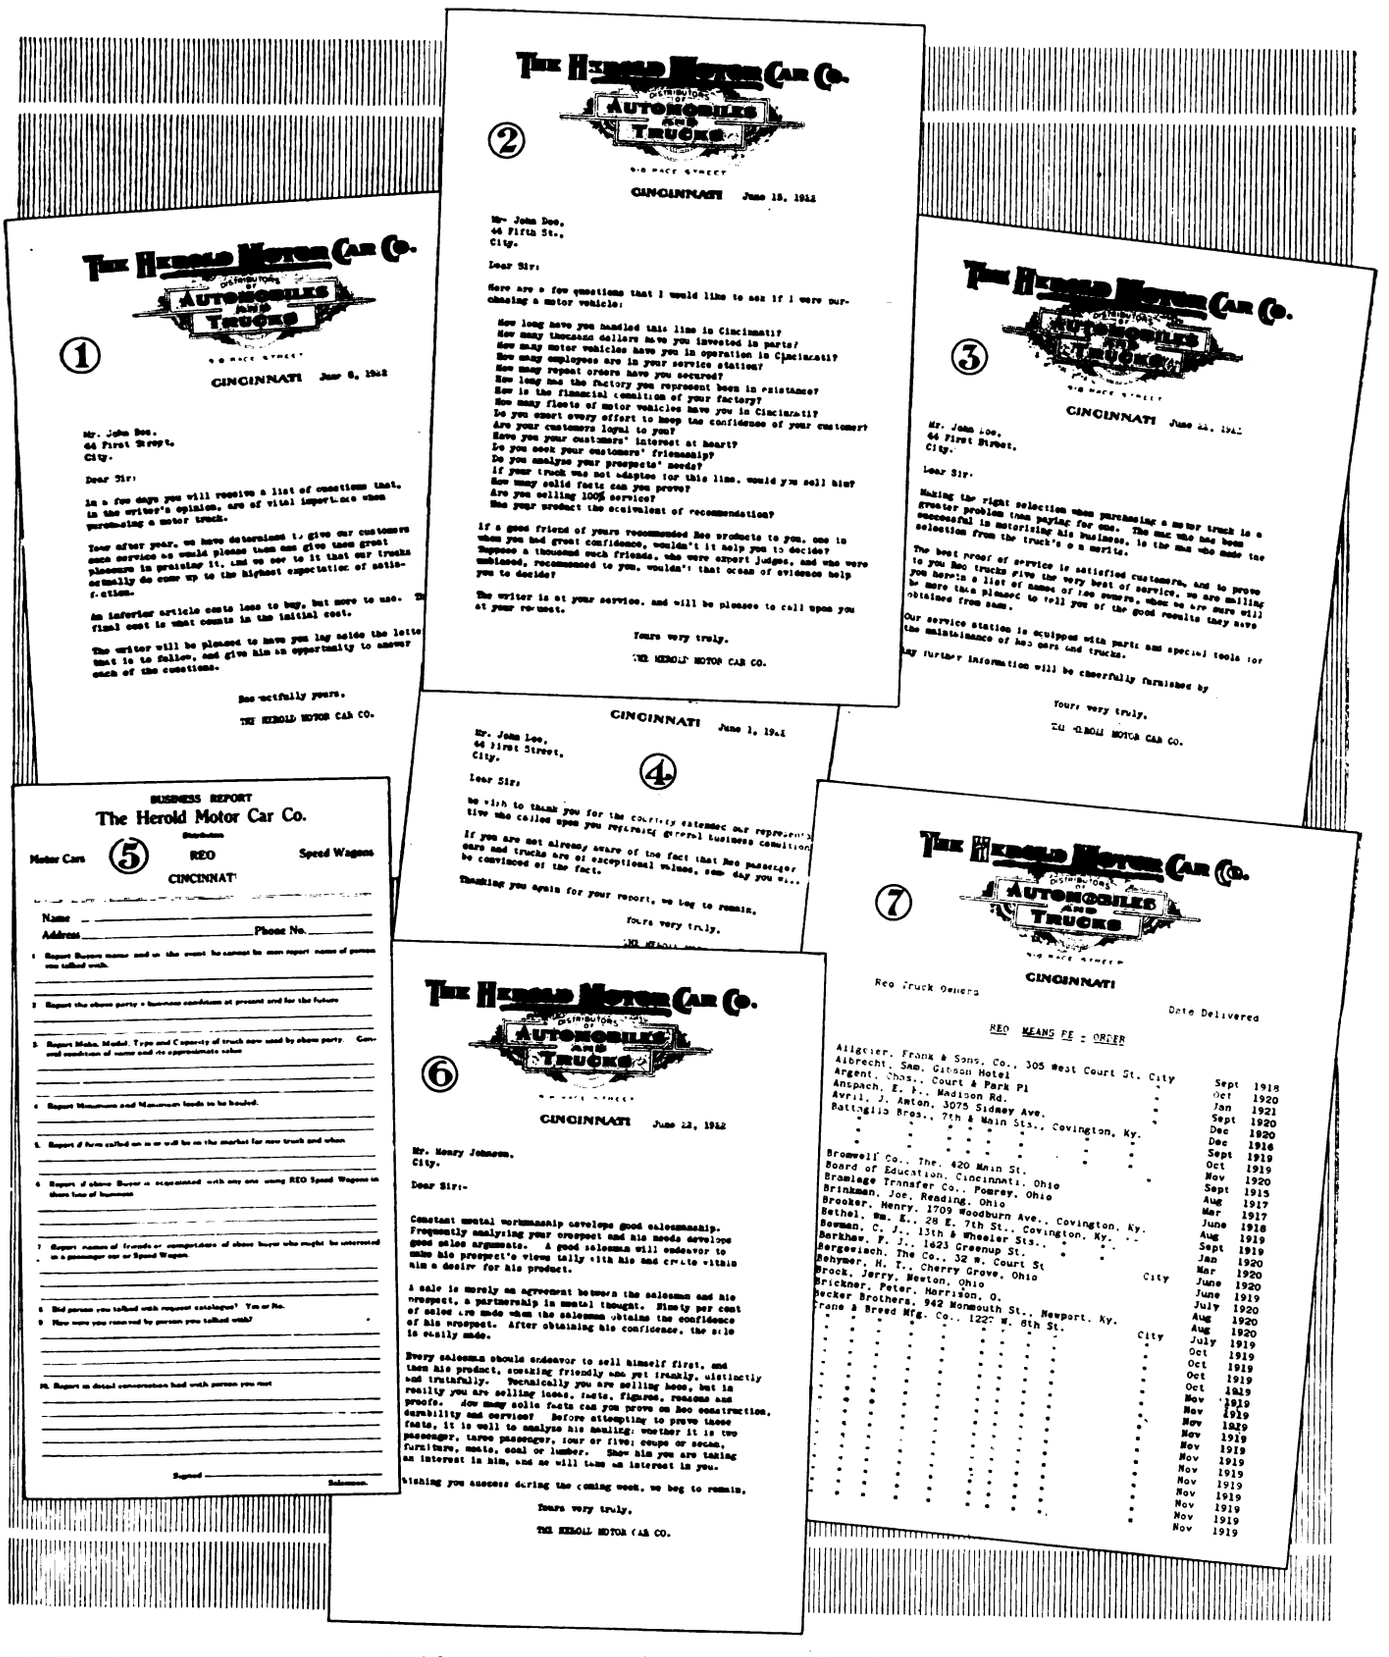
If the prospect is acquainted with any Reo owners in the same line of business, their names are put down under item 6. This indicates clearly the part that satisfied owners have in this selling effort. If item 5 indicates that the man is a prospect, the information furnished by item 6 is very useful. The owners in the same line of business with whom the man is acquainted are called on the telephone and asked to put in a good word. Furthermore, their experiences are used as sales arguments and they have added weight to their testimony because of the acquaintanceship.

As a follow up on each call, the sales department writes a letter to the man visited thanking him for his courteous treatment of the salesman. This impresses the visit on him. Furthermore, if he has been short or discourteous with the salesman, the short note of thanks may secure better treatment next time.

Finding Prospects

Prospects obtained through the canvass are listed on prospect cards and followed up at regular intervals. The sales manager goes through the prospect file every two weeks, and any prospects which should have been followed during that period but have been neglected by the salesman, are turned over to another salesman. This system forces the follow up because the salesmen know it is necessary to retain their prospects.

Prospects are also followed up with a series of three letters which are shown in the illustration. The first of these informs the prospect that another letter will follow and that this letter will contain a list of questions. These are questions that Kibby would ask a dealer if he were buying a truck. He offers to answer these questions for his own company upon the request of the prospect. The third letter carries with it a multigraphed list of all the Reo truck owners in the Cincinnati district. The first sheet of this list is reproduced in the illustration.



This mail advertising stresses the importance of dealing with a well established dealer and factory. It features the importance of service behind the truck. In furnishing the prospect with a list of owners, this company shows how confident it is that the testimony of any of its customers will be favorable.

Kibby is a first class salesman himself. He attributes his success to the fact that he has first sold himself and his company and, after that, the truck. He believes that sales are made when the salesman has the complete confidence of the buyer. In tackling a new prospect, his idea has been to establish this feeling of confidence and respect before proceeding to the business of selling the truck.

He is trying to inculcate this same idea into his salesmen. Frequent letters to his salesmen are part of the work he is doing to educate them. One of these letters is reproduced. This letter stresses the importance of analyzing

the prospect's hauling problem so that the salesman will be able to show most clearly how the Reo will fit these needs.

The results obtained by Kibby in a small community near Cincinnati illustrate how well this method works out in practice. It also shows that it pays to sell by the intensive cultivation of particular vocations.

There is a community of about 100 truck gardeners about eight miles from Cincinnati. The average size of their farms is in the neighborhood of five acres. These farms sell their produce on the Cincinnati market.

Some years ago Kibby started out to sell Reo trucks and cars to this community. As soon as he had made some preliminary acquaintances, he started a free truck school to which these farmers were invited. The sessions were held on the farms and the course continued for a period of eight months. The attendance averaged 25 and at times it reached 45.

Each session, Kibby would take up a different part of the truck. He would explain its function, how it operated and how it should be cared for. He was endeavoring to impress these farmers with the simplicity and durability of the truck—how easy it was to operate and maintain one. And all the time he was getting acquainted. He was getting their respect and confidence.

When a prospect was ripe for a demonstration, he would give him a real one. It meant an all night job, but he showed him the truck under actual working conditions.

Using teams, the farmer and his wife would leave for market before midnight. It would be daylight by the time the produce was sold and the farmer was back at his farm. Frequently he had to make another trip to town for a load of manure. This meant a working day of 18 to 20 hours and two teams of horses.

In making a truck demonstration, Kibby would call for the farmer at about 2 o'clock, load up the truck and drive the farmer and his wife to market. There the produce would be unloaded and the wife would remain there to sell it. Then Kibby would take the farmer and the truck, get a load of manure, drive out to the farm and then return to the market for the farmer's wife and the empty boxes and barrels. The drive back to the farm was made and everything was finished up by 6 a. m. The saving in time that the truck effected was evident.

These farmers had confidence in what Kibby said. They knew that he wouldn't sell them something that would not pay. First one bought and then another. And the truck sales brought passenger car sales. Up to the present time, this small community has purchased almost $200,000 worth of Reo trucks and cars.

The contact that Kibby established with these farmers some years ago is still maintained. Every month they receive mail advertising. Kibby maintains his personal acquaintance, too. He attends their weddings and funerals and, if he hears that any of them are sick, he makes it a point to visit them.

The reasons for the success that the Herold Co. has had in selling trucks may be summed up in a few words. It has worked to secure the confidence of its prospects. It has justified this confidence by selling a truck and equipment that would fit the prospect's business needs. It has retained this confidence by backing these trucks with efficient service. In this way they have insured satisfied customers. And these customers are showing their satisfaction by helping this dealer sell more trucks.

This Salesman Fought With Odds Against Him —and He Won

THIS is a regulation story.

It has a hero, a heroine and a villain, without which any story would be as unreal as a Georgia mountain without a moonshine still.

The hero is "Chick" C. A. Verlin, automobile salesman de luxe for the Atlanta Haynes Co.

The heroine is a woman, as a heroine should be, whom we shall call Mrs. Jones.

The villain is a lawyer whom we shall refer to as John Doe.

And so—on with the dance——

Chapter I.

"Chick" Verlin was entirely satisfied with the ways of the world. Mrs. Jones promised to buy, and at a time when sales were so few and far between that it is little wonder he should feel more or less exalted over the circumstance. This was Saturday and on Monday morning she would turn over to him Liberty Bonds to cover the initial deposit and sign her contract.

Chapter II.

Enter the villain.

It was Sunday afternoon and he had called to see the daughter of Mrs. Jones.

John Doe the villain had but recently acted as counsel for the defense in the case of a man who the Atlanta Haynes Co. had been compelled to sue. This man had bought a car and then sought to wiggle out of his contract. A jury's verdict against this party had compelled him to comply with the terms of his contract.

John Doe, upon being informed of the fact that Mrs. Jones and family intended to purchase a Haynes, proceeded to do his villain stuff. The loss of the suit had left an unpleasant taste in his mouth, and when he got through knocking that particular make of car——

Chapter III.

"I am sorry, Mr. Verlin, but I have decided not to buy that car."

Thus did Mrs. Jones upset the well-known beans when our hero called on Monday morning to close the deal in accordance with her promise of Saturday.

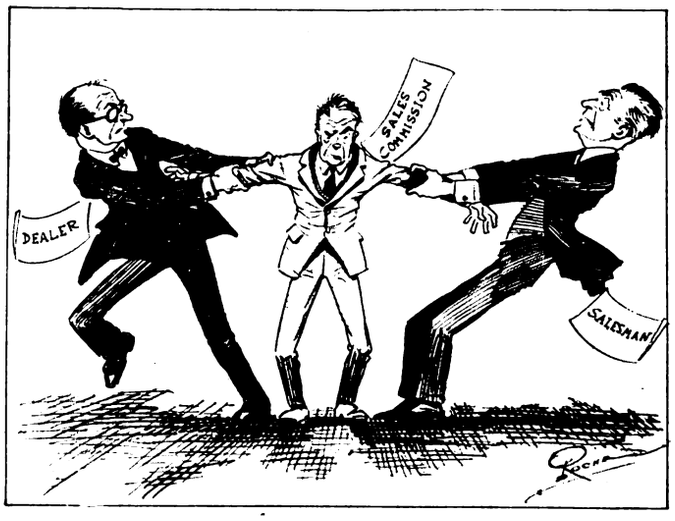
To say that Verlin was astonished is expressing it in the mildest of terms. He knew that she had gone so far as to visit her bank and get the $200 worth of Liberty Bonds that were to represent her deposit, and with his missionary work fully completed—or at least so he thought—he had presumed that all he would have to do would be to get her signature to the contract and take the bonds. But there's many a slip——

"Mrs. Jones, of course I am very much surprised," quoth Verlin, when he had sufficiently recovered his equilibrium to speak with coherence. "I wonder if you would mind telling me why you have decided not to buy."

At first Mrs. Jones was rather disinclined to do so, for she was quite sure that she had definitely made up her mind and that nothing would cause her to change it. Verlin, however, had a very convincing way about him and Mrs. Jones finally related the story.

Whereupon Verlin called all of his powers of salesmanship out of reserve and set forth to make this sale.

He showed Mrs. Jones where a jury, serving in a court of justice, had rendered their verdict in behalf of his company. And he showed her where that verdict was just and rightful. He showed her, too, where John Doe's condemnation of the car was entirely based upon personal prejudice. He talked, in fact, for more than an hour to surmount this wall of sales resistance he had so suddenly and unexpectedly encountered.



And finally, to make a long story short, as the fellow says, Mrs. Jones once again changed her mind. When Verlin left that Monday morning he had the signed contract in his pocket and the $200 worth of Liberty Bonds that represented the initial deposit.

And that's how "Chick" C. A. Verlin sold the toughest prospect he has yet encountered.

The moral of this story is—"Faint heart ne'er loosed the purse strings of a prospect."

Exciting, Perhaps, But—

By NEAL G. ADAIR

AS Cornelius J. Reilly, distributor of the Sennett in the Callawassa territory, stepped into the salesroom of Chadwick, his Oldtown dealer, he met a young man going out. This young man was in a great hurry, and he showed signs of anger. In the office Reilly found Chadwick. The dealer was shoving books and papers about his desk and showing the same dissatisfaction with the world that had betrayed itself on the face of the departing young man.

"Hello, Chadwick," Reilly remarked casually.

"How'd do," Chadwick responded with a forced attempt at cordiality as he rose to shake hands. Then he added: "Got any salesmen down at your place that you want to farm out?"

"Need some?" Reilly inquired.

"Need some!" Chadwick retorted. "You must have bumped into the last one I had, beating it out the front door as fast as he could leg it."

"Yep, met him," said Reilly. "Seemed to be terribly sore about something."

"Kicker, just like all the rest of 'em," Chadwick went on. "Quit in a huff because I wouldn't give him the commission on a car I sold myself. Another bird did the same thing a couple of weeks ago and about a month before that Carlson—best man I ever had—picked a row over a prospect this last man sold, and jumped over to the Redman. He's been raising Ned with some of our old customers, too; took three sales away from us since the first of the month."

"Got any new men coming on?" Reilly asked.

"Two due to start to-morrow morning," Chadwick answered, "but most likely they'll blow like the others. Never saw such a business. Expect it'll drive me cuckoo some day. If you're not sweating under a load of used cars you're bound to be refereeing a fight among salesmen over commissions, or something."

"But why should they fight?" Reilly demanded.

"Why shouldn't they?" Chadwick retorted. "Wouldn't you, if you could pick up a hundred or two that way?"

"But I couldn't, and no salesman could, in any dealer organization that is run as it should be." Chadwick flushed.

"Chadwick," Reilly continued, "ever since you've had this agency I've been hammering at you to keep a prospect file, haven't I?"

"Yes, but what's that got to do with—," the Oldtown dealer began.

"And you've been promising to get one into operation," Reilly went on. "Last winter you claimed you were too busy getting your shop in good running shape, and in the spring you said you had all you could do to get two or three salesmen started right, and now—"

"And now I've got to do it all over again," Chadwick interrupted.

"Which serves you right," Reilly declared, "because if you had had a good prospect file and your girl out there at the phone had been keeping it up to date from simple reports of your salesmen there wouldn't have been any chance for quarrels about commissions and you wouldn't have lost these men."

"Oh, I don't know," Chadwick remarked.

"I know, and so will you when I get through with you," Reilly warned. "Let me ask you something. Where did you get the first tip on the man you sold the other day, the one this last salesman claimed the commission on?"

"Didn't have any tip," Chadwick replied. "He just walked in and bought. Then Johnson, this money-grabber, had the crust to say he dug the fellow up a month before and gave him a demonstration."

"Did he?" Reilly asked.

"How do I know?" Chadwick countered. "I wouldn't take Johnson's word for it and I couldn't put the customer through the third degree to find out how he happened to want a Sennett, could I?"

"But if you had been keeping up a prospect file and requiring your salesmen to report prospects, calls and demonstrations you would have known all about it, wouldn't you?" Reilly persisted.

"I suppose so," Chadwick conceded.

"And in this case, if the file had shown that Johnson had listed this prospect, given him a demonstration, and called on him regularly to keep him 'alive,' you would have admitted that he was Johnson's prospect?" Reilly continued.

"But if Johnson had discovered him, then forgotten him?" Chadwick questioned.

"Then he would have had no claim on the commission. He would have known that and known that you knew it. There would have been no argument and Johnson would still have been selling cars for you instead of going around town roasting the hide off you while he hunts another job."

"Maybe," Chadwick said.

"Better put 'maybe' in with the dead languages, where it belongs," Reilly suggested. "And better put your selling system on a basis where there won't be any 'maybes' in it, so that every time a salesman makes a sale or has a part in making one he'll get paid for it, just as much as he deserves, and so that when the house makes a sale, without any help from your men there won't be any excuse for commission claims and a lot of bickering.

"Did it ever occur to you that two leading assets of a sales organization, no matter how large or small it is, are loyalty and enthusiasm?"

"But I've been selling cars—" Chadwick broke in.

"Last week and last month and the month before—when everybody wanted them—yes," Reilly responded. "But what about next fall and winter? Can you sell them, if your salesmen suspect you of trying to make their profits as well as your own? Will they work their heads off to locate new prospects and interest them in the Sennett if they have no assurance that their work is going to pay them in dollars and cents?

"It gets right down to this, Chadwick: Are you just selling for today or planning for to-morrow? Are you just gambling on a stock of cars or building a business?"

"I suppose, I—I—don't know—," Chadwick stammered.

"But I do know," Reilly countered. "I've been selling automobiles ten years for every year you've been bluffing at it. And in my selling system the prospect list is the backbone, heart, lungs, digestive tract and a lot of other things. It keeps our sales machine alive and active and happy and—out of trouble."

"Well, I guess—where can I get a set of cards and a box to put 'em in?" Chadwick demanded.

"Send the whole system out to you—to-morrow," Reilly promised. "Been keeping an extra one on hand, waiting for some sinner to hit the trail."

Editorial Notes

Hoover Against Dumping

ANY charge of selfishness that may have been raised against the automotive industry in connection with its opposition to the reimportation of cars and trucks sold in Europe by the American War Department will hardly stand in face of the firm support given the Graham anti-dumping bill by Secretary of Commerce Hoover. The bill would virtually prohibit the reimportations by imposing upon them an import duty so high that the transaction would not be profitable.

Information obtained by Government representatives abroad is to the effect that almost 9,000 automobiles are ready for immediate reshipment to this country, in addition to 30,000 which could be reconditioned and sent back. These vehicles would add to the used cars on the American market, aggravating a condition which is never an easy one for dealers to contend with. The reimportation would have the same unsettling effect as the sale here at reduced prices in the past year or two of many trucks brought back from the former war zone.

All these cars and trucks, together with millions of articles of equipment, were sold to Europeans, at sacrifice prices, when the War Department got out of France. It was generally expected that they would be resold abroad. It will be encouraging to leaders in the industry, who have been vigorously opposing the dumping of these goods in this country, to have Secretary Hoover agree with them that such a procedure would be unfair to the American trade.

It is to be hoped that Secretary Hoover's support of the automotive industry's attitude will overcome Congressional opposition to consideration of the Graham bill at this time and that the measure will be passed early enough to save the domestic market from this additional demoralization.

Confiscation!

AN Oklahoma dealer is the latest victim of the Federal law, literally interpreted by the courts, which imposes confiscation upon a vehicle discovered in the act of transporting intoxicating liquor. A man who had bought a car on time left it standing in the street, where an officer found a pint of whisky in it. The case against the driver, who owned the whisky, was dismissed, but the car which carried it was found "guilty" and confiscated. The dealer, who had no part in the violation of the prohibition enforcement law, thus became the principal sufferer.

Such cases are numerous. They will continue until public sentiment brings about amendment of the law. Forces within the industry, including the National and some State automobile dealers' associations, have been trying to spur such a sentiment into activity. Until this is accomplished the only recourse of dealers is to use every possible precaution in investigating the character, habits and occupations of persons to whom they sell cars on installment payments.

Correct Labels

THE automotive trade will welcome the decision of the standardization committee of the Automotive Equipment Association to attempt to bring about labelling that means something on packages of canned goods, such as body and top finishes. The committee hopes to induce members of the association making goods in this class to adopt uniform phrases describing their products, so that substitutes for certain standard compositions, such as varnish or shellac, for instance, will be plainly distinguished from the genuine merchandise.

This is a needed reform, which ought to be taken up by manufacturers regardless of association urgings. Dealers and garagemen and the general public as well are entitled to know exactly what they are buying when they purchase for resale or use finishes for such expensive property as automobile tops or bodies. And so it is with grease, oils and other merchandise that involves combinations of raw materials. They should be so marked as to be sold for just what they are.

The Outing Season

MEMBERS of many dealer associations, these days, are planning their annual outings. Committees in charge are putting in quite a bit of time making the arrangements, with no accomplishment in view except to see that everybody who attends has a good time. Trivial? Perhaps, but practical. Men, like boys, must play sometimes and there hasn't been any too much opportunity for it during the present selling season. Work is easing up a bit now and the time is ripe for the kind of relaxation that an outing offers. More than that, an occasion of this sort breeds acquaintance and friendliness. We need all of these qualities we can get in business. Where's the outing? When? Let's go!

The Freight and Traffic Department of the Automotive Equipment Association has collected $12,000 for members in freight overcharges by railroads since the department was organized a few years ago. This is an interesting example of one type of association work.

Chicago seems likely to retain its crown as an exhibition city. The latest organization to vote down a suggestion to move its show elsewhere is the Automotive Equipment Association, which unanimously favored making Chicago the permanent location of its annual business exhibit.

The Jobber Salesman's Job

He Will Get Farther if He Tries to Help the Dealer Sell Instead of Just Trying to Sell Him

HERE are some extracts from a letter that G. Norman Baughman of the G. Norman Baughman Co., Tampa, Fla., jobber, wrote to his salesmen. There are some pungent thoughts in it for jobber salesmen—some for retailers, too:

"To our salesmen:

"If you have been a jobber salesman for two years or more you have noticed that the method of buying has changed. You can no longer step in and proceed to write down a long want list or take a haphazard order, but you have got to confront the customer with real sales argument, and if you are not a salesman you do not register. You may not know it, but most of our customers to-day read trade papers, often take courses in salesmanship and are fairly up on the art of purchasing, and many of them have adopted the same rule as the purchasing agent of many jobbing firms, viz., *'I will only buy goods from those salesmen who give me ideas.'* Therefore, if you are not giving them some ideas you can rest assured your orders, if any, are small and that the chap who follows you and tells them how to sell the goods, how to display them, how to demonstrate them, knows his line and can answer the questions asked him, shows their salesmen how to put over the line, and the hundred and one other things that go to make a successful merchant, will carry off the order *that pays his house to ship.*

Many salesmen do not realize that *when you turn in small orders the house loses money,* and the only reason the house ships those small orders is because they want to give *service* and are hoping that you will turn in a large order next time to overbalance the loss on the small ones.

"When you see a man's stock is disarranged, teach him to keep it in order and take a little time yourself and help arrange it. If you find the containers in bad shape and know that we have extra ones, or the manufacturer has, and the goods are moving slowly, order a few new cartons so the goods will present a salable condition. If the man has a show window and it is poorly dressed, take a half hour and dress it. If you do not know how to dress it, the next time you are in the store inquire of someone who does and take back the ideas. You can also get such ideas from the trade papers. You should take the best ones on salesmanship, window dressing and merchandise, study them every week and thus keep prepared to go out each week with some *new thoughts* and some *new ideas* pertaining to your line and the customer's needs.

"Always see that your customers have the advertising matter that they should have for display, both outside and inside of their buildings.

"Now, there is not a single one of our salesmen who could not increase his business, and some could easily double it, if they would take all of the above thoughts and put them into effect and watch their steps for the next 60 days.

"There is only one way to sell a customer who has not been sold on the 'Ask 'em to Buy' idea. If he has seen the picture, read the book and heard your spoken message, then if he is not sold you will have to use the 'show me' method, i.e., spend an hour or so with him and when a customer comes along sell him, and we have found out we can sell two out of every three customers if we go at it right. While you might accidentally miss the first one, you will surely get the second one. If he is getting one out of two he is getting a great deal more than he has in the past, so the idea will go over.

"There is no man to-day operating a supply store, garage or filling station selling supplies who has not sold something since your last visit, and probably his reason for not giving you anything is because he thinks he is overstocked. The chances are that he is, but I am doubtful if he is overstocked on the popular selling articles. If he is not, then he should have a few of those articles so his line will be complete because if somebody stops and asks him for something which is a good selling article and he hasn't it, and he drives to the next place, the customer is liable not to come back the next time he wants something, and if the other man has it he will stop there thereafter. Automobile owners are inclined to be clannish. If one man gets good service it is a rule that he tells his fellow motorists, and you will find friends usually going to the same place, so when you lose one customer you often lose others. When you gain a new one you may gain a dozen, so let's not try to overstock our customers, but sell them orders that will last from call to call, and see that his good selling items are always up to date, because if he hasn't the good selling items he certainly cannot expect to sell the poor ones; and if he is overstocked, give him some assistance and ideas as to how he can reduce his stock. If he has any peculiar problems and we can help him, we are here for service.

"Jobber salesmen may be divided into two classes. Those who call on the dealer *to sell him something* and those who call *to show him how he can sell something.*—G. Norman Baughman."

L'ENVOI

WHEN men have ceased to travel
And every one stays home,
Should the social skein unravel
Back beyond the days of Rome;
Should our sympathies, desires,
Be confined to what-we've-got,
And our interest merely fires
'Round a single house and lot;
Should the busy marts of trading
Never call to fields afar,
Ne'er by rail or wing be aided
O'er the geographic bar;
Should we never sigh in summer
For a cooling northern breeze,
Should we never seek to slumber
Underneath the stars and trees;
Should the travel lust that ever
From Creation's rising sun
Drove our fathers, stopping never,
Till the newest lands were won,
Should that heritage of wander
Be forgotten in a trice,
Could we sit content and ponder
With content become a vice—
When the clock no longer beckons,
When we cease to value time,
When we heed not fleeting seconds
In the universal climb;
When the road no longer calls us,
When we still the world-old-trend,
When we care not what befalls us—
Then the "Auto Boom" will end.
—Ohio Motorist.

Why "Flivverboob"?

Editor Motor World: We read with interest in Motor World of January 14 that "Flivverboob" wins the prize of what they term a road hog, or reckless and careless driver.

One would naturally think that drivers of Ford cars were the only ones of such nature, if we understand the meaning of the word "Flivver," and we for one take exception to such decisions. We know the Flivver takes up more of the road than any other car, but it is in the form of one behind the other. In our part of the country it is the larger car drivers of this reckless class that think a Ford has no place on the road, and forces them to take the ditches when necessary.

We think the judge's decision is partial to a great extent.—Coon Auto Co., Sioux Falls, S. D.

Live Local Automobile News Helps Dealers

Can You Sell Your Newspaper This Idea of the Utica Morning Telegram?

HAS your newspaper a photographer to handle pictures for the automobile section? If it doesn't, wouldn't it be better for the paper and the dealers to have one? The Utica Morning Telegram thinks so.

Ivan Moore, who handles advertising and publicity pertaining to the automobile industry for this paper says:

"Utica, like many other cities, never had a newspaper that appreciated the popularity of automobile publicity, and now that the Morning Telegram promoted and made such a success of this necessary department, I feel proud and confident that there are greater possibilities in the automobile publicity line.

"It is quite surprising how little automobile men appreciate the value of publicity. Good, live news events break every day in some one or the other dealer's place of business, but the dealer fails to appreciate the value to be derived from the same in telling the public through the newspaper medium.

"The big factor in making the Utica Morning Telegram so popular with the automobile dealers and accessory men is having at our command a good photographer, who is ready to go at a minute's notice to take a picture of a new model of an automobile which has just arrived in town, or the taking of any picture pertaining to the automobile industry. Local pictures make a live automobile edition, just as local pictures in advertising make the advertisement more attractive.

"When the automobile edition was started by the Utica Morning Telegram there was little or no automobile advertising or publicity in the paper, but now the paper has an average of 4,985 inches of advertising, the automobile edition being published on Wednesdays only.

"The attention of the readers of the Morning Telegram is called to the special automobile edition through the insertion twice a week in the paper of special advertisements. These advertisements are large enough so that no reader can overlook the fact that he can expect something out of the ordinary in the automobile edition."

A Used Car Slogan

"EVERY used car must make a friend for us," is the slogan of the used car department of the Bornschein Motor Sales Co., Fort Wayne, and this slogan is effectively played up in all of the concern's advertising for the sale of used cars. Do all the used cars you sell make friends for YOU?

Axioms for the Truck Dealers' Letters

THE practice of typing a slogan or axiom at the bottom of business letters is becoming quite prevalent and many of those who use them are ready to testify that they are actually helpful in driving home selling truths and rendering other types of service to customers.

Some truck dealers may be able to use profitably these axioms published in the current issue of *Haul-Age*, a house organ of the Garford Motor Truck Co.:

An ounce of attention is worth a pound of overhaul.

An oiling a day keeps the repair man away.

Look before you back.

A rolling truck gathers no repair bill.

A tool in the kit is worth a thousand in the garage.

Service is as service does.

Fools rush in where experts fear to ride.

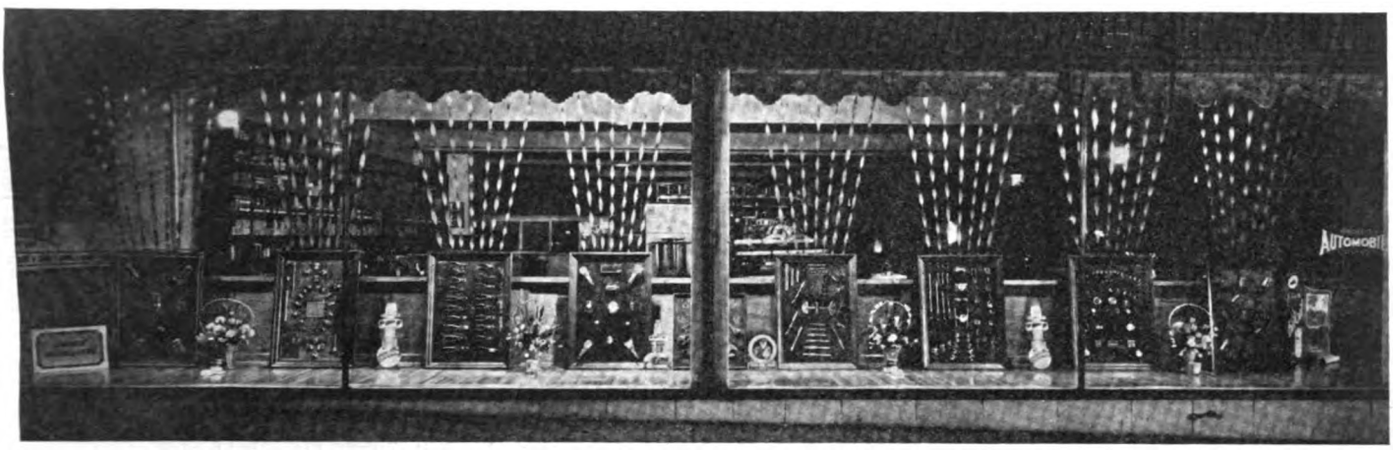
In using axioms and slogans in letters they usually are typed in red ink at the bottom of the page.

Durant Weather Vanes Carry Advertisement

In the rural sections of New Jersey and New York, motorists have been attracted recently by something novel in the way of signboards. It is a weather vane which carries the advertisement of the Poertner Motor Car Co., Durant distributor in New York, and the message "Durant — Just a Real Good Car"

Not Used Cars, But "Certified Cars"

"WE want the public to know that they can purchase 'certified cars' at our standardized prices," says E. L. Patton, president and manager of the Southern Motors Co., Jacksonville, Fla. And they carry out this idea in all advertisements in their sales.



A "Certified car is a safe investment," the company's advertisements assert. To back up this assertion the company issues a certificate with each used car. This certificate carries a guarantee on mechanical condition for 30 days, and new parts installed in re-conditioning are guaranteed against flaws for 90 days. A ten-day free labor service is also a part of the certification.

Patton asserts that this policy has eliminated his "used car problem," although despite that fact he is willing to co-operate with the other Jacksonville dealers.

By advertising to the public that prospective buyers can obtain Chevrolet cars from the Southern Motors Co.—"certified cars" at standard prices, Patton believes he has made it almost impossible for his competitors to bid-up a Chevrolet car in trade.

Marmon Standardized Service Costs and Flat Rates

Sixteen Service Operations Covering 85 Per Cent of Maintenance Operations Developed by Factory Service Department

THE Nordyke & Marmon Co. has prepared a list of sixteen service operations which cover 85 per cent of all maintenance operations. A flat rate covering both labor and materials has been made on these sixteen operations, these being based on time studies of thousands of operations. The minimum number of hours is entirely practical and allows a fair profit on each operation, provided the shop is equipped to do the work with Marmon special tools and methods. The prices and operations apply only to Marmon 34 cars of the B series, 1920, 1921 and 1922.

Operation	Hours	Total Price Including Parts
1—Complete inspection of car (no charge)	2.0	
2—Adjusting torque ball	2.0	$3.00
A—Loosen nuts on torque ball gland. B—Insert or remove shims as necessary. C—Tighten nuts on torque ball gland. (Several adjustments may be necessary before the correct one is obtained. This operation does not include dropping the rear end.)		
3—Grinding valves and removing carbon	8.0	18.50
A—Remove header cover. B—Remove rocker arms and push rods. C—Remove header. D—Remove valves. E—Clean carbon from pistons, cylinders and cylinder header. F—Grind valves. G—Assemble head on engine. H—Fit new gaskets. I—Refit rocker bushings. J—Clean spark plugs. K—Clean distributor points. L—Clean gasoline strainer. M—Warm up engine and adjust valves. N—Adjust carbureter.		
4—Installing and adjusting standard fan belt	0.8	2.50
A—Remove old fan belt. B—Install and adjust new standard belt.		
5—Adjusting brakes and oiling brake connections	2.5	4.00
A—Take up slack to permit both brakes to function properly. B—Free and oil all brake connections.		
6—Tuning engine	1.5	4.00
A—Adjust valves. B—Adjust carbureter. C—Clean sediment out of gas strainer. D—Clean spark plugs. E—Clean and adjust breaker points. F—Check timing. G—Test.		
7-A—Relining foot brakes	4.0	16.75
A—Remove wheels. B—Take off external bands. C—Remove facings from bands. D—Rivet on new facings. E—Round up bands. F—Replace bands. G—Replace wheels H—Set brakes to allow for take-up. I—Adjust brakes.		
7-B—Relining hand brakes	5.0	18.75
A—Remove wheels, hubs and drums, and internal bands. B—Remove old facing from bands. C—Rivet on new facings. D—Round up bands. E—Replace bands. F—Replace wheels. G—Set brakes to allow for take-up. H—Adjust brakes.		
7-C—Relining both brakes	9.0	33.00
These two operations described separately in sections 7-A and 7-B.		
8—Installing new water hose connections and flushing out radiator	2.0	2.95
A—Removing old water inlet hoses at radiator connections. B—Remove hose from split water pipe. C—Flush out radiator so it is clean. D—Install new hoses and clamps.		
9—Rebushing shock absorbers (16 bushings)	2.5	12.00
A—Remove shock absorbers. B—Press out end bushings. C—Insert new bushings. D—Examine plates. E—Replace shock absorbers. F—Adjust shock absorbers.		
10—Greasing car	3.5	8.75
Furnish the grease and grease the car completely, including the gearset, rear axle and engine.		
11—Rebushing front springs with oilless bushings	4.0	13.50
A—Remove wheels. B—Press out worn bushings from eyes of springs. C—Press in new bushings. D—Replace wheels.		
12—Aligning front wheels and adjust bearings	2.0	3.00
A—Align front wheels and adjust bearings.		

This is the ninth flat rate schedule published in Motor World. The previous schedules covered Paige, Overland Four, Studebaker, Dodge, Dort, Buick, Chandler and Hupmobile.

Operation	Hours	Total Price Including Parts
13—Rebushing steering cross rods	3.0	8.70
A—Remove bolts B—Remove bushings. C—Press in new bushings. D—Tram front wheels.		
14—Overhauling clutch	7.0	14.00
A—Take out clutch. B—Disassemble clutch. C—Clean discs. D—Replace discs. E—Clean teeth of spider. F—Replace bearings. G—Reassemble clutch. H—Replace clutch in car.		
15—General overhauling of engine	55.0	264.00
A—Disassemble engine. B—Clean carbon. C—Grind valves. D—Refit rocker arm bushings. E—Grind cylinders. F—Fit new piston skirts. G—Fit new piston rings and wrist pins. H—Repack water pump and install new impeller. I—Install new tappet rollers and pins. J—Install new guides, push rods and tappets K—Install new timing gears. L—Clean and inspect electrical equipment. M—Reassemble engine. N—Test and tune engine.		
16—Replacing standard fender	3.5	35.00
A—Remove old fender. B—Put on and bolt up new fender. The price given above applies to all fenders, front or rear; on all body styles open and closed.		

An Addition to the Hupmobile Flat Rates

Due to a regrettable error a portion of the detailed procedure of Operation No. 8, Group 24 on the Hupmobile Model R, Flat Rates published in Motor World issue of July 5 was omitted. These operations are necessary to complete the work. The details omitted were from M to V and herewith are given:

8—Take out rattle by tightening.. 7.0

A—Tighten all spring rebound clips—eight rear and six front. Shorten spacers if necessary.
B—Tighten all spring to axle clip nuts—sixteen.
C—Tighten all spring shackle bolts—four each front and rear. Spring action must be free and nuts properly locked—use new star washers if necessary.
D—Shim all four spring front bolts as required.
E—Tighten tie rod clevis bolts and clevis clamp bolts. Steering must be as free as before tightening.
F—Tighten radiator to frame.
G—Tighten hood ledges to frame.
H—Tighten head lamp bracket to fender bolts.
I—Tighten all fender bolts.
J—Tighten running board brackets to frame and running boards to brackets. Be sure spacers are tight.
K—Tighten body to frame bolts.
L—Tighten gasoline tank brackets to frame bolts.
M—Drill and tap rear cross tube near center if not already provided with set screws—use 3/16 in. drill and ¼ in x 20 U. S. S. tap.
N—Turn cross tube so hole is on bottom and install ¼ in. x 20 U. S. Std. set screw ⅞ in. long under head and check nut.
O—Tighten rear cross tube tie rod nuts.
P—Tighten spare tire rim on carrier.
Q—If car is equipped with bumpers tighten all bolts and nuts.
R—Tighten battery cage to body and battery in cage.
S—Tighten toe and floor boards.
T—Tighten windshield to body and top to windshield.
U—Shim or build up upper windshield frame to stanchion bumpers to take out side play.
V—Adjust or replace rubber door bumpers as required.

Classifying Debtors Helps Collections

Some Helpful Hints in Collecting Accounts from the Legal Editor of Motor World

AT this time of the year most of the attention of dealers in seasonable lines like the automotive business is apt to be concentrated on the sale of goods, and only too often is the fact lost sight of that a large volume of sales is not the thing most to be desired—but a large volume of sales for cash or to people whose credit is beyond reproach.

Every dealer continually has a number of accounts on his books. A certain proportion of these are always hard to collect. This is due to various reasons. Some of the debtors are not financially responsible, some are financially responsible but neglectful, some have a real or fancied grievance in that they think they have been overcharged, and last, but fortunately smallest class, are plain "dead beats."

The most important thing for a dealer desiring to make successful collections to do is to use a little judgment when he is writing his debtors.

If, for illustration, a dealer has on his books one hundred people who owe money to him, I am convinced he will meet with much greater success in his attempt to collect the money due him, and will succeed in clearing it all but a few of the outstanding accounts, if he will take the time and trouble properly to classify them.

My suggestion as to the first class would be that it include all those people who are financially responsible, people who are quite able to pay their bills and very likely quite willing to pay them, but who have simpy neglected to do so because their entire time is taken up with things which seem more important to them.

A suggested second class will be all those people who have a grievance, whether it is real or fancied; that is, the people who the dealer thinks have neglected to pay because they believe the bill rendered is too high. These people, of course, should be addressed in a different way from those of the first class.

The third class might contain all the people on the dealer's books about whose financial responsibility he has some doubt. Even if people are perfectly willing to pay, but cannot do so because of lack of cash, they should go in this class. It will be found that the letters to people in the first and second class will not bring any results if addressed to these people; but if a special series of letters is written them, the results will be quite different.

Then there is the last class, which, unfortunately, is always found among a number of people who owe money—the "dead beats." These also will have to be dealt with differently from the others to insure results.

People properly belonging in the first class must naturally be handled tactfully. To offend them means to lose them as customers.

An itemized bill should first be sent to the party for whom the work is done. After a sufficient period of time, it should be followed by a statement simply reading "To account rendered."

It is discretionary with the dealer whether or not to send another statement, if a check is not then received. If he does not wish to send another statement, he may begin to write his letters. A form of letter which may be sent to those who fail to pay merely because of neglect is the following:

"Dear Sir:

"On going over our accounts we find an item of $75, which became due January 1.

"We appreciate the fact that in the rush of present-day business small matters like this are frequently overlooked.

"If you will send us your check, we shall be glad to forward a receipted bill and close this account.

"Thanking you, we remain,

"Yours truly."

A form of letter which may be sent with good effect to those who have a real or fancied grievance is this letter:

"On going over our books we find under your account a balance of $50, due since January 1, 1915; inasmuch as the work was done so long ago, you may not now be familiar with its details, and if you have any doubt as to the amount or accuracy of the bill, we shall be pleased to have you go over it with us.

"Our business policy is:

"First, to do our work right.

"Second, to make our prices right.

"Occasionally a customer does not understand when certain jobs require so much time or why some other item enters into the account, and we gladly go over all these things with our patrons. May we have your check, or, if the account seems like ancient history, a call in person?"

A good letter to those who are not financially responsible follows:

"My dear Mr. ——:

"I have sent you a number of bills and statements showing the state of your account with us at this time. To date we have received no response.

"We desire to co-operate with you in every way and to extend all possible credit. As this account has been running a long time, however, we will appreciate your check to close, or, if you find it inconvenient to send a check for the full amount at this time, we will be glad to receive your check for part of your indebtedness, as we find it necessary to jack up our bills receivable this month because of heavy expenses we have to meet.

"Very truly yours."

If you know a man to be a dead beat, it is not worth while wasting much time on him, so after statements have been sent, it is just as well to write letter F and if no check is received, turn the claim over to your attorney.

"Dear Sir:

"We beg to advise you that unless we receive your check in settlement of the balance of $75 still due us by Monday, the 24th inst., we shall refer the matter to our attorney for suit.

"We trust you will see your way clear to dispensing with the trouble and expense of a law suit.

"Yours truly."

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER

Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Seeks Insurance Information

Editor Motor World:—The writer (one of your subscribers) read with considerable interest Mr. Kaiser's article on Insurance Information; and I am going to request that you send me the names of some insurance companies that are really dependable.

Have carried some "mutual" insurance (to my sorrow) and do not care for any more of this kind, and I am not well enough versed in the different plans to hazard a guess.—F. J. McMahon, Kalamazoo, Mich.

Answer:—There are so many good insurance companies—and so many bad ones—that it is impossible to give you a complete list. Any of the big companies, like the Aetna, Travelers or Hartford, will be safe for you to use. If you want information concerning any particular company, write to the Superintendent of Insurance at your state capital, and he will give you full information regarding its assets, liabilities, etc.

Service Operations on Timken Truck Axles

Factory Recommended Practice for Adjustment, Lubrication and Maintenance on Front and Rear Types

IN ordinary truck service front wheel bearings should be removed, cleaned and readjusted at least four times a year. If the service is unusually severe it is advisable to inspect the condition of the lubricant and the adjustment of the bearings every two months.

To Remove, Clean and Readjust Front Wheel Bearings

1—Remove the hub cap, then put a jack under the front axle and raise the wheel clear of the floor.

2—Wipe the grease from the end of the spindle and with pliers remove the cotter pin from in front of the outer lock nut.

3—Take off the outer lock nut with a wrench; a thin lock washer comes off next, then take off the inner lock nut.

4—Kneel directly in front of the wheel. Grasp the rim with both hands and pull directly toward you, being careful not to let the outer bearing slip from the hub and fall to the floor, as this may bend or damage the cage so that the bearing will not render perfect service when replaced.

5—The outer bearing having been removed, lift the wheel off the spindle, exposing the inner bearing.

6—With a stiff brush and gasoline or kerosene clean all old grease from both the inner bearings and the inside of the hub. It is not necessary to remove the inner bearing from the spindle in order to do this, although it may be removed if desired. It is a good idea to occasionally remove both bearings, placing them in a pan containing a mixture of washing soda and hot water, allowing the water to come to a boil, thus cleaning off any grease from behind the rollers that the brush and gasoline may have failed to remove.

7—The bearings having been thoroughly cleaned and dried, replace the largest, or inner, bearing on the spindle, covering it thoroughly with good, clean grease, that is, free from acid, grit or any solid matter. Care should be taken to have no grit or dirt on the paddle.

8—The inside of the hub should be thoroughly cleaned and the space between the two bearing cups should be repacked with clean grease.

9—Replace the wheel, and, holding it firmly in position, slide the smaller or outer bearing on the spindle, pressing it firmly into the hub.

10—Screw on the adjusting nut, turning it up tight against the outer bearing so that the wheel binds, at the same time revolving the wheel to be sure all working surfaces come into contact. Then back off the adjusting nut enough to allow the wheel to rotate freely — but without noticeable end play.

11—Test the adjustment by taking a short bar, placing the end of it between the tire and the floor, at the same time holding one finger on the cage of the outer bearing. Work the bar up and down so that you can detect any excessive play or looseness. When you can feel a barely perceptible shake and the wheel will oscillate when given a slight spin, the adjustment is right. If there is too much looseness in the bearings, tighten up on the lock nut. If, on the other hand, the lock nut is set too tight to allow the wheel to oscillate, loosen it about one-quarter turn.

12—Replace the keyed washer which goes between the two lock nuts and which prevents the inner nut turning.

13—Replace the outer lock nut and screw it up tight.

14—Replace the cotter pin in the end of the spindle to prevent the outer nut working loose.

15—Again test the adjustment with a bar as before, because in using a heavy wrench to tighten the outer lock nut it is sometimes possible to jam this nut so tightly against the inner nut as to destroy the adjustment. By taking the extra precaution to test the adjustment before replacing the hub cap, you can always be sure that your bearings will render perfect service.

Better Mechanics

Article No. 248

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

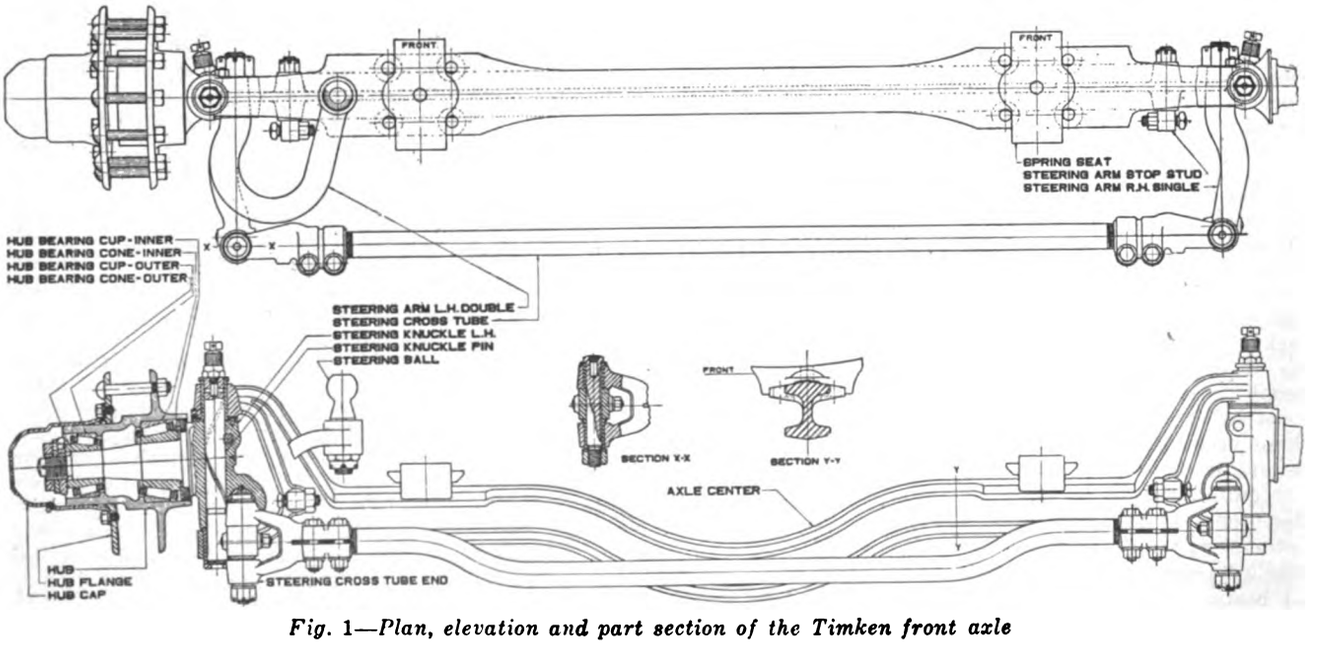

Fig. 1—Plan, elevation and part section of the Timken front axle

Digitized by Google

16—Now cover the end of the spindle and the lock nuts with grease and put on the hub cap, tightening it securely.

To Adjust Bearings in Steering Knuckle Heads

To adjust steering knuckle bearings when a Timken roller bearing is used at the inside of the wheel hub. Occasionally both bearings should be placed in a pan of hot water and washing soda and brought to a boil. This cleans off any grease behind the rollers that may not have been removed by the brush.

6—The bearings having been thoroughly cleaned and dried, replace the inner bearing on the tube, covering it the wheel to rotate freely, but without noticeable end play. Test your adjustment by taking a bar, placing the end of it between the tire and the floor, at the same time holding one finger on the cage of the outer bearing. Work the bar up and down so that you can detect any excessive play or looseness. When you can feel a barely perceptible shake and

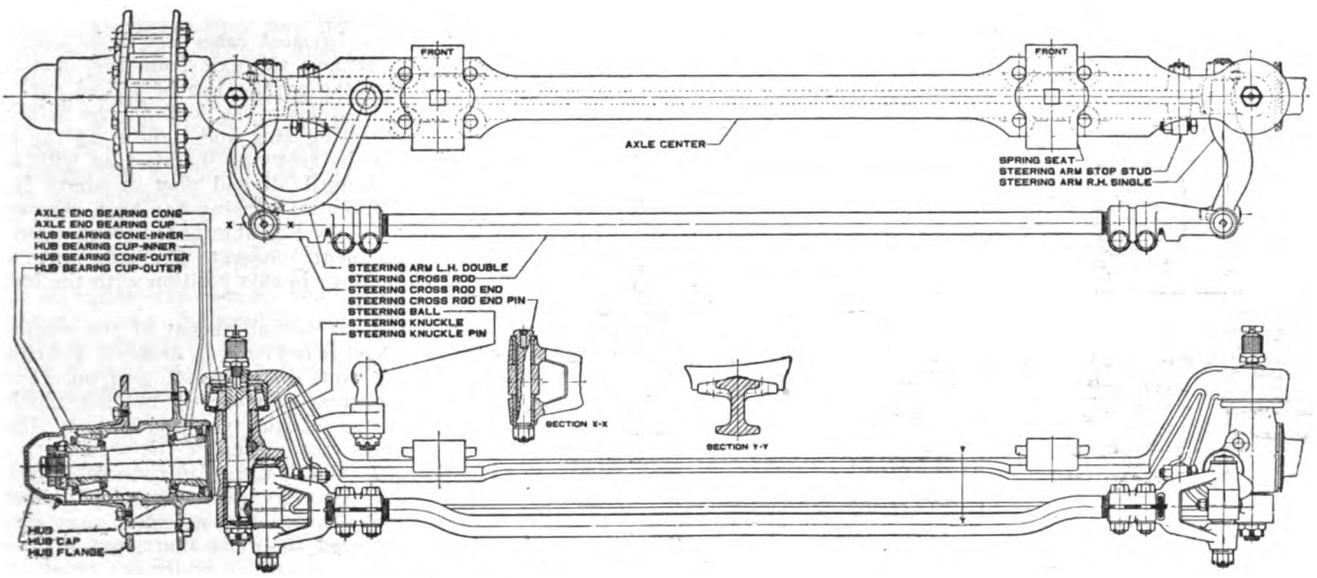

Fig. 2—Plan, elevation and part section of Timken front axle with straight beam

this point, simply tighten up on the nut on the bottom of knuckle pin after cotter pin has been removed. (See Fig. 2.) This forces the bushing in the lower yoke of the I-beam up against the steering spindle, which in turn forces the bearing up into the cup for a proper seat.

Do not fail to lubricate this bearing thoroughly with good quality cup grease through the cup provided on the top of the knuckle pin.

Rear Wheel Bearings—Full Floating Type

1—Remove the cap screws around the axle shaft drive plate (see Fig. 3) and pull out the axle shaft.

2—Put a jack under the housing, raise the wheel off the floor and wipe the grease from the end of the housing tube and the lock nuts.

3—Take off the outer lock nut, then remove the thin lock washer and the inner lock nut.

4—As the wheel is too heavy to be easily lifted off the tube, the following method can be used to remove it. Take a short piece of board and cover the upper surface with grease—slide this under the wheel and then lower the jack several notches until the wheel rests lightly on the board. Remove outer bearing, being careful not to allow it to fall on the floor, which may bend or otherwise damage the cage. The wheel can now be eased off on the greased surface of the board and rolled to one side.

5—With a stiff brush and gasoline or kerosene clean all the old grease from both outer and inner bearings and from well with good clean grease that is free from all acid, grit or solid matter. Care should be taken to see that there is no dirt on the paddle.

7—Repack the space in the hub, between the two cups which fit over the bearings, with clean grease.

8—Replace the wheel and, holding it in position, slide the other bearing on the tube end, pressing it firmly into the hub.

9—Screw up the inner lock nut, turning it up tight against the outer bearing so that the wheel binds, at the same time revolving the wheel to be sure all working surfaces on the bearing come into contact.

10—Back off the nut enough to allow the wheel will oscillate freely, the adjustment is correct.

11—Replace the lock washer and outer lock nut, screwing the nut up tight. Before replacing the drive shaft again test the adjustment with a bar as before.

12—Cover the end of the axle tube and the lock nuts with grease and replace the drive shaft, being careful to tighten up the cap screws in the plate securely.

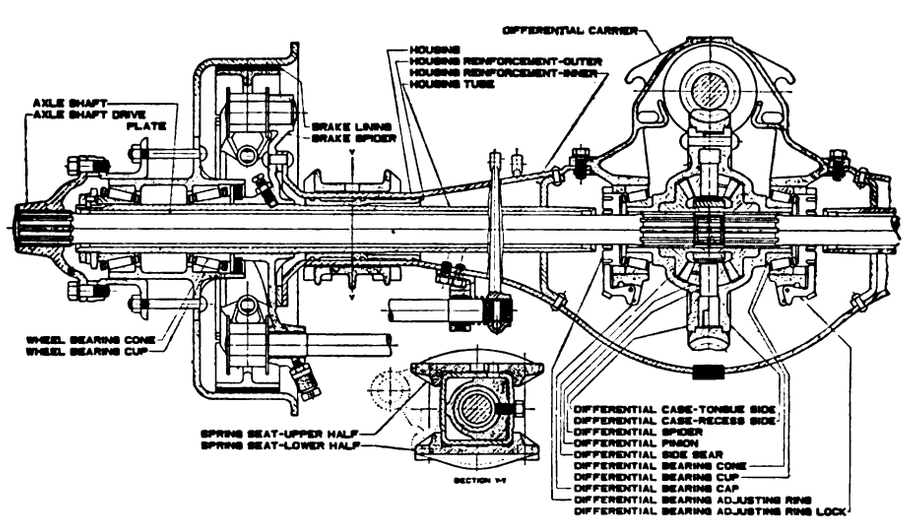

Fig. 3—Section of the Timken full floating rear axle

Rear Wheel Bearing—Fixed Hub Type

On this model axle the rear wheel is keyed to the axle shaft. The bearing cone is pressed on the shaft and the cup

Digitized by Google

is mounted in an adjusting ring which is screwed into the axle housing. Adjustment of bearings is made by turning this ring. These bearings should be cleaned and repacked with grease once a year.

1—To clean or adjust the wheel bearing remove the wheel from the shaft using a wheel puller if necessary.

2—Release the lock (See Fig. 4) which prevents the bearing adjusting ring turning, and with a flat tool unscrew this ring from the housing. The axle shaft, carrying with it the bearing cone and rollers, can now be pulled out of the housing.

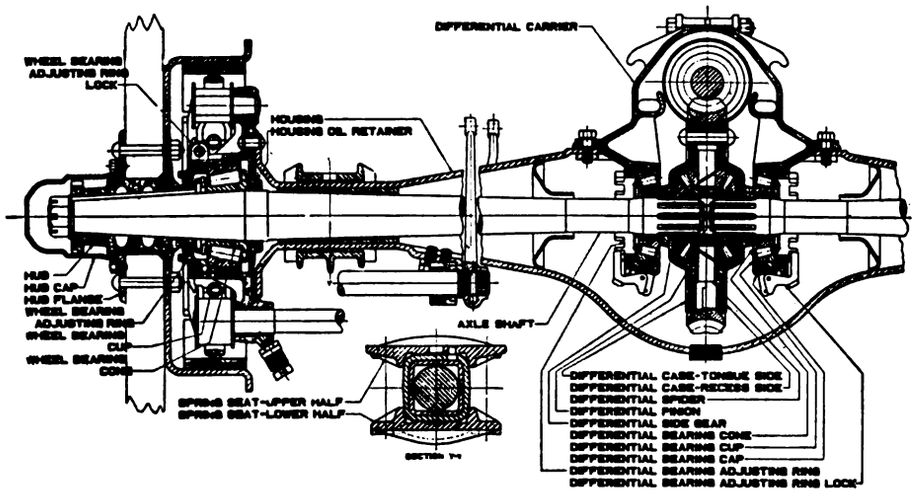

Fig. 4—Section of the fixed hub type Timken rear axle

3—With a stiff brush and gasoline or kerosene clean all old grease from the bearing shaft and end of housing. To thoroughly remove all old grease the bearings should be placed in a solution of washing soda and water and brought to a boil.

4—After carefully cleaning and drying the bearings, cover them well with good, clean grease, free from acid and dirt, grit or other solid matter.

5—Also pack the end of the housing, into which the bearing adjusting ring fits, with grease.

6—Replace the shaft with the bearing cone and rollers and screw in the ring carrying the bearing cup.

7—In adjusting the bearing remember that the two drive shafts, right and left, come in contact in the center of the differential spider. If the bearing on one side is adjusted in too far, while the bearing on the other side is too far out, the spline end of the shaft will project through into the opposite side of the differential. This will either lock the differential or cause the end of the shaft to be twisted off. Care must be exercised, therefore, to take up the same amount on both the right and left hand bearings.

8—Screw up the bearing adjusting ring on each side until all end play is taken out of the shafts and the shaft turns stiff when revolved by a wrench placed on the nut on the shaft end.

9—Back off the ring one notch and lock in this position by means of the locking finger.

10—The wheel may now be replaced, being careful to tighten up well on the nut on the end of shaft and to lock same with a cotter pin.

Differential Bearings

Differential bearings are lubricated by the oil in the axle housing. They require no attention in connection with lubrication beyond keeping the correct amount of the proper lubricant in the housing and seeing that the oil grooves are kept clean.

In adjusting the differential bearings a combination adjustment is necessary (See Fig. 4). First, all play must be taken out of the bearings by screwing up the adjusting rings on both sides of the differential, and second, the worm and worm wheel must be set in proper alignment by adjusting the differential bearing on both sides end for end, moving the differential and worm wheel to one side or the other as required for correct alignment.

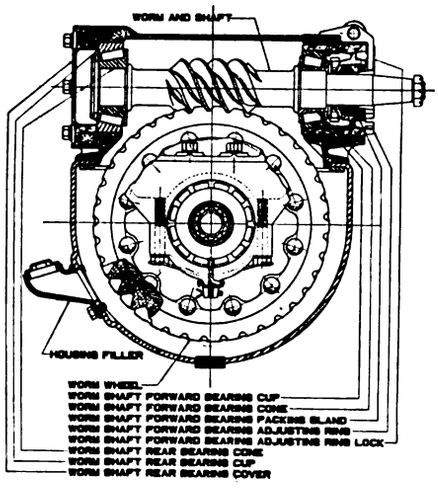

Fig. 5—How the worm shaft bearings are adjusted

All ordinary adjustment of these bearings should be made on the left hand bearing (standing at the rear and facing toward the front of the truck); never disturb the right hand bearing except when it is necessary to take down the entire differential assembly. By making the adjustments on the left bearing only the alignment of the worm and wheel will not be destroyed.

1—To adjust the bearings (See Fig. 4) the differential carrier must be removed from the housing.

2—Take out both drive shafts, remove the cap screws holding the carrier to housing, and, having disconnected the propeller shaft, lift out the entire carrier assembly.

3—In most cases it will be necessary to remove the axle from the chassis before the carrier can be pulled out.

4—Release the lock on the left hand adjusting ring and tighten up the bearings by screwing in this ring with a flat tool until all end play or shake in the differential housing has been removed.

5—Having obtained a good tight adjustment, unscrew the ring one notch and lock in this position with the locking finger.

6—If the alignment of the worm and wheel is not correct, unscrew one ring, at the same time tightening up on the other the same number of notches until the center of the worm wheel is directly under the center of the worm.

7—Check up again for end play to be sure that the adjustment is all right.

8—The carrier assembly may now be replaced, the drive shafts put in, and the axle reassembled under the truck.

9—In replacing the carrier assembly be sure that you tighten up well on the cap screws holding the carrier to the housing.

Worm Shaft Bearings

1—To adjust the worm shaft bearings (See Fig. 5) remove the packing gland from the carrier to avoid binding on the shaft and to allow free movement of the shaft.

2—Remove the lock from the slot and, with a flat tool, screw in the forward bearing adjusting ring until the shaft binds.

3—Unscrew the ring several notches to allow end play so that the shaft can expand when it becomes heated under running conditions. The exact amount the ring should be backed off is shown in the following table:

Size Axle	Play in Inches	Number of Notches
¾-1½ Ton	.011-.015	3
2-3½ Ton	.016-.020	4
5 Ton	.020	4

4—Lock the adjusting ring in this position with the locking finger and replace the packing gland on the shaft, tightening up on it sufficiently to prevent oil leaking out at this point.

On the older type axles (6456—1½ ton, 6552—2½, and the 6652—3½ ton) it is necessary, after backing off the cage, to see that the bearing cup is properly seated in the cage. This can be done by driving on the rear end of the worm shaft or by starting the truck up slowly in low gear. On the old type 5-ton axle (6752), where the worm shaft bearings are set the other way, no end play to take care of expansion is necessary. On this axle the adjustment of bearings is made at the rear of the shaft.

Digitized by Google

Brake Adjustment

1—To tighten up the brakes, first take up on the brake rods.

2—After all the adjustment possible has been made in the brake rods take off the nut, lock washer, and clamp bolt which clamps the brake levers on the axle to the brake camshaft.

3—Lengthen out the brake rods again and move the lever back two or more serrations on the camshaft and clamp into place with the clamp bolt.

4—Make a final adjustment of the brakes by means of the adjustment on the brake rods. All possible or necessary adjustment can be made in this way up to the point where the brake shoes require relining.

Lubrication

To lubricate the worm and wheel, differential, and differential bearings, keep the housing filled to the level of the oil plug in the bowl with a good quality of light steam cylinder oil.

Cautions

1. Don't jam lock nuts so tight that the wheel binds. A wheel should oscillate when given a slight spin (in other words come to a stop and turn slowly back in the opposite direction).

2. Don't allow the lock nuts to be so loose that you can shake the wheel and feel the play in the bearings. Too loose adjustment will damage a bearing just as rapidly as too tight adjustment.

3. Don't take rollers, cone, cage or cup from one bearing and substitute these parts in another bearing even though it bears the same number. After a bearing has once been used the parts differ from an unused bearing one or two thousandths of an inch—not enough to see but enough to cause trouble and expense if parts are substituted. If a bearing must be replaced because of damage, replace the whole bearing.

4. Don't hit the cage with a hammer to drive a bearing on a spindle; you will bend the cage and damage the bearing.

5. Don't use a screw driver or other sharp tool back of the cage to pry a bearing off a spindle—you will bend the cage. If a bearing cone sticks, be sure the tool is placed behind the edges of the cone. A slight pressure is sufficient to release the cone from the spindle.

6. Don't let bearings fall on the floor; you may bend the cage which keeps the rollers in line.

7. Don't use grease or other lubricant that contains acid or has acid forming qualities. Use only a good grade of clear, medium cup grease, having no solid matter in suspension.

8. Don't drive cups in hubs or other retainers, nor cones on spindles, with a hammer where pressed fit is required.

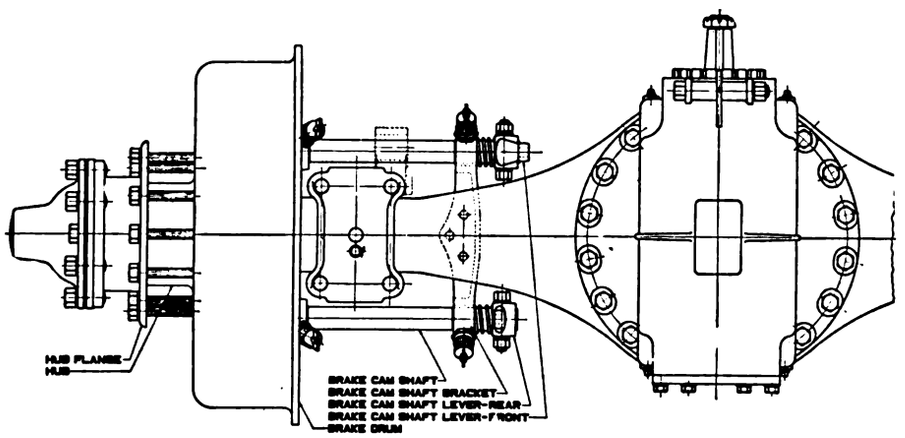

Fig. 6—Brake parts on the Timken rear axle

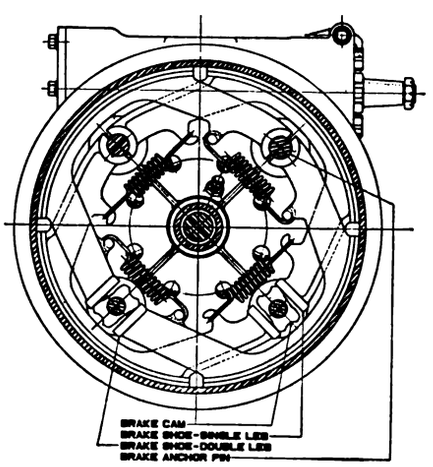

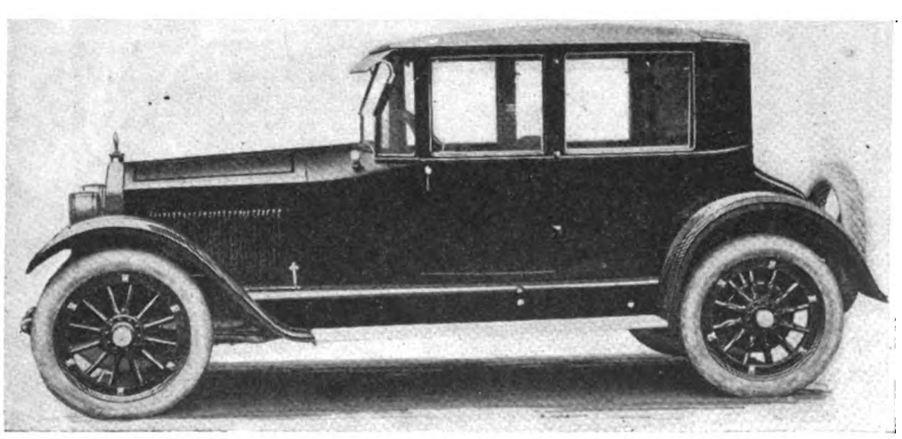

Fig. 7—Plan of the Timken brake

Stearns-Knight Six a Longer Car Than the Four

THE new Stearns-Knight Six which was announced in the July 5 issue of Motor World is to have a wheelbase of 130 in., 5 in. longer than that of the four. This change and the use of six cylinders instead of four constitute the most radical changes in the design, most of the other units and constructions following closely the practice used in the four cylinder car. The engine dimensions of the six are a little smaller than the four, being 3⅜ x 5 in. in the six as against 3¾ x 5⅝ in. in the four. It is stated that the experiments and tests of the new type engines were largely carried out by engineers and mechanics who joined the Stearns organization during the war at the time the Stearns plant was turning out Rolls Royce airplane engines. The new engine is said to operate without a period of vibration at any running speed.

Lubrication of the six is a combined force feed and splash system, the oil being driven by a gear pump. The electrical equipment is a 12-volt system, the same as in the four cylinder model. Water is circulated by a centrifugal water pump through a cellular type radiator. The clutch is a multiple disk, gearset a three speed member and gear shift and emergency brake levers are located at the center.

The wheels are of the artillery type with 34 x 4½ in. cords. The front springs are semi-eliptic and the rear cantilever. The equipment on the cars includes tire carrier, number brackets, tool equipment, pump, etc. The tops are supplied with door opening curtains and a plate glass window is placed in the rear curtain. There is a ventilator in the cowl and the windshield is a two piece plate glass, rain vision and ventilating. The coupe, brougham and sedan are equipped with sun shade and clear vision windshield.

The Stearns-Knight Six coupe brougham, $3,500. Prices of other bodies are: roadster and phaeton, $2,700; 7-pass. phaeton, $2,850; coupe, $3,350; sedan, $3,700

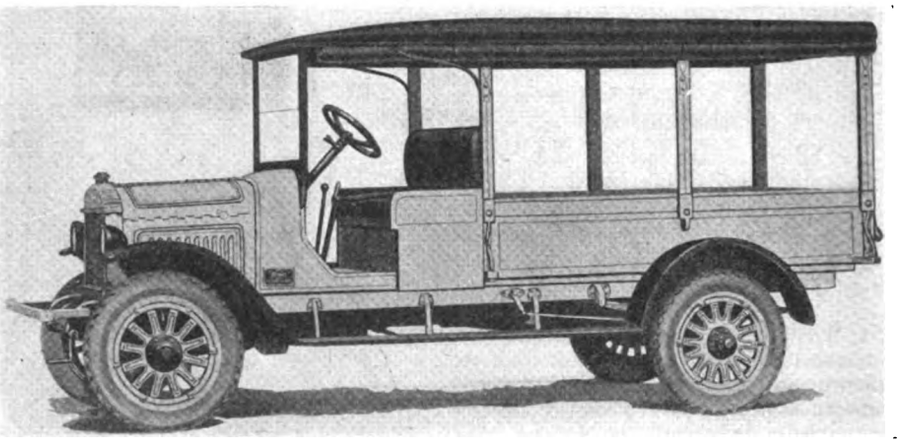
Stewart Brings Out a New Utility Wagon, $1,245

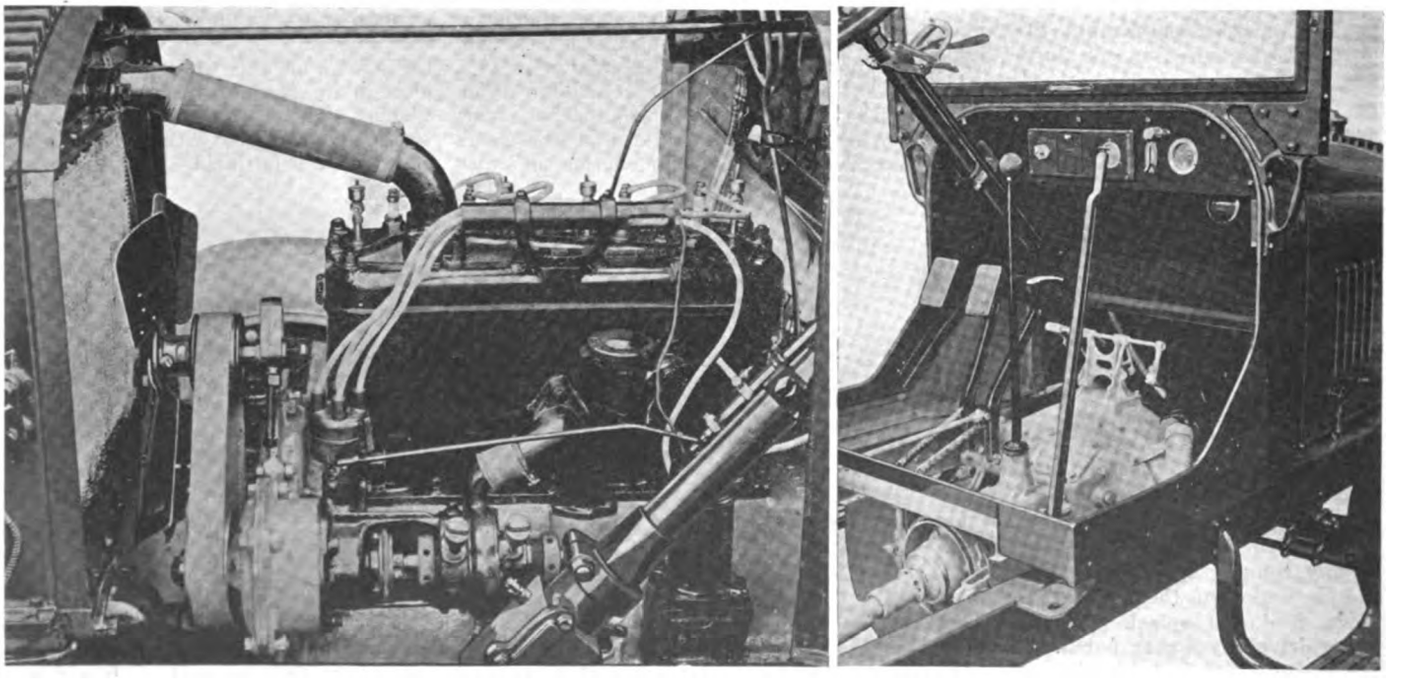
Short Turning Radius a Feature—Electric Lights and Pneumatic Tires Regular Equipment

A NEW utility wagon with a capacity of 1¼ tons and a speed of 35-40 m.p.h. has been placed in production by the Stewart Motor Corp., Buffalo. Pneumatic cord tires 34 x 4½ are part of the regular equipment and the turning radius has been made very short.



The engine is a Buda 3⅝ x 5⅛ in. with removable cylinder head and a removable cylinder block. The S. A. E. rating is 21.03 hp. Lubrication is full pressure feed with an oil gage on the instrument board. The cylinders are cast in block and are amply water jacketed and baffled to secure equal distribution of the cooling water. The cylinder head is provided with a large ledge projecting beyond the cylinder block and lugs on each end of the cylinder and head are provided for breaking the joint and for the purpose of eliminating possible injury to the gasket.

The cooling water is circulated by a centrifugal pump having a large bronze runner. Liberal sized packing glands are provided and bronze sleeves fitted over the pump shaft to prevent rusting and pitting. Made up as one assembly unit, the water pump and its drive shaft may be readily removed as a unit or separately.



The valves and valve mechanism are operated by a single cam shaft and entirely closed. The cover over valve spring assemblies is split into two sections to facilitate removal and permit adjustment of valve tappets.

The pistons are of a gray iron and fitted with three concentric rings above the piston pin and one wiper ring in the lower part of the skirt. The wiper ring prevents the passage of excess oil into the combustion chamber. Piston heads have cooling ribs to dissipate the heat caused by the present low grade fuels.

The crankcase is divided horizontally into halves. The upper half contains the crank shaft bearings and extends over the flywheel to form the upper half of the bell housing, the lower half of the bell housing being a separate casting and not a part of the crank case or oil pan. This makes the one-piece

The new Stewart utility wagon which has a capacity of 1¼ tons and a speed of 40 m.p.h. The price is $1,245

The power plant and control units of the new Stewart utility wagon. The engine is a Buda 3⅝ x 5⅛ in. unit

Digitized by Google

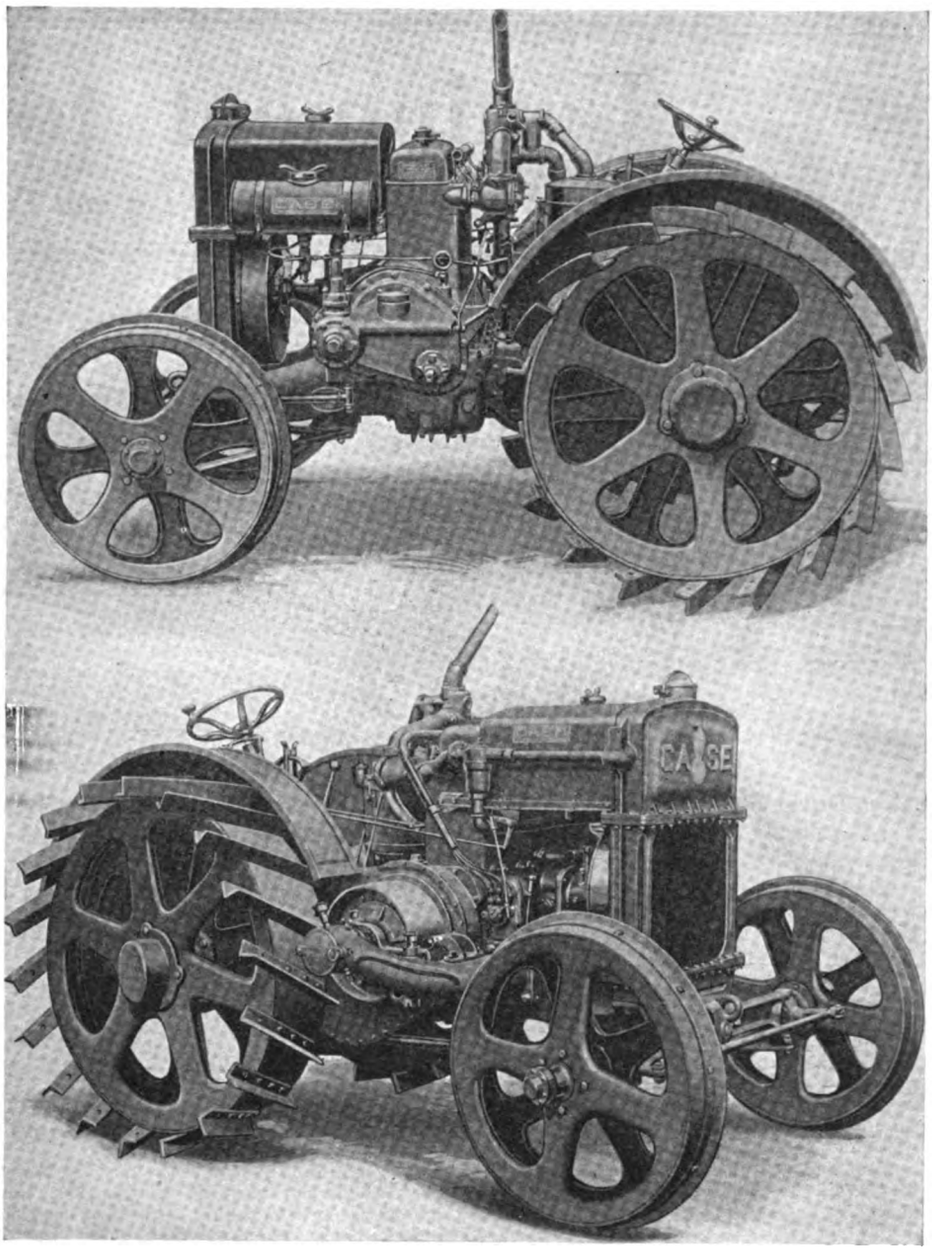
oil pan easily removable for cleaning or bearing adjustments.

The three main shaft bearings, all main and connecting rod bearings are bronze shell, babbitt lined. Camshaft bearings, which are three in number, are of babbitt, die cast. All main bearings are accurately reamed and scraped to give a maximum bearing surface. The connecting rods are drop forged I-beam construction, made of open hearth steel, and have no offset.

The crankshaft, of special design to admit of accurate running balance, is drop forged from open-hearth steel, heat treated, machined and drilled for force feed oiling system. The timing gears have wide faces and are helically cut on automatic hobbing machines.

The lubricating system is full force pressure feed to all crank shaft, cam shaft bearings, and connecting rod bearings. Oil is forced to the main bearings and cam shaft bearings through a seamless steel distributing pipe which is cast in the crank case. Oil is forced from the main bearings to the connecting rod bearings through a drilled passage in the crank shaft. This system is of the self-contained positive pressure feed, with pressure regulating valve, the oil being pumped from the oil reservoir which is located beneath the crank case, by a geared pump located in the center of the oil reservoir and attached to the upper half of the crank case to make it independent of the oil pan. Pistons and cylinders are lubricated by oil thrown from the lower ends of the connecting rods. Timing gears are also fed positively from the pressure system. The extra wiper ring on the lower end of the piston prevents an excess of oil reaching the combustion chamber, and a double throw ring back of the rear main bearing effectively prevents oil leakage into the bell housing. The oil reservoir is unusually large and is so designed that any sediment which may be present in the oil will tend to settle in bottom of reservoir below the oil pump, from whence it may be drawn off from time to time. This feature results in clean oil being circulated through the engine, which insures a long life for all bearings surfaces and a consequent long-lived engine. Chassis lubrication is by the Alemite system.

This truck has a clutch of the single disk dry-plate type, with one steel plate, and another set of disks of clutch facing material. The engine, clutch and gearset are mounted as one unit, on three-point suspension.



The rear axle is a Clark internal-gear drive, the same as used on other Stewart models. It is geared 5½ to 1.

The steering gear is of the screw and nut type with an adjustment on the thrust bearings for removing any end motion of the screw that may develop.

The front and rear springs are semi-elliptic in type. The rear spring has fifteen leaves and is equipped with full length rebound plate bronzed bushings, and hardened steel pins are used throughout. The wheels are the artillery type.

The regular equipment consists of electric lights with lenses equipped with focusing device, electric tail lamp, tool box, 111-hour storage battery, tools, jack, electric horn, front bumper, ammeter and dash light.

The Utility Wagon will take open and covered express body, panel, stake, special farm grain type body, and also a covered express body with closed cab.

The New Case 12-20 Tractor

While not differing radically in appearance from previous Case models, this new tractor is practically of a two-plow size for all conditions and will pull three plows under ordinary conditions. It will handle a 22 x 36 thresher with all attachments, will operate a 12 or 14 in. silo filler, will pull a 9 ft. double disk in high gear or a 12 ft. grain drill. The frame is in one piece and this holds all bearings, shafts and gears. The engine is a vertical four cylinder type, 4⅛ x 5 in. with valves in the head. The cylinder barrels are renewable. The belt pulley is mounted directly on an extension of the crankshaft. A new type of wheel construction reduces weight as well as increasing strength and rigidity

ANTI-KNOCK LIQUID PRODUCTION PLANNED

NEW YORK, July 10—Commercial production by the General Motors Research Corp. of tetra ethyl lead, the anti-knock liquid which has been developed in its laboratories, probably will not be started for several months. It first will be necessary to provide a plant which probably will be located where there is an abundance of water power. The liquid is produced by a process of distillation and it is highly explosive, which will make it necessary to locate the plant with care.

When commercial production is begun, the liquid will be supplied first to the Government for use in aircraft. The second customer to be taken care of probably will be the Fifth Avenue Coach Co. and the third, a Chicago taxicab company which operates a large fleet of cabs.

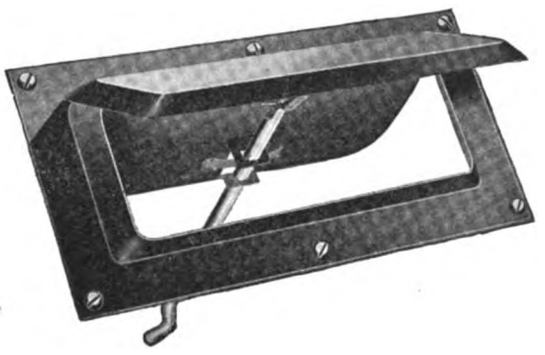
Equipment to Sell

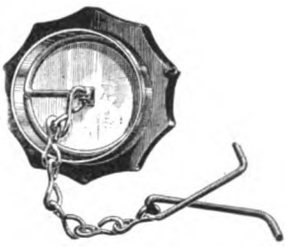


New Devices for the Car and Truck

Universal Mountable Ventilator

Higbee-Orne Co., New Britain, Conn.

Price $3.



A cowl ventilator that can be attached to any car by cutting a rectangular piece in the cowl and fastening the ventilator over. The control is from the inside of the car and the construction is such that the water will not go through the ventilator when it is closed. The outfit is supplied with all necessary screws, nuts, etc., and a metal cutter for cutting the rectangular opening.

Edelmann Rubberized Radiator Cap for Fords

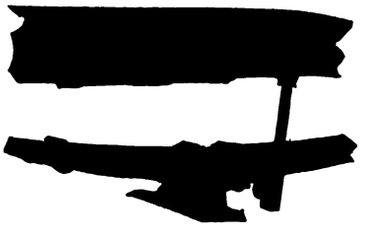
E. Edelmann & Co., Chicago.

A radiator cap for Fords with a brass shell and rubberized top portion with serrations around the outside to allow an easy finger grip. A chain and wire catch prevent the cap from being lost.

Dural Slip-On Dust Cap

Dural Rubber Corp., Flemington, N. J.

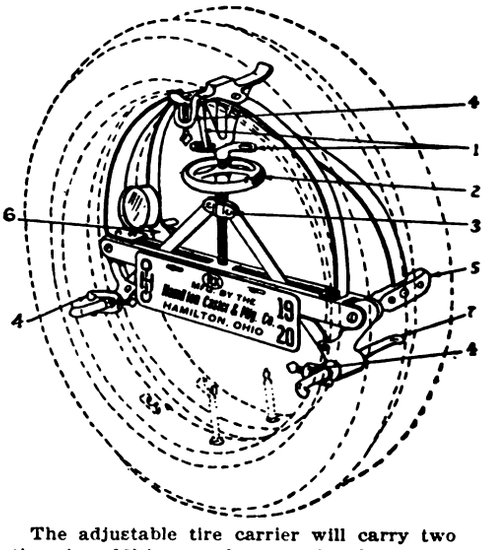
Price 40 cents per set of four for 30 x 3 and 30 x 3½; 50 cents per set of four for 4 in. and larger tubes.



The slip-on dust caps are made of heavy rubber and slip on and off the valve stem without turning. They will not depress the valve plunger and protect the tube from chafing when it is wrapped up and carried as a spare. A tight fit is made at the bottom and at the dust cap to prevent flopping or coming loose.

Hydraulic Control Shock Absorber

Auto Spring Control Co., Inc., Jamestown, N. Y.

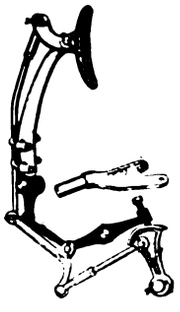


Price $135 installed.

This hydraulic control was illustrated and described in our issue of June 14, 1922, but unfortunately the illustration was inserted upside down. We are herewith showing it right side up.

Triple-Grip Adjustable Tire Carrier

Hamilton Caster & Mfg. Co., Hamilton, Ohio.



The adjustable tire carrier will carry two tires in addition to the one already on the spare carrier. The tail lamp fixture is part of the carrier. A locking device consisting of a link casting riveted on the screw allows the carrier to be locked every half turn of the hand wheel.

B & C Neutral Clutch Pedal for Fords

Burnham-Cote Co., Holyoke, Mass.

Price $7.50

The pedal provides a positive neutral position in operation and makes the emergency brake independent of the clutch operation taking away the cam which has controlled the clutch release through the emergency lever, and the lever now has only the rear end to provide for, so that it may be set up as tight as desired without affecting other adjustments. The new pedal is substituted for the stock pedal and a hinged foot plate operates the connections and the control position of the cam to maintain the clutch release in the neutral position. Operation of the car is not changed materially.

Dorrance Spark Plug Wrench

Charles J. Dorrance, 728 Monadnock Block, Chicago

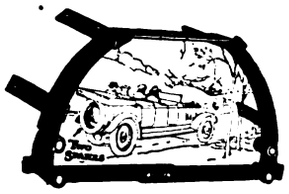
Price 80 Cents

The wrench fits all makes of spark plugs and is malleable iron, nickel plated. The ends are adjustable and reversible and sufficient clearance is provided to prevent breakage of porcelains.

Du-Plex Rear Signal Lamp

Du-Plex Signal Company, Jackson, Mich.

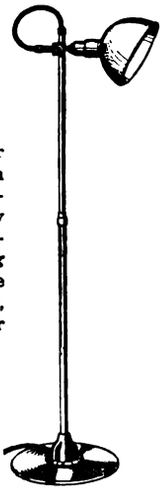
Price $7.50.



The lamp is a two color signal showing a green caution light and also a red stop light. A switch operates two different bulbs, one contact for green and the other contact for red. It is automatic in its operation and can be adjusted to any car for either a clutch or a brake driver.

Digitized by Google

Interlock Instantaneous Tire Carrier



Lyons Level & Tool Co., New Haven, Conn. Price $10 with cylinder lock; $8 with padlock.

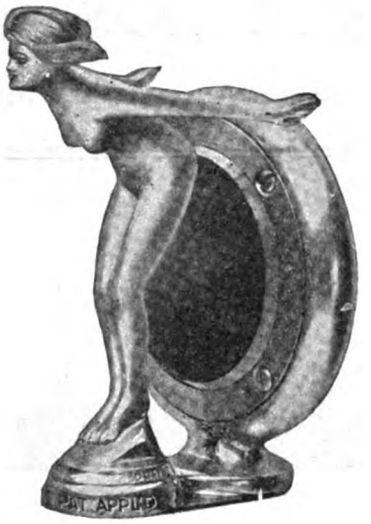
The tire carrier is for carrying an extra spare and can be put onto any car having a single ring tire carrier. It is installed by drilling four holes in the tire carrier and riveting the extra tire carrier in place. A toggle joint at the lower side of the extra tire carrier expands the rim against the tire rim and the tire is locked in place with a lock.

White Adjustable, Portable Floor Lights

O. C. White Co., 15-21 Hermon Street, Worcester, Mass. Prices $14.40 to $24.65.

Made in three styles for general shop work, bench type, flood lighting, and restricted flood lighting. Any of the three styles are obtainable with or without plug outlets. The fixtures are adopted for ceiling, wall, floor or bench attachment or for tables and desks.

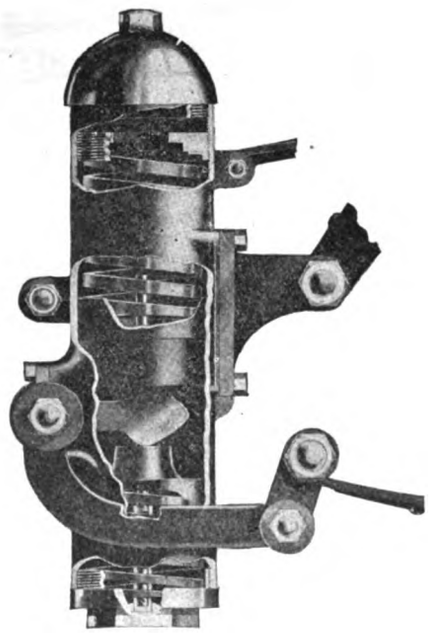
Kosac Accident Preventers



Pacific Diesel Engine Co., 57 Post Street, San Francisco.

This is an automatic brake and ignition control for the purpose of minimizing traffic accidents. It is carried in the same place as a bumper and is a mechanism consisting of flexible contact bars, fastened by goosenecks to the front and rear of the car, being equally applicable to passenger cars or trucks. The contact bars yield to a pressure of 15 lbs. that make contact with electrically wired contact points, which are in turn connected with brake and ignition control, contained in a brass cylinder which rides freely with the brake rod, so as not to interfere with the foot or hand braking of the car. A slight pressure on the contact bars makes connection, setting the brakes, cutting off the ignition and blowing the horn. The device operates only in the direction in which the car is moving.

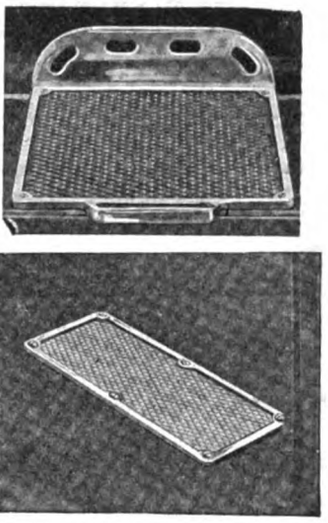
Moto-Meter Nymph



Irving Florman Co., 60 Nassau Street, New York City

The model is the same as the speed nymph which attaches to the radiator cap where a Moto-Meter is not used. The Moto-Meter model has an extension on the front of the base for the figure to stand on. It fits any Moto-Meter.

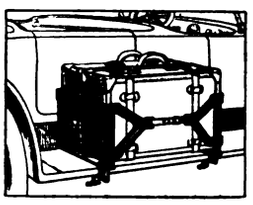
Lomar Shock Absorber



Lomar Mfg. Co., Middletown, Ohio.

The shock absorber consists of a strong cylinder entirely enclosed at either end. Two arms that terminate in a cam within the cylinder are attached to the automobile spring with the regular spring shackle bolt. The cam operates between two pistons, which are separated from the ends of the cylinder by properly adjusted special alloy springs. The upper springs absorb the shock and the lower absorbs the rebound. An adjustment nut screwed into the top of the cylinder enables one to vary the resistance of the main spring and regulate it to the exact load to be carried. Heavy oil poured into the cylinder is pumped to the top of the absorber and flows back by gravity. The cam works on a roller bearing on the upper piston which allows it to act or respond to small jars or motion.

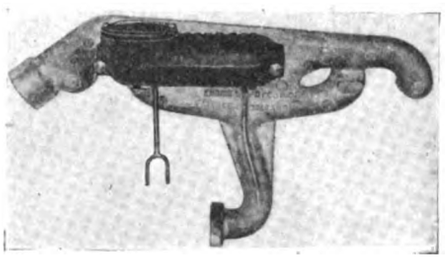
Oberdorfer Aluminum Runningboard Plates and Heel Plates



M. L. Oberdorfer Brass Co., Inc., Syracuse, N. Y.

The heel plates are 5 x 12 in. and are placed underneath the clutch and brake pedals to prevent wear on the carpet or linoleum. The runningboard plates are made in three sizes, 7½ x 9½, 8½ x 10 and 9 x 10½. A scuff plate is used on some models and a patented scraper can be had on any of the models.

Interlock Luggage Carrier



Lyons Level & Tool Co., New Haven, Conn. Price $5.

The luggage carrier has curved ends to hold luggage tightly and is attached to the runningboard with a screw clamp which requires no tools. It is made in one size adjustable from 12 in. to 4 ft. It is made of steel, finished in black enamel and is complete with straps.

Sinclair Thermostatic Carbureter Control for Ford

Sinclair Engine & Foundry Co., New Orleans, La.

A device for regulating the needle valve of the carbureter on a Ford car by a thermostatic element. Regulation is provided through the expansion and contraction of a copper section that permits a greater volume to pass when that section is cold and contracted and shuts off a part of the flow when it becomes heated and expands. The device has two vents opening into it and inside the box is a bar of copper and steel welded together. One end is stationary and the other is attached to a lever that is connected with the carbureter needle valve, thus turning the gas on or off.

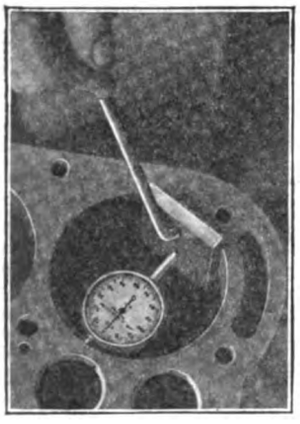
Equipment for the Shop

New Machinery and Tools

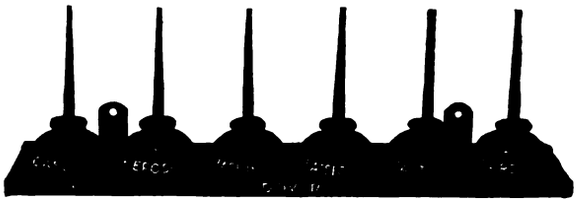
Stevens Fits-a-Ford Wrench



Stevens & Co., 375 Broadway, New York City
Price 60 cents

The wrench has four sockets which fit 95 per cent of all nuts and bolts on a Ford car. The sockets get a full firm grip on the nuts to prevent rounding of the edges.

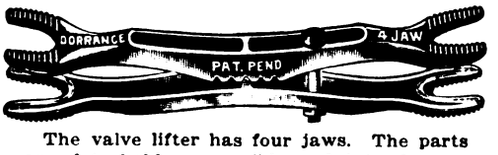
Atlas Mikro-Indicator Piston Gage



George H. Wilkins Co., 180 North Market Street, Chicago
Price $15

This gage is an adaptation of the dial indicator to a bench gage for checking the diameter of pistons, piston pins and other cylindrical articles with diameters up to and including 6 in. Pistons can be checked for diameter, roundness and uniformity. Piston pins can be rapidly sized and flat pieces gaged for thickness.

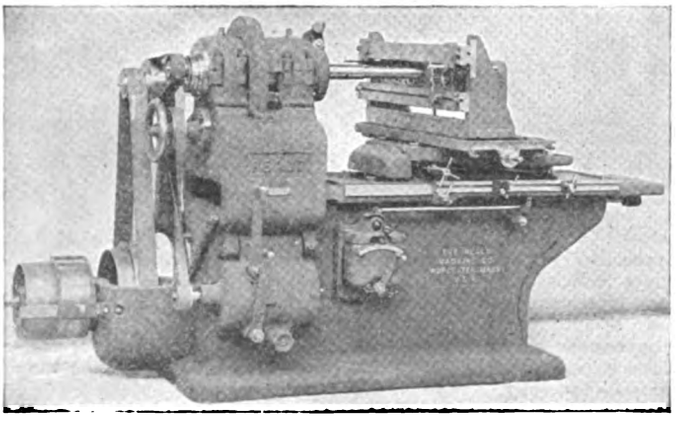
Dover Handy Oiler Set



Dover Stamping & Mfg. Co., 385 Putnam Avenue, Cambridge, 39, Mass.

The handy oiler set consists of six ½ pt. copper-plated steel oilers with a heavy steel shelf which is enameled black. Each oiler has the name of its contents marked in steel raised letters.

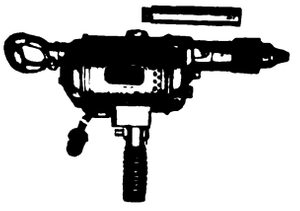
Dorrance Valve Lifter



Charles J. Dorrance, 728 Monadnock Block, Chicago
Price $1

The valve lifter has four jaws. The parts are detachable, reversible and interchangeable. The reversible openings have different widths to meet the requirements of the various sized valve spring caps and pass all pin or horse-shoe keys now in use. A locking device holds the jaws firmly apart at any point of lift. Five fulcrum bearing points permit a forward or backward movement.

Heald Style No. 50 Cylinder Grinding Machine



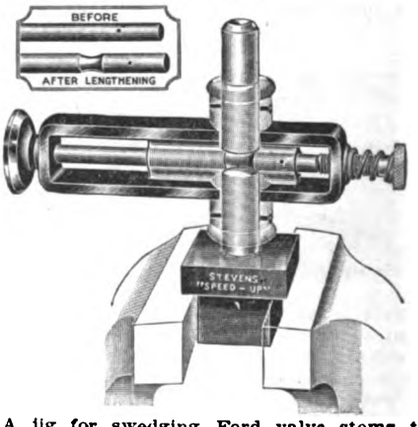
Heald Machine Co., Worcester, Mass.

The new style No. 50 cylinder grinding machine has all the features of previous machines for this class of work and has a number of improvements. It has a hydraulic drive for the table, instantly giving any speed desired. The main casting is a solid bed supporting both the eccentric grinding head and the work table. The main drive shaft on the rear of the machine is mounted on ball bearings and takes the power directly from the main line without countershaft. In addition to the vertical adjustments that it is possible to get with the universal locating jig, the cross slide table can be raised and lowered sufficiently to take care of any vertical adjustments that may be desired by the operator after the block is attached to the jig. This is obtained by two inclining slides between the main table and the cross slide.

Cincinnati Portable Electric Drill

Cincinnati Electrical Tool Co., Cincinnati, O.
Price $65

A light weight ball bearing portable electric drill with a capacity of ½ in. in steel. It weighs 14 lb. and carries a universal motor for either direct or alternating current. The drill has a Jacobs chuck, extra detachable side handle and 10 ft. of cable with Hubbell attachment plug. A mandrel with 3 x ½ in. driving wheel to insert in the chuck for light grinding is furnished as an extra. The switch is enclosed in the handle of the drill and operated by a push button through the handle.



Zip Friction Paste for Fitting Bearings

Zip Mfg. Co., Denver, Col.

A friction paste that increases the normal friction of the bearing surfaces so that a shaft wears the babbitt bearing size. Furnished in 6-oz. tubes.

Stevens Valve Stem Swedge for Fords

Stevens & Co., 375 Broadway, New York City.
Price $3.

A jig for swedging Ford valve stems to make them longer. The jig is held in a vice and the valve inserted between the handle and the swedge. The swedge is tapped with a hammer and the valve turned around slowly until it is peened all the way round. The required amount of lengthening is first measured by inserting a thickness gage between the end of the valve stem and the tappet. After the valve is put in the swedge, the adjusting screw on the swedge is set according to the thickness gage. The maximum lengthening permitted is $\frac{1}{16}$ in.

Repairshop Shortcuts

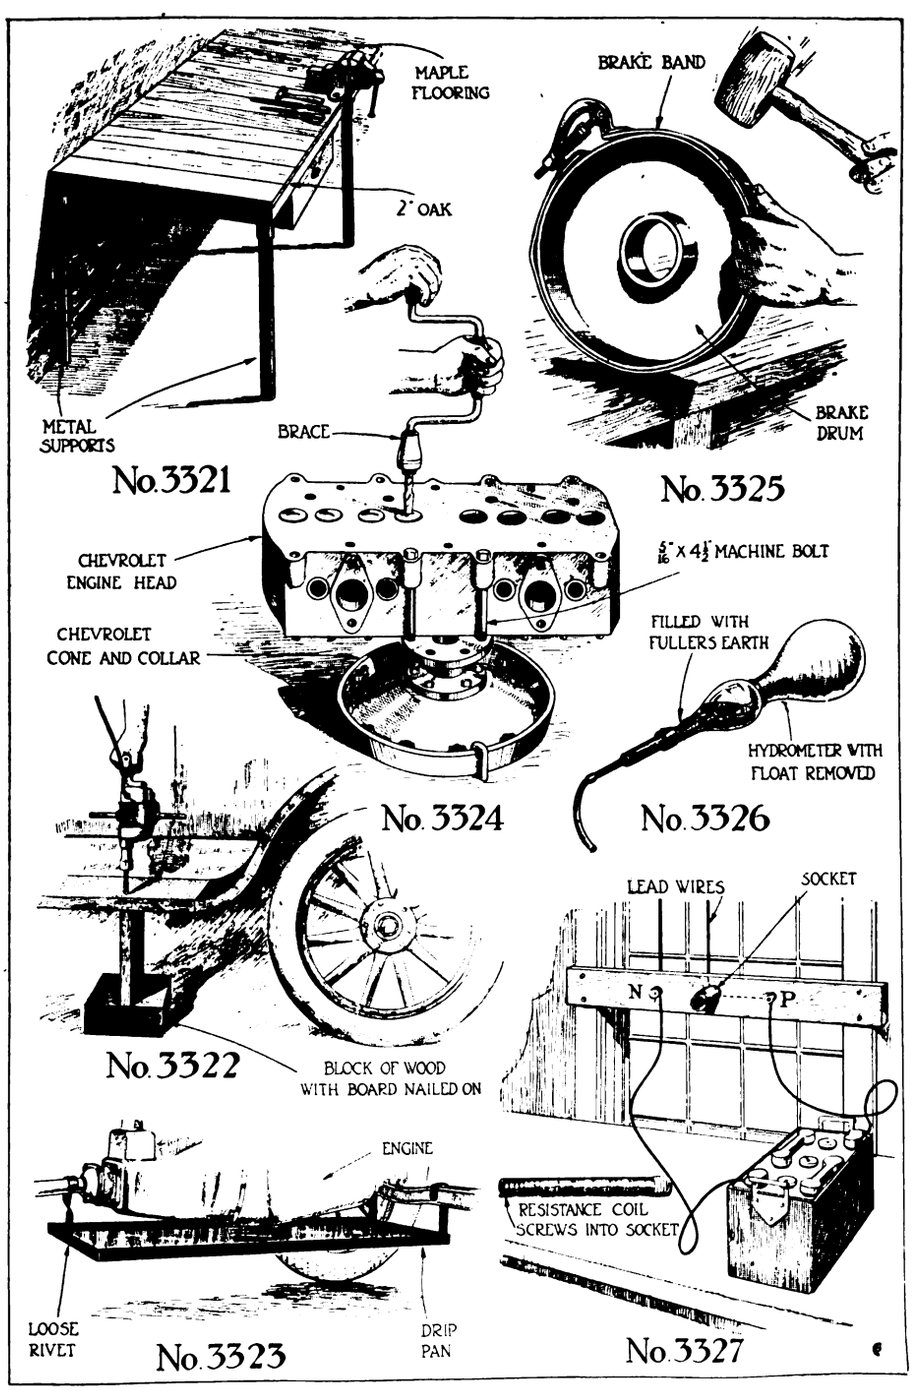
What Did You See?

A NEW YORK newspaper is running several columns every evening under the heading "What Did You See?" Readers contribute short accounts of unusual things they have seen and receive a dollar. The unusual things consist of men buying bananas, peeling them and throwing the banana away, keeping the skin; women absent-mindedly (?) carrying subway tickets through the gate, etc. People are reading these items with great interest and contributors are many.

Motor World has been for years running a page which is very much like this but the interesting or unusual things are operations or devices to save time and labor in the repairshop. These shortcuts are just as eagerly read by Motor World readers as the unusual daily happenings are read by metropolitan readers. Send a Short Cut to Motor World. One dollar will be paid for each one accepted. We will accept any which have not been used before and which are practical.

No. 3321—A Double Top Work Bench.—A work bench is made with a double top to prevent small parts and small tools being dropped into the cracks. The supports are of iron pipe stuck into the concrete floor and covered with 2 in. oak which runs lengthwise of the bench, and this is covered in turn with maple flooring which fits tight.—Owen & Graham, Detroit.

No. 3322—Drilling a Runningboard.—Holes can be drilled in a runningboard without danger of breaking the drill by blocking the runningboard from underneath.—Donald McLean, Cleveland.



No. 3323—Concealed Drip Pan.—To prevent the unsightly appearance of a drip pan on a showroom floor, the pan is provided with three hooks, two at the forward end to hook over the front axle and one at the rear end to hook over the driveshaft. The pan is larger than ordinarily used.—Myers Motor Co., Oklahoma City, Okla.

No. 3324—Chevrolet Cylinder Head Holder.—A Chevrolet cylinder head is conveniently held on a Chevrolet cone and collar with 5/16 x 4½ in. machine bolts. The cylinder head can be moved around as desired and clearance is provided for the valve stems.—Frank S. Siebert, Oakland, Cal.

No. 3325—Straightening Brake Bands.—Brake bands that are twisted and bent are straightened by clamping around an old brake drum and pounding down the high spots with a mallet. The brake adjustment can be taken up as the band is straightened out.—Eugene Bower, Dodge Brothers Service, Scio, Ohio.

No. 3326—Applying Fullers Earth.—Fullers earth is easily applied with an old hydrometer syringe from which the float has been removed. The Fullers earth is drawn up in much the same way that electrolyte is drawn up, and the tubing can be placed between the cone and the flywheel.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3327—Resistance for Battery Charging.—A resistance coil is mounted on a piece of porcelain and fitted with an electric light plug which fits in a socket. The resistance can be adjusted to suit the battery condition.—William Huppenbauer, New Brunswick, N. J.

Conference Sought by Tire Dealers

MAKERS WILL MEET THEM, VILES SAYS

Gathering Held at Cleveland Draws Out Differences of Both Branches

CLEVELAND, July 7—The board of directors of the National Tire Dealers Association and the tire manufacturers division of the Rubber Association of America probably will meet soon to discuss certain phases of the adjustment and stabilization of the distribution of tires.

This important meeting will be the result of a series of conferences in this city which preceded and followed a meeting of the Cleveland Retail Tire Dealers Association last Friday, presided over by R. F. Valentine, president of the National Tire Dealers Association. It was the largest gathering of tire dealers and tire makers ever held in Ohio, and the plain talk indulged in by both dealers and makers sent both sides from the room with information that was most enlightening.

Many Cities Represented

The ball room of the Winton, where the meeting was held, was crowded with approximately 350 dealers, manufacturers and makers' representatives when Valentine called for order. Men were present from New York City, Philadelphia, Washington, Seattle, Minneapolis, Milwaukee, Baltimore, St. Louis, Kansas City, Indianapolis, Akron, Canton, Detroit, Chicago and Cincinnati.

A roar of approval greeted the announcement at the start of the meeting that A. L. Viles of New York City, general manager of the Rubber Association, who was in Cleveland for the meeting, stated that when the tire dealers named a committee and requested a conference the Rubber Association representatives, he was sure, would gladly meet with them and give consideration to what they had to present. Viles made it plain, however, that his association would not discuss price questions under any circumstances as that is one of the functions that trade associations must not take up.

Dealers Score Practices

Judging by the statements made by the speakers, the question of making exclusive tire dealers and automotive dealers compete with department stores, dry goods stores, barber shops and other concerns which carry tires as a side line and cut tire prices to attract trade to the other departments of their businesses, will be one of the important subjects discussed when the dealers' committee and the Rubber Association executive committee get together. That method of disposing of tires by makers was most severely criticized.

The national accounts of the tire makers, the direct accounts with fleet owners, the system of discounts, sales of tires to employees and the selling of the same tires to several dealers in the same trading radius were scored by the speakers representing dealers.

Complaints of Makers

Manufacturers came right back and charged that dealers watched their competitors and if they found one prospering in a certain neighborhood, they would open a store next door or across the street; that although the leading tire manufacturers of the country had discontinued the mileage guarantee, practically all issues of every newspaper in cities of any size contain advertisements of dealers with 6000, 8000 and 12,000 mile guarantees.

F. A. Seiberling of the Seiberling Rubber Co. was optimistic. As costs are lowered and more improved roads are built the tire industry will expand, he said.

Speaking of dealers' problems, Seiberling stated that there are far too many of them in business. He stated there are 50,000 tire dealers: 40,000 selling tires as a side line and possibly 30,000 others. With such a situation existing the dealers are bound to have trouble, he stated.

The manufacturing end is in the same boat. A few years ago there were seven tire manufacturers and now there are

(*Continued on page* 42)

BOSTON USING FILMS IN SAFETY CAMPAIGN

BOSTON, July 8—Mayor James M. Curley, in an endeavor to keep down accidents to children during the summer vacation, has ordered Superintendent James B. Shea of the park department to spend $4,000 in displaying films at all the open air playgrounds showing how accidents to children occur.

This is a continuation of the work begun before the schools closed under the direction of the Safe Roads Federation working with Mayor Curley and the school committee. In the high schools on Saturday mornings the children gathered to hear a traffic officer explain signals, and a safe roads man the need of safety. They saw a film showing how youngsters are careless.

AKRON HAS BIGGEST MONTH IN HISTORY

All Records Broken with Estimated Production of 2,500,000 Tires

AKRON, July 10—June was the greatest month from the standpoint of volume of sales in units in the entire history of the tire industry insofar as the Akron district is concerned, not even excepting the short-lived period of abnormal production during early 1920.

Estimates show over 2,500,000 tires of every size and description manufactured in the Akron district, which includes the Mason company at Kent and the Seiberling company at Barberton, during June.

The Firestone Tire & Rubber Co. reports June was the biggest month in the company's history, with sales in units larger than ever before. Firestone produced nearly 750,000 tires in June, averaging 25,000 a day and running in excess of that mark during the latter half of the month.

Large Increases Shown

The Goodyear Tire & Rubber Co. reports that its June sales of cord tires exceeded June sales of 1921 by nearly 100 per cent. Practically all other tire companies here report sales showing from 50 to 100 per cent increases over the corresponding periods of last year.

Firestone officials state:

We sold more tires in June than in any previous month in our history. The demand seems very general for our products and comes from all sections of the country, the increase being mostly from dealers who have been carrying low stocks and are now in their full selling season. Manufacturers' business and export shipments are also increasing. With tire prices on so low a basis, the consuming public is purchasing freely, knowing that tire values are in accord with the times.

No Diminishing Evident

Akron companies report July orders so far booked do not indicate that there will be any appreciable diminishing of sales, at least during the fore part of the month, although a slight tapering off of production during the latter weeks is anticipated. The usual seasonal slump in sales which comes in August, it is stated, will cause manufacturers to reduce production and to, perhaps, stabilize the industry on a basis of about 75 per cent of present aggregate production.

Jordan Has Big Earnings

CLEVELAND, July 10—The Jordan Motor Car Co. reports that June earnings will approximate twice the preferred dividend requirements for the year.

Digitized by Google

Plants Operate on June Schedules

NO RECORD FOR JULY BECAUSE OF HOLIDAYS

Last Month's Output at Factories Shows Slight Increase Over May

DETROIT, July 11—Reports received from factories in the Detroit district indicate that a compilation of figures on June production will show a slight increase over the record output of May. In most factories the variations were very slight due to the fact that capacity was reached in May, but better deliveries of materials and other causes enabled the June production to run just a trifle higher.

Production in July, so far as the daily schedules are concerned, will be practically identical with the schedules of May and June, but holidays early in the month and close-downs for inventory and vacation periods will bring the monthly total considerably lower. The demand for cars is reported to be steady but falling off from the early spring rush. Dealers are reported to be holding orders strictly to a sales basis.

Columbia Motors, with the assurance of deliveries of materials for its light six, has set a schedule of 1650 cars for July, which will exceed its June total by 100 per cent. Two-thirds of this will be the light six and the remainder the former larger models. Gray Motors has booked a total of 500 cars for July, which will be its first full production month. First deliveries of the Gray were made late in June and consisted mainly of demonstration cars for dealers.

140,000 Ford's Output

Incomplete figures for Ford business in June show that the schedule of 130,000 cars and trucks and 10,000 tractors was approximated. The company has set a similar schedule for July production, and announces that this schedule is lower than the orders received from its dealers. There will be considerable orders carried over into August, these, for the most part, being in the closed models.

Dodge Brotbers production is continuing at the rate of 550 to 600 daily and Maxwell at the rate of 300 to 350. In the latter case the month's total will be lower owing to a week's closing for inventory in the first part of the month. Durant production is continuing at the rate of 100 daily. June being the largest month to date for the Lansing plant, and increases are set for July and August. Production of the Star car will begin at the Lansing plant in August. Dort Motor production for June was lower than in May. The July schedule is fixed at from 50 to 70 cars daily.

Hudson Motor Car Co. reports an increase over its May total of about 5 per cent in June and expects to approximate the June production in July. In both the Hudson and Essex models the daily production is continuing at 275 to 300. Hupp Motor Car Corp. is continuing its schedule of 140 daily. In the first six months the company reports business to have reached about 18,000 of its planned 30,000 output for the year.

Chevrolet Motors is continuing on its schedule of about 1000 daily, June production being about on a par with May. Buick has operated on part time in June owing to plant changes, but is prepared to resume on its regular schedule of about 350 cars daily in July. Oldsmobile is building at the rate of about 120 daily, a reduction from the May and June totals which were about alike. Oakland is running better than 100 cars daily and reports July business will be on a par with May and June.

Inventory Period Postponed

Studebaker, because of the pressure of business, has postponed its regular inventory period and will continue manufacturing throughout July at the rate of 440 cars daily in all plants. This is at the same rate as in May and June and represents the utmost that present plants are capable of producing. Paige produced about 4000 cars in June in its Paige and Jewett models, the total being about equal to the May output.

Cadillac is operating on a schedule of about 100 daily, but looks for a seasonal falling in business toward the end of the month and in August. June production was about equal with May. Wills Ste. Claire was down for inventory in the first week of the month, but will resume on its schedule of 25 to 30 daily.

Packard production in June on all models was about 1800. July schedules call for a total of 2000 cars and trucks. Lincoln is building about 35 cars daily and is four months behind on orders.

Earl Motors reports June to be the banner month of the company and is continuing on a schedule of about 65 cars daily. Chalmers production is running at the rate of 25 to 30 daily. Liberty is building 30 to 35 cars daily, plant capacity, and will continue at this rate through July and August.

Rickenbacker is continuing its schedule of 25 cars daily through July, and reports June to be about equal to May. Reo closed in the first two weeks of July for the regular vacation period.

Insures Employees

HARTFORD, CONN., July 10—The City Auto Repair Co., conducting a garage and service station and handling the Dort, has insured all its employees under a group policy.

INTENSIFY EFFORTS FOR JULY BUSINESS

Dealers in Milwaukee Working Harder Than They Did in Rush Season

MILWAUKEE, July 8—June business as analyzed by most Milwaukee dealers, equaled by the May volume, with some able to report a progressive gain. The past month started off for some dealers rather less actively than April or May, but, by the close of the period, business had the same characteristics as before, dispelling any ideas some may have entertained that the peak of demand was past and a decline had set in.

It is true that a great many dealers believe it unreasonable to expect retail demand for passenger cars to maintain the April, May and June marks during July and August. Past experience, which is still acceptable despite overturning of traditions during this reconstruction period, shows that the cream of the demand was skimmed during the second quarter of the year, while the third quarter usually required more intensive work to "sell" the more lukewarm prospects whose procrastination set them down as doubtful customers in the first instance.

Buyers Help Salesmen

No effort is being relaxed; in fact, selling work is being prosecuted with even greater intensity than in the rush season. It is recognized that resistance becomes stronger as the sales curve reaches the peak and the more willing customers have been satisfied, leaving the "hard nuts" to crack. On the other hand, the missionary work, intentionally or unconsciously being done by buyers of new cars among their friends, is helping salesmen in closing new deals.

May and June rank as the largest retail selling months in the history of the Milwaukee trade. For this reason alone, in view of seasonal conditions, it would be an extremely difficult matter to produce in July or August, the vacation period, an equal or larger amount of business.

Local dealers are not yet caught up on open car deliveries, while their closed car orders, forming a greater percentage of sales than ever before, will require from 30 to 90 days to fill at the present rate of receipts from distributors or factories.

Franklin's Biggest June

SYRACUSE, July 8—Franklin Automobile Co. reports that June surpassed all previous records for the month, and was the second biggest month in the history of the company.

Digitized by Google

140 MORE DEALERS ADDED TO N. A. D. A.

Makes Total of 383 Elected Since New Membership Campaign Started

ST. LOUIS, July 10—One hundred and forty of the leading dealers of the country were elected to membership in the National Automobile Dealers Association during June. This makes a total elected of 383 out of the 500 applications that have been received since March 1, the date the one-of-a-thousand campaign was formally begun.

The addition of dealers in Cleveland, Jacksonville, Atlanta, Chicago, Omaha, Hutchinson, Dayton, Muskogee, Oklahoma City, Houston, San Antonio and Richmond, indicates the widely scattered nature of the work done by the national association organizers. The members are located in forty states and the District of Columbia, and July will see virtually every state represented in the membership as a result of the first campaign efforts to distribute the membership nationally.

To date, Cleveland is the most largely represented city in the association. As a result of the activities there of G. G. G. Peckham, a director of the national association, eighteen dealers have been elected to membership. Cleveland also has reorganized its local association on a basis of membership requirements virtually the same as those exacted by the national association.

Chicago Close Second

Chicago pressed Cleveland a close second as the result of the work of Henry Paulman, Pierce-Arrow distributor in that city. The Chicago representation so far is ten, but there are other applications pending that may give Chicago back the lead in national association affairs that it has always held.

Lynn M. Shaw, assistant general manager, has completed one month's work on the Pacific Coast and starts upon his second month in that region. P. F. Drury, assistant general manager, is winding up the association's first membership campaign in New England. Boston will be added to the N. A. D. A. list of cities as the result of this campaign. The membership, elected as of June 26, follows:

ALABAMA: Bissel Motor Co., Inc., of Birmingham; Standard Motor Car Co., Inc., of Mobile.

ARIZONA: M. P. Barret, Inc., McArthur Brothers Merc. Co. and Overland Arizona Co., all of Phoenix; Snow & Tufts Auto Co. of Tucson.

ARKANSAS: Bernstein Brothers of Little Rock.

CALIFORNIA: Ralph Hamlin, Inc., Howard Automobile Co. of L. A. and Albert J. Russell, all of Los Angeles; Clark Brothers, Gates & Zander and C. R. May, all of Pomona; H. O. Harrison Cox and J. W. Leavitt & Co., all of San Francisco.

CONNECTICUT: Harrington Hudson Co. of Hartford.

DISTRICT OF COLUMBIA: Stanley H. Horner, Sterrett & Fleming, Inc., and Washington-Cadillac Co.

FLORIDA: Duval Motor Co., McCants Hall Co., Mangels-Kirby Co., Claude Nolan and E. C. Williamson Motor Co., all of Jacksonville.

GEORGIA: A. L. Belle Isle, Jos. G. Blount, Franklin Motor Car Co., J. W. Goldsmith, Jr.-Grant Co., Inc., and John M. Smith Co., all of Atlanta.

ILLINOIS: Allison Rood Co., W. C. Auble Motor Co., Dashiell Motor Co., W. V. Faunce Motor Co., Louis Geyler Co., James Levy Motors Co., Marmon Chicago Co., Rowe-Young-Cooley and Smith Sauer Motor Co., all of Chicago; Morris Adler Co. of Quincy.

KANSAS: Gunsolly Motor Co. of Emporia; Clark Motor Co., Davis & Child Co., Hereford Motors and Hutchinson Motor Car Co., all of Hutchinson; Kimball & Delay and J. C. Olson, both of Parsons; Salina Automobile Co. of Salina.

LOUISIANA: Fairchild Motor Car Co. of New Orleans; Geo. T. Bishop, Inc., Dickinson Motors, Inc., and S. B. Hicks Motor Co., Inc., of Shreveport.

MARYLAND: H. S. Block of Baltimore.

MASSACHUSETTS: Weldon Garage, Inc., of Greenfield; Smith Motor Car Co. and Robinson-Toohey Co., both of Lawrence; Auto Selling & Supply Co. of New Bedford; A. V. Reopell and J. S. Harrington, Inc., both of Springfield.

MICHIGAN: Bemb-Robinson Co. of Detroit; Dort Sales Co. and Knight & Matzen, both of Flint.

MISSOURI: Central Motor Sales Co. of Springfield; Weber Motor Car Co. of St. Louis.

NEBRASKA: J. H. Markel of Lincoln; J. H. Hansen Cadillac Co., O'Brien-Davis-Coad Auto Co., Scott Motor Car Co., Guy L. Smith and Stewart Motor Co., all of Omaha.

NEW HAMPSHIRE: Manchester Auto Garage Co. of Manchester.

NEW JERSEY: Mortensen & Humphreys, Inc., of Newark.

NEW YORK: Howard B. Smith, Inc., of Buffalo; Stratton-Bliss Co., Inc., and Warren-Nash Motor Corp. of New York City; Ross Automobile Co. of Syracuse; Alling & Miles, Inc., and Chal-Max Motor Corp., both of Rochester.

(*Continued on page* 44)

DODGE PRESIDENT URGES GOOD ROADS

SYRACUSE, July 10—Frederick J. Haynes, president of Dodge Brothers, speaking here predicted that so-called speed ordinances will be obsolete in a few years and that state legislation to replace them will make the driver fully responsible for all accidents regardless of the speed at which a motor vehicle may be travelling at the time.

"In many sections of the country the towns refuse to repair highways except to make them just passable," he said in urging better roads. "Our fleets of trucks, which have become a vital necessity in the business life of America, are held up and forced to consume many extra hours of time in trips, which slows up business and increases transportation costs. We must have better highway construction, that will stand the wear and tear of truck and car alike."

JUNE MAY SET MARK FOR INDIANA JOBBERS

Accessory Unit Sales 150 Per Cent of Same Month Last Year

INDIANAPOLIS, July 10—Wholesale and jobbing accessory business for Indiana in May was far ahead of any month thus far this year. June business is reported to be as large as May and in many cases will exceed it. The general report of the leading jobbing houses in this city which sell throughout the state is that for the first three months of this year the business was on a general level that in some cases was quite low. During April the upward movement started, but it was not until May that the sales and shipment curve made a sharp upward line. In almost every case the large accessory jobbers found May far ahead of any month for this year, and in general business to exceed that of any month during 1921.

The record cannot be estimated correctly unless the fact is considered that there are considerable portions of the state where business as a rule is at a low ebb. The coal producing portions of the state are down in the consumption and sale of accessories.

The fact that present records surpass those of last year in dollar value, in spite of decreased list prices and in the face of a considerable portion of the state where business is considerably affected by idleness makes the new record highly satisfactory to the jobbing houses.

The volume of sales from the standpoint of the number of units of accessories and equipment sold is running well over 150 per cent as against the same month last year, and some of the jobbers look for a steady pull at this rate and possibly better for the next month and a half or two months.

STEPHENS PLANNING EXPANSION PROGRAM

MOLINE, ILL., July 8—The Stephens Motor Car Co. is producing at the rate of 25 cars a day, and a production of 650 for July is scheduled. Production for May and June was 430 and 425 respectively. The company has shipping specifications covering July and August which indicate no falling off in demand. Approximately 10 per cent of the present output is closed cars.

In its two factories in Freeport, Ill., where 520 men are employed and where the chassis assembly and body manufacture are carried out, there is capacity for 75 bodies daily. The engines are manufactured in Moline, where the output is 30 a day, the company having taken up the manufacture of its engines approximately two months ago. They are being manufactured in a modern brick plant, 1200 ft. by 120. A program of expansion in production of Stephens cars has been decided upon, and an aggressive selling program outlined.

OUTPUT FOR QUARTER MAY BE NEAR 750,000

Total for First Half of Year Would Then Approximate 1,120,000

NEW YORK, July 11—While there has been an unexpected delay in compiling the totals of passenger car and truck production for June, preliminary estimates indicate strongly that it equalled the May record of 256,000 and perhaps exceeded it. This would make a total for the second quarter of close to 750,000 and for the first half year of approximately 1,120,000. The total for 1921 was 1,668,000.

While factory schedules for July have not been cut materially, there will be a considerable falling off in the month's production because of the universal July 4th holiday and inventory taking in several plants.

A seasonal falling off in sales has become apparent in some sections, notably in the larger centers of population. The farm demand has not really opened, and the extent of the decline will depend in large measure upon the volume of sales in the agricultural districts.

New Farm Truck Models

Truck makers are watching the rural districts even more closely than the passenger car makers. Most of them are bringing out new models of light trucks designed especially for farm use and will cultivate this field intensively. Unless there is a strong demand in this direction it is not expected that truck business will go much beyond the present level for the remainder of the year and it may fall off.

Passenger car manufacturers are confident that sales of closed cars after August will be unprecedentedly large, and will make the volume of business for the closing months of the year entirely satisfactory. Many of the companies are preparing to bring out new models, but there will be no revolutionary changes in design.

NEW YORK REPORTS DECLINE IN SALES

NEW YORK, July 12—Passenger car sales have started on a seasonal decline in the metropolitan area. Buying has fallen off sharply since July 1, contrary to the expectations of some distributors, who looked for a continuance of the extremely heavy business of April, May and June. More experienced merchants, however, did not anticipate that demand would be sustained after the Fourth of July holiday had started the vacation season, and they predict that July and August business will be what might be termed normal.

The record of June registration will be heavy, showing the results of sales in that month and delayed deliveries on June sales.

The used car market is accurately reflecting conditions in the new car market.

PORTLAND SCHOOLS MAY TEACH SAFETY

PORTLAND, ORE., July 10—Instruction in safety-first methods may be included in the public school curriculum of the states of Oregon, Washington and Idaho, if the unanimous recommendation of a special safety first committee composed of officials of the three states is carried out.

The committee was formed to study ways by which the number of accidents at railroad crossings and along the public highways might be reduced and to bring about uniform action in the three states.

Instruction of children in the public schools in proper safety precautions was declared to be one of the best methods for cutting down accidents, and it was proposed that instruction to the extent of one hour a week be given to all pupils.

CHAPMAN APPOINTED DORRIS SALES HEAD

ST. LOUIS, July 11—W. A. Chapman, formerly connected with the selling organization of the Skelton Motor Car Co., has been appointed director of sales of the Dorris Motor Car Co.

Chapman entered the automobile field from the farm implement business. He formerly served as manager of the Oklahoma City branch of the Rock Island Plow Co. and later acted as field supervisor for the Dort Motor Car Co.

Chapman's first connection with the Skelton organization was as general manager of distributing firms in a number of southwestern cities. When Skelton organized the Skelton Motor Car Co. to manufacture the Skelton automobile in St. Louis, Chapman became vice-president and general manager. He has been connected with Skelton sales since, continuing after Skelton's death about two years ago.

Butterfield Resigns from Apex

YPSILANTI, MICH., July 11—C. W. Butterfield, assistant general manager in charge of sales of the Apex Motor Corp., manufacturer of Ace automobiles, has resigned, effective July 10. Before joining the Apex corporation Butterfield was sales manager of the Herschell-Spillman Motor Co., North Tonawanda, N. Y.

Torbensen Gets Injunction

NEW YORK, July 10—A permanent injunction was granted the Torbensen Axle Co. by Justice Knox in the United States District Court to-day, restraining the United Gear Manufacturers Corp. from using the Torbensen name in the selling of parts for Torbensen axles, where the parts are not made by the Torbensen company.

WOULD UNIFY TRUCK HAULAGE IN SOUTH

Meeting in Birmingham Discusses Bringing Private Interests Together

BIRMINGHAM, ALA., July 10—Motor transportation, conservation of individual operation transportation in Birmingham and nearby sections, spreading out as new roads are built and old ones improved, providing a delivery system for wholesalers, jobbers, retailers and manufacturers through operation of motor trucks by a single concern, promises to be a studied business in Birmingham.

Discussion of the problems of delivery in the city and district by motor trucks at the lowest possible cost, at a luncheon attended by a score or more business men, at the instance of Henry C. Goodman, transfer and warehouse man, brought out much valuable data concerning the possibilities of the proposed plan, elimination of penalization of shipper and consumer through the operation of motor trucks and other means of delivery by individuals, and other phases of the situation.

System Now Used

Sidney J. Bowie, who acted as chairman, told of the difficulties of delivery by railroad, the several handlings necessary when shipments are made by rail, and the delays and the cost incident to rail delivery. He pictured the progress in motor transportation as good roads are being provided, and declared that the future held great things in this line. Railroads, he said, were getting most of their returns from long hauls, but had to meet the competition on short hauls. He said that Goodman had invited the assembly to the dinner for the purpose of discussing motor transportation, a system of delivery through established agencies.

Goodman went into details as to the proposed plan for operating a regular fleet of trucks, making deliveries on a small cost basis and working out the costs of operation, which, he said, were around $18 a day for a large truck. He cited some instances where the system which he proposed to Birmingham business men was being used. Merchants, manufacturers, wholesalers and jobbers were taking advantage of the system, he said, because it offered a solution of the delivery problem.

Relief from First Cost

The plan proposed by Goodman consists of private trucks being taken over by a general motor delivery concern at a fair allowance for their value to the owners in return for service to be rendered. The private concerns would thereafter be relieved of initial costs as well as the cost of upkeep. A single large concern operating a delivery service for a large number of firms would be in a position to have repairs made at a minimum cost and secure truck repair parts at minimum prices.

UNDERWRITERS START SAFETY FIRST STUDY

Seek to Remove Growing Sales Resistance, Which Is Due to Accidents

NEW YORK, July 8—The National Bureau of Casualty and Surety Underwriters, which is the rate-making organization for automobile insurance other than fire and theft, is planning to conduct an automobile accident prevention campaign for its members.

In announcing the campaign, the bureau states clearly that the action is being taken for business reasons, aside from reasons of public welfare—that the large number of automobile accidents is creating considerable sales resistance, and that the high insurance rates, which the large number of accidents has necessitated, are unprofitable.

The preventive work of insurance companies in the field of fire and industrial accidents is well known. This is, however, the first organized effort on the part of the insurance companies to deal with the automobile accident prevention problem.

According to the present plans, which have been submitted to the directors of the bureau, the work will be fundamental in character. There will be no widespread publicity, no accident prevention weeks, or other similar popular appeals, but, instead, a close study of automobile accidents, traffic control, statistical research, etc.

The work will be carried out with the object of making the National Bureau of Casualty and Surety Underwriters a national authority on accident prevention.

The present plans provide for the progression of the work under three general heads:

1—Establishment of a department to study traffic problems and recommend systems of control and traffic legislation.

2—Widening of the present field of statistical research to include automobile accidents.

3—Establishment of an educational department which will work largely through the National Safety Council in developing safety education in the public schools, in automobile schools and through the automobile industry.

This activity on the part of the National Bureau of Casualty and Surety Underwriters is of particular importance to the automotive industry because it, too, is beginning to recognize a definite factor of sales resistance in the need for better traffic control.

Walker-LaFrance Unchanged

NEW YORK, July 10—Walker Motors, Inc., which has purchased the assets of the Ward LaFrance Truck Corp. of Elmira and will remove the plant to this city, especially for the New York market, announces that no radical changes will be made in the design or construction. The truck will be known as the Walker-LaFrance. A. Ward LaFrance, formerly president of the Ward LaFrance Truck Corp., will be in charge of production.

FARMER BEST BUYER; LABORER IS NEXT

TOLEDO, July 11—Analysis of sales by the Willys-Overland Co. for May shows that farmers bought 81 per cent more Overland cars in that month than any other vocation. Laborers came next with approximately 10 per cent of the total output. Merchants, salesmen, clerks, foremen and doctors followed in the order named. The vocational list of Willys-Knight owners shows 104 classifications for May with the farmer fifth. The farmer group was in eighth place in April.

COLE DOUBLES LAST YEAR'S PRODUCTION

INDIANAPOLIS, July 11—Production of the Cole Motor Car Co. is running 100 per cent ahead of last year and at a rate which is equal to 85 per cent of capacity. J. J. Cole, president and general manager, reports that the smaller dealers in agricultural districts are ordering cars for delivery during the summer months and that with the harvesting of crops business with them will be better than in the last two years. Foreign business also has improved materially.

A balance sheet of the Cole company as of May 1 showed current assets of $3,561,629 as compared with current liabilities of only $327,671. Cash on hand amounted to $699,089. The Cole company paid a 10 per cent dividend early in May and present indications are that there will be a similar distribution of profits in October.

Allen Plant Sold

BUCYRUS, OHIO, July 10—The Shunk Manufacturing Co., manufacturer of magnetos and various metal products, has purchased the plant of the Allen Motor Co., at auction. The sale has been confirmed by the court, and steps are being taken to occupy the plant.

All of the personal property of the company, both at Bucyrus and Columbus, was also disposed of, but the real estate in Columbus did not sell, the best bid being $150,000 while the plant is appraised at $303,830.

Bethlehem Begins Operations

PHILADELPHIA, July 6—The newly reorganized Bethlehem Motors Corp. has begun operations at Pottstown and Allentown under Howard B. Hall of New York, who is acting for the stockholders syndicate. The plant is running ten hours daily. The officials are optimistic about the motor truck business and soon will add to the working forces at the plant.

MAIBOHM TO APPEAL APPROVAL OF SALE

Because of Court Decision Arrow Motors Obtains Possession of Assets

TOLEDO, July 8—Federal Judge Killits has confirmed the sale of the property of the Maibohm Motors Co. to a creditors' committee, which has incorporated the Arrow Motors Co. as a successor. Minority creditors who did not come in under the plan for acceptance of preferred stock in the Arrow company will be given until July 20 to prove their claims. H. C. Maibohm, former head of the Maibohm company, is included in this group. The creditors' committee which took over the property is headed by E. G. Kirby, trust officer of the Commerce Guardian Trust & Savings Bank of Toledo.

After a hearing previously held, Judge Killits said he favored confirmation of the sale and the general plan adopted for organization of the new company, but that he would take the case under consideration before signing the order. H. C. Maibohm had made an offer to the court to bid $100,000 cash for the assets. Many of the creditors doubted his ability to make possible a cash distribution, however. Under the present plan creditors will be given preferred stock in the Arrow company.

Maibohm asserted that an appeal would be taken from the order by Judge Killits confirming the sale on a stock settlement basis. He declared the majority of creditors want the sale made for cash.

Arrow Motors with A. C. Burch as general manager is preparing to put the plant into operation soon.

Claims against the Maibohm company aggregate $600,000 and all but $60,000 are represented by the creditors' committee.

CRAWFORD TO EXPAND UNDER NEW CONTROL

HAGERSTOWN, MD., July 10—The stock of the Crawford Automobile Co. of this city has been purchased by M. P. Moller, a wealthy pipe organ manufacturer, and the plant has been placed under the supervision of Herbert N. Ross of New York. The factory was owned for several years by a corporation in which Moller and Henry Holzapfel, Jr., of this city were the principal stockholders. This corporation, it is said, will be dissolved.

Announcement is made by Moller and Ross that in addition to the Crawford car a sport model to be called the Dagmar will be manufactured at the local plant. One of its sport models has been built and is on exhibition in the company's salesrooms in New York.

Moller announced that all his assets will be behind the Crawford company and that it is planned to enlarge the plant and increase the output of cars as demand increases.

EIGHTH ANNUAL PIKE TOUR NOW UNDER WAY

Association Will Hold 77 Good Roads Meetings During Two Weeks

DETROIT, July 8—The eighth annual "Pike" tour has started on a 14-day swing around Lake Michigan, with the Copper Country of Michigan as its northern terminus. The tour, as in former years, is conducted by the Michigan Pike Association. During the two weeks Captain W. S. Gilbreath, manager of the Detroit Automobile Club and president of the M. P. A., will conduct 77 good roads meetings. The object of the tour is to create interest in improved highways and to popularize through-touring routes. Out of the time spent on the road, all but two days will be in Michigan territory.

Has Staff of Speakers

Capt. Gilbreath has organized a staff of speakers for the tour and expects to have a half dozen prominent men from Michigan. The line-up includes Horatio S. Earle, "Father of good roads in Michigan," and Inspector Harry H. Jackson, head of the traffic division, Detroit police department, also Dr. P. E. Doolittle, Toronto, president of the Canadian Automobile Association and honorary vice-president of the M. P. A.

The Copper Country, which embraces all of the Keweenaw Peninsula, is making extensive arrangements through the Calumet Chamber of Commerce to surpass any entertainment ever accorded the "Pikers" on their international tours. C. T. Murphy, secretary of the Calumet C. of C., has advised Tour Manager W. D. Edenburn, of the following plans.

A large delegation from the Copper Country will meet the tour at Michigamme and passengers will be exchanged for the drive to Calumet. A monster good roads rally will be conducted at Calumet for the entire Copper Country, the Upper Peninsula highway commissioners and road engineers will be in session and join in the meeting, also the officers and directors of the Upper Peninsula Development Bureau.

DeBEAR CONTINUING FORMER ASSOCIATION

NEW YORK, July 8—Harry J. DeBear, whose term as president of the Maxwell Distributing Corp. the New York Maxwell-Chalmers branch, terminated with the purchase of the business by the Colt-Stewart Co., is retaining an executive connection with the general Maxwell-Chalmers organization.

The newly organized Colt-Stewart Co. has stepped into the Maxwell-Chalmers business in the New York territory with sales going forward at high speed. June was the largest month in the history of the territory and July has started off with a large number of orders unfilled on both Chalmers and Maxwell cars.

The organization has more than thirty dealers in the territory, including New York and several adjoining counties, but excluding all of Long Island, including Brooklyn.

It is the intention of the Colt-Stewart Co. to retain the entire personnel of the former Maxwell-Chalmers branch.

Automobile editors and advertising men on the New York newspapers gave DeBear a testimonial dinner at the Automobile Club of America, when they presented him a silver cigarette case.

GEORGE FRITZ

Former field secretary of the A. E. A who has resigned as general manager of the Research Club

GEORGE FRITZ QUITS AS MANAGER OF CLUB

CHICAGO, July 11—George Fritz, who has been general manager of the Research Club for a year and a half, has resigned, his action to take effect Aug. 1. Fritz has not announced his plans and no successor has yet been chosen by the club.

The Research Club is an organization of eighteen jobbing houses in non-competing territories, which was formed in June, 1920, the idea being adapted from the dry goods trade. Its first activities had to do with business research along efficiency lines, but later it added co-operative buying. The club maintains headquarters in the State-Lake Building. Robert Weinstock of the Weinstock-Nichols Co., San Francisco, is president.

Fritz was the first manager employed by the club. Prior to that connection he was for four years field secretary of the Automotive Equipment Association. He has been in the automotive industry eighteen years.

To Report to Ford on Mexico

DETROIT, July 10—A. J. Lankford, manager of the Ford southern branches, is on his way here after a three weeks' inspection trip into Mexico to report on the advisability of building a plant at Tampico.

MORE DISTRIBUTORS, PLAN OF MOLINE PLOW

Will Supplant Small Implement Dealers with Them—Factory Branches Reduced

MOLINE, ILL., July 10—A new plan of merchandising farm implements has been adopted by the Moline Plow Co., Inc., and George N. Peek, president and exponent of the plan, hopes to start a movement that will very largely revolutionize the merchandising of farm machinery.

The plan is to get away from the great numbers of small implement dealers, many located at crossroads, and none of whom has made money or been capable of giving the necessary service or often of making sales. In place of these dealers, Peek aims to develop distributors at centers to serve a large territory.

The Moline company, which had 24 factory branches, has already reduced this number to nine, and the appointment of distributors has been under way for some months. This change is to get away from the old method of distributing implements, which Peek describes as wasteful, and, still further to complete his plan, a basis of cash sales has been included. It is founded on the belief that the farmer should pay cash when he can.

Factory Assistance Necessary

In the past the old order of implement dealers has required too much factory sales effort. The implement manufacturer, not satisfied with putting dealers at every crossroad, had to send factory representatives to instruct these dealers, to assist them in making sales, to assist them in collecting for the machinery, and also in providing service.

The Moline plan is opposed to free service because free service means that the service is generally paid for in the original price. The new Moline distributor plan is aimed to reduce the selling cost. The distributors should buy in volume and receive volume shipments, securing the economies going with both of these.

Peek does not anticipate a very rapid return of prosperity to the farmer. The present prices for July grains are little different from those of a year ago. Wheat is 11 cents per bushel less than a year ago, and rye is 86 cents as compared with $1.20. The strong price of hogs is one of the best agricultural conditions.

The sale of agricultural machinery is from 40 to 50 per cent, and not much in excess of the same time last year.

The repair business has been considerably better.

May Best Stutz Month

INDIANAPOLIS, July 11—A complete check-up of Stutz retail sales and factory output for May shows that it was by far the best month of recent times. Complete reports of retail sales for June are not yet available.

Digitized by Google

FEDERAL AID GIVEN FOR WESTERN ROADS

Thinly Populated States Will Receive Benefit of Latest Distribution

WASHINGTON, D. C., July 10—Additional Federal aid for construction of good roads in states thinly populated has been extended to ten states, it has been announced by the Bureau of Public Roads. Fifty per cent of the cost, not to exceed $16,500 per mile is the maximum participation in all states except those containing unappropriated public lands in excess of 5 per cent of all lands in the states.

A survey made by the bureau shows that in ten states additional Federal aid, over and above the 50 per cent, is necessary in order that construction of important trunk line highways, through thinly settled regions, may be constructed, giving a national highway transport system. The following states will receive the additional Federal highway aid:

State	Percentage Payable by United States
Arizona	61.11
California	59.21
Colorado	56.12
Idaho	58.01
Montana	53.04
Nevada	87.22
New Mexico	61.50
Oregon	61.13
Utah	74.86
Wyoming	64.65

MEETING SOUGHT BY TIRE DEALERS

(*Continued from page* 36)

300. The speakers said that many in both branches would be eliminated before the business gets down to rock bottom and then would come a healthy period for all. The legitimate tire dealer was pronounced the sound point of contact for the manufacturer, and the argument was made that no business will survive that does not protect the dealer.

Seiberling declared that the tire manufacturers have the same troubles that the dealers have, and he urged a spirit of tolerance be shown on both sides. The dealers were urged to build good will as a most valuable asset both to them and to the manufacturer.

A. E. Berger of New York City asserted that the distribution of tires in New York was in chaos; that dealers had little confidence in prices and that the situation was further harmed by the action of a big cigar store in selling tubes as a side line. He urged that before opening accounts manufacturers ask the applicants for agencies to demonstrate that they have the qualification of good business men.

Farmers Buying Trucks

ALMA, MICH., July 8—The Republic Motor Truck Co. reports that its factory is now working at about 50 per cent and that during July it will build more trucks than for any month in two years. Colonel Frank E. Smith, president of the company, declares that farmers in Kansas and Nebraska have started buying and that the farm demands promise good business through the summer. He regards the outlook for the balance of the year as very favorable.

GIRL TO OPERATE OWN CAR SERVICE STATION

ATLANTA, GA., July 11—From the gracious hostess of the Pensacola Country Club to the manager and owner of an automobile service station, Miss Marguerite Ingraham, a well known Pensacola, Fla., girl, steps into the limelight as one of the first—if not actually the first—woman in the South to take over the active management of such a business.

Miss Ingraham, who is well known in society circles of Pensacola, has purchased the station in that city operated under the name of Service, Inc., one of the finest stations in that part of Florida.

NEW YORK BRIDGES SEGREGATE TRAFFIC

NEW YORK, July 12—The Brooklyn Bridge, oldest span across the East River at New York, has been restricted to horse-drawn vehicles, and the Manhattan Bridge, a quarter of a mile upstream, is to be used exclusively for motor traffic under a city order just issued. Hitherto the bridges have carried mixed traffic, which has caused heavy congestion despite the fact that it was routed as one-way traffic at stated periods of the day.

NASH PLANS BIGGER DAILY PRODUCTION

KENOSHA, WIS., July 10—Daily production of 150 Nash sixes has been under way for some time, and Charles W. Nash, president of the Nash Motors Co., with latest factory additions, has attained a possible factory capacity of 200 a day. Contracts have recently been let for an addition to the plant at Milwaukee where the four-cylinder types are manufactured, which will give a daily capacity of 100 fours and permit the two factories a capacity of 300 daily.

Nash looks for a slight falling off in demand during July and August as compared with last year, when these two months were large production months largely due to several concerns reducing prices July 1, 1921, which created a great amount of business for July and August.

The coming harvest is certain to stimulate country buying, according to Nash, although not to the extent that has been predicted.

The Nash factory is gradually being built up into a very complete manufacturing unit. At present approximately 93 per cent of the car is produced at the factory.

ONLY THIRTY TRUCKS UNSOLD IN GERMANY

Those Disposed of by Army Commander Will Not Be Reimported to U. S.

WASHINGTON, July 8—All motor trucks used by the American Expeditionary Forces in Germany, with the exception of thirty, have been sold, the Department of State has been advised by General Henry E. Allen, commander of the Rhine forces.

The information that none of the 2000 or more trucks used by the government during the occupancy of German territory, will be returned to this country was received in response to a cable request by the department to ascertain what numbers of the trucks, if any, might be affected by the Graham anti-dumping bill.

The trucks, it is understood, were sold with the understanding that none of them were to be re-imported to the United States. If the Graham anti-dumping bill if passed, a 90 per cent re-import duty on the returned trucks would be collected.

The department was not advised what price the trucks brought but the cable advises that they were sold to all comers on open bids for whatever they would bring. The announcement of the sales has brought a protest from the Department of Agriculture which had been promised the equipment.

Department of Agriculture Aroused

Under an agreement, the War Department was to have turned the trucks over to the agricultural department to be used by the Bureau of Good Roads, which had announced previously that the trucks would be proportioned among the various 48 states by the Bureau of Good Roads for the building of highways.

A representative of the bureau arrived in Europe to inspect the trucks the day that the thirty machines were shipped on an army transport to the United States.

The Department of Agriculture has requested Secretary of War Weeks to ascertain by what authority General Allen sold the trucks after they had previously been promised to the department. As the matter now stands, however, it is believed that General Allen's sale of them will stand.

OHIO GASOLINE TAX TO FINANCE ROADS

TOLEDO, July 10—Tax on gasoline will probably be the next method of financing road construction and maintenance to be attempted in Ohio. County Commissioner John Jackman of Lucas County has already made plans to have the Toledo representatives in the state Legislature introduce such a measure at the next session.

He says his proposal will reduce high license fees and place the burden of road improvement on those who use the roads.

Nine Companies Join in Merger

ASSOCIATED MOTORS GETS THEIR ASSETS

All Plants Will Be Continued As Will Present Line of Products

CHICAGO, July 8—Announcement has been made of the completion of the organization of the Associated Motor Industries, negotiations for which have been in progress for about ten months.

The company as now organized is an $80,000,000 corporation chartered in Delaware, and has acquired by purchase full ownership of nine companies manufacturing automobiles, trucks, parts and equipment. Following are the nine companies:

National Motor Car & Vehicle Corp., Indianapolis, Ind., manufacturer of National cars.

Covert Gear Co., Lockport, N. Y., manufacturer of transmissions, clutches and other car controls.

Recording & Computing Machines Co., Dayton, manufacturer of ignition systems, starters, magnetos and other electrical equipment.

Jackson Motors Corp., Jackson, Mich., manufacturer of Jackson automobiles and four-wheel drive trucks.

Kentucky Wagon Manufacturing Co., Louisville, Ky., manufacturer of Dixie Flyer automobiles, and of trucks, wagons, wheels and bodies.

Saginaw Sheet Metal Works, Saginaw, Mich., manufacturer of sheet metal parts for automobiles and trucks.

Traffic Motor Truck Corp., St. Louis, manufacturer of Traffic trucks.

Murray-Tregurtha Corp., Boston, Mass., manufacturer of gasoline engines.

H. F. Holbrook Co., New York City, manufacturer of automobile bodies.

Offices at Dayton

The officers of the corporation, offices of which will be at Dayton, are: Chairman of the board, Will I. Ohmer, president Recording & Computing Machines Co.; president, Louis Ruthenburg, formerly general manager of Delco Light plant of General Motors Corp.; vice-presidents, A. A. Gloetzner, president Covert Gear Co.; Robert V. Board, president Kentucky Wagon Manufacturing Co.; T. C. Brandle, vice-president in charge of merchandising of Traffic Motor Truck Corp.; George M. Dickinson, president National Motor Car & Vehicle Corp.

Ohmer, who as chairman of the board will have entire charge of the operations of the company, stated that all the plants will be operated and that for the present the products of all of them will be continued. These include the Jackson, National and Dixie Flyer automobiles and Traffic trucks. It was said also that trucks would be manufactured at the Kentucky Wagon and Jackson plants. Development of a standardized line of cars and trucks is the ultimate object of the company, Ohmer said. This line is to include a four cylinder, a light six and a de luxe six-passenger car, and trucks of various capacities.

The companies in the merger have been acquired by purchase, payment being made in stock of the new corporation on the basis of actual inventory valuation of the various companies. Ohmer said that all companies taken in had to show assets having a ratio of three to one over liabilities. Although it was not divulged just what amount of capital stock was issued in absorbing the member companies, it is understood the combined net assets of the companies were listed at about $23,000,000.

Negotiations are now in progress for the purchase of another group of companies, Ohmer said, for which additional stock will be issued. He said that in acquiring the first group no cash was spent except in taking up bonds and paying off some bank indebtedness of member companies. A $6,000,000 bond issue is being arranged to aid in paying bank loans and to give additional capital. It is also understood that some preferred stock will be offered to the public.

Working on Plans

Detailed plans for operation of the plants have not yet been worked out. Ohmer and other officials will begin a tour of inspection of the various properties next week to determine the most economical methods of operation. Present plans include automobile assembly plants at Boston, Indianapolis, Louisville, St. Louis and Oakland, Cal. The company

"ASKS 'EM TO BUY" THROUGH STICKERS

CHICAGO, July 12—Everybody seems to be sloganing these days. The Automotive Equipment Association is the latest to come out with a sticker on its letters, a yellow, circular affair about the size of a silver dollar (they are still circulated west of Chicago) which says:

Buy
Ask 'em to Pay
Join

The first and second phrases are part of the merchandising campaign and the last is a booster for the association's ambition to enlarge its membership.

HONORS FOR HAYNES AT STATE CEREMONY

Indiana Unveils Statue on Spot from Which Car First Operated

INDIANAPOLIS, July 11—Elwood Haynes received the national salute and heard prominent men laud him yesterday when Indiana commemorated before the nation his achievement in giving to the country a mechanically successful automobile, and dedicated a monument on the spot from which the first Haynes was operated twenty-eight years ago. Hundreds of citizens of Kokomo and the state joined in the observance on Pumkinvine Pike and listened to the address of Dr. G. L. MacIntosh, president of Wabash College, and others.

As the monument of granite with an inscription in stellite, another invention of Haynes, was unveiled by Mrs. John Edward Moore, past president of the Indiana Federation of Women's Clubs, the guns of Battery A 150th Field Artillery boomed the national salute in honor of Haynes and his first little machine which the Smithsonian Institution had loaned for ceremonies.

Greetings from N. A. C. C.

On behalf of the Indiana Historical Commission, Frank B. Wynn paid tribute to Haynes' achievement, as did F. W. Fenn, representing the National Automobile Chamber of Commerce, who brought the greetings of the chamber.

Mayor B. C. Moon of Kokomo made the address of welcome. Governor McCray of Indiana was represented by C. C. Shirley who declared the celebration commemorated an epochal event in the development of the automobile and modern transportation.

Haynes responded to the tribute and stated that at the original try out there had been just four people. He narrated how the car had been hauled to the starting point, where a marker now stands, and had run a mile down the Pike, turned around and run back to the starting point. In his tribute to the citizens of Kokomo, he said, "I am surprised that they stood for the annoyance that this machine caused them."

Buick Dealers Meet

MEMPHIS, TENN., July 10—The Memphis branch of the Buick Motor Co. held a two-day "service clinic" here with approximately 75 Southern dealers and service men present. A. H. Sarvis and R. P. Keating of the factory at Flint, Mich., were in charge of the convention. George B. Gillespie is manager of the Memphis branch.

ASSOCIATION ACTIVITIES

Houston Reorganized

HOUSTON, TEXAS, July 8—The reorganized Houston Automotive Trades Association came into being at a special and well-attended meeting of automobile and accessory dealers of this city. F. W. Mozart, the new secretary-manager, was introduced by President C. W. Manford, who announced that the new executive will maintain an office and give his full time to the work of the association.

The new body intends to establish an arbitration board with which any customer may lodge a complaint against any dealer with the assurance that a complete investigation will be made.

The new secretary-manager stressed the necessity of building up confidence between the car buyer and dealer. He has set the membership goal at 100 and more than a score of firms signed up immediately. Yearly dues were doubled to take care of the extra work assumed by the association in establishing a central office.

The association will be a strictly business body. There will be no entertainment programs, although meetings are expected to be held weekly.

New Association Promoted

ST. LOUIS, July 10—The formation of the Mississippi Valley Automobile Trade Association, composed of dealers representing the entire St. Louis district, was promoted at a meeting of the St. Louis Automobile Dealers Association last week.

Preliminary steps for the association were taken by a committee including Harry Newman of Harry Newman, Inc., Frank C. McDonald of the Southwest Nash Co. and George Schroeder of the Vesper-Buick Co. At the meeting a report was made by this committee favoring a meeting in the near future to be attended by the president and secretary of all district automobile associations and in those districts where there was no association, by leading dealers.

This committee will secure the names of the dealers whose memberships are desired and will report to the association a time and place for the organization meeting.

Toledo Elects New Trustees

TOLEDO, July 8—Members of the Toledo Automotive Trades Association at their annual meeting elected five new trustees for the ensuing two years.

They are Warren E. Griffith, for the passenger car division; A. H. Draime, tire and accessory division; C. A. Van Dusen, repair and garage division; M. R. Himes, truck division, and R. Myers, electric car and battery division.

President A. G. H. Jenssen, after expressing his appreciation for the services of Secretary T. J. Cooper in putting the organization on an efficient basis, turned the meeting over to Griffith as temporary chairman.

George B. Ricaby, Toledo realtor, and former Congressman J. Adam Bede were the speakers of the evening.

Announcement was made by Jenssen that the Ohio Automotive Trades Association would hold its annual convention in Toledo in September.

Butler on Directorate

DETROIT, July 8—Guy Butler of the Overland Sales Co., Jackson, was elected to the directorate of the Michigan Automotive Trade Association at the meeting of its officers and directors at the Hotel Addison. Butler will serve out the term of Gilbert Loomis of the Gilbert Loomis Motors Co., Jackson, for District No. 2 which expires in May, 1924. Butler is also secretary of the Jackson Automobile Dealers Association.

President M. L. Garlock reported to the executives the progress of the membership campaign for the M. A. T. A. and the results of the three weeks' campaign with the "Ask 'Em to Buy" film through the State. The membership progress was gratifying to the directors, showing a 25 per cent increase. The campaign will terminate Aug. 1. Those present at the meeting were: M. L. Garlock, Lansing, president; Charles A. Mitchell, Bay City; Frank R. Lusk, Grand Rapids; George L. Simmons, Flint; Frank E. Hathaway, Muskegon; J. J. Tompkins, Saginaw; G. O. Simons and Walter J. Bemb, Detroit, directors; H. H. Shuart, secretary, and W. D. Edenburn, manager, Detroit.

Atlanta Issues Prospectus

ATLANTA, GA., July 10—An interesting sales prospectus has just been issued by the Atlanta Automobile Association for distribution among members and non-members throughout this section, setting forth what the association is, what it does, and why membership therein is genuinely valuable to every dealer.

This organization is made up of automotive dealers and accessory dealers in Atlanta, now numbering more than 100 members, making it one of the strongest city associations of dealers, it is claimed, in the United States.

One of the principal features of the organization is the educational sales work it has carried on the past six months for the benefit of its members.

Tire Dealers Organize

DES MOINES, July 10—Retail tire dealers of Des Moines have formed the Des Moines Tire Dealers Association and affiliated with the National Tire Dealers Association of America. A. R. Corning of the Corning Rubber Co. is president; Ward Schooler of the Schooler Rubber Co., vice-president, and W. H. Bishop of the Mid-West Tire and Supply Co., secretary-treasurer.

Service Experts at Convention

SPOKANE, July 5—Service experts representing most of the varied fields in the automotive industry of the country will attend the gathering of automobile repairmen of the State in Olympia this month.

The conference will be held on the first day of the Washington Automotive Trade Association's convention, July 21. Other crafts to convene on the same day include car dealers, battery dealers, tire dealers and service stations, accessory men, body and top men, painters and grinders.

New Pittsburgh Secretary

PITTSBURGH, July 10—W. A. Richwine, formerly associated with the Pittsburgh Motor Corporation, Chandler distributor, has resigned as assistant secretary and treasurer to take up the duties as secretary of the Pittsburgh Automobile Dealers Association. The other officers of the association are F. L. Dennis, president; F. G. Affeldt, vice-president, and Roy F. Kenney, treasurer.

140 MORE DEALERS ADDED TO N. A. D. A.

Makes Total of 383 Elected Since New Membership Campaign Started

(*Continued from page* 39)

OHIO: The Cincinnati Automobile Co. of Cincinnati; The Auburn Sales Co., Barnes Motor Co., Warner M. Bateman, Cleveland Cadillac Co., Cleveland; Lafayette Co., Cleveland Motor Car Sales Co., A. L. Englander Motor Co., Jordan Ohio Co., Lake Erie Motor Co., Lucas & Christenson, Marmon Cleveland Co., Paige Ohio Co., Peerless Motor Co., Simmons Motor Car Co., Stearns Motor Sales Co., Stutz Motor Co. and Birkett L. Williams Co., all of Cleveland; F. K. Boggs, Citizens Motor Car Co., Dayton Buick Co., Jones Gist Co. and Welbon Dayton Motor Co., all of Dayton; D. D. Jones Co. of Lima; Burke Motor Co. of Springfield.

OKLAHOMA: Leachman-Johnson Motor Co. of Ardmore; Cohenour Motor Co., Fast-Buck Motor Co. and Mills Motor Co., Inc., of Muskogee; Markham Motor Co., Shelburne Motor Co. and Vesper Motors Co., of Oklahoma City; Murdock Persels Motor Co. of Okmulgee; Southwest Nash Motor Co. of Tulsa.

OREGON: C. L. Boss Automobile Co. of Portland.

PENNSYLVANIA: Smith-Foster Motor Car Co. of Newcastle; Coffman Motor Co. of New Salem; Eddie Bald Motor Car Co., Inc., Samson Motor Co. and Frank D. Saupp, Inc., all of Pittsburgh; Electric Garage of Sharon.

TEXAS: Toney Chisum of Amarillo; F. R. Wulff Motor Co. of Brady; Lone Star Motor Co., Inc., of El Paso; Percy Garett Motor Co. of Fort Worth; Jno. Christenson & Co. of Galveston; A. C. Burton & Co.; Gydeson-Manford Cadillac Co., Morehart & Keller Auto Co., Oldsmobile Sales Co., Inc., and Shelor Motor Co., all of Houston; Birdsong & Patchernick, Citizens Auto Co., Crockett Automobile Co., Guarantee Motor Car Co., Jack Neal-Nash Motors Co., San Antonio Cadillac Co., Universal Car Co. and Winerich Motor Sales Co., all of San Antonio.

VIRGINIA: William F. Lintz of Norfolk; Anderton Auto Co., Inc. and Jones Motor Car Co., both of Richmond; Virginia Motor Car Co., Inc., of Roanoke.

WASHINGTON: Washington Auto Co., Inc., of Yakima.

NINE COMPANIES JOIN IN MERGER

(*Continued from page* 43)

has no plant at Oakland, but is understood to be negotiating for one.

Plans include a subsidiary dealers' financing organization capitalized at $35,000,000. This plan will permit the dealer to sell cars and trucks on a small cash payment from which he will take his discount or commission and to accept for the balance notes which he will turn over to the finance corporation. Between 600 and 700 banks have agreed to buy these notes from the finance company, Ohmer said.

Ohmer stated that immediate steps would be taken to enlarge the dealer organizations handling the various products and that as quickly as possibly the financing plan would be made available to them all.

CHANGES IN THE TRADE

L. J. Davey, Des Moines, has taken on the Marmon.

Union Motor Co., Waterloo, Iowa, will distribute the Packard.

Frank K. Taylor has taken the Columbia agency at Des Moines.

Fowler Motor Car Co., Milwaukee, has been appointed retail Jordan dealer.

Mason Tire Co. has named **W. B. Connolly** of Cleveland branch manager at Des Moines.

F. H. Fernald of Newport, R. I., has been appointed Nash dealer in Newport and vicinity.

Carl B. Seaman, Columbus, has been appointed representative for the Rolls-Royce in central Ohio.

F. B. Smalley Co., Toledo, has been made distributor of the Ruggles truck for Northwestern Ohio.

George W. Canterbury, Inc., Boston, has taken over the sale of the Winton car in the Boston territory.

East Side Paige Co., Milwaukee, has been formed to serve as a retail dealer in the Paige and Jewett.

Snow Auto Co., Ottumwa, Iowa, will handle Overland and Willys-Knight in addition to the Maxwell-Chalmers line.

Lawwell-McLeish Co., Columbus, has taken over the agency for the Lincoln in central Ohio from the Ellis Motor Car Co.

William S. Black, formerly with Nash and Chevrolet, has become service manager for the **Clemens Auto Co.**, Overland dealer at Des Moines.

Bachman Motor Co., Milwaukee, for many years Dort distributor, has been appointed distributor of the Stephens in Milwaukee and adjacent territory.

The Supreme Motor Co., distributor of the Stutz car for many years, has been appointed distributor for the Rickenbacker line for St. Louis and territory.

Monarch Motor Car Co., St. Louis, has been appointed distributor for the Davis for that territory. The company also is distributor of the Stanwood.

C. P. Brewer, who has been handling used cars at Spokane, has become an associate of James L. Elam of the James L. Elam Auto Co. in handling Paige and Jewett automobiles.

Old Hickory Tire & Tube Co., Nashville, will distribute Old Hickory cord and fabric tires and tubes in middle Tennessee and central Kentucky. **Rottero Bros.** are the proprietors.

Bar Harbor Motor Co. of Bar Harbor, Me., has secured the agency for Mount Desert Island, including the summer resorts of Bar Harbor, Northeast Harbor and Seal Harbor, for the Nash.

Drexel Motor Co. has taken over the Jordan lines in the Houston territory. The company has been handling the Ranger cars. Agencies have already been established in many towns of the Houston territory.

B. F. Goodrich Rubber Co. has opened a factory branch office in Cedar Rapids, Iowa, to serve seventeen counties. **P. H. Broadies**, Goodrich representative in the Mason City territory, has been made manager of the branch.

John F. Evans has been installed as Minneapolis district manager for the Miller Rubber Co. He has been manager in Indianapolis since January, 1921, and also had been Cincinnati manager for the Firestone Tire & Rubber Co.

I. J. Cooper Rubber Co., Birmingham, Ala., has retired from the general accessory business and in the future will handle its own manufactured products exclusively, which consist of tires, tubes, storage batteries and battery parts.

M. S. Mentzer, formerly in the automobile business in Atlanta and recently branch manager for the Studebaker company at Buffalo, N. Y., has returned to Atlanta as manager of the Studebaker branch, succeeding **S. M. Piper**, who died during June.

George Means, one of the oldest dealers in Des Moines, has bought the interest of his partner in the **Means-Kucker Auto Co.** and the business will now be conducted as the **Means-Chevrolet Sales Co.** Until a few months ago it was a direct factory branch of the Chevrolet.

William S. Black has been appointed service manager for the **Clemens Automobile Co.**, Des Moines, distributor of the Overland and Willys-Knight. For a number of years Black was traveling representative on the Pacific coast for the Nash Motors Co. Previously he was connected with the Chevrolet organization.

Conrad Welling, for the past six years president and general manager of the Welling Motor Co., which formerly distributed the Olympian, Friend and Crow-Elkhart cars and All-American truck, has been appointed special supervisor of service for the **St. Louis Motor Car Co.**, Jordan and Cleveland distributor.

Norman E. Stoneburg, Toledo, has been appointed the new distributor for Stutz cars in 18 counties of northwestern Ohio. He was formerly manager of the used car department of the Sturdevant-Jones Co. **Ralph Benton**, Stutz service manager, and **Charles Beckerman**, used car man, will be associated with Stoneburg.

New York Auto Supply Co., organized by Minneapolis men to take over the stock and lease of the Times Square Auto Supply Co. in that city, is headed by **Bernard Schwartz**, who has conducted the Minneapolis branch of the company since it was started. **Morris F. Levitt** is treasurer and **C. L. Levitt** is secretary.

Scott-Bury Motor Car Co., Packard distributor in Omaha, has changed its name to the **Scott Motor Car Co.**, following the resignation of F. J. Bury. A. C. Scott is the president. Ralph Hitchcock, secretary, and Clarke W. Thornton, treasurer, represent the active management. John Wale continues as head of the service department. Hitchcock is sales manager.

Kokomo Rubber Co. of Kokomo, Ind., has opened a St. Louis branch. The Kokomo tire formerly was sold and serviced by the **Zerweck-Grayson Tire Co.** as distributor. **Walter W. Napier**, formerly Kansas City representative of the Kokomo Rubber Co., has been appointed manager of the St. Louis branch and **Wallace E. Acton**, who has been in the tire sales field in St. Louis, has been appointed office manager.

H. F. Williams and **H. C. Futch** have purchased the plant of the **Webber-Doe Co.** in Cloverdale, a suburb of Montgomery, Ala., and have bought and reopened the Cloverdale Ford and Fordson agency. Williams, formerly of Athens, Ga., was commercial agent of the Southern Railway for many years. Futch was formerly vice-president of the Old Hickory Wagon Co. of Atlanta.

E. O. Wattis, president of the **Winford-Kimball Motor Co.**, Ogden, Utah, has acquired the Binford interests in that company, the name of which has been changed to **Wattis-Kimball Motor Co.** Wattis is vice-president and general manager of the Utah Construction Co. of Ogden, builder of railroad extensions and at the present time has under his supervision one of the largest dams in the world in the Hetch-Hetchy San Francisco water supply project.

Calhoun Motor Co. has been formed at Minneapolis to handle the Chevrolet following the closing of the retail office at the branch there. Martin Swanson is president; Ray W. Close, sales manager, and F. W. Palmer, secretary and service manager. The **Pomeroy-Kennedy Co.** has also been organized in that city to deal in the Chevrolet by H. F. Kennedy and E. F. Pomeroy. Charles M. Stroud is the service manager. Other Chevrolet companies in the city are the **F. B. Wilcox Motor Co.** and the **Grossman-Kimball Co.**

Southwest Motor Co., distributor in North Texas for the Wills-Sainte Claire cars, has been purchased by John P. Neece, formerly of Mexia. It is announced that a reorganization of the company is now in progress and that the name probably will be changed. **G. C. Tippins** remains with the new firm. Other members of the company are **J. R. Neece, J. R. Neece, Jr., John P. Neece** and **R. D. Neece.** The company will retain headquarters at Dallas. Agencies have been established at Fort Worth, Wichita Falls and Mexia.

The Automotive Sales & Service Co. of Atlanta, after operating for five years as a factory branch for Splitdorf products, has been organized as a separate company and has taken over the distribution of the Splitdorf line in the entire Southeast. **S. D. Katz**, who opened a Splitdorf factory branch in Atlanta nine years ago and has been district sales manager, heads the new company, which covers eight States. Products of the Wire Wheel Corporation and Benzer lenses are also distributed by it in the southeastern territory.

A. E. Maltby has resigned as vice-president and general manager of the **Guy A. Willey Motor Co.**, Philadelphia, distributor of Paige and Jewett cars. He has made no announcement of his plans other than to take a vacation at his summer cottage on Island Heights, N. J. Maltby has been associated with the trade in Philadelphia for twenty years, starting as branch manager for the Winton Co. Three years ago he became identified with the Bigelow-Willey Motor Co., as it was then known. He has been president several times of the Philadelphia Automobile Trade Association and a director of that organization for a number of years. During that time he was a leading spirit on the show committee. He was also a member of the board of directors of the National Automobile Dealers Association and is widely known throughout the country for his activities in the organization. He is succeeded in the Willey company by **L. F. Carter**, who has spent most of his life in the advertising and automobile business. For the last four years Carter has been conducting used car sales.

New Eagle Sales Manager

ST. LOUIS, July 10—C. A. Wetherbee, for many years connected with the truck business in St. Louis, has been appointed general sales manager of the Eagle Motor Truck Corp., manufacturer of the Eagle truck.

Eighteenth Annual Automobile Salon, National Automobile Chamber of Commerce, Commodore Hotel.

Chicago .....January
Annual Automobile Salon, National Automobile Chamber of Commerce.

SARVER WOULD HEAD LOCOMOBILE PLANT

NEW YORK, July 11—If the offer of Durant Motors, Inc., for the plant and assets of the Locomobile Co. is accepted when they are offered at receiver's sale, it is probable that the subsidiary corporation which will be organized to operate the property will be headed by A. H. Sarver, who headed the Scripps-Booth Corp. until it was dissolved by General Motors. It is not likely that Sarver will be actually in charge of production, but this work will be entrusted to some man already in the Durant organization.

Durant is understood to be willing to pay about $2,000,000 for the plant, which includes four large buildings and eight or ten smaller ones. It is his purpose to effect manufacturing economies which will permit the sale of the Locomobile for less than half the present price and put it in the class with Cadillac and Lincoln. He proposes to use part of the factory space for the manufacture of the new Mason truck to supply the Eastern territory.

Frank L. Mitchell Dies

NEW YORK, July 12—The death is announced at Monticello, Cal., of Frank L. Mitchell, founder and first president of the Mitchell Motor Car Co. He was 70 years old.

"COPPER COOLED" CAR OF G. M. C. DELAYED

NEW YORK, July 10—Quantity production of the line of "copper cooled" cars which General Motors Corp. proposes to put on the market probably will not be started for several months. It had been expected that they would be turned out in limited quantities by September, but C. F. Kettering, who has charge of their development, insists upon considerably more experimental work. He wants the new line tested under all kinds of weather conditions and on all kinds of roads, which necessarily will mean a delay in production.

Lexington

MINUTE MAN SIX

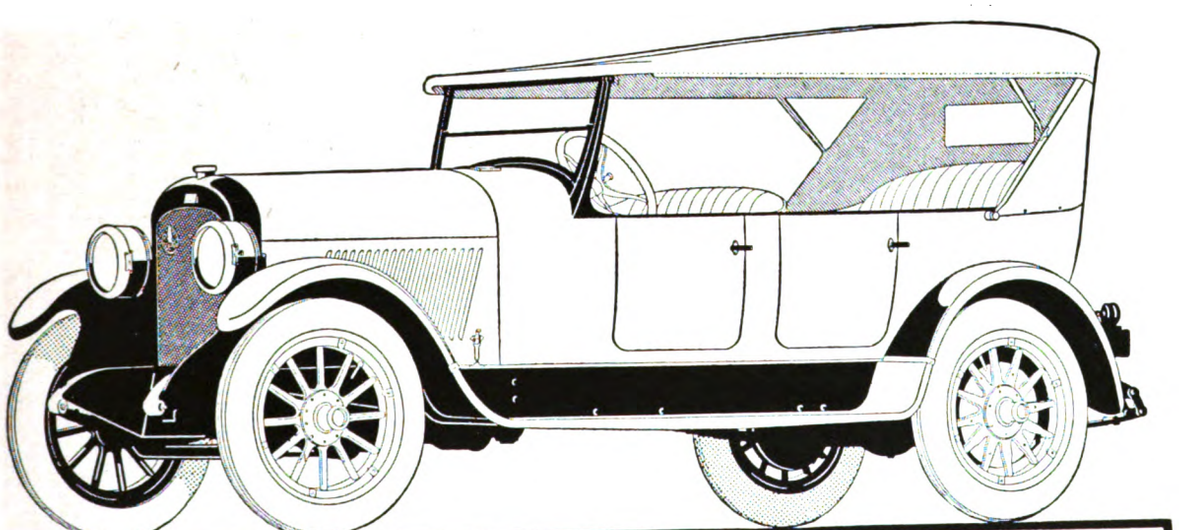
(Series 22)

$1745

The Series 22 Lexington *dominates!*

Experienced motorists realize that here is extraordinary *value*.

Lexington possesses certain features that can not be obtained on any other car regardless of price—features that mean more power, greater economy, longer life, increased safety, added convenience:



Moore Multiple Exhaust System—more power with less fuel;

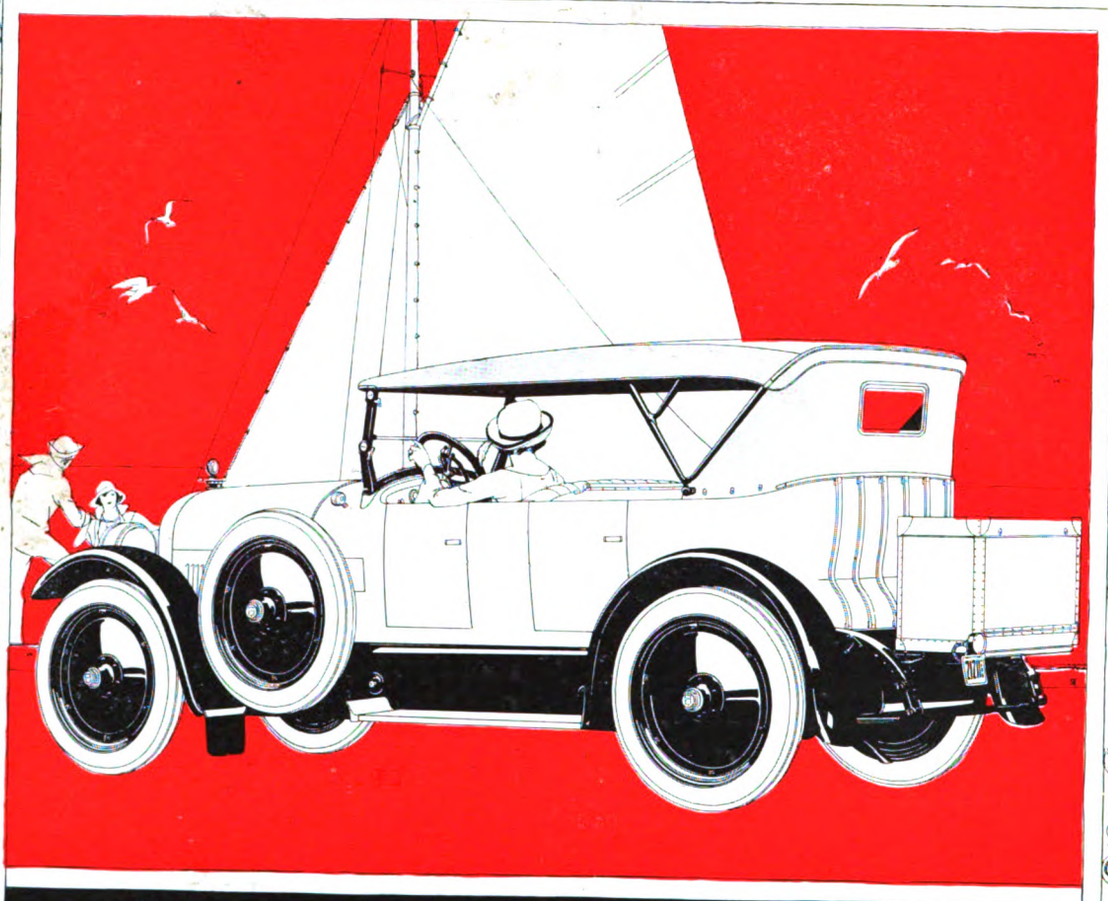
Double-triangular Center Cross-member—a new frame principle;

Cable Foot Brake System—positive, quiet, perfectly equalized;

Adjustable Radiator Head Lamp Mounting—practical and neat.

Let us tell *you* about them *today!*

Here They Are! Series 22 Line Now Complete!



Five-passenger Touring, $1745; Six-passenger Touring, $1845; Five-passenger California Top, $2045; Six-passenger California Top, $2145; Five-passenger Sport, $2145; Four-passenger Coupe, $2345; Five-passenger Sedan (with two taxi seats), $2545.

A Wonderful Proposition for Responsible Dealers!

LEXINGTON MOTOR COMPANY : : CONNERSVILLE, INDIANA, U. S. A.

BEAUTY · STRENGTH · POWER · COMFORT

THE NEW IMPROVED FOUR PASSENGER HAYNES 75 TOURISTER

For those who desire a car for touring which is dependable in power and impressively proportioned, and yet wish the seating to be conversationally convenient, Haynes engineers and designers have evolved the new, improved, four-door, four-passenger Haynes 75 Tourister.

The whole car is correctly eloquent of smartness, from its new design, searchlight type head lamps to the serviceable trunk carried at the rear. The slope of the windshield, the three-quarter length running boards, the spare tires riding beside the commanding hood, the trim, ebonized handles of the four convenient doors, the stylishly French-plaited leather upholstery over deep, resilient cushions, every detail appeals to those who appreciate discriminative completeness.

Like all Haynes 75 models, the Tourister has the pick-up, the get-away, the steady, trustworthy, quiet power, which is the gift of Haynes manufacturing experience, in the famous, Haynes-built six cylinder 75 motor.

No wonder Haynes dealers are having such a great volume of requests for this Tourister. Valuable territories are still open to well qualified dealers. Communications are held in confidence.

In writing or wiring, address Department 752.

$2395
F. O. B. FACTORY

Cord tires and wooden wheels are standard equipment on all six cylinder Haynes 75 models. The Haynes 75 Blue Ribbon Speedster has cord tires and six wire wheels as standard equipment. ***Disc wheels are optional at no extra charge.*** *All models except the Speedster, equipped with six wire wheels, prices on application*

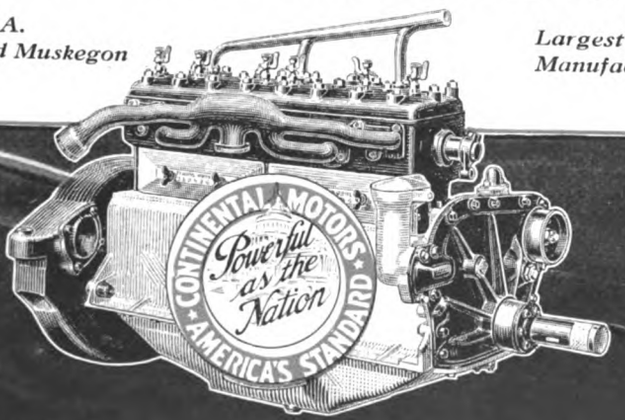
Back of the SPECIALIZED car

Skill and equipment concentrated to a degree not possible in any one organization

Today the car buyer looks not only at the car but, with keen understanding, at the production methods and standards back of it.

The SPECIALIZED car holds his interest because in each of its major units it represents concentration of skill, specialized training and specialized equipment. No lost motion, no dissipated energies—but the undivided and untiring attention of SPECIALISTS to each unit until, in material, in mechanical principle and in operation, perfection is achieved.



Add to this the efficient distribution of genuine replacement parts in parts-stations throughout the world—and you have the reason for the growing demand for the SPECIALIZED car—the car of *proven* units.

Dealers are rapidly recognizing the advantages of identifying their organizations with the SPECIALIZED car—the demand for which is sustained by the matchless service of such *proven* units as that recognized standard of motor dependability—the Continental Red Seal.

No more accidents— to tires and rims!

Many a tire has had its bead pinched and many a rim has been damaged by a careless blow of a metal hammer.

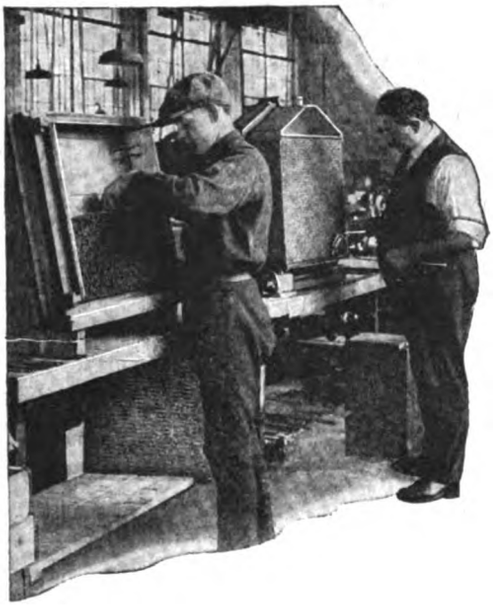
Everyone is "in a hurry" when changing tires.

With Goodrich Rubber Mallets everyone can be in a hurry—can miss their aim if they want to—but they can't damage their rim or tire.

Just explain to any motorist the danger of a miss-hit with a metal mallet — an injured rim or felloe—damaged tire bead—

They'll *want* a Goodrich Rubber Mallet.

"Every motorist's a prospect."



Goodrich Rubber Mallets have the weight, the balance, the force, the punch — but not the risk — of the usual tire-change mallet. They are good to use and good to sell.

Your Goodrich Branch will send you a supply on request

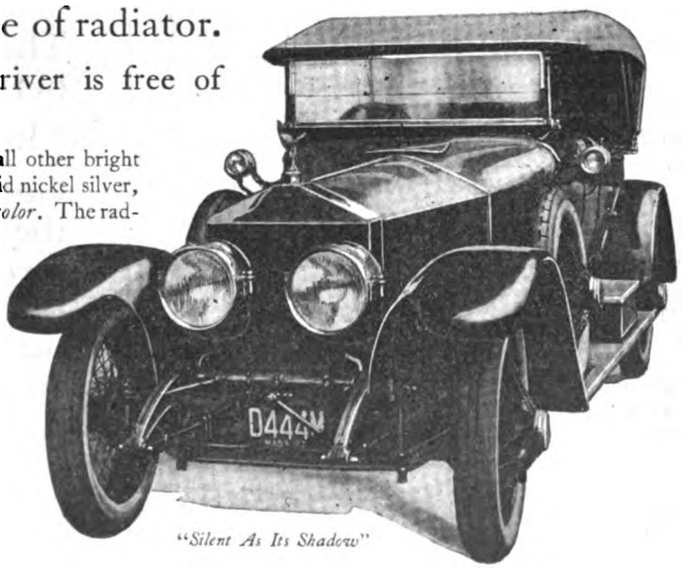
The Radiator

for the Rolls-Royce car is built entirely in the Rolls-Royce Works at Springfield, Mass.

It is of the honey-comb, tubular type, built up from separate, seamless, solid drawn tubes—the strongest and lightest construction. It is guaranteed against everything except only damage by accident.

ROLLS-ROYCE



Radiators have superior cooling advantages. They cannot rust or clog—freezing does not injure them—they withstand road-shock, strain and rapid changes of temperature—they may be more easily and economically repaired, in case of accident, than any other type of radiator.

The Rolls-Royce driver is free of radiator troubles.

The top-tank, side plates and all other bright parts of the radiator are made of solid nickel silver, so that *they will always keep their color*. The radiator is supported on ball joints so that it is not stressed by the inevitable small deflections of the frame. All radiators are tested, under pressure, before being put on the car.

No Wonder They Come Back for More

Digitized by Google

WHAT makes people "come back for more"?
That's one way of asking what builds business.
The answer ALWAYS is SERVICE.
The well built car, well maintained—the car that gives satisfactory service—sells another. So it is with a truck or tractor.
The well done repair job sells another.
Well handled treatment of the customer for gas, oil or automotive equipment brings him back for more.
EVERY DEALER AND GARAGEMAN CAN BUILD BUSINESS ON SERVICE—IF HE WILL.

Putting Service in Sales Brings Customers Back

A Small City Dealer Asks 'em to Buy with Well Displayed Stock, Good Advertising and Serious Attention to Patrons' Wants—AND THEY BUY

SELTZER is a dealer in Norristown, Pa., 35,000 population. And Seltzer says:

"Get 'em coming to your gasoline pump and your free air line, but for goodness sake have a hose that will work and a pump that is efficient. Failure to have these necessities makes grouches out of most motorists and infuriates some.

"Tie up your windows with your advertising and call attention to them. Have a 'tourist window,' a 'gift window,' or the like.

"We use a 'street scout' armed with a pencil and notebook, in getting equipment prospects.

"We use postcards in series and personal letters as a means of follow-up."

EVER since he attended an A. E. A. movie and lecture meeting last March, M. Eugene Seltzer, proprietor of the Colonial Auto Supply Co., Norristown, Pa., has been a fervid supporter of the policy of "Ask 'em to Buy," which, he says, at a conservative estimate has increased his business 20 per cent.

"We have a system that works well," says Seltzer. "When a customer stops at our curb for gasoline or air we first supply his needs in that direction. We then find out if he has come to buy some particular article. When this is supplied, or at about the same time, we make a practical suggestion relative to something which we have, in the meantime, noticed his car lacks; we call attention to articles displayed in our window, close to the curb and we go inside and bring out something he needs, which we ask him to buy. If a customer buys anything, we never fail to ask 'Is there anything else?' And whether there is, or isn't, we offer him something for sale.

"This plan, since its inception, has been most satisfactory. Our window displays supplement our sales talks. We dress our windows frequently, changing them at least once a week, and we usually tie up our window displays with our advertisements in the Norristown newspapers. This week we have a 'tourist' window, displaying such articles as folding seats, travelers' cases, picnic kits and even a Blue Book in the foreground.

"Do our windows pay? Well, I notice that whenever we display any particular article in the window, sales in that line for the week are considerably larger."

Seltzer stresses the importance of having a first-class air hose that is always in good condition.

"I know of more motorists than you can count who have been annoyed at and complained of poor or useless air hose and pumps at different places, including service stations," said Seltzer. "It is my belief that having an air hose that won't work when needed is the cause of many motorists becoming so disgusted that they stop patronizing the

$15,000 STOCK HERE

Gas, free air and an accessory store—not much of a place, you'd say offhand, but the dealer this story tells about does a big, aggressive, prosperous business there

Digitized by Google

place where it is, no matter how loong they have been trading with the concern owning it. Either give real service, or don't pretend to, or you will anger your customer. We see to it that our air hose is never out of commission." The air hose Seltzer uses is a pliable metal one, of the "indestructible" type. The air is served by means of an automatic compressor of 150 lb. pressure. Both pump and hose are closely inspected daily, to see if they are in first rate operating condition. Air service, of course, is free.

Believing in giving customers a chance to make purchases on the day they do the most touring, Seltzer keeps open on Sunday till 5 p. m. Week days he closes at 9 p. m.

He carries a complete stock as to width of range, rather than as to the number of items of the same kind, and keeps his retail stock up to about $15,000, cost price value.

"I found I had to keep a complete stock," says Seltzer, "because people here never ask, 'Have you got such and-such an article?' They always say, right off the bat, 'Give me such-and-such a thing.' They expect you to have it and feel disappointed if you don't, so in stock it has to go in case I don't have it. I have two men inside, besides myself and the bookkeeper, and we all carry a little pad on which to enter calls for stock that we are not keeping, so we will be sure to order it.

"I turn my stock over, on an average, six times a year, so you can see that we keep the goods moving right along."

Anything wanted in the way of accommodation for a patron Seltzer makes a point of getting, even if there is no profit on it. He does not grudge the time and effort, as he is confident that this policy helps to weld his customers to the store.

"If I am not sure that I can get a certain article," says Seltzer, "I am careful not to promise it, for it's not good policy to promise and then disappoint. Some customers are apt to take an incident of this kind very much to heart."

Seltzer has learned that it not only pays to accommodate his customers, but that it also pays sometimes to accommodate car dealers. For instance, he has a reciprocal working agreement with automobile dealers in Norristown, whereby when they are closed, or out of some article, he takes care of their patrons in the accessory department. This plan works out advantageously for all concerned.

Seltzer carries a minimum stock of $5,000 worth of tires, being a dealer in two brands and distributor of a third. He vulcanizes tubes, distributes a lubricating oil locally and is agent for a well-known battery. In his tire stock he has not forgotten the larger pneumatics for trucks.

"We pride ourselves on selling more battery water than any three other concerns in Montgomery County," says Seltzer, "not because of what there is in it for us, but because we have cultivated this as an advertisement. People talk about it and it helps our business. Little things like this count for more than one would be apt to believe."

The store is also a service station for attaching bumpers and replacing fenders. It sells and attaches a large number of automatic windshield cleaners."

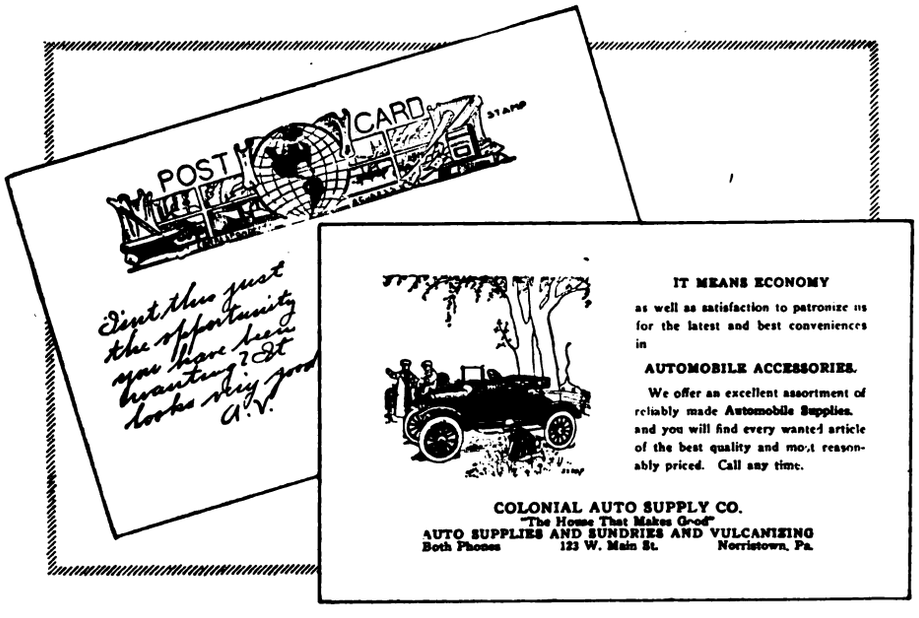
In fact, it is largely because Seltzer doesn't hesitate about going after prospects through the mails, on foot and by deputy that he has succeeded in piling up an enviable business. He has several ways of doing this. Seltzer, like most small town dealers, makes good use of the State automobile registration records, issued from the capital. From these he obtains names and addresses and follows up letters with advertising matter.

He always makes his letters personal, although he uses a mimeograph machine of his own, and sends them under a two-cent stamp, so they will be opened as first class mail. One week he may send a fuel oil letter, the next a tire letter, and the next a stoplight letter, and at times he will combine several articles in a sales letter.

He had considerable success with a series of specially printed pictorial postcards, of which he mailed to each prospect and listed customer twelve cards in succession, one for every month in the year. Each card bore a catchy line at the top, and, on the address side, in simulated handwriting, were announcements like the following:

"Isn't this just the opportunity you have been wanting? It looks very good," and

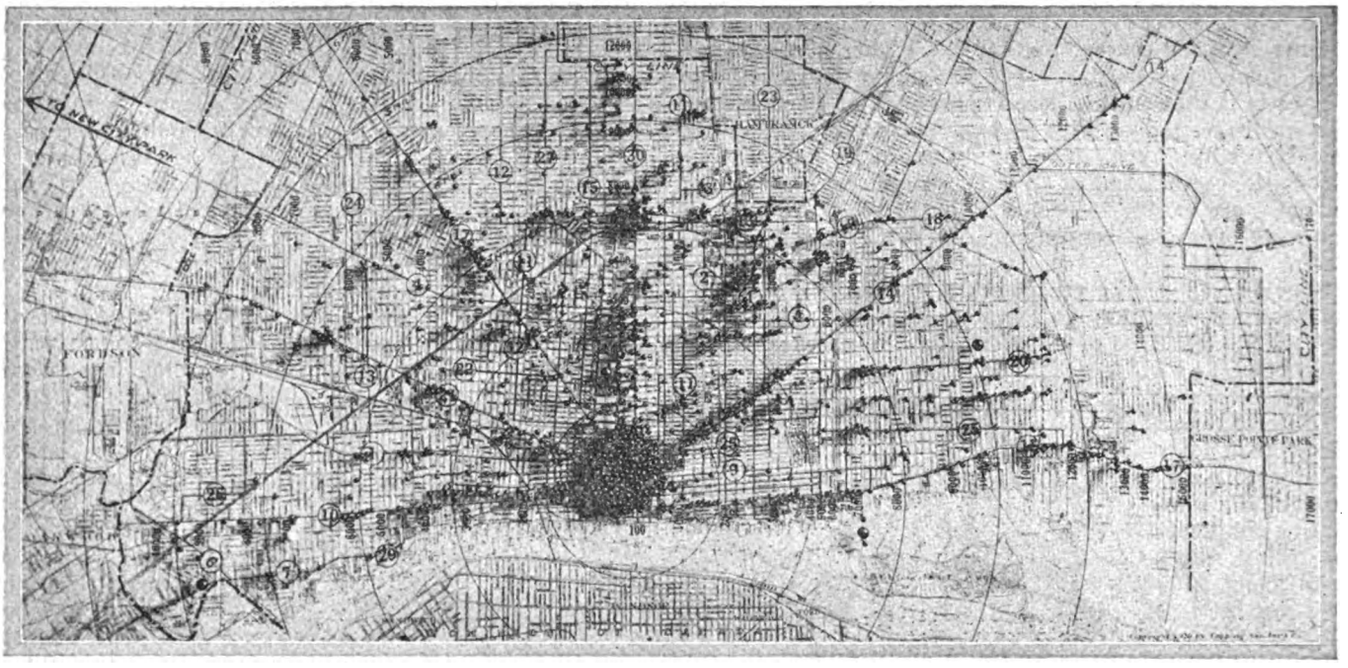
"Have you been here? It's the most satisfactory place."



The concern's name, address, telephone number, line of business, the phrase, "Automobile Accessories," and a picture of a car with people in or near it, always figured in the cards' general scheme.

Whenever he starts anything new for the store, like the "New Local Service for Motorists," a special bearings service, he announces this in a printed folder.

Another of Seltzer's practical ways of going after customers is to detail a man who sometimes acts also as an inside salesman, to street duty.



This man's job at such times is to patrol the town on the lookout for cars that need new and spare tires, better fenders, springs or any parts or accessories; to jot down the needs and the car's license number in a little book he carries; to look up the name and to report on it.

Advertising That Builds Equipment Business

The Pennsylvania dealer whose merchandising methods are described here got good results from a series of twelve postcards like the above. One card was sent each month to prospects and customers

DETROIT ACCIDENT BAROMETER THAT AIDS POLICE IN SENSIBLE TRAFFIC CONTROL

The picture shows part of the map, maintained at police headquarters, on which are "spotted" each month accidents of different kinds. Study of the map enables the authorities to detect danger points and, in case of street accidents, to make necessary provisions for proper traffic control. Different sizes of pins show whether the accidents were fatal or resulted in the injury of persons and different colors show whether automobiles, street cars or other vehicles were concerned. Detroit led the country in 1921 in cutting down fatal street accidents.

Education Helping Regulation to Improve Street Traffic

Detroit's Traffic Control System Moves Motor Vehicles More Promptly and Safely Through Busy Sections and Safety Campaign Cuts Down Accidents

By J. EDWARD SCHIPPER

DURING the first four months of 1922, there were 7000 less traffic ordinance complaints than for a corresponding period in 1921 in the city of Detroit. Along with this, there has been a very material decrease in accidents when compared to the number of vehicles registered in the city. This has been the result of an intensive Safety First campaign, which has been persistently followed in well defined form since 1918.

This campaign has spread to every angle of the question of public safety and its relation to the traffic in the city. It has reached into the public schools, where lectures designed to awaken the interest and hold the attention of children have been given. It has spread to the courts, where efficient co-operation has been given to the police department in the conviction and punishment of those arrested for traffic violations. It has spread in a most interesting way to the method of handling traffic in the city streets and in various devices and plans for so regulating the traffic as to have it move at a sufficient pace to free the business districts of congestion and, at the same time, to keep the number of accidents down to a reasonable and steadily decreasing figure based on a percentage of accidents compared with the number of vehicles registered.

Every Friday there is a meeting and luncheon at the Detroit Athletic Club of the Public Safety and Traffic Committee. This committee has 28

Are You Working for Street Safety in Your Town?

IN Detroit the aim of the traffic authorities is not to restrict but to expedite the movement of vehicles in the greatest degree possible with due regard to the safety of the public.

Could you cut down sales resistance on automobiles in your town if traffic conditions were improved? Would the Detroit plan help you make suggestions to your public officials? This story gives the general details and additional information can be obtained from the Detroit Public Safety Committee.

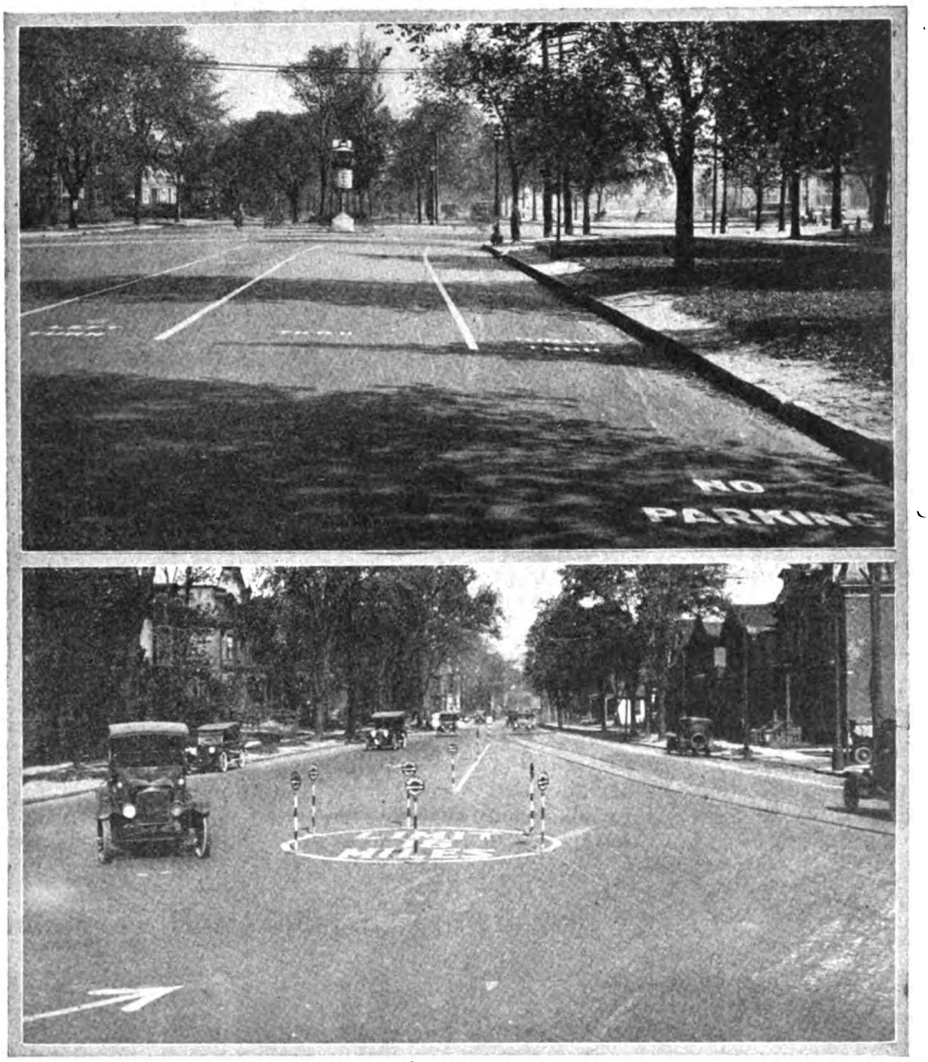
Digitized by Google

members representative of practically every branch of business and public affairs that would be interested in the question of traffic and public safety. Prominent automobile dealers, the city engineer, the county road commissioner, the fire commissioner, the park commissioner, the police inspector in charge of traffic and several of the city's representative merchandising and manufacturing executives are members of this committee. The meetings are well attended and a complete record of the minutes is kept and forms the basis of recommendations which are back of much of the traffic system which has been adopted in Detroit.

Inspector Harry H. Jackson, who is head of the traffic division of the police department, has under his command a picked body of men who are doing effective work in the reduction of street accidents. The law making it compulsory to report every accident to the police department has put into his hands statistics which enable him to post his men to the best advantage. In addition to this, the automobilist is guided by well defined markings on the curbs and streets, so that at no time should he be in doubt as to how fast he can go or what path he should take.

The Tower System

On the main thoroughfare, Woodward Avenue, traffic is controlled by the tower system, which is similar to that adopted in New York and other large cities. There are, however, some improvements which are unique and original with Detroit. One of these is the use at crossings of a bell which rings when the signal lights are about to change, informing vehicles lined up ready to make the crossing that the signal is changing. This makes it unnecessary to place officers at intermediate points between the towers save on exceptionally busy corners. The tower signals are the three-light system, green, meaning go, yellow, meaning that the signal is about to change, and red, indicating stop. When the yellow signal flashes, all traffic is supposed to stop, and this is followed immediately by the green or red signal, meaning go or stop. The tower system controls the traffic for several blocks each way, so that it is possible to keep traffic moving along a long line and thus promptly empty the business sections of the city during the evening rush hour, or to fill them during the morning rush period.



The use of white markings on the streets for guiding the motorist both in regard to speed and direction has worked wonders. It is surprising to see how even drivers who are inclined to be careless keep inside of the bounding white marks and they have proven to be as efficient as a raised curbing, without the possibility of causing accidents such as would be likely to happen with a raised guide.

As the stranger enters the city, he is greeted by a sign post at the city limits which reads, "Detroit—speed limit 15 miles per hour." The traffic officers allow a leeway of five miles per hour, but rigidly hold the traffic to a speed of 20 miles per hour. Formerly, 25 miles per hour was permitted in certain districts of the city, but recently a limit of 20 miles has been strictly enforced, with a resulting noticeable drop in accidents.

As in all large cities, there are a number of confusing corners where traffic could readily be jammed or accidents occur, due to vehicles going in opposite directions attempting to take the same path. Practically all trouble throughout the entire city has been eliminated at these points by the use of the white line system. A broad white line is painted in such a way as to give a well defined path for every vehicle and even though the driver be a stranger in the city and unfamiliar with the particular corner, he is virtually certain to take the right way.

Along the main boulevard and other through streets, drivers encounter lettered warning signals painted directly on the road paving. These are large enough to attract attention and to continually impress themselves on the mind. On the main boulevard which completely surrounds the city and

Upper—Congestion at prominent intersections has been relieved by plainly marking the path for vehicles going straight through or making a right or left turn. Note the "No parking" sign along curb so that the approach to the corner will be clear. Lower—The establishment of rotary traffic at this intersection has practically done away with accidents, whereas there was formerly some sort of minor collision here almost every day and not a few serious ones

Digitized by Google

which is much used for a motor thoroughfare, the driver encounters these painted warnings which admonish him to "Drive safely"; "Don't speed"; "Drive with care"; "Limit 15 miles." Or, he will go along a little farther and come to a large sign which will say, "School—Limit 10 miles."

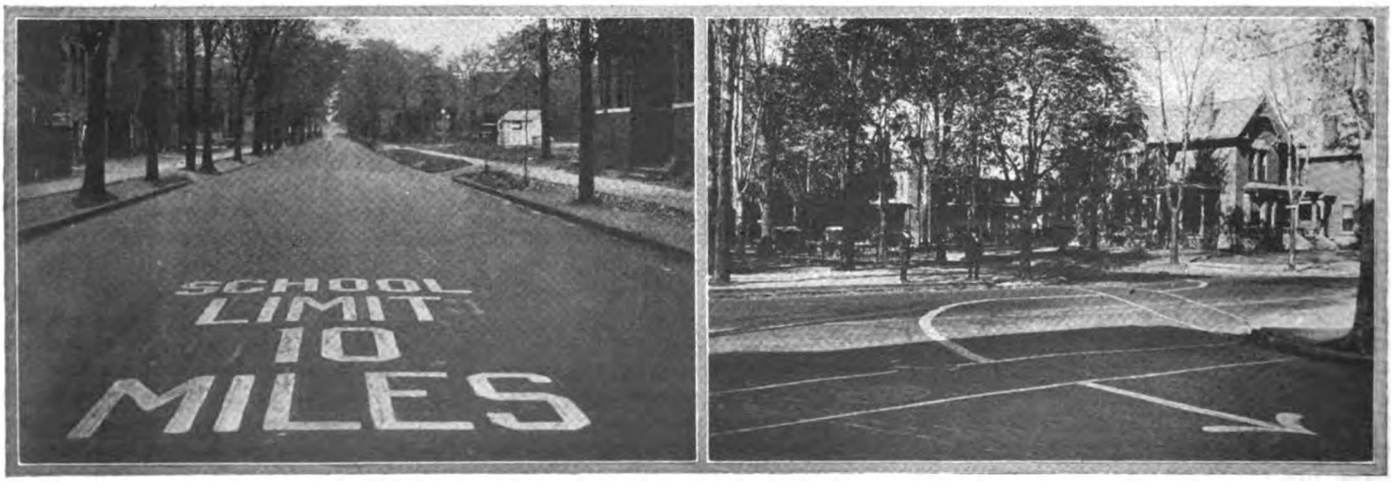
As in all large cities, many of the traffic problems are concerned with parking in the city streets. Instead of leaving the parking regulations for any particular block to the imagination of the motorist, he is duly informed by the curb stone signs which advise him what the regulations are for that street. A typical sign reads, "Parking limit 7 to 10 a. m. 5 min., 10 a. m. to 4 p. m. 20 min., 4 to 7 p. m. 5 min. At the bottom is printed "City Ordinance."

At each car stop there is a safety zone denoted by a white mark and a raised mushroom plate, providing sufficient room for intending passengers to stand in a position where they can mount the car platform. No parking is permitted at the curb adjacent to these safety zones, and at the curb opposite each safety zone there is a target mounted on a pole which reads, "No parking, safety zone." Other signs read, "No parking day or night" or "No parking—Fire engine house," "No parking—Fire engine route." On some streets angle parking only is permitted and such streets are denoted by signs which state, "Angle parking only."

In order to expedite traffic at corners, white lines are painted guiding those intending to make a right turn close to the curb and within this space is painted the words, "Right curve." Those going straight through have a space in the center which is indicated by the word, "Through," and those turning to the left are guided into a

DETROIT TRAFFIC CONTROLLER

Type of signal tower used by Detroit Traffic Department for controlling traffic for several blocks in either direction from the point of intersection. Flashing of a yellow light indicates that the signal is about to change, green means go and red, stop



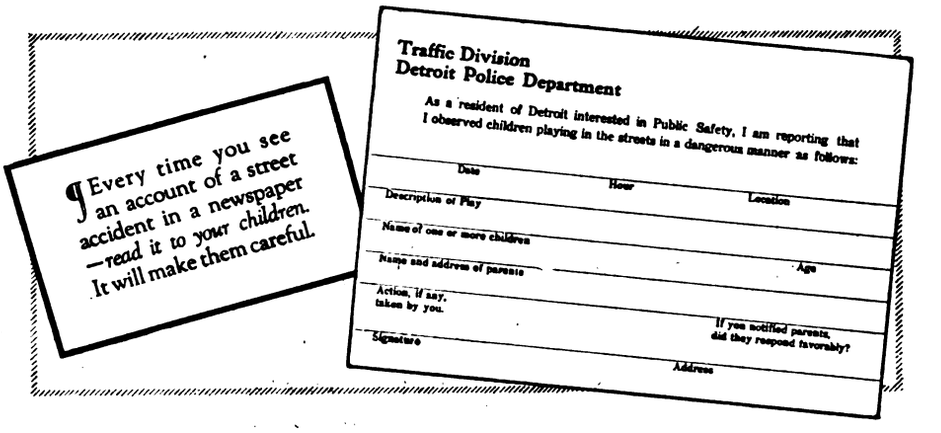
left-hand space or pathway which is indicated by "Left turn." Detroit permits a right turn being made when the traffic is moving at right angles to the vehicles intending to make the right turn. In other words, a right turn can be made at any time, which has been found to help in relieving congestion at the corners.

A point which Inspector Jackson has insisted upon is that at no time is a traffic officer allowed to violently upbraid a man who makes a mistake in traffic. He is simply sent around in the direction that traffic is moving. He is never forced to back up if he goes across a curb line against a stop signal, but is simply made to make a right turn and go on with the cross traffic. Inspector Jackson states that a man rarely or never wilfully violates a stop signal on traffic. He has completely eliminated the customary harangue given the offending driver by the policeman and this has resulted in a more friendly spirit of co-operation among Detroit motorists.

All of these devices and arrangements are but the surface indications of the careful work and thought given to safety matters by the police department itself, as well as the Public Safety and Traffic Committee. When the members of the committee make a suggestion that seems feasible, Inspector Jackson passes it along to his department for trial and what has been accomplished in cutting down traffic accidents is very largely due to these suggestions. Every effort is being made to get the average citizen to co-operate with the police department. For instance, post cards are supplied on which a citizen may report to the police regarding traffic law violations. Other cards encourage citizens, including motorists, to report places where children are playing in the street in a dangerous manner. The informant's name is held in strict confidence.

Every police officer also carries with him accident report blanks which make it certain that reports on acci-

Typical Detroit Street Markings to Direct Motor Vehicle Drivers



Left—Only a heedless driver would speed past a school with a sign like this painted on the pavement. Right—The white lines which guide traffic on this puzzling street intersection have proved to be effective in preventing accidents at this kind of corner. Note the pedestrian crossings ruled off. There are a number of such corners in Detroit where a street intersecting an avenue comes in at a point which is not opposite that at which it leaves, thus giving an irregular four corners as shown. In order to prevent vehicles going in opposite directions from taking the same path, the white line has been employed with success, giving two well defined traffic lanes

Digitized by Google

dents will be uniform and of such a nature as to enable the department to derive its statistical information from this report. The result is that some interesting and important statistics on accidents have been secured. For instance, in 1921 there were 134 fatal accidents in the city. The diagram with this story shows the kinds of vehicles responsible. Passenger automobiles led with 76; street cars were second with 22; heavy trucks had 16; light trucks 7, railroads 5, motorcycles 4, taxicabs 2 and jitneys 2. The time of day at which most accidents occur is stated and every time an accident is reported a pin is placed in a big city map in Inspector Jackson's office. At the end of the month, these pins form a very good indication of the parts in the city which require maximum attention.

A complete system of records and cross card index files is kept, giving the date of the accident, the name of the driver, the kind of car, etc., so that every type of record desired on accidents can be secured from the files of the department. Every driver whose name comes to the attention of the police in any way, either for a traffic violation, for an accident, or for any other reason, has a card in this index file with his complete record so that a close check is kept for reference when cases come to court. Reckless driving and driving while intoxicated impose revocation of license. The police department recommends the revocation to the Secretary of State. Before the police department makes the recommendation the driver is given a hearing. Before the revocation is made by the Secretary of State, the driver has another opportunity for a hearing at his office. In practically all cases, however, the recommendations of the police department have been followed.

One of the effective methods of public education has been in the use of moving pictures showing typical street accidents which have been carefully and accurately posed for the police department. These films are shown at public schools, at lodge meetings, at churches and wherever the police department finds it possible to place them.

Two Glimpses of Detroit's Safety Campaign Propaganda

Left—This advice to parents, widely circulated in various forms, helped to make children more careful in street play. Right—Thousands of people who enrolled in an auxiliary of the Public Safety Committee and other interested people who could be reached were furnished these cards on which to report cases of children courting accidents by carelessness in street play

DIRECTS DETROIT TRAFFIC

Inspector Harry H. Jackson of the Police Department

Organizations co-operating in an auxiliary Public Safety Committee include schools, churches, the Board of Commerce, the Detroit Automobile Club, various business clubs, the street railways, truck and taxicab drivers, owners and fraternal organizations, theaters, city departments, labor unions and the like.

The campaign of public safety education is going on continuously. Booklets, cards and posters keep hammering this message home.

Motor World's next article on traffic control, to appear soon, will consider the highways out in the country, with traffic problems that affect the rural and small town highway rather than the big city street. Traffic control systems of Massachusetts, Connecticut and other States are being studied and interesting, practical information will be presented to assist readers who may want to induce action along better traffic lines by public officials in the sections where they live and do business.

Patience Wins with This Type of Prospect

SELL a hard-boiled buyer?

The greatest asset a salesman can have in a case like this is patience, for without it you only waste your time. Besides patience, I found in my own case that some excuse to make another call is very necessary. My hardest sale was made to a man who had an old car to trade in; in fact, he had already gotten trade-in appraisals from the other dealers. Of course, in selling quality and not price it was necessary for me to sell him thoroughly on the advantages my car offered to offset the price attraction made by my competitors, who cut the price of their cars indirectly, by allowing more on my prospect's car than it was actually worth. Another feature that made this sale very hard was having to spend so much time waiting for an interview, as almost every time I called on this man I would have to wait from one to three hours before he would see me. He would then take up a lot of time explaining how much better trade he could get on some other car, and would then tell me of the wonderful things other salesmen claimed for their cars.

During our interview I found it very necessary to always have a ready answer for every objection.

I am convinced that my greatest help in making the sale was the fact that I called regularly at least once a week until I succeeded in securing my prospect's order.

I was told that several other salesmen made but two or three calls and then apparently got "cold feet."

By going to my prospect's office at just about the time he was leaving for home I would let him drive the new car, thus giving him the chance to get that new car fever and at the same time to see the advantages of the car I was trying to sell him.

When I finally got his order I put him down as about the hardest prospect I ever had to sell.—JOHN B. KENNEDY, Triangle Motors Co., Louisville, Ky.

Closer Canvass of Territory Needed in Farm Sections

Dealers Are Selling Tractors in Volume, and Some Trucks, But Some Sales Opportunities Are Overlooked—A Close-up Study of a Territory

By DONALD D. BLANCHARD

A MOTOR WORLD editor has been gumshoeing around a typical farm territory, looking into tractor and truck sales and prospects for more sales. The territory was central—southern Ohio. Conditions there may be different from those prevailing in some sections but they are identical with those in others.

The Motor World editor discovered—but his story tells that. He discovered some things about farmers' attitude toward tractors and trucks, about farmers' credit and how dealers can profit by it, about things done and things that might be done in selling to farmers that tractor and truck dealers and other dealers considering these products will find readable and, we believe, useful. The story is about the Ohio field, but it is largely applicable anywhere. The scenery is sectional but the narrative is a faithfully reproduced cross-section of farm territory selling conditions.

TRACTOR dealers in Ohio have enjoyed a fair measure of prosperity during the past spring. Sales made this year are many times those made in the same period of last year. Price, terms and weather conditions have been important factors in the making of these sales.

The heavy price cuts made last winter evidently have brought the tractor down to a figure that is satisfactory to the farmer. At present prices the farmer seems to be convinced that the tractor is a profitable investment. The price cuts accomplished what elaborate comparisons showing that implement and tractor prices had not increased as much during the war period as the prices of other commodities, could not accomplish.

HE bottom had fallen out of the farmers' market. Until tractor and implement prices had taken a similar drop, the farmer would not exchange any of the few dollars that his products brought for machinery that was priced on the basis of the war dollar.

The pockets of Ohio farmers are not well lined with cash. There is likely to be a decided improvement in this respect this fall if crops come up to present expectations, and if the market for these crops maintains a reasonably high level. Still, the average Ohio farmer is in pretty fair shape despite the shortness of his cash assets. There are some who may not survive financially, but these are the exceptions.

As a result of this shortness of cash, practically all of this spring's buying has been on a credit basis. This is a decided change from last year. It indicates that the farmer's view of the future is much improved. He sees better times ahead, and he is willing to use his credit to buy equipment that will hasten their arrival.

Very few tractors have been sold for cash this spring. In some cases the farmer has given notes for the entire purchase price. In others he has paid a quarter or a third down. The notes mature in 6 to 18 months.

Some of the factories assist their dealers in handling the farmers' paper. These factories offer an additional discount for cash, and dealers who are financially able to do so are availing themselves of this additional profit. Of course, before a note is accepted a very careful investigation of the reputation among tradesmen of the maker is made.

The local banks are also assisting in financing farm machinery sales. They are not favorable to the 18-month notes, but in a majority of cases will buy six-month paper made by responsible farmers and endorsed by the dealer. In a few cases dealers are using farmers' notes as collateral security for loans from the banks on their own notes. If a note is to be sold to a bank, the dealer invariably determines whether the bank will buy it before accepting the note.

The branch salesman is an important factor in closing truck sales. Here he is shown helping the dealer get the order from a farmer with a big berry crop

Dealers handling lines that are not factory-financed naturally are at a disadvantage, unless they can finance themselves. Dealers in this class must have capital of their own to carry their sales, or they must have the assistance of a bank. The ability to accommodate the farmer with credit is essential to farm machinery sales in this territory at this time.

Weather conditions favored tractor sales during the past spring. The season was late and unusually wet. Farmers found it difficult to get their crops in with horses. Many

Digitized by Google

of them met these weather conditions by purchasing tractors. The tractors worked so much faster that the farmers were able to get their crops planted in the short dry spells between rains.

In this connection, it is interesting to note a change in viewpoint. At one time the tractor was regarded as a strictly fair weather performer. It was supposed to be a disadvantage as compared with horses when the going was heavy. But the experiences of the past spring indicate the contrary is true. The tractor has proved itself a reliable machine in all sorts of weather.

Practically all the dealers in this territory depend entirely on tips and other chance information for the location of prospects. Very few are making any systematic investigations that produce all the sales possibilities of their territories. Most of them keep some sort of a prospect record, but it is the exceptional dealer that is making any special effort to get names to put on this prospect record.

The average dealer considers himself well acquainted with his territory. He feels that he knows about everybody worth knowing and that he is a pretty good judge of their credit. And he uses this knowledge as the basis of his sales work. There is some reason to question the accuracy of this knowledge. It hardly seems likely that a dealer with a territory embracing an entire county with approximately 5000 farms in it can know his territory so well that he can realize on all of its sales possibilities without resorting to intensive selling methods.

Under present conditions, when tractors and machinery must be sold on credit, the obvious method of territorial sales analysis would seem to be the determination of what farmers in the territory have good credit. The next step would be to determine the needs of this class and to focus all selling effort on the job of filling these needs.

A few dealers have made farm-to-farm canvasses, and a profitable percentage of the prospects turned up in this way have been sold. One dealer in Southwestern Ohio has two salesmen on the road. They work on a commission basis and are independent of any direction from the home office. This dealer does not think that the commissions they earn during the year will be large enough to balance their drawing accounts. The failure of these salesmen can very likely be traced to the fact that their efforts are of a hit-or-miss variety. They are going where the grass looks greenest, and in so doing are very likely passing over many prospects that could be sold. It is quite probable that, if their efforts were directed and supervised by the home office, they would be more successful.

Now that the farmer is satisfied with tractor prices and is willing to use his credit to buy them, the two principal points of sales resistance have been eliminated. Most of the farmers hereabouts seem to be convinced of the tractor's utility and economy. Despite this condition, demonstrations are still helpful in securing orders. These demonstrations are in the nature of exhibitions for individual farmers rather than public affairs.

The importance of service seems to be pretty generally realized, but not many dealers are equipped to handle it. One dealer interviewed has an inspector whose duty it is to report on the condition of tractors. If repairs are needed, this dealer sends a mechanic from his service station to handle them. The farmer is charged so much for each mile this mechanic has to travel, in addition to the charge for the time spent in making the repair. Another dealer has a handy man who helps the farmer with difficult repair jobs on both tractors and implements. The dealer does not make any charge for his services.

Parts stocks carried by dealers are on the whole rather limited. Dealers depend on the complete stocks maintained by branches and distributors for their needs.

It is difficult to say just how far the dealer can afford to go in the matter of service. The average farmer is inclined to do his own tinkering and to call on outside assistance only when the job is too much for him. For this reason the dealer service station is likely to get only the hard jobs. Furthermore, unless the dealer has a large number of tractors in the field, he cannot hope for a profitable volume of service work. These conditions probably account for the fact that so few dealers have made any provision for tractor service. The dealer knows that service is essential to sales, but he can't afford to provide as good service as he should. Of course, if he operates a garage, or a service station for cars and trucks, tractor service can be handled very nicely. But the dealer who handles nothing automotive but the tractor is in a difficult situation from the service standpoint.

Much that has been said about tractors might also be said about the methods employed in selling trucks to farmers. Farmers raising corn and grain do not seem to be particularly good truck prospects. They prefer to hire a truck when they need it. They can hire truck haulage for from 16 to 20 cents a ton-mile, so it is not hard to see why they prefer this method to owning a truck. Farmers with vegetables or fruit to haul to market are more likely prospects in this territory.

It might be possible to bring more farmers into the truck owning class if the field were worked more intensively. At the present time, little effort is being made to sell the farmer. Dealers and distributors are directing their sales efforts at the industrial and commercial user.

Selling methods are not all that they should be. Salesmen are inclined to feature the construction of the truck rather than the work it is capable of doing and the economies it can effect. Springs, axles, engines, bodies, etc., are likely to form the high spots of the sales talk rather than the time and money-saving features.

Local dealers lean quite heavily on the assistance of salesmen from the branch or distributor. The branch salesman works out in the field with the dealer and helps him close the order. Where there is a trade-in involved, the branch frequently handles that part of the deal.

Everybody Knows the Tractor Will Plow, But—

The farmer likes to see the tractor at work in his own fields. Individual demonstrations of this character are of material assistance in getting the farmer's name on the dotted line.

Garage Issues Passes to the Trade

HART'S GARAGE at Chattanooga finds it profitable advertising to distribute passes each year to a number of garagemen, motor car dealers and proprietors of car and battery service stations in the surrounding states. Where the name of the owner is known, it is placed upon the pass and accompanies a letter asking the garageman or dealer to accept it with the compliments of Hart's Garage. Where names of proprietors are not known, they are asked to furnish the names of one or two parties actively engaged in their particular business. The garage stores an average of two or three cars a night gratis as a result of this advertising, but there are many more storage customers each night who have been recommended to Hart's Garage by the garagemen and dealers who have received passes from this Chattanooga garageman.

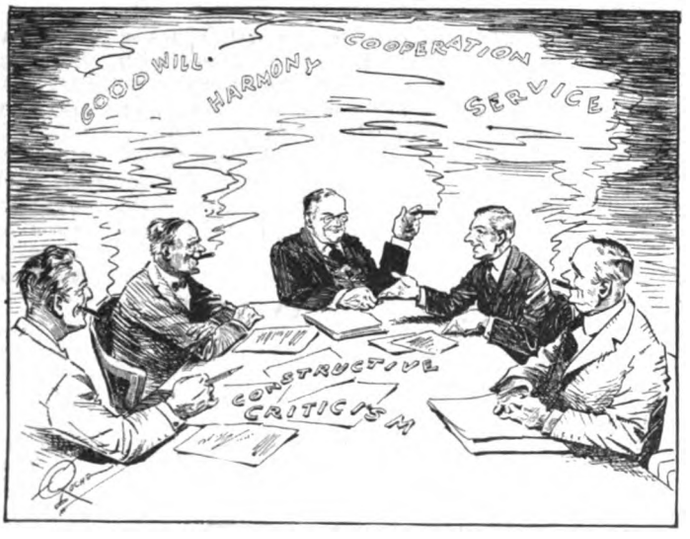
If Some Businesses Would Get Acquainted with Themselves

What a Fine Family They Would Discover They Had and What Splendid Co-operation Among Departments Would Result

By B. C. HAMILTON
Chandler Motors of New England



IF the *Service Department* feels that the sales department is reckless with its promises of free work; that the parts department is always out of standard stock; that the delivery department seldom delivers new cars in proper condition—what would you do?

If the *Sales Department* feels that the service department turns out work which makes the customer sore and creates sales resistance; that the parts department is not courteous and painstaking in its attention to customers' needs; that the delivery department is careless instead of careful in preparing cars for delivery to customers; that the service department—oh, well, there's only one place worse and that's where free heat is furnished all the year round—WHAT would you do?

If the *Parts Department* feels that the service department expects too much and too often; that the sales department is made up of a lot of fresh guys who get more fun out of blaming them for anything and everything than they do in making sales; that the delivery department is always out of this or that for some unaccountable reason; that the service department is wasteful and unreasonable in wanting parts to-day instead of two weeks—what WOULD you do?

If the *Delivery Department* feels that the service department should do uncomplainingly the things left undone by the D. D.; that the sales department crowds them on delivery dates so that the work has to be hastily instead of thoroughly done; that the parts department doesn't give a rip whether they have equipment or not—it's always to-morrow—or too late—WHAT WOULD YOU DO?

Now if this condition or feeling exists throughout the main departments it is bound to spread to the bookkeepers, stenographers, and general office force, but it can't do a great deal of damage there, because the office force does not come in very intimate contact with the customers. The amount of friction they create is only a little added irritation to the "internal workings" of the organization, BUT if the switchboard girl is considered on the office force just remember that *she does come in contact with the customers*—good and plenty—when she is not knitting or talking to some other girl about the length of her skirt or the shortness of her hair and so forgetting all about what she is paid for. Some go so far as to say that a switchboard operator is just as important as the best salesman. She certainly can be a great help or do a lot of damage.

If these criticisms were only an indoor pastime it could be considered as a source of possible mental relaxation for brains that imagine they are overtaxed, but this attitude of "passing the buck" and shirking of responsibility finds its way into the consciousness of our Big Boss—the customer. Of course, this internal hemorrhage must be stopped, and stopped effectually. Courteous and efficient service cannot be given if we are not right among ourselves.

This is not an overdrawn or exaggerated picture of an unusual condition. Not at all. Praise be it can be cured, and quickly, as soon as the heads of departments realize that the development of their department depends in some way on all the other departments. One reason for this isolated feeling is that the department managers do not get together in conference, do not know each other outside of business—do not have periodical *round table gatherings* where they can exchange stories, smoke, josh, settle the affairs of the nation, discuss prohibition, and get acquainted; find out what good fellows the others are when one really knows them.

It takes only a few of these meetings to get into the frame of mind where you would give your shirt, if necessary, to help the other fellow. You just bet you would, and all the others soon feel the same way toward all the rest. Then what? Co-operation during business hours. Then what? Why, the application (perhaps not admitted) of the rule which irons out all petty misunderstandings, removes all the obstacles in the way to perfect harmony. You are doing as you would be done by.

This is not preaching. It is common sense. It is efficiency.

So, if you are looking for some way to reduce, to the lowest possible point, the friction mentioned in the beginning of this article, organize, a *round table council*, if you want a name for these meetings of department managers, for the open and free discussion of any problems that confront you, the company as a whole, or some particular department. Of course the real purpose of these meetings is to *discuss constructive criticism*. There should be no knocking or controversial argument. The chief executives may or may not sit in.

Honest expression is a great relief. It may clear out a channel that has been clogged with misunderstandings and apprehension so that definite ideas can come to light. You never can tell—*a round table council is worth a trial.*

You and Your Job

By NEAL G. ADAIR

IT occurred to Georgie Roper, as he glanced at a newspaper headline chronicling the day's heat record as the highest in ten years, that his spirits were just about as far below zero as the temperature was above. When anything occurred to Georgie he usually did something about it. On this occasion he walked into the office of his boss, Tommy Trumbull, general manager of sales and numerous other things around the establishment of C. J. Reilly, Inc., and announced that he was going to quit trying to sell automobiles.

"Going to?" Trumbull commented. "Thought you did—about three weeks ago."

Roper flushed at the reference to his successful competition, since July first, for the cellar championship in the Reilly sales organization.

"But this is official," he persisted.

"Sounds serious," Trumbull conceded. "Let's talk it over—over here in the breeze," motioning the salesman to a chair that, like his own, was in the range of a busy electric fan.

"What seems to be the matter this time?" Trumbull asked, recalling several other occasions when Roper had declared his intention of withdrawing his talents from the job of retailing Sennett cars in Callawassa.

"Oh, everything," Roper answered vaguely.

"Not so serious, then," said the general manager. "I had begun to think perhaps you had a real reason for getting out, but—"

"But I have," Roper replied. "I've only sold one car in three weeks and I haven't a live prospect to work on and—and—and I'm getting sick of it, sick of the whole blamed thing."

"Like to sell, don't you, Georgie?" Trumbull suggested.

"I do, you know."

"Sold a lot of 'em last year, didn't you?" Trumbull went on.

"Last year, sure, but this month—"

"Sold quite some the first half of this year, quite some last month, didn't you?" Trumbull persisted.

"Sure, but—"

"Then, why not now?" the general manager finished.

"Now you're shootin'," Roper flashed back. "That's what I want to know—why not now? And, as I can't answer the question, and you don't seem to be able to, I'm for trying a crack at something else."

"Suit yourself, Georgie," Trumbull said, "but — well, let's enjoy the zephyrs here a few minutes longer and maybe we'll think of something important."

Tommy lighted a cigarette to encourage the thinking process, and Roper gave himself over to the pleasant occupation of soaking up the artificial breeze.

"Georgie," said Trumbull after a few puffs, "you're trying to drive spikes with a tackhammer."

"Seems just about as hard as that," Roper conceded. "But what's the idea?"

"Nobody can get across with a job that requires headwork unless he has faith in his job and in himself as the best man on earth to do the job," said Trumbull.

"Some order," Roper observed.

"And you can fill it—because you've been filling it, until you hit into this slump," Trumbull answered.

"But this slump—" Roper began.

"—is like a lot of others you've had and every salesman has," Trumbull finished for him. "Reminds me of climbing a mountain. You strike a lot of little downhill grades, but take it all in all, and you're going up all the time—climbing.

"That's the word you want to put in the back of your head and keep there—climbing. There are no level roads to successful selling or anything else successful. You must keep climbing or slide back.

"And as long as you have faith you will keep climbing."

"But it's pretty hard to have faith when—when—" Roper hesitated.

"When you haven't faith, sure it is," said Tommy. "And the way to work up faith and the enthusiasm that goes with it is to sit down and see what there is to have faith in.

"First, there's the thing you're trying to sell—the Sennett car. Is there a better one anywhere for the money? Do you ever need to feel that you are misleading a prospect when you tell him that it will give him satisfactory service?

"Then there's the house—and can you go anywhere and find a man who's squarer than C. J. Reilly, or a policy that's fairer, for customers or employees?

"Next, there are the folks you work with, salesmen, men in the shop and girls in the office, all doing their best, all ready to give you a square deal and a helping hand and expecting the same from you. Anything wrong there?

"Then there's your job. For quite a few years it has kept you and your family comfortably happy. You are buying a home out of its earnings. And it keeps you busy doing something useful in the world, selling a useful commodity. Worth while job, isn't it?

"And, finally, there's yourself. I've never heard anyone around the place roasting you or doubting you, and I'm putting in half the afternoon talking to you because—well, it sounds foolish to talk this highbrow stuff, but I have faith in you, Georgie.

"So there you are. Believe in your product, believe in the house, believe in the folks you are working with, believe in your job and yourself and put your faith into selling conversation."

"And then what?" said Roper.

"Roll your own conclusions," Tommy suggested. "I'm beating it down to the Board of Trade to sell the secretary a sedan."

And Tommy went.

And Georgie thought.

And if you were finishing the story wouldn't you add that Georgie *stayed?*

Questions

IF your salesman fails to close a prospect, do you count the sale lost or try your own ability as a "closer"?

Do your road signs tell motorists how to get to your garage or just mention the fact that you operate one—somewhere?

Do you treat the man who stops for gas and oil as a nuisance or a customer?

Do you listen to your prospect when he's saying something important—or thinks he is—or do you make him devote the whole period of the interview to listening to you?

Do you know the condition of the roads leading out of your town, or do you tell the tourist to stop and ask somebody at the postoffice?

Editorial Notes

Don't Get Caught

IT is significant that two of the largest automobile dealers' associations in the country, those in Chicago and Detroit, have issued statements to their memberships warning dealers not to get caught with excessive stocks of used cars in a market with a declining demand.

The officers of both associations cite the experiences of dealers in the summer of 1920, when the great bulk of the trade, which had been selling actively throughout 1919 and the spring of 1920, traded actively and found itself when the readjustment period set in with used car accumulations on which many heavy losses were taken.

There is no justification for comparing the big selling season which has been in progress since early spring with the final months of the boom period following the armistice, but it will not be amiss to call the trade's attention to the fact that the tremendous demand of recent months for new and, in a degree, for used cars cannot be expected to continue. A decline in sales already is under way in many of the larger cities and some smaller communities. A probable rise in farm territory buying will offset this to some extent. However, even with good business, which is likely to prevail for the rest of the year, the selling records of the first six months can hardly be maintained and dealers should apply this fact directly to their consideration of the used car situation.

The situation is one which will bear conservative watching. Dealers should see to it that trades are made on a basis which will permit profitable handling of the used car. They should also see to it that used car stocks are kept down to a minimum so that they will not be forced into expensive warehousing of used merchandising during the fall and winter or into the equally disastrous alternative of getting rid of such stocks at a sacrifice.

Tractors on Small Farms

BETTER selling by dealers and wider appreciation by farmers of the varied utilities of tractors are putting these agencies of power farming more and more on the smaller size farms. Month by month the fact is being impressed upon more farmers that the tractor is not merely a power unit built to pull a low or cultivating implement, but that it can be turned to many jobs by using its belt-driving ability. A manufacturer recently sent a questionnaire broadcast to about a thousand farmers who owned his make of tractor, asking among other things the size of their farms. Almost half of them were found to be of less than 100 acres. It was not so long ago that many men in the trade were conducting their tractor businesses on the assumption that the farm of 100 acres or less seldom would be a tractor prospect. As education regarding tractor uses is extended and equipment to go with the tractor is developed not only more small farms but many additional classes of business will be added to the lists of tractor owners.

A Motorless Highway

DO you know of a highway where no motor vehicles travel? Offhand we can think of a few—in the Lake Mohonk, N. Y., restricted property and on the roads of Mackinac Island, Mich., for instance. Motor vehicles are not allowed there; that's the only reason, of course. Recently in a most unexpected place, in the heart of New York City, a highway has been restricted to animal-drawn vehicles. This is the highway across Brooklyn Bridge, oldest and most famous of the East River spans connecting Manhattan Island and Long Island. Traffic necessities, not someone's desire for what they term exclusiveness, dictated the Brooklyn Bridge restriction and at the same time all but motor vehicles were ruled off the Manhattan Bridge, a quarter of a mile upstream. The two bridges have carried the great flow of traffic, passenger and freight, between downtown New York and Brooklyn. Now the Brooklyn Bridge highway will see nothing but freight—slow-moving freight. And on the other bridge faster moving freight will go its way unhindered and unhampered.

The two bridges will offer an interesting study of yesterday and to-day in highway transportation. One will show the haulage methods that had to fill the bill until automotive transportation was developed. It will present in continuous drama the passing of the horse except for short haul work. The other will typify the transport of to-day—and to-morrow—motor cars and trucks swiftly, unhaltingly, surely taking persons and commodities to their destinations.

We can imagine that metropolitan motor truck dealers who may have scant prospect lists will send men to Brooklyn Bridge to scan the procession of vans, trucks and delivery wagons. Why not? Among names of firms that could be jotted down from the lettering on these vehicles would be found many that might be sold motor trucks. The suggestion prompts another. In any city or town where highway freight traffic is heavy—at market centers, bridge approaches and in warehouse and industrial districts—there will be found a proportion of horse-drawn vehicles. The owners of some of them may be on motor truck dealers' prospect lists, but hardly all of them. An occasional observation trip to a busy trucking section looks like a good bet for any motor truck dealer. Not only horse-drawn trucks but some of the motor-driven variety that are nearing the final stages of their usefulness are likely to suggest where motor truck salesmen can find interested listeners.

How New Zealander Handled a "Tough Prospect"

Courtesy and Service Were the Things That Won a Sale When Other Dealers in the Territory Failed

Editor Motor World: I have only just received my issue of the Motor World dated March 8. I look forward to each mail from America to get my journal, as I read and digest every bit of news it contains, and as a help in running a garage it is invaluable to me. Although I am manager of the firm, I also act as salesman and there is no other job I would prefer to that of an outside salesman. I am enclosing a 500-word copy of my toughest car deal.

On the occasion of this particular deal, I was salesman for Messrs. J. Pomeroy & Co., at Hamilton, Waikate, and had occasion to take a trip through to Auckland on business. I called on a salesman friend of mine in the motor business in Auckland. During our conversation a gentleman called in to have a look at the car my friend was representing. I noticed he soon got rid of the prospect and came back to finish the talk we were having. He casually mentioned to me, "See that old gent, all the agents in town are trying to separate him from his wad for a car, but he's too hard, and although he's a buyer, I am not wasting any more of my time making a sale with him."

I thought no more about it until that night when on my way back to Waikate by train, I was surprised to find myself sitting right opposite to the same old gentleman and his wife. From their conversation I gathered they were on a visit to my own home town. Before being on the train very long we got acquainted and I gradually introduced the question of motor cars without letting him know I was interested in any particular car. He told me quite a lot about himself and his business, and I gathered he had a very successful business and that he had worked hard to make his money.

We arrived in Hamilton about midnight, and I had by that time got his confidence, and after wishing him a pleasant time, and directing him to a suitable place to stop, we parted as he believed, for good. Next morning I had the demonstrator just O. K. and was waiting for him to walk down the only street in Hamilton, which I figured he would do immediately after breakfast. At 9.30, he, with his wife, came along, and as they were passing the shop I walked right out and met them on the pavement with a good hand shake; told him I would like to run him around our town and show him a bit of the country. He never suspected that I was out to sell a car, and he walked right into the trap with eyes wide open. Out in the country I let him have a drive just to see how easy it was. It was his first try at the wheel. At the end of the drive his wife complimented him on the performance and when we arrived back at the garage I told him the price and asked him to buy. He ended up with buying and we drove back some days later to Auckland with his car. He paid all my expenses and also made me a present for the kindness shown him. We stopped at my friend's garage for some gas, and imagine his surprise when he saw what I had done. After I had explained, all he said was, "The mean old skinflint." —George L. Campbell, Motor Garage, Auckland, New Zealand.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

Sees Importance of Traffic Control Study

Editor Motor World: That is a splendid work you have started, to discuss traffic problems, as indicated in "The Editor Says—" in your issue of June 28. We have had a traffic problem here in Newark, and two years ago this association was instrumental in forming an organization that adopted the title of the Traffic Regulations Advisory Committee of the City of Newark, in which we enrolled every user of the city streets. The associations represented, in addition to the Automobile Trade Association, were the Motor Truck Club, Automobile Club, Chamber of Commerce, Merchants' Association, Jitney Bus Owners' Association, Marketmen's Association, Furniture Warehousemen's Association, Expressmen's Association, the Public Service Corp., which operates the electric street cars, and others. All told there were some twenty-five organizations, in addition to which there were representatives of the city and county engineers' departments.

Every phase of the traffic congestion problem was taken up; sub-committees were appointed, to whom were assigned various angles of the problem, such as main-line routing, one-way streets, direction of traffic, parking, etc. After a careful survey of their respective tasks these sub-committees reported back to the main committee, and their recommendations then were forwarded to the city officials, in whose department the regulation of traffic, parking, etc., was centered.

Traffic regulation is a very vital part of the motor industry. The saturation point is not going to come from an overproduction so much as it is from overcrowding of the highways, which will make it inconvenient, or perhaps dangerous, to operate motor vehicles. It certainly is an important part of our business.

Broad and Market Streets, Newark, is the second busiest corner in the State of New Jersey.—Claude E. Holgate, Manager, Newark Automobile Trade Association.

Persistency

SIX times a spider has spun its web outside my study window and six times I have destroyed it. Tomorrow morning I'm sure it will be there again.

To prevent a spider from spinning its web time after time in the same place one has to kill the spider.

If we, who are interested in selling goods, had the persistency of spiders we'd amount to something, wouldn't we? — Thomas Dreier Service.

Drip Pans Under Cars May Prevent Sales

"THERE'S one thing I always see to about the cars I have on display in my salesroom," said a successful middle western car dealer, "and that is that no drip pan is necessary under the cars. I formerly used to put cars on exhibition in my salesroom which dripped oil, and I'd catch this oil in a pan, as so many other dealers do. But I found that this pan always attracted the attention of prospects and made many of them ask whether or not the cars I was selling leaked oil. So now I either take the oil out of the cars I put into my salesroom or make sure that they don't leak. And, believe me, this helps in making sales."

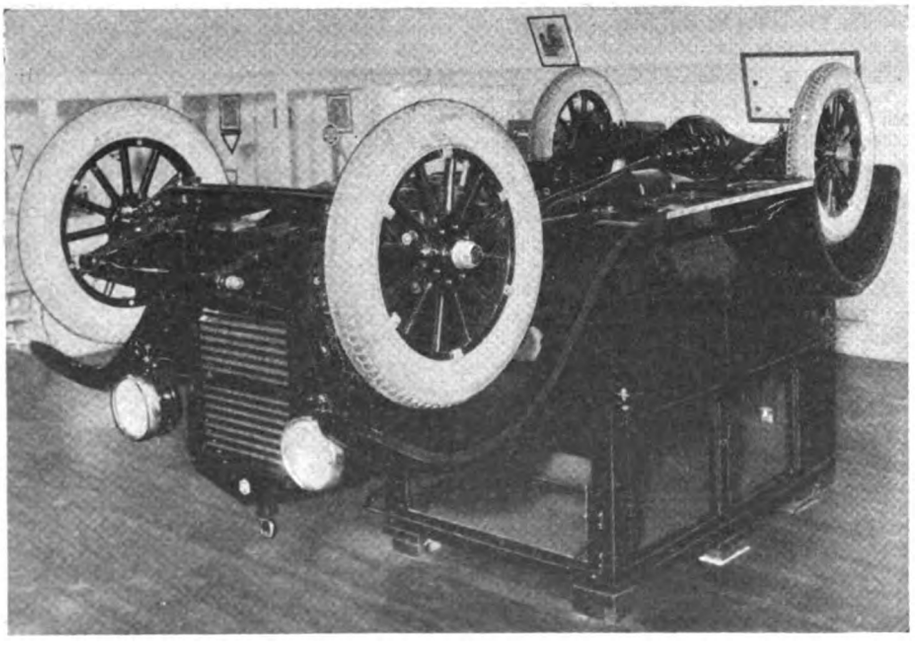
Slogan Contest Is Good Summer Publicity

Dealer Finds It a Valuable Means of Preparing Public for Big Fall Selling Drive

A SLOGAN contest may be just what your business needs this summer to attract and hold popular attention and prepare the public for your big fall selling drive. Several dealers have gotten fine results from such a contest. Here is how one was handled recently. In an advertisement in the Sunday papers, the dealer asked the local owners of the car he sold to submit a slogan or phrase describing the car, of ten words or less. A cash prize and several valuable items of equipment were offered for the best phrases submitted. The following Sunday the dealer's advertisement contained all the phrases submitted with the names of the persons submitting slogans, and it also announced the winners. One of the valuable things accomplished by the contest was that it enabled the dealer to get the names of a lot of his owners into his advertisement with their own snappy phrases endorsing the car.



Ideas On Selling and Management

You will find them every week on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer
Truck Dealer
Equipment and Tire Dealer
Tractor Dealer
Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other man? If you have, will you write it out and send it in?

A Novel Car Display

In making this startling, and at the same time educational, display of an Essex coach, no special equipment was needed. Before beginning the actual work of turning, the oil was removed from the distributor housing, crankcase, transmission and rear axle. The rear seat cushions and battery were removed. A set of four right angle blocks, upholstered, so that the weight of the car could rest on them without marring the body, was made. Four straight blocks, also upholstered, were placed under the pillar posts, after the coach was overturned. Then some old padding material, front seat cushions in this instance, were secured to place under the wheels as the coach was turned on its side, and hub caps used to relieve strain on the fenders and running board at the same time. Ten or twelve men then turned the coach on its side, after which the blocks were placed so that the weight would rest evenly on them when the car was overturned. Following this the car was tilted up and slowly turned over

This Bulletin Board Gives Good Impression

THE Crawford Auto Co., Birmingham, Ala., Ford dealer, maintains a large bulletin board in its main salesroom on which the names of purchasers of cars are placed each day. The bulletin board asks all employees of the Crawford organization to patronize Crawford patrons. The bulletin, which is in plain view, naturally has a fine effect on prospective buyers of automobiles, especially if they are business men. The wording on the board is as follows:

"We sold cars to the following concerns and individuals yesterday: (Here is given a list of purchasers.) We will appreciate it if our employees will trade with our friends named above."

Rents Emergency Trucks on Mileage Basis

TRUCK maintenance has been a problem, more or less, with various Chicago dealers. The systematic care of turning a job out on schedule time is perhaps the biggest part of this problem. One dealer, however, has installed what he believes will be a profitable thing, both for himself and the owner.

When a truck is brought into his maintenance department, the owner is advised of the length of time required for the repairs necessary. Very often the holding of a truck means serious losses to the owner and so he is told that there are at his service, a number of trucks, one of which he can put into operation while his is being worked on.

Gas and oil are, of course, supplied by the user and a hubodometer registers the number of miles covered. The charge on the mileage is determined by the class of goods carried.

Introducing a New Employee

ADVERTISEMENTS like this are inserted by some dealers in local newspapers when a man joins the company in an executive capacity or as a salesman:

> MR. JOSEPH SPILLANE
> Takes pleasure in announcing his appointment as service manager of the
> Goodwin Motor Car Company
> 916 Main Street
> Sennett Cars Redman Trucks

Women's Interest Helps Sales Contest

Illinois Jobber Finds It Pays, Once in a While, to Put Up Prizes for Salesmen's Wives

IF you want to make a sales contest go strong, get the women interested in it. This is the advice of George Rinkenberger of the Washington Auto Supply Co., Washington, Ill., jobber, who recently conducted a successful contest among his travelers by offering a washing machine as a prize. Rinkenberger wanted to promote sales of a particular line of items through his jobbing territory. He offered a washing machine to the salesman who first reached a certain quota. The result was that wives and families of all the salesmen became interested in the contest and urged the salesmen on to vigorous efforts. After the contest was completed, Rinkenberger decided to continue it in a different way, offering to each salesman who should reach the quota, in a given period, one of the machines. Every man in the organization won a machine.

Rinkenberger says the contest paid in dollars and cents. The sales stimulation was so great, not only on the lines which were being pushed, but on other items which the salesmen sold at the same time.

Counter at Curb Sells Accessories to "Gas" Customers

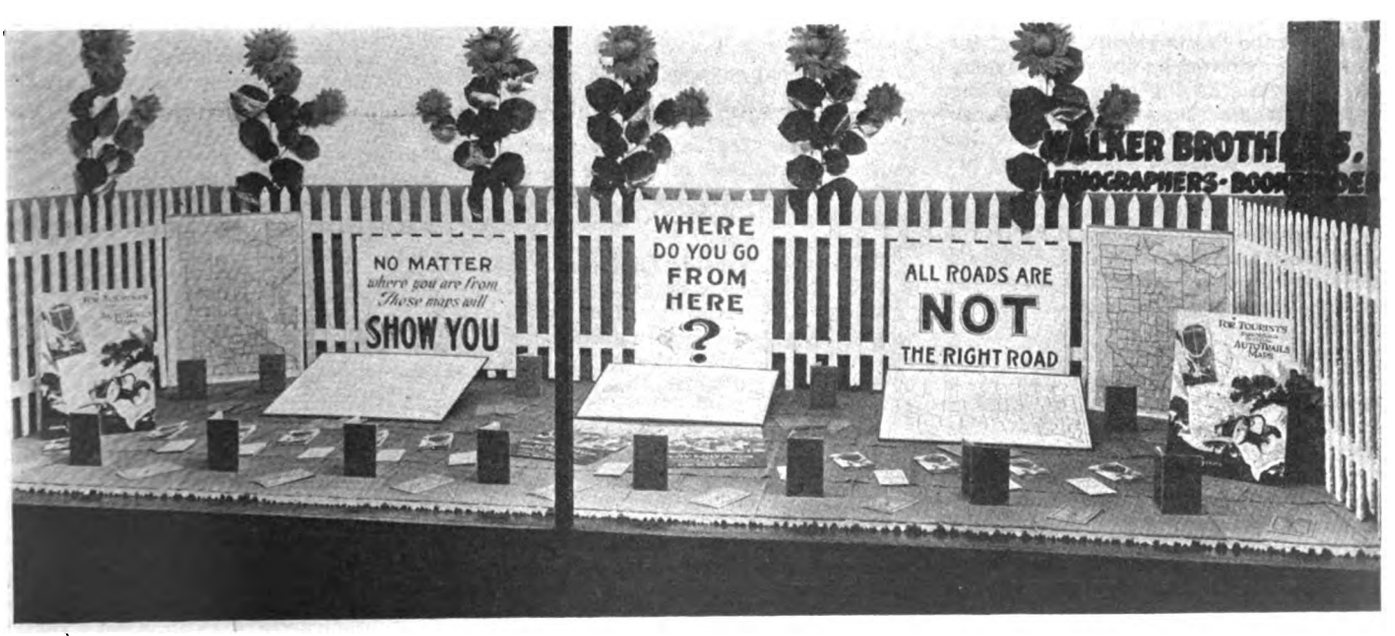
THE Scholder Tire and Accessory Co. of Birmingham, Ala., has a long counter along the edge of the sidewalk in front of its store on which accessories and supplies are attractively displayed to the passing motorist. The advantage of the counter is that it is much nearer the street than the show windows, and autoists cannot pass without seeing the articles on display.

An Accessory Show Window Card

HERE'S a good stunt for an accessory show window card. Print the word "Accessories" in a perpendicular line at the left of a card—the "A" at the top, the first "c" right under, the second "c" under the first "c" and so on. Then opposite each letter paint the names of some of the accessories you carry in stock beginning with that letter. For instance, opposite one of the letters "s" found in the word you could paint, "Spot-lights." Opposite another "s" you could use "Spark plugs" and so on. This sort of a card always interests folks.

Milk Bottles Help Station Give Quick Service

QUART and pint milk bottles may be used in the filling station to expedite service and gain the good-will that is the motorist's reward for quick administration to his needs. Some filling station operators fill a number of these bottles with oils of common grades and have them arranged on shelves where they are easily accessible.



When the motorists ask for oil, some of these are placed in one of those wire baskets used to carry half a dozen or more milk bottles and taken to the car. Bringing along an extra supply often enables the service man to sell an extra pint or quart of oil when it is seen that one quart does not fill the reservoir.

Jobber Salesmen Have Weekly "Leader"

AN enterprising jobber in Central Illinois finds it worth while to give his salesmen, traveling in a jobbing territory, a particular item each week as a leader. One week it will be a spotlight, another week a bumper, another week a windshield cleaner, and so on, but always there is some top-liner item in which the men are particularly interested and with which they open their conversations with dealers and garagemen.

The jobber says this gives the men a subject to break the ice with customers and proves good business, not only for the item being pushed, but for others as well.

A "Where Do We Go from Here" Window

Walker Bros., at Fargo, N. D., recently made a very effective display of road maps. The lower half of the background of the window was covered with grass green crêpe paper with white crêpe paper on the top half extending across the background and the side. In front of this background was a picket fence painted white, behind which lines of sunflowers were planted. The floor of the window was covered with green paper also, and upon it was shown several road maps as illustrated in the accompanying picture. Signs on the fence in the background carried the merchandising message

Dealer Responsible When Renting Cars

A Good Thing to Remember When the Summer Guest Hires a Car and Driver for a Trip

AT this time of the year a great many dealers in the country do an extensive automobile livery business with summer guests. The question of a dealers' liability when he acts as a livery man therefore becomes important.

If a garage keeper rents cars, he must take care that they are in proper condition and in charge of a competent person, for in a case where the owner of a garage lets a car for hire and furnishes a driver and the hirer exercises no control, except to direct him where to go, the garageman is responsible for any negligence of the driver.

Meyers vs. Tri-State Auto Co., 140 B. W. 184.

He is not only liable for injuries caused to third persons that the driver may run down, but he is also liable to the one hiring the car for injuries caused by the chauffeur's negligence or unskillful driving.

Neumiller vs. Acme Motor Car Co., 49 Pa. Sup. Court, 183.

In fact, in a recent case a company which rented cars was held liable for injuries to a guest of the one who hired the car. It seems the chauffeur tried to crowd between a standing truck and the curb, which brought about a collision in which the guest was more or less severely injured.

The court said: "A corporation engaged in the business of renting out automobiles driven by its regularly-employed drivers, having an understanding with the regular customer to carry also such persons as he invites to ride with him, is liable to the one so riding by his invitation for damages sustained through the negligence of the driver in operating the automobile, unless it appears that the customer has exercised such control over the operation of the car as to make a negligent act of the driver his own act."

Clinton vs. Company, 87 Atl. 71.

In another case, the foreman of a garage took a car out at night, inviting several friends to go with him. After imbibing considerably, he wrecked the car. The owner sued and the court held that, as the garage keeper knew that his foreman was in the habit of taking out cars which were left at his shop for repairs, at improper times and making unauthorized use of them, he was liable for the damage done.

Travellers' Indemnity Co. vs. Fawkes, 139 N. W. 703.

The garage keeper is not always liable, however, when he rents a car. In one recent case, a man hired a car without a chauffeur and procured a man to operate the same from another rival garage. An accident resulted, and it was held that the owner of the car was not liable for the injuries, as the chauffeur was not his employee but was the employee of the man who hired the car for the occasion.

The general rule as to when a garage owner is liable for his chauffeur's negligence is the same as in the case of any other motor car owner. The question is, as the courts have put it. Was the person operating the automobile at the time of the accident engaged in the service of or acting as the agent of the car owner? Did the car owner exercise any control over the operator? When he exercises control—when the automobile is being operated in his service, or on his business, then he is liable. Otherwise, he is not liable.

Power vs. Arnold Engineering Co., 126 N. Y. S. 839.

Among the many peculiar decisions which have been handed down involving the rights and liabilities of motor car owners, is one in which a man rented an automobile for a Sunday pleasure ride. The garage keeper rendered his bill, but payment of the same was refused. He thereupon sued, but the court refused to allow him to recover because there was a provision in the State Penal Code that a person should not pursue one's ordinary calling on Sunday, as the regular business of the man who rented the car was renting cars for hire. The court said that renting a car for a pleasure ride was neither a work of charity nor necessity, and for that reason the garage keeper could not recover.

Jones vs. Belle Isle, 79 S. E. 357.

To date, this decision stands alone and has not been followed by the courts of any other State. Many of the States, however, have statutes quite similar to the Georgia statute under which this case was decided, and sooner or later this question is bound to come up in some of those States. When it does, it will be interesting to note what method the courts will adopt to get around this law. If they do not find some way, the result will surely be to put taxicabs out of business as far as Sunday is concerned and to drive people to using surface cars and the subway.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Custom a Factor in Determining This Case

Editor Motor World: I bought a harness, auto accessories, tire and vulcanizing shop, and there was a contract drawn up and signed that the man I bought out was not to re-engage in the harness, garage and vulcanizing business in the same town. He went away and learned the battery business, and in about five months he put up a building and started a battery station, in connection with this he handles tires, auto accessories, gas, oil and vulcanizes tubes. Now if it comes down to law, would tires, auto accessories, gas and oil be considered as garage business, or would he have to be selling some make of car; this is what I would like to find out. Now would vulcanizing tubes be violating the contract or would he have to be vulcanizing tires? He also has an air compressor and has the back part of his building rented out to another man for repairing cars.

Now you may have had a case of this kind before and would know more about it than a home lawyer, that's why I am writing you. Please answer my letter at once.—George Stoker, Victor, Iowa.

Answer:—The custom of garages in your part of the country should be controlling in determining the effect of the limitation clause in the contract. Thus, if it is the custom for garages to sell tires, auto accessories, gas, oil, etc., I think the person who sold you the garage should be enjoined under his agreement. The best thing for you to do is to take your problem to a local lawyer and let him decide whether he thinks it advisable to ask for an injunction. There is nothing very difficult about a case of this kind and there are lots of authorities on it.

A Method for Speeding Up the Flat Rate System

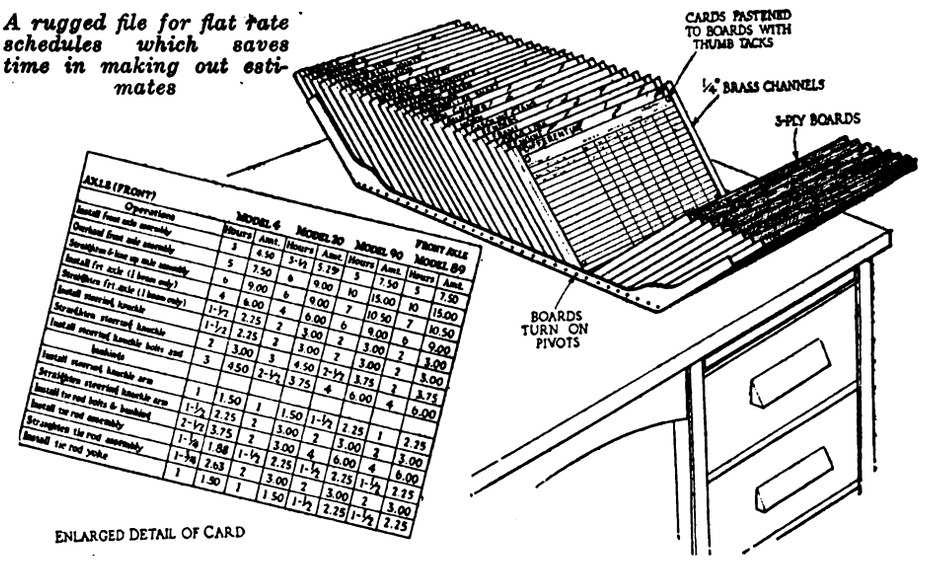
Handling Estimates When the Volume of Repair Orders Finds the Neck of the Bottle at the Estimator's Desk

FLAT rate schedules are being handled in a great variety of ways throughout the country. Some of the smaller shops have them in sheet form, but most organizations use either a card system or a visible system. Where the schedule is confined to one make of car and the repairshop handles a large volume of business, it is found that all the other departments of the organization are "hanging" on the estimator. Purely manual labor and dexterity of the fingers have to be relied on to hasten the estimates so that the repair orders can be signed and the work routed through the shop.

The Willys-Overland branch in New York was for some time face to face with this problem, and there seemed no way out of it without adding another estimator. This would have meant the duplicating of a great deal of records, forms and estimating machinery and was not considered advisable.

Making practically a time study of the system, the Service Manager, Henry M. Holt, finally came to the conclusion that the time spent thumbing cards was the fly in the ointment. He accordingly devised a simple device that would cut down time in locating the specific operations wanted and provide a working estimate file that would be at once heavy enough to be serviceable and simple enough to cut out lost motion.

This device consists of a brass frame or cradle made out of 1 in. angle brass with thirty 3 ply boards. These are reinforced with 1¼ in. brass channel on each side to prevent warping.



These boards are set in the frame by having two pivots which are part of the boards, fit into corresponding holes of the brass cradle. The boards are leaning backwards at an angle of 45 deg. This position of the boards leaves a margin on top of ½ in. for each board. On ½ in. is pasted in alphabetical order and covered with celluloid the names of units upon which repair operations are made.

The standard repair operations for each of these units are printed on sheets which are fastened on the corresponding board with thumb tacks. As the name of the units are printed in large letters, it makes it very easy for the estimator to instantly find the flat-rate charges for each unit. He then separates the boards at that point and the forward boards fall backward also at an angle of 45 deg., making a total of 90 deg., which is quite sufficient to disclose the information desired. The first five boards are used for everyday service station information, such as car specifications, license information, etc.

Besides being simple in construction it is also strongly made and will give years of service. It also has another advantage over the loose-leaf binder, as there are no sheets to be worn or torn. It also works better than a card system, as it takes less time to find the information by just separating the boards, and when taking into consideration that some service stations estimate over 10,000 jobs a year it can be readily seen how much time is saved.

The cradle is screwed to the desk and cannot be moved away. If it is found necessary to change any information the thumb tacks are removed and the sheet changed. The front board is covered by celluloid so as to give complete protection. Besides all this, it has one big advantage in giving the customer the impression that the flat-rate or estimate system has been put on a business basis and that the flat rates given are standard to all who come to the service stations.

A rugged file for flat rate schedules which saves time in making out estimates

A Shipping Room Convenience

The shipping department of a service station or garage of any considerable size is often up against the problem of sorting shipments for packing. An interesting feature of the shipping and receiving room of the Paige-Detroit Service, Inc., New York, is the design of the tables. These tables, one receiving and one shipping, have a number of light pieces of wood hinged at the back end to the table so that by bringing any number of them down on the table, the table is divided up in a number of spaces on which can be piled the parts orders as they are made up or received

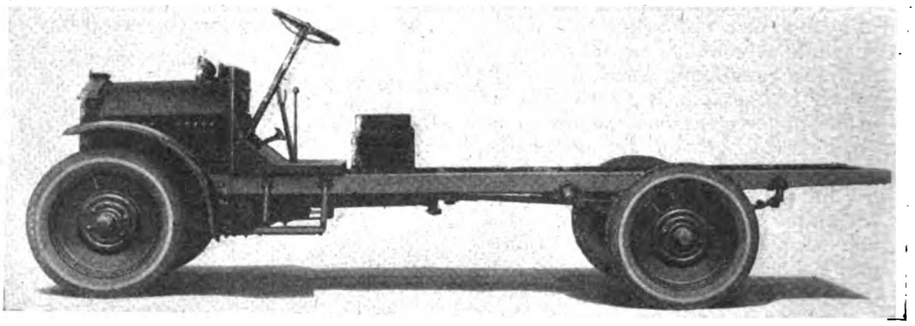
Federal Develops Fast Express Chassis



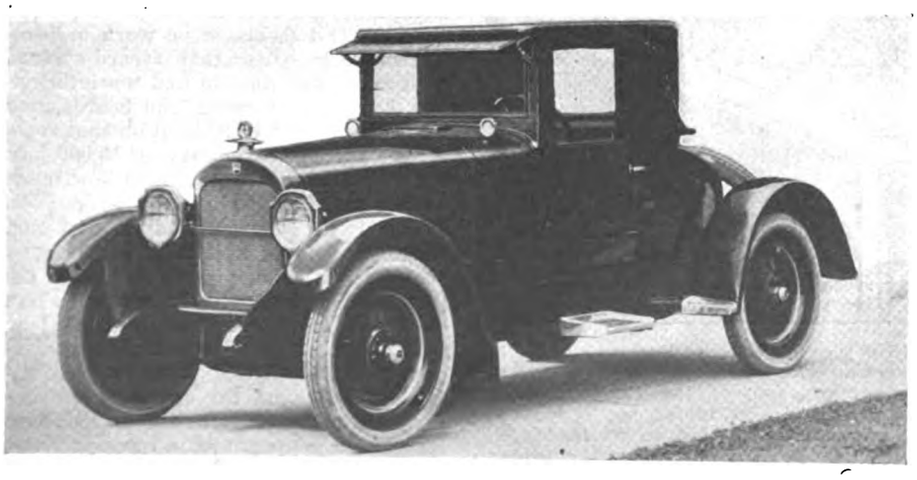
Thirty-two Body Combinations Available—Chassis Price to Be $1375

A NEW model, known as the Federal Fast Express, with a nominal capacity of one ton, has been brought out by the Federal Motor Truck Co. This new delivery type truck has a chassis weight of 2950 lb., with a body allowance of 900 lb. It is mounted on a 132-in. wheelbase chassis with 56-in. tread, and has a loading space back of the seat of 110 in.

The powerplant is the Continental J-4 engine, which is the same unit as has been used for the past two years in the Federal Model S-D. This engine has a bore of 3¾ in. with a 5-in stroke. It has a three-bearing crankshaft with 2½-in. diameter shaft. It also has a heavy camshaft, 1¾ in. in diameter, mounted on three bearings.

The truck is distinctive in that although of small capacity it is worm drive employing the Timken axle. The worm drive type of rear axle is used in all Federal models. In addition to the Continental and Timken units, the Federal Fast Express employs the Eisemann magneto, Zenith carbureter, Oakes fan, Long radiator with the core in a heavy pressed steel shell, Borg & Beck clutch, Detroit Gear & Machine transmission, Peters universal joints, Gemmer steering gear, Stewart-Warner vacuum tank, Disteel wheels, U. S. Royal cord tires, Alemite chassis lubrication, Remy starter and generator, and Exide heavy truck service type of battery.

The clutch is a 10 in. type. The gearset is selective sliding and in conjunction with the 5.6 to 1 reduction in the rear axle, gives a final reduction of respectively 5.6 to 1 on high, 9.4 to 1 on second, 17.4 to 1 on low and 21 to 1 on reverse.



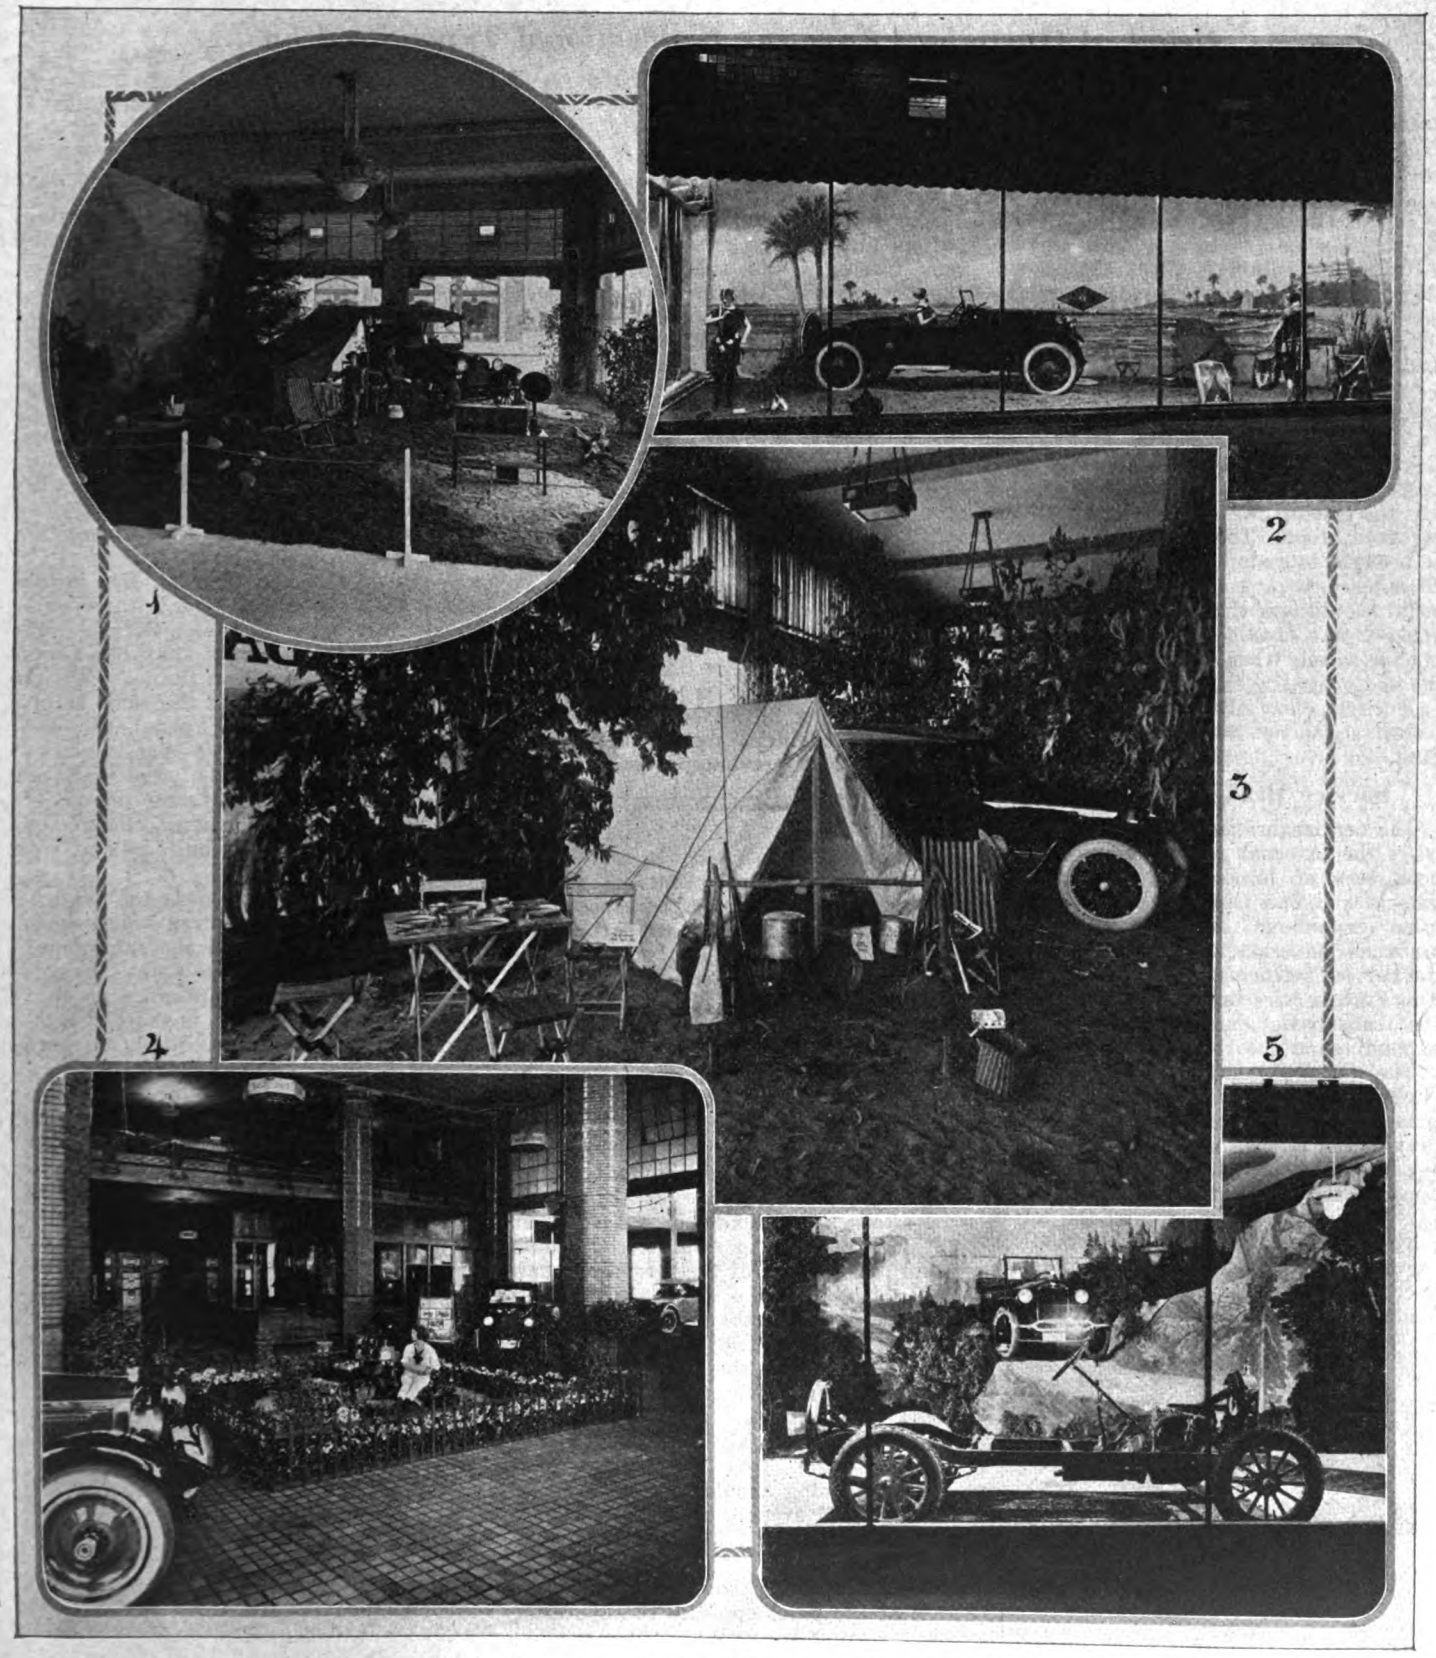
The Federal Fast Express

Chrome vanadium steel springs have been adopted in place of carbon steel, as experience has shown that due to the continuous use of trucks and the great number of miles traveled, the ordinary carbon steel type of spring is subject to considerable fatigue. The tire size is also designed to withstand considerable usage, the car using the 5 in. tire, Royal Cord make, both front and rear.

Thirty-two Combinations

The Federal company has made arrangements to furnish any style body mounted and painted, ready for work. There are in all thirty-two different combinations of seats, bodies, windshields and cabs which have been worked out to fill practically every need of express or delivery work for which this chassis would be called upon. Many of the combinations are interchangeable on the same body and with the same top. Production on these models started July 5, and it is expected that by Aug. 1 demonstrators will be in the hands of all Federal distributors. Owing to the magneto ignition equipment and the adaptability of the truck for various road conditions, it is expected that considerable export business may be secured with it. The price of the chassis is $1,375, f.o.b. Detroit.

The new Liberty coupe



Liberty Brings Out New Coupe for Business and Professional Men

A NEW coupe of the roadster type, designed particularly for business and professional men, is being manufactured by the Liberty Motor Car Co. The body is a distinctly two-passenger design, the seating arrangement being side by side. The lines of the under part of the body are identical with the Liberty roadster and the upper part is a steel covered unit. There are two doors, the pillars of which are wood covered with steel. One of the features of the body is the large glass rear light. This is bevel glass 13 in. in height by 26 in. in width, and is provided with a silk curtain. The body is fitted with a step instead of a runningboard, and there is an aluminum casting at the base of the rear fender which carries out the step idea and, at the same time, provides a rigid support for the rear fender. The soft top is over wood framing and the construction has been worked out to eliminate drumming. The windshield is a one-piece type and the car is provided with a cowl ventilator. Tuarc wheels are standard equipment with nickel trimmed head lights and parking lights. The car is equipped with a water indicator and special radiator filling cap. The windshield is equipped with a visor.

The doors are provided with Eagle locks, with an inside door lock on the left door and an outside door lock on the right. In addition to the usual dash equipment there is also a clock and a cigar lighter.

Some Summer Salesroom Display Ideas

THE salesroom that is bright, cheerful and particularly attractive is the one that helps best to sell in the Summer. Here are some fine examples of salesroom displays that make a particularly strong summer appeal. 1—Camping scene with radio amplifier that announced baseball scores, Albertson Motor Co., Dodge, Los Angeles; 2—Beach scene, Bird-Sykes, Bunker Co., Paige, Kansas City; 3—Call-of-the-Open-Road display, Chase-Morrill Co., Velie and Jordan, San Francisco; 4—Summer garden scene, with radio, Carl C. Anthony, Packard and Durant, Los Angeles; 5—Mountain touring scene, Gardner salesroom, Los Angeles

How to Adjust and Reline Car and Truck Brakes

Detail of Operations Covering Conventional Types Used on Nearly All Motor Vehicles—When to Adjust and When to Reline

IT is quite a simple matter to determine when the brakes need adjustment or relining. When the brakes are properly adjusted, a sudden application of either service or emergency should bring the car to a stop in a short distance, this distance depending largely on the speed of the car when the brakes are applied and the weight of the car. As a rule a light car will be brought to a stop more quickly than a heavier car, and, of course, the faster the car is going, the greater the distance it will cover before it stops. The average car should be brought to a stop in 20 ft. when going 20 m.p.h. A pressure of 30 lb. on the pedal should lock the wheels. The emergency brake should be capable of locking the wheels when several notches from the end of its travel. Both brakes should be entirely clear of the drums when released so as not to cause brake dragging.

Service Brake Adjustment

The service brakes are practically always the external contracting set when both sets of brakes are on the rear wheels and one is contracting and the other expanding. When one set is a transmission brake, it is the emergency, the service set being on the rear wheels. The Ford service brake is on a drum in the transmission, and the emergency is expanding on the rear wheel drum.

The external contracting brakes vary slightly in construction, but the general principles are about the same. The brake band is positioned at three points, the brake anchor pin which is directly opposite the contracting linkage, the upper part of the equalizer and the lower part of the equalizer. The equalizer serves to allow the same amount of clearance on the top and bottom of the drum when the brake is released. The release spring acts between the support at the bottom and the lug on the brake band, thus forcing it all the way out. On the bottom the distance that the band can clear the drum is regulated by two nuts on the opposite side of the support from the spring. One of the nuts is the adjusting nut and the other is the lock nut to keep it from turning after the adjustment has been made. In some cases one or two additional points of adjustment are provided, as in the case of the Dodge, which has a top support and a rear support. A typical brake construction is shown in Fig. 1.

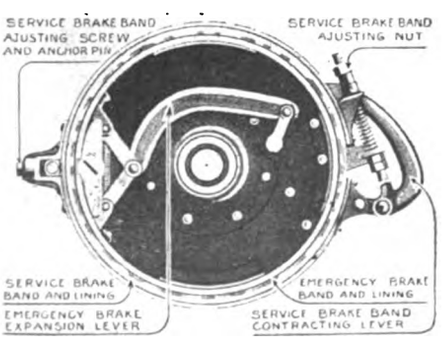

Fig. 1—A typical brake set with toggle operated internal brake and equalized external brake

Better Mechanics

ARTICLE No. 249

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

The first thing to be done in making any brake adjustments is to jack the rear wheels clear of the floor, release all brakes and see that the gear shift is in neutral. If the brake pedal can be pushed all the way to the floor or to the end of the slot without locking the wheels, the service brakes need taking up. Proceed as follows:

1—Loosen the locknut on the equalizer on either brake and slack off both nuts toward the bottom of the threaded equalizer until there is a clearance of about 1/32 in. between the brake lining and the drum at the end of the band.

2—Set down on the upper adjustment which is either a winged nut or an elongated nut, until the top of the brake band is approximately the same distance from the drum.

3—The lining should now be clear of the drum all around, and this clearance should be not over 1/32 in. nor less than 1/64 in.

4—If the lining has too much clearance at the point opposite the operating mechanism, it is usually possible to make an adjustment by removing a cotter pin in the brake anchor pin and setting the screw in until the clearance is correct. This may necessitate making the other adjustments over again. See Fig. 2.

5—Where there are more adjustments, each screw should be turned the proper amount so that the clearance is uniform.

6—When the clearance has been adjusted, proceed in the same manner to adjust the clearance on the other service brake on the other wheel. Theoretically both brakes should now be equally adjusted and should take hold at the same time and should lock at the same time. Practically, however, this seldom happens, and further slight adjustments will have to be made on account of varying amounts of lost motion, slight misalignment, etc.

7—Have someone depress the brake pedal about 2 or 2½ in. Both wheels should just begin to brake slightly. If they do not both catch at the same time, set up the adjustment on the loose wheel till they both do brake at the same point.

8—Depress the brake pedal till one of the wheels is locked so that it cannot be turned with the hands. See that the other wheel locks at the same point. If it locks either before or after, change the adjustment slightly till both lock at the same point.

9—It occasionally happens that an adjustment cannot be secured where both wheels start to brake at the same point and both lock at the same point. In this case it is better to compromise so that a medium pressure which is short of locking the wheels operates equally on both wheels.

10—There may be some misunderstanding as to the term equalization. Some brakes are said to be equalized, and this means that there is a mechanical contrivance arranged so that any pull from the pedal is distributed equally to each brake. In addition to this, each individual brake band is equalized so that the pressure is equally distributed around the band when the adjustments are correct. In spite of equalizers between the

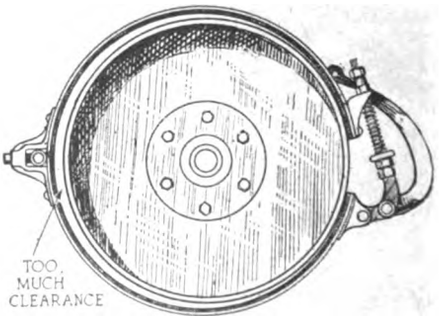

Fig. 2—There is too much clearance at the anchor pin. This is remedied by adjusting the screw

Digitized by Google

two brakes, adjustments must be made so that the brakes take hold at the same time. Failure to make the adjustments this way will result in skidding in slippery weather and in slewing of the car when the brakes are suddenly applied.

11—The adjustments on the service brakes are all made on the equalizer, not on the pull rods. On practically all cars the rod adjustments are made at the factory and are correct for all time. Changing the adjustment on the pull rod will not effect a correct adjustment and will throw the whole mechanism out of order. There are a few exceptions to this rule, but not very many. Any special adjustments involving the length of the rod would be covered by individual manufacturers' instructions.

12—Occasional trouble will be experienced with bands that are bent. The lining in such a case will have more clearance at some places than others. This can generally be remedied by inserting the blade of a screwdriver at the point where the clearance is smallest and then depress the brake pedal. This has a tendency to bend the band out at that place. More serious bending, which cannot be remedied by the screwdriver, can be taken care of by removing the brake band and hammering it to a true circle with a wooden mallet over an old brake drum. To do this it is necessary to remove the wheel, brake rod connections and the anchor pin.

13—Where the brake chatters, grabs or refuses to take hold till considerable pressure is applied, then takes hold all at once, the reason can be ascribed to glazing of the brake lining. Relief can sometimes be obtained by squirting generous quantities of gasoline or kerosene between the lining and the drum, followed by an application of neatsfoot or castor oil. If the glazing resists this treatment, the band is removed and the lining soaked in gasoline for an hour, followed by a good scrubbing with a stiff brush and an application of neatsfoot or castor oil. Any lining which resists this treatment is probably too burned or charred to be of further service and should be replaced. While such a treatment is necessary to get rid of the glazing, it is probably not the best thing in the world for the lining. Linings are impregnated with various compounds to give them longer life, better holding power, etc. These compounds are supposed to be oil, water and gasoline proof, but after having undergone great heating and soaking in oil, it is a question whether some of the compound is not dissolved out. At any rate, they will be better than a glazed lining, and the soaking can result only in the slightest harm. Opinions on this may differ.

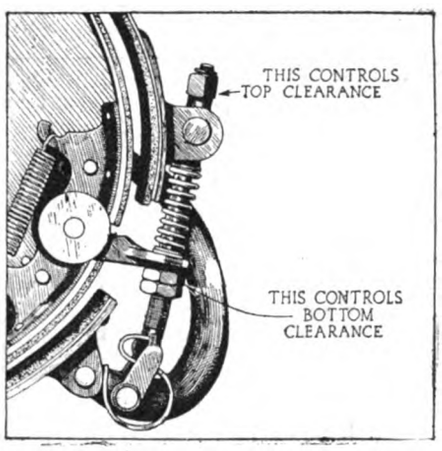

Fig. 3—Adjustments to get correct top and bottom clearance

Emergency Brake Adjustment

The emergency brakes are either of the internal expanding type, where both brakes are on the rear wheel drums, or are of the contracting type when placed in back of the transmission. There are some cars with service and emergency brakes external contracting side by side on a single wide drum, and there are some other constructions using two drums, one inside the other on the rear wheels, both sets being either internal or external. The large majority of cars, however, have the emergency or hand brake internal expanding on rear wheels.

The operating part of the brake consists of two shoes, which are hinged at the anchor pin and expanded at the opposite side, either by a toggle joint or a cam. Either of the two methods forces the shoes away from each other at the operating end and into contact with the inside of the drum. The shoes are faced with brake lining. A new type that is used to a limited extent on trucks and will shortly be used on passenger cars has four shoes instead of two.

The emergency brake in the hands of the average owner is not subject to a great amount of wear, as it is supposed to be used only to hold the car stationary or on long hills or in case the service brake fails to hold. When the emergency is of the internal expanding type in the rear wheels, the only possible adjustment is by shortening up the brake rod from the pedal. Usually this adjustment is made at the clevis joint to the pedal. The clevis pin is slipped out after removing the cotter pin, the clevis turned down on the brake rod the desired number of turns and the pin and cotter pin put in place again. Another favorite construction is a wing nut on the end of the brake rod which in this case goes through the pedal. In making a wing nut adjustment either on the service or emergency brakes, care must be taken to get the knife edge of the nut in the slot so that it will lock.

When the emergency brake is at the rear of the transmission, the operations of adjusting are exactly the same as in the case of the contracting service brake. The contracting mechanism is usually at the top and the anchor pin at the bottom. It is usual to allow slightly more clearance at the anchor pin side than elsewhere, and the brake should start to take hold at the top first. A clearance of 3/32 in. at the bottom and 1/32 in. at the top is about right.

There are several cars that have constructions a little aside from the conventional. On the Reo the service brake and clutch are both operated by the left or clutch pedal. Depressing the pedal slightly releases the clutch and depress-

Fig. 4—Using a screwdriver to bend the band

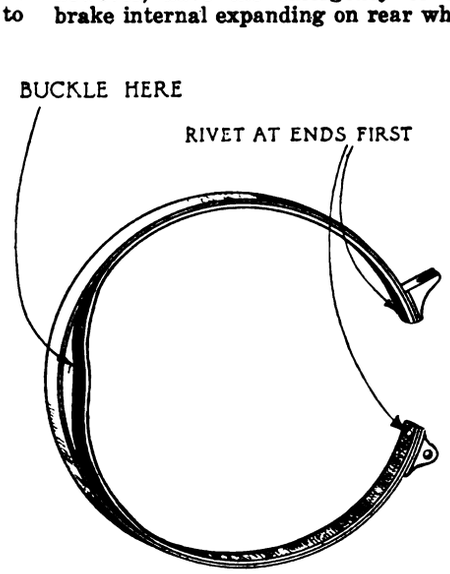

Fig. 5—Method of buckling the external lining

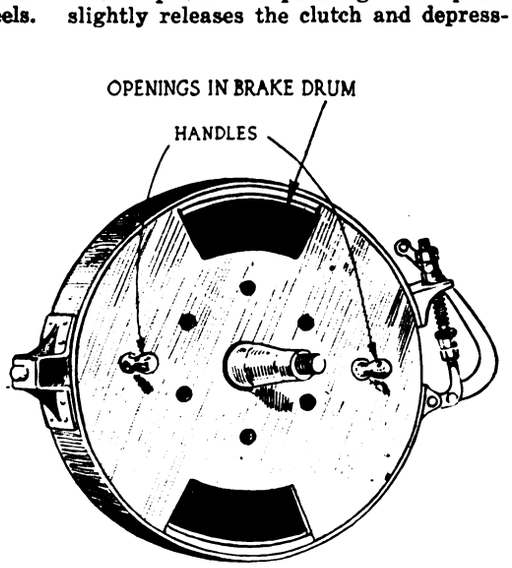

Fig. 6—A dummy drum for adjusting the brakes

Digitized by Google

ing it further applies the service brake. It is necessary to see that the brake does not take hold till the clutch is disengaged. The Reo emergency brake is operated by the right pedal which has a ratchet lock so that it will stay down at any point until released by the latch. There is no hand lever. The actual braking mechanism is conventional. By depressing both pedals at once both sets of brakes are applied. On the Reo the emergency would tend to receive more wear than on a car where the emergency is operated by a hand lever because it is used not only for holding the car, but for stopping it as well.

The Ford service brake operates on a drum in the transmission. There are three drums in the transmission and the brake is the rear one. Adjustment is made by tightening up the adjusting nut on the right side. The recoil spring is between the band lugs. The nut engages a slot every half turn to lock it in place. It is usual while the transmission door is off to also adjust the reverse band. The slow speed band is adjusted from the outside. The Ford emergency brake is of the internal expanding type in the rear wheels and is not lined. There are two hub brake shoes expanded against the drum by a cam. The emergency brake is not intended for stopping the car, merely for holding it.

Relining Brakes

When brake linings have worn down to a point where it is impossible to get an adjustment, it is necessary to reline them. While some constructions will necessitate special methods, the following series of operations will be found approximately correct for most cars having external service brakes and internal service brakes:

1—Jack up the rear axle at both ends so the wheels are clear of the floor. Block the front wheels securely.

2—Remove the wheels. The various types of axles will require slightly different operations for this. Semi-floating axles are removed by taking off the hub cap, removing cotter pin, removing axle nut and removing wheel, using a puller if necessary. Floating axles are removed by taking off the hub cap, removing the bearing adjusting nut and cone and slipping off the wheel.

3—Disconnect the brake bands, breaking the joints to the rods and the brake anchor pins. Also loosen additional adjustment points if they are used.

4—Disconnect the internal shoes in the same way and lift them out. Even if the emergency brakes are not worn enough to warrant relining, it is customary to reline both brakes at once on account of the economy of time in taking the other parts off.

5—Wash the bands and all other parts around the brake operating mechanism with gasoline or kerosene.

6—Remove the old brake lining, using a cold chisel ground on one side only like a carpenter's chisel. Another method is to drive them through from the lining side with a punch, as the heads will be worn off.

7—Rivet the new lining on, being careful that the lining is the correct length, width and thickness, as called for in the manufacturer's specifications. Hollow brass or copper rivets are used with the heads on the lining side. Thin linings can be worked from the band side, driving the rivets through the lining through the holes in the band and clinching them over some rounded piece of iron. Heavier lining should be drilled and countersunk. Lining that is so heavy that it cannot be worked readily can be softened by soaking in hot water for a half hour.

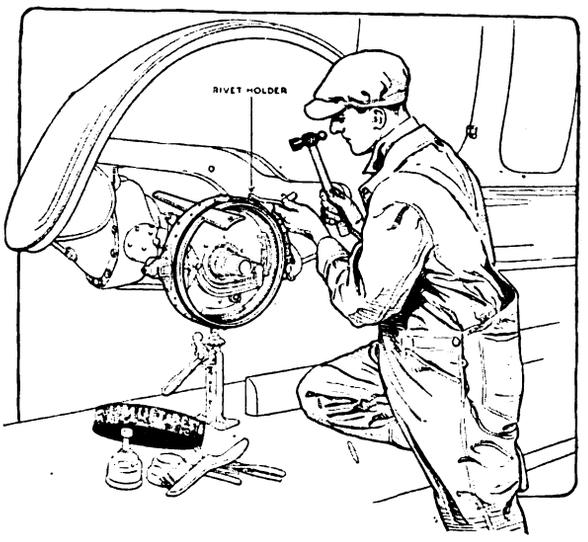

Fig. 7—The Multibestos method of relining external brakes

8—In riveting lining to the external band, rivet one end, then buckle the lining into a loop so that it is a little too long and rivet the other end. The buckle is forced in place and the other rivets put in. If the buckle is made too large, it will not go in place. The lining in internal shoes should be pulled as tight as possible.

9—Some service men claim that the method used in operation No. 8 is liable to cause a wrinkle in the lining when the brake gets in service and recommend that the external lining be pulled tight and cut short. This will leave flat places between the rivets, which will stretch out to meet the band as the lining is worked in.

10—Replace the bands and shoes, making the connections and fastenings good.

11—While it is customary to replace the wheel and make the adjustments to the bands directly to the drum, it is much quicker and easier to use a dummy drum with two peep holes cut in it. This is shown in Fig. 6. The drum is the same size as the regular drum and can be rapidly put on and taken off to make the necessary adjustments. When the right adjustment is secured, the wheels are replaced.

12—Lubricate all points needing oil on the rocker shafts, clevices, cams, etc. Brake anchor pins and toggles need oil at the joints.

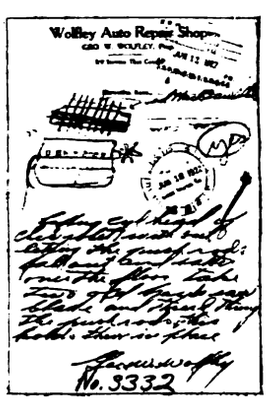
Difficulties with Varying Loads

It sometimes happens that difficulty is experienced with a varying brake action which depends on the load carried. Brakes adjusted correctly for a light load will drag when the load is made greater. This is often caused in cars with a Hotchkiss drive by the axle slipping along the spring or the spring taking a set and throwing the axle out of position. If the axle and the brake rods swing from different centers, there is bound to be difference in the brake action at different loads, and if the springs cannot be set so that the rocker arm is always equidistant from the brake rod pivot, then a compromise adjustment will have to be made. Some of the older types of cars were subject to this difficulty, but this has been generally overcome in the newer models by more careful design.

Multibestos Brake Relining Method

A new and patented method of relining brakes has been developed by the Multibestos Co. This method saves considerable time over the method of removing the linings, but applies to the external bands only. As they are the service brakes and receive the most use, this is not a serious disadvantage, considering the time saved. The equipment necessary is a series of seven anvil rings, an anvil wedge and other tools. The wheels are removed, the old lining cut from the bands without removing the bands from the car, the new lining slipped in place and the proper size anvil ring placed between the linings. A wedge driven in the tapered split in the ring expands the ring against the new lining. Rivets are then driven through the holes in the bands, and they clinch against the anvil ring. The ring is then removed and the wheel replaced. The method is shown in Fig. 7.

Temper Colors of Steel



Fahr.	Color
420	Very faint yellow
430	Very pale yellow
440	Light yellow
450	Pale straw yellow
460	Deep straw yellow
470	Straw yellow
480	Deep straw
490	Yellow brown

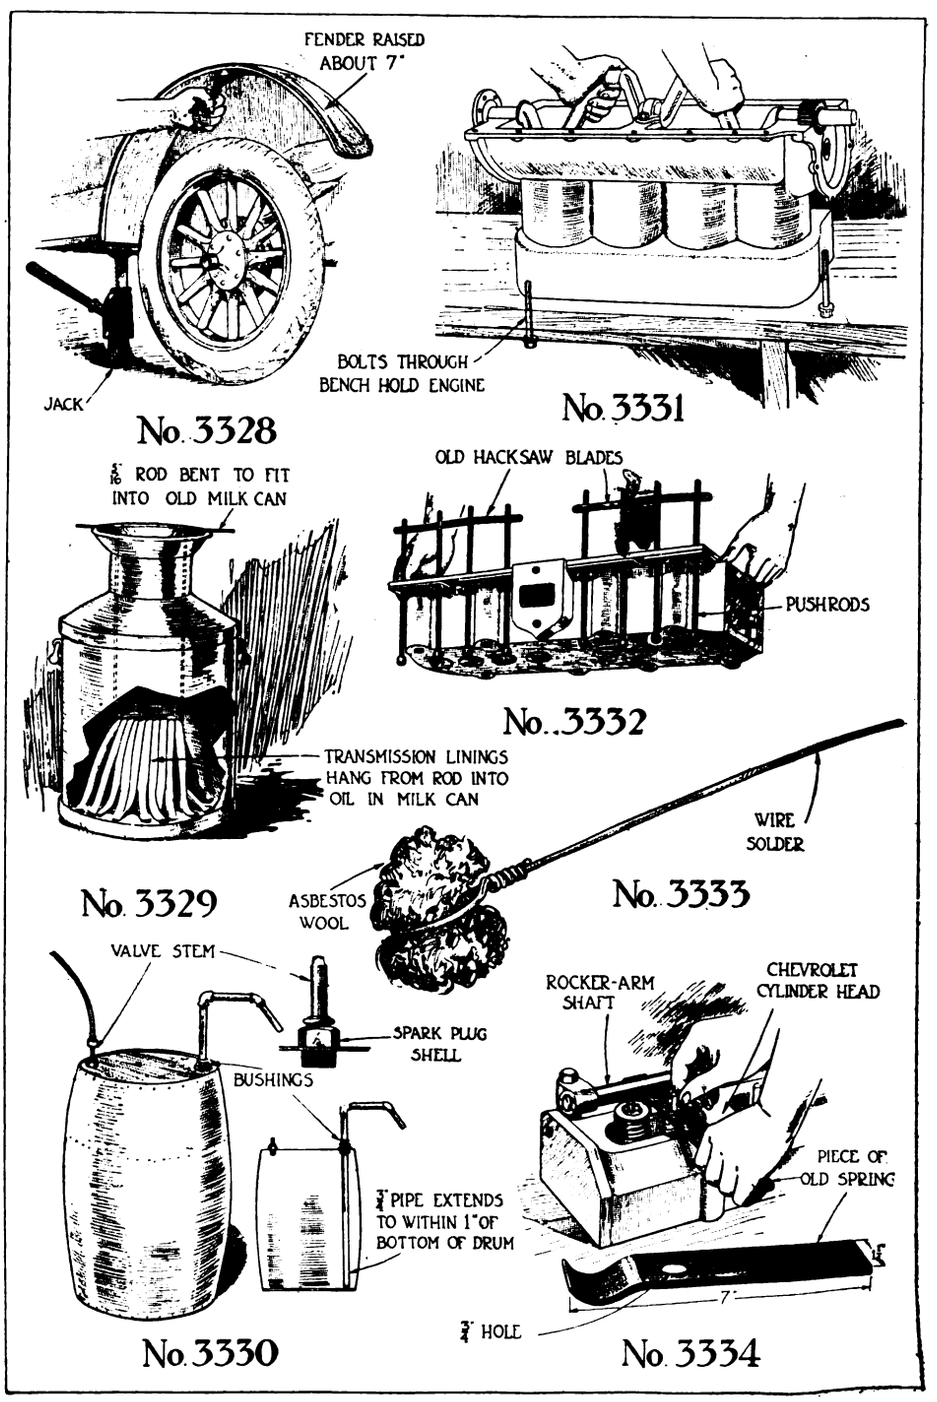
Repairshop Shortcuts

No Apology Needed

MANY of our contributor friends in sending in repairshop shortcuts apologize for the drawings or sketches. They see the pretty sketches in Motor World and imagine that their sketches should be as good. Not at all. The average sketch that comes in is just a few pencil lines to indicate the relation of parts. The very much reduced cut of No. 3332 is better than the average, but is sufficiently explanatory to enable our art department to make the finished drawing which appears on this page. Do not hesitate on account of lack of artistic ability. We pay $1 for each shortcut accepted and will accept those which have not been previously used and which are practical for shop use.

No. 3328—Tightening a Ford Rear Fender.—A Ford rear fender is tightened by placing a jack under the rear end of the runningboard and lifting it until there is a space of 6 or 7 in. between the wheel and fender bolt.—J. H. Kistner, The Kistner Co., Meredesia, Ill.

No. 3329—Oil Soaking for Transmission Linings.—Transmission linings are kept pliable and in better shape by soaking in oil. An old milk can is fitted with a bail on which the linings are hung.—H. V. D. Sweet, Canajoharie, N. Y.



No. 3330—Air Pressure for Emptying Oil Barrels.—Air pressure is used for emptying an oil barrel by fitting a spark plug shell with a tire valve and applying air pressure through this. The other bung hole is fitted with a pipe which extends to within 1 in. of the bottom of the drum. The air pressure forces the oil up through the pipe.—J. W. Kozel, Midway Garage, Blunt, S. D.

No. 3331—Holding a Ford Cylinder Block.—A Ford cylinder block is held to the bench by drilling two holes through the bench which correspond with the holes for the cylinder head cap screws. The cap screws are inserted from underneath the bench.—A. E. Dailey, Ever Ready Garage, Chester, Pa.

No. 3332—Holding Chevrolet Push Rods.—The Chevrolet cylinder head is lifted without letting the push rods drop by inserting thin hack saw blades on alternate sides of the push rod so that the spring of the blade holds the push rod in place.—George W. Wolfley, Wolfley Auto Repair Shop, Hiawatha, Kan.

No. 3333—Indestructible Acid Swab.—An indestructible acid swab is made with a tuft of asbestos wool twisted on to the end of a piece of wire solder. The soldering acid does not affect the asbestos wool and affects the solder only slightly.—H. V. D. Sweet, Canajoharie, N. Y.

No. 3334—Chevrolet Valve Spring Compressor.—A valve spring compressor for the Chevrolet 490 is made of spring steel 7 in. long, 1¼ in. wide and ¼ in. thick, bent and drilled to the shape shown in the illustration. This lifter is inserted under the rocker arm shaft, and the hole goes over the valve and depresses the washer so that the key can be taken out.—Richard Spellerberg, City Garage, Highland, Ill.

Equipment to Sell

New Devices for the Car and Truck

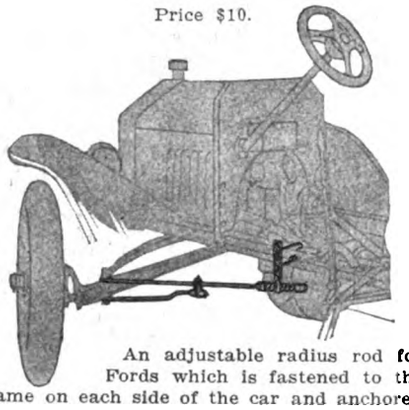
Paragon Disk Wheel

Wilkinson Bros., Portland, Ore.

The disk wheels have demountable rims and are fitted with standard hubs. The construction is a two-piece disk built on the arch principle, each disk being dished and cupped and coming together at the edges. This construction allows the use of lighter disks than with the single disk type. The tire valves come to the outside of the disk to allow easy installation. The price for the Ford set is $50.

Woolwine Emergency Running-board Set

Woolwine Metal Products Co., Los Angeles, Cal.

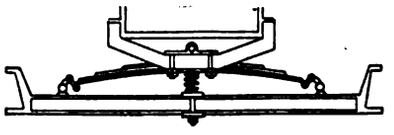


The cabinet is a runningboard set containing three cans, one for water, one for oil and one for gasoline. The cans are enclosed in a metal case of heavy steel which is japanned and baked. The cover of the box is hinged and the entire outfit is made noiseless by interlining and equipping the handle of each canteen with a spring which holds it in place. The spouts when not in use telescope into the canteens and are closed by mouth-pieces. The fastening arrangement prevents removing the cabinet without its destruction.

Common Sense Radius Rods for Fords

The Silver Mfg. Co., Salem, Ohio.

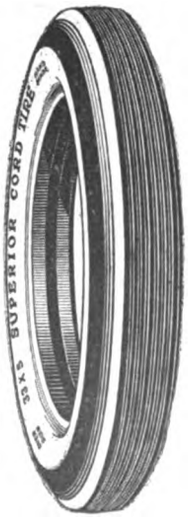
Price $10.



An adjustable radius rod for Fords which is fastened to the frame on each side of the car and anchored to the front axle both above and below. Through the adjustment feature, alignment of the front wheels can be maintained.

C. P. Springs for Fords

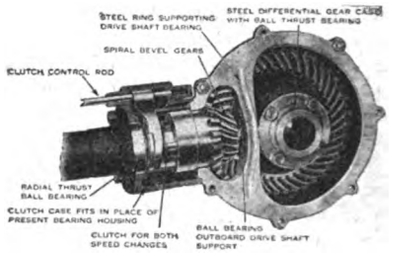
Fifield Bros Co., Augusta, Me.



Price $2.

An auxiliary coil spring for Fords attaching to the center of the front axle extending upward to the spring. Two plates attached, one to the top and one underneath the axle and the spring fits over two humps which keep it in place.

Superior Seven Ribbed Tread Tire

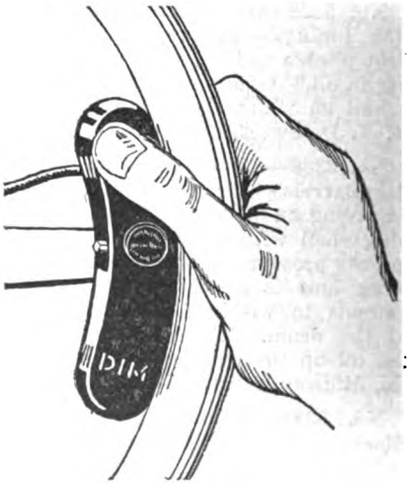


Cord Tire Corp., Chester, W. Va.

The seven ribbed cord tire has a wide flat tread and the tread surface is as wide as in the non-skid type. The tire was developed especially for larger and heavier cars.

Austin Two-Speed Axle for Fords

Two-Speed Axle Co., 15 West Second Street, Cincinnati, Ohio.



The axle gives the Ford car four forward and two reverse speeds. Two of the forward speeds are the same as at present and of the two additional speeds, one is between the present Ford low and Ford high to be used for long hill climbing. The other speed is 36 per cent higher than the present Ford high to be used on smooth level driving. The unit is constructed with ball bearings, the dominating feature being a ball bearing support on the outer end of the pinion shaft. This fits into a housing of a Ford without any alterations. The change can be made in the same time that it now requires to dismantle and assemble a Ford axle.

Roxwitch Headlight and Horn Control

Patton-Mac Guyer Co., Providence, R. I.

Price $3.85.

The device is fastened on one of the spokes of the steering wheel spider, bringing it close to the rim. The control of the headlamps, either bright or dim, and of the horn is brought within the range of the thumb without changing the hand on the steering wheel. The device operates by a simple rocker motion and in neutral position it puts the lights out. The horn in the center is operative in all positions. It is fully equipped with cable and terminals. It can be installed with a screw driver and a pair of pliers.

Equipment for the Shop

New Machinery and Tools

Stevens Universal Calipers

Stevens & Co., 375 Broadway, New York City

Price: 4 in. scale, $4; 6 in. scale, $4.50; 8 in. scale, $5

The calipers have four features—rule, inside calipers, outside calipers and depth gage. They are of sufficiently rugged construction to withstand rough service without affecting their precision. The jaws are hardened. The figures are large and clear cut for easy reading. The scale on the front, for inside and outside measurements, is divided into 16ths, which with the vernier on the slider gives readings to 32nds, 64ths and 128ths. The reverse side for measuring depths is divided for direct reading of 32ds.

Dorrance Nut Spinner

Charles J. Dorrance, 728 Monadnock Block, Chicago

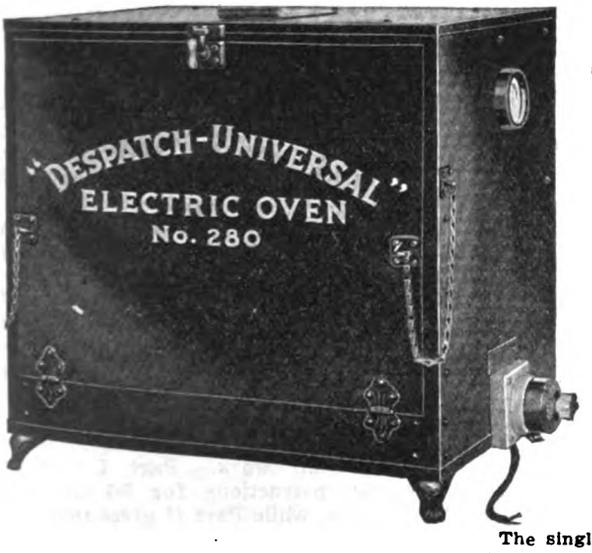
Price 80 Cents

An inner tube valve stem nut spinner wrench made in the form of a wheel. After the nut is started the spinner has sufficient weight to take the nut completely off the valve. The weight is 1¼ lbs. and the wheel is 4 in. in diameter. It fits large and small inner tube base nuts.

Atlas Mikro-Indicator Cylinder Gage

George H. Wilkins Co., 180 North Market Street, Chicago

Price $15

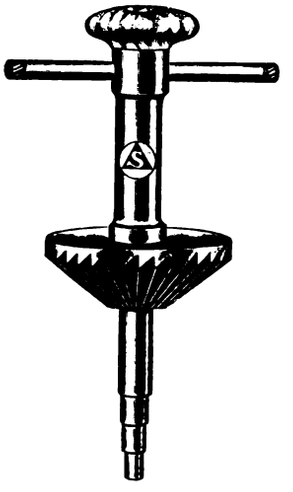


The gage is for testing straightness, size or scoring of cylinders. It consists of two units, the indicator or dial with two contact points which can be removed and used as an inside micrometer and a saddle with a supporting stud upon which the indicator dial is placed and which holds it at right angles to the axis of the cylinder. The indicator measures exact diameters from 2⅝ in. to 5 in., the adjustable rear contact passing through the saddle plate and riding the cylinder diametrically opposite the front contact point. The indicator has auxiliary uses for testing lathes, crankshaft bearings, direct reading inside micrometer, etc.

Despatch Universal Electric Oven

Despatch Mfg. Co., 120-122 First Avenue, No. Minneapolis, Minn.

Price $37.50.



The oven has a temperature range of 100 to 400 deg. Fahr. and a maximum current consumption of 900 watts on high heat, 400 watts on medium heat and 200 watts on low heat. The desired temperature is selected by means of a three point rotary switch. The oven is used for baking armatures, enameled parts, etc. The oven is 18 in. wide, 14 in. high and 14 in. deep.

Stevens Universal Valve Reseater

Stevens & Co., 375 Broadway, New York City

Price $10

The single tool will reseat valves on practically all 45 deg. removable head engines. The pilot is one-piece and stepped off for the four popular sizes of valve stems, 5/16, 3/8, 7/16 and 1/2 in. Each step is slightly tapered to insure a snug fit in the valve guide. The pilot telescopes into the handle and readjusts itself to any valve seat. The large cutter will fit any job, as it tapers from 1⅛ to 3 in. Also furnished with pilot step 1/64 in. oversize at the same price.

Stow Flexible Radial Grinder

Stow Mfg. Co., Inc., Binghamton, N. Y.

Prices: 4 x ¾, $105; 6 x 1, $125; 8 x 1, $135; 10 x 1, $145; 12 x 2, $160.

The flexible radial grinder is belt driven to the top of the flexible shaft and the flexible shaft extends from the supporting arm down to the grinding wheel. It may also be furnished for drilling or with screw driver for assembling. The weight of the countershaft is balanced so that the operator is not obliged to support this weight.

Digitized by Google

Wide Building Permits Use of Ramp

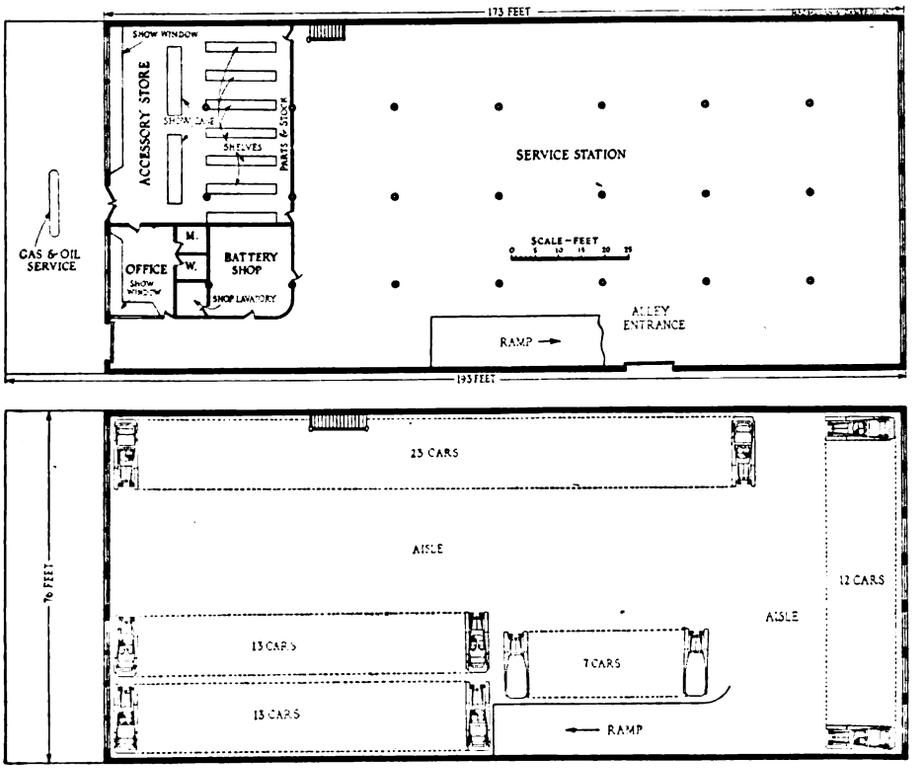
Cars Must Have Sufficient Room to Turn Off Top of Ramp Without Backing

MOST dealers planning the erection of a building of two or more stories favor the ramp to the elevator. The greater convenience and operating economy of the ramp are the big points in its favor. However, it takes up more space, it is likely to interfere with car storage, and in some buildings it may make it difficult to move cars. It is less difficult to fit a ramp into a two-story building, however, than it is with a building of three or more stories.

A ramp is used in the plans shown on this page. The building is two stories and the dimensions are 76 ft. wide and 173 ft. deep. The width of this building favors the use of a ramp. Assuming that the walls are one foot thick and that a row of cars is stored along the wall opposite to the ramp, there is about 58 ft. for a car coming off the top of the ramp to turn in. This width is ample for practically all cars.

The ramp does not interfere with storage capacity to any great extent. In a building of this width the obvious storage arrangement is a single aisle with one row of cars on one side and two rows on the other. This is the arrangement used, with the exception of the row across the back of the building and the single row beside the ramp.

Motor World's Department of



Better Business Buildings

Is a weekly feature of the paper. Motor World is glad to receive and answer inquiries for salesroom or garage plans, but in order that there may be as little delay as possible in submitting the plans desired it is imperative that the following information be given:

Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage; any other pertinent details.

The building is set back 20 ft. from the street line to provide for a double driveway filling station. The accessory store and office face this driveway. The toilets are located in back of the office, and in back of them the battery shop is situated. The office has two display windows—one facing on the filling station and the other on the driveway to the garage. The accessory store is arranged with two combination counters and display cases across the front, and in back of these are shelves for carrying stocks of equipment and parts.

The balance of the first floor is used for service. This part of the building should be arranged so that fine work will be handled at the rear of the building where the light is best. The second story is used for storage exclusively.

Floor plans for two story service station garage on lot 193 x 76 ft. The storage capacity is about 68 cars. The accessory store and stockroom are combined

GEORGIA BILL WOULD REDUCE LICENSE FEE

ATLANTA, GA., July 18—A bill to reduce the state license fee on all classes of automobile vehicles has been introduced before the Georgia State Legislature, now in annual session here. The bill would also repeal the provision in the present law allowing sheriffs $1 for certifying applications for automobile tags made after March 1.

If the bill is passed present license fee reduction would be from $3.00 to $5.00, according to the size of the vehicle. For passenger carrying motor vehicles of not exceeding 23 h.p. the reduction would be from $6.00 to $11.25, and the fee on cars of more than 23 horsepower would be reduced from 40 cents to 60 cents per h.p.

BOOK REVIEW

Automotive Repair, Volume 2. Electrical Service Work by J. C. Wright. John Wiley & Sons, Inc., New York City. The volume has 417 pages and 405 figures. Price $3.

The needs of the electrical service man have been considered from the standpoint of training for the job. The principal repair jobs which make up the work of the electrical service shop have been analyzed into operations which must be performed in order to make repairs, the descriptions of the operations being illustrated by cuts of important parts and operations entering into the doing of the actual repair work. Part I contains working instructions for 56 electrical repair jobs, while Part II gives that part of the theory of electricity which is needed by the repairman for a thorough understanding of the function of each electrical unit. The volume is published June, 1922. The author is Director of the Federal Board for Vocational Education and was formerly Chief of the Industrial Educational Service, Federal Board for Vocational Education.

June Production Reached 271,000

EXCEEDED BY 15,000 RECORD MADE IN MAY

Plants Report Substantial Orders Received from Dealers in Farm Districts

NEW YORK, July 14—While the entire industry is awaiting the expected mid-summer lull in business and is prepared for it, a decline in sales has become apparent only in spots. There has been a slowing up in New York, Chicago and other big cities, but nothing which can be characterized as a slump.

Factories report, on the other hand, that dealers in agricultural districts who have been more or less quiescent for a long period, are sending in substantial orders. This is a positive indication that the farm market has come to life, because these dealers are not taking cars merely on a chance of selling them.

Production schedules have not been curtailed materially and while the output in July will not reach the June record of 271,000, it would not be surprising if it approximated 200,000. Last July, with a production of 176,000 passenger cars and trucks, was the best month of the year with the exception of August.

Gain Over June, 1921, 51 Per Cent

June production exceeds by 15,000 the May record of 256,000. This would make a total for the second quarter of 746,000 and for the first half year of approximately 1,120,000. The total for 1921 was 1,668,000. The gain over June, 1921, was 51 per cent.

Parts makers have noted no shrinkage in the volume of their business. All of them assert their July sales will be as large as those for June, and a good many say their business will be better this month. Commitments indicate that August will be equally good, but commitments under present conditions do not make a thoroughly reliable barometer. Manufacturers feel little hesitation in cancelling or holding up shipments. Collections in the parts branch of the industry are uniformly good.

Truck production continues to average between 10 per cent and 12 per cent of the total output. Substantial sales of light commercial vehicles are expected in the agricultural districts, but sales of heavy duty trucks still are handicapped by the presence in this country of a considerable number of unabsorbed American made army trucks sold in Europe after the armistice and reimported. Several thousand more of these trucks will be brought into the country unless Congress passes the Graham resolution, which would impose a prohibitive re-import duty.

Any forecast of production for the remainder of the year is complicated by the fact that a serious freight blockade on the railroads seems certain to follow the resumption of coal carrying together with the grain harvest which must be moved in a short time. With an unprecedented amount of equipment in bad order because of the shop men's strike, it appears inevitable that the carriers will be unable to handle the volume of miscellaneous freight which will be offered them during the third quarter.

TABLE SHOWING STEADY CLIMB IN SHIPMENTS OF CARS AND TRUCKS THIS YEAR

NEW YORK, July 18—With the figures only 90 per cent complete, reports made to the National Automobile Chamber of Commerce show that June shipments of passenger cars and trucks totalled 271,000, a gain of 15,000, or 6 per cent over May and of 51 per cent over June, 1921. The following table shows the factory shipment figures for the first six months of 1920, 1921 and 1922:

	Carloads			Driveaways			Boat		
	1920	1921	1922	1920	1921	1922	1920	1921	1922
January	20,057	6,485	15,241	29,283	3,185	7,397	....	93	154
February	25,505	9,986	19,600	43,719	1,507	9,950	....	99	169
March	29,236	16,287	27,380	57,273	9,930	15,800	....	75	264
April	17,147	20,187	30,200	64,634	14,197	22,500	....	1,619	3,200
May	21,977	18,608	33,810	74,286	15,193	28,710	....	2,381	7,220
June	22,516	20,269	33,000	60,746	18,384	30,500	8,350	3,947	7,900

Factory shipments for the other months of 1920 and 1921 follow:

	Carloads		Driveaways		Boat	
	1920	1921	1920	1921	1920	1921
July	23,082	19,470	52,342	15,320	8,702	3,725
August	23,386	20,350	34,060	14,290	7,095	3,565
September	20,804	20,150	24,431	13,550	5,469	3,580
October	17,209	17,323	14,127	11,257	2,519	2,300
November	13,253	14,061	9,497	10,509	659	1,385
December	11,802	12,100	6,469	7,500	89	134

WINTON RETURNING TO GOOD POSITION

CLEVELAND, July 18—The Winton Co., which was caught in the aftermath of the depression of 1920, has been making rapid progress in restoring its finances to normal condition.

Since October, 1921, the company has been operated under the supervision of a creditors' committee, represented by Edwin McEwen as general manager. During that time 50 per cent of the indebtedness has been paid off in cash and the company has current assets double the amount of the balance remaining to be paid.

During the past nine months, the company has brought out a new model which has met with favor in the trade.

Among more important matters of policy, it has been gradually substituting dealer representation for an extensive branch system for the distribution of its cars. In the past month it has disposed of the large New York and Boston branch establishments, and has been fortunate in making strong connections in replacing the branches.

CARAVAN WILL TEACH TRACTOR FARM VALUE

PORTLAND, ORE., July 17—A caravan of trucks, tractors and trailers has left Portland on a 4000-mile tour of Oregon, covering a period of three months, for the purpose of giving lectures and demonstrations on the use of trucks and tractors on the farms. The feature is being directed by the Ford Motor Co.'s Oregon branch at Portland, with a large number of other concerns co-operating.

More than 40 machinists, drivers and lecturers are with the caravan. The itinerary will cover the entire state, the caravan stopping not only at the main points but going out on side roads to reach the more distant points. Stops will be made at rural towns and at centrally located farms in the different communities, where programs including truck and tractor demonstrations with farm machinery, radio concerts, motion pictures, lectures and prize contests will be provided.

W. H. Goodwin, manager of the Oregon branch of the Ford company, is director of the caravan. Goodwin staged a similar caravan in Washington last summer which was a big success. At that time he was assistant manager of the Washington Ford branch at Seattle, but since then he has been promoted to head the Oregon branch.

600 Tires Daily by Victor Rubber

SPRINGFIELD, OHIO, July 15—An average of 600 rubber tires a day is being turned out at the plant of the Victor Rubber Co.

War Trucks Still Menace to Trade

MANY ARE HERE NOW; MORE MAY BE BROUGHT

Speculators Sell Stocks at Prices Which Make Competition Impossible

DETROIT, July 18—Development of truck business in the United States by manufacturing companies is being seriously handicapped at this time by the presence of the still large stocks of war trucks brought back from Europe by speculating companies. Word has been received in this city of purchases by large fleet owners in recent weeks of war trucks at prices which made competition impossible.

A strong effort is being made by the speculators in war trucks to induce regular dealers in the trucks which they have in stock to handle these at retail to the trade at such profit as they are able to realize. The dealer trade of the entire country is being steadily canvassed by mail to line up a selling organization, and the belief is shared in the industry that with a sales organization formed, the speculators will undertake to bring in many more trucks from abroad.

Big Cut in Prices

Price reduction in five-ton models of two very prominent makes by the speculators in the past few weeks place these at $1,340 and $1,580 respectively, prices which are about on a par with the usual run of one-ton models. These price changes were broadcasted throughout the country to dealers. The most serious effect of the canvass is that it discourages dealers and is retarding the development of new truck business.

In the fact of competition of this kind, truck makers are turning to Washington to seek the passage by the Senate of the Graham resolution which imposes a 90 per cent duty on these reshipped vehicles. The harm done the industry by the presence in this country of war trucks at present is considered as nothing to the damage resulting if the bars are permitted to remain down.

At least five companies are known by truck manufacturers to be prepared to bring in these vehicles at the first indication that the truck market is in satisfactory condition to make for ready sale.

Truck makers report that they have received information from a reliable source that American trucks are being counterfeited in the Krupp factories in Germany, and that these will be shipped back with the war stocks as trucks that were originally made in this country. Because of conditions in Germany and the exchange situation, it is said these trucks can be made up at prices as low as the auction prices on the war trucks.

TRUCKS WILL CARRY MAIL IF STRIKE HOLDS

WASHINGTON, July 18—Postmaster General Work has had plans prepared under which the mails can be transported independently of the railroads if operations on the carriers are interrupted more seriously by the strike. Work says that the department has available 40 airplanes in addition to 40,000 trucks which are in daily use throughout the country, and a surplus of 2000. Two thousand more trucks could be obtained from the War Department.

SPECIALIZED TRUCK BUILDERS AROUSED

DETROIT, July 17—Motor truck companies manufacturing specialized unit vehicles are planning to investigate the reasons for discrimination by the city of New York against trucks in which specialized units are used. Decision to take this step follows the action of the city street cleaning departments in advertising for bids on trucks in which it is specified the engines must be built by the same company manufacturing the truck. By this stipulation the field of bidders has been limited to a half dozen companies.

It is planned to point out to the city that many of the specialized unit manufacturers have been long in the field, that trucks of this type are employed in many cities of the country with success and that the best interests of New York City or any community are not served by the limitation of its purchases to a certain restricted class. Furthermore, it will be asserted that this discrimination is unfair to the representatives of the companies doing business and maintaining properties in the city.

BUS AND TRUCK MEN TO START CAMPAIGN

ATLANTA, July 17—The Georgia Motor Bus & Transportation Association, which includes in its membership not only operators of motor bus and freight lines but also truck and passenger car dealers, will carry on a campaign of education in an effort to show the public and the state legislature the advantages of motor transport.

The main purpose of the campaign will be to defeat a bill presented to the legislature by railroad interests, under which the bus and freight lines would be made common carriers subject to the same rules and regulations as the railroad and under the jurisdiction of the state railroad commission.

NOW MERCHANDISING PERIOD, SAYS MOOCK

This Feature of the Industry Now Supreme, Says Former N. A. D. A. Official

SAN FRANCISCO, July 18—The history of the automobile industry will make the most wonderful and the most interesting reading for the generations to come the world has ever known, according to Harry G. Moock, assistant sales manager of the Hudson Motor Car Co. and formerly secretary of the National Automobile Dealers Association, in a talk he made to the sales organization of H. O. Harrison Co., Hudson-Essex distributors in this city.

"Our industry is now twenty-two years old and is in its third period," declared Moock. "The first ten years was the engineering period, when engineers racked their brains and worked like Trojans planning and designing a practical vehicle for individual transportation. At first the results of their labors were crude, but within the limit of their time their product evolved itself into virtually our motor car of to-day, which, of course, like any other commodity is being constantly improved."

Continuing, he said:

Factories at Acme of Efficiency

The second period, of another ten years, was devoted to production. It also was a mighty problem, but the manufacturers persevered until today automobile factories are the very acme of efficiency and it was not long ago that one plant announced it was turning out a motor car every six seconds. The Hudson and Essex factory can produce an automobile every two minutes.

The present time and third era is what might be called the merchandising period. There are 177 passenger car factories in the country today and fifteen of them could manufacture all the automobiles needed by the public, and consequently the industry is entering one of the most keenly contested campaigns for business that probably any line of business has ever experienced.

Moock has been away from the factory for about five months and has traveled all over the United States. He states that with the exception of a few labor difficulties good times prevail.

Speaking of conditions, he said:

The agricultural situation is particularly good, practically everywhere everything points to a much improved market for farm produce. And when conditions with the farmer are healthy, it is reflected in the money market, industrials and in every line of business.

Occasionally we hear the query, "when will the point of saturation in the automobile business be reached?" There never will be such a thing. As long as we have boys and girls, there will always be a demand for motor cars.

FIAT 2-LITRE CAR TAKES GRAND PRIX

Italians Make New Records in French Classic with Light Engines

By W. F. BRADLEY

STRASBOURG, FRANCE, July 15 (*By Cable*)—The 2-litre cars, 122 cu. in., demonstrated in the Grand Prix race to-day that they can give higher speeds than those of 3-litres, 180 cu. in., did last year. Felix Nazzaro, a race driver familiar in America 12 years ago, won in a Fiat, covering the 499 miles at 79.3 m.p.h. The time was 6:17:17. Last year Jimmy Murphy in his 3-litre Duesenberg averaged 78.1 m.p.h. for the shorter distance of 322 miles. This year's race was over a triangular course, 8.3 miles per lap, and 60 laps were covered. All cars started in one group, three abreast across the roadway, as at Indianapolis. It was the first time such a start ever was used in a road race.

Italians Win All Honors

It was a veritable Italian field day with Bugatti cars finishing second and third, and another Bugatti still running when the race was called off. Of eighteen starters only three finished the 60 laps. The times of the Buggatis were:

Bugatti—Viscaya 17:15:09
Bugatti—Marco 7:48:04

None of the French or English cars finished the race. All three Ballots had to retire, as did the British Sunbeams.

Perhaps the greatest feature of the race was the fact that there was not a single tire blowout from start to finish. Drivers were forbidden to carry spare wheels, agreeing to complete the circuit to the pits on a flat tire if necessary. It was the first time such sustained road race speed for approximately 600 miles had been maintained without tire troubles.

While there were no tire troubles there was a perfect medley of mechanical troubles, indicating that the engineers of 122 cu. in. cars have still a good deal of refining to do before they are seasoned products. The mechanical troubles were broken crankshafts, connecting rods, pistons and valve stems. There were some cases of broken magneto drive and one of a wheel coming off. When it is remembered that the engines in some of the cars had a crankshaft speed of 5000 r.p.m. and higher, it is not surprising that mechanical troubles developed. This was the first Grand Prix race in which the rules restricted the entries to two litres. Last year one 2-litre car competed and finished third.

Four-Wheel Brakes Predominated

The race was run on a course slippery after heavy rains, but which dried considerably because of the strong wind which blew during the race. It was necessary to take the turns with caution. Four-wheel brakes were used on most of the cars.

The race was a Waterloo for many of the classic drivers of Europe, whose names will remain forever closely associated with early racing in Europe and America. Some of those to drop out were:

Goux, in a Ballot, who ran through a fence but was not hurt, and claimed to have been forced off by Nazzaro, the winner.

Wagner, winner of the American Grand Prix in 1908, went out with a broken connecting rod.

Hemery, who so frequently drove the Benz in American road races, was eliminated by his car catching fire.

Chassagne, familiar in Indianapolis races, broke a valve stem in his Sunbeam.

The same fate befell his running mate, Guinness.

Guyot was eliminated with broken crankshaft.

There was one fatal accident. The victim was Biagio Nazzaro, nephew of Felix Nazzaro, the winner. He was killed when his Fiat overturned in the fifty-third lap, when he was running in third position. His mechanic was seriously injured.

Fiat Made Good Showing

The Fiat team dominated the field throughout the race, except for a brief period of 5 minutes, when Frederic Bugatti took the lead. The Fiats ran one, two and three for most of the race, and two laps from the finish were holding second place, as well as leading. Bordino lost a rear wheel after having held all lap records during the race. His withdrawal and Biagio Nazzaro's accident, happening within a few minutes of each other, lost second and third places when they were leading the nearest Bugatti by nearly an hour.

In addition to the two Buggatis which finished second and third, three others were running at the finish, but were never dangerous competitors.

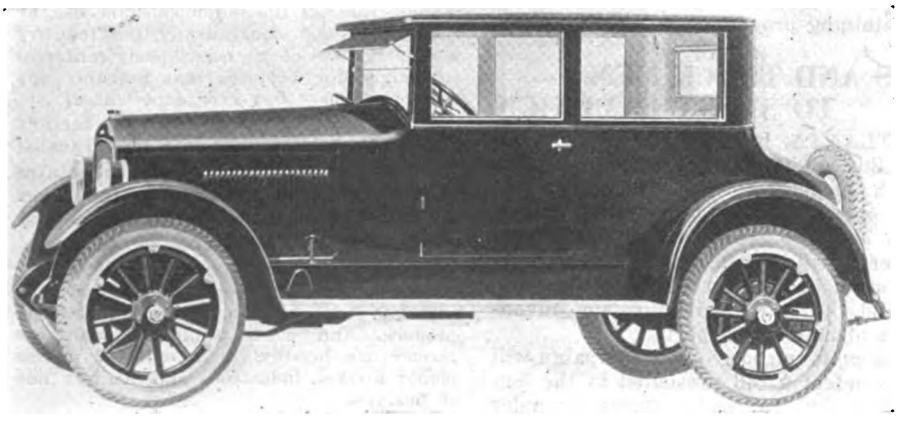
The two British Aston-Martin cars, 1½ litre capacity, made a good showing during the first half of the race, holding their position with all the cars, except the Fiats, but were eliminated at 300 miles because of magneto trouble.

VOISIN KNIGHT WINS FUEL GRAND PRIX

First Three Places Captured by Knight Engines in Fuel Race

By W. F. BRADLEY

STRASBOURG, FRANCE, July 16—To-day's race for four-passenger stock touring cars in which each was given a fixed quantity of fuel to cover the 444 miles was a great victory for the Knight sleeve valve type of engine, which won three and perhaps more of the first positions. It was won by Rugier, driving a Voisin Knight type. The race was an easy victory for Voisin who covered the distance in 6:35:09, or 67.4 m.p.h. The nearest competitor was Durai in another Voisin, 2 minutes behind. In this race the stock cars were allowed 13.7 miles per gallon, and were given enough fuel to cover the distance at that rate. The cars carried four-passenger bodies, the driver being the only passenger, but each car carried 154 lbs. weight for each of the supposed three additional passengers.



The winner used a Solex carburetor. The Voisin is a four-cylinder car, 95x140 mm. and used magneto and Delco ignition.

Those who finished were:

Voisin—Rugier 6:35:09
Voisin—Durai 6:37:31
Voisin—Gauderman 6:42:57
Peugeot—Boillot 6:46:41
Voisin—Piccioni 6:49:58
Peugeot—Artault 7:21 25

The Peugeot-Boillot used a sleeve valve type of engine.

Jewett Coupe, $1395, Which Will Be Delivered in July

The latest Jewett model to be announced is the coupe, $1395, which is now getting into production. Deliverics will start some time in July. It is a four-passenger car with all metal panels over a wood frame. The body is 77 in. long and 57 in. wide. The equipment includes cowl ventilator, sun visor, dome light, locks on the doors and lever window lifts

FORD CANADIAN PLANT TO DOUBLE CAPACITY

Ultimate Plan 1000 Cars Daily —Buys Land for Additions

DETROIT, July 17—The Ford Motor Co. of Canada, Ltd., has paid $1,000,000 for the land adjoining its border city plant on which it is proposed to erect structures which will enable it to double its present capacity of 250 cars daily. An ultimate 1000 cars a day production is contemplated, according to W. R. Campbell, vice-president in charge of operations at the Canadian plant.

Plans for the extension of the plant activities have been worked out in conjunction with Henry Ford, president of the Canadian company. Engineers are now preparing plans for the buildings, which will include machine, forge and body shops, and foundries. Other buildings will be added later, which will provide for the manufacture of all parts and equipment used in the Canadian Ford car. With the completion of the new buildings, the former headquarters will become the body plant. The property provides a river frontage of 2000 ft. and is served by the Grand Trunk and Essex Terminal railroads. According to Ford, the establishing of a tractor plant is contemplated in conjunction with the extension of car manufacturing facilities.

Canadian Demand Good

Tractor building in Canada is contingent upon the location of a water power site. Vice-president Campbell, in explaining the car expansion plans, said:

We have done little construction for several years and we have come through the depression nicely. Our company has enjoyed a healthy year. The Canadian demand for our car is growing. Export business is increasing. Canada is again in a healthy condition. The Canadian market can absorb all the cars we can make and we feel that we should set the example for greater activities in the Dominion.

All engineering activities connected with the Henry Ford enterprises will be housed in a special laboratory building at Dearborn, adjoining the present buildings of the company, which will be razed when the new structure is completed. The new building will be of Grecian style of architecture, one story in height, and will be 800 x 200 ft. in size. The cost will approximate $500,000.

In a statement on the new building, Henry Ford said that about 200 men will be employed, half of whom will be mechanics, and "we may as well call the other half scientists."

Premier In Receivership

INDIANAPOLIS, July 17—The Premier Motor Corp. has been placed in the hands of a receiver by Judge Linn D. Hay of the Superior Court of this city. The Fletcher Savings and Trust Co. was appointed. The suit, said to be a friendly one, was filed by the American Foundry Co., a creditor.

The petition sought judgment of $2,970.82 and asked that the Premier Motor Corp. officers be enjoined from interfering with any property or control after the receiver had been appointed.

The receiver, it is said, will continue to operate the plant pending the effort of the reorganization committee to complete the plans now under way.

Second Receivership for Premier

INDIANAPOLIS, July 18—A second receivership suit has been filed in Wilmington, Del., against the Premier Motor Corp., incorporated under Delaware laws, Chancellor Wolcott appointing Elmer E. Mitchell of Wilmington receiver.

STUDEBAKER TO HAVE NEW SERVICE HOMES

CLEVELAND, July 18—The Studebaker Corp. of America will begin work at once on a new service station on East Twenty-fifth Street, near Payne Avenue, in this city, which will cost about $250,000. The building will be ready for occupancy about Oct. 1. The structure will be a model building of its type with 85,000 sq. ft. of floor space. It will be equipped with the most modern machinery and time-saving devices.

The floors will be connected with ramps in the center of the building and all doors will be operated electrically. There will be a large reception room on the ground floor for the convenience of owners while waiting for minor repairs or adjustments. A separate department will be operated to prepare new cars for delivery to owners.

BROOKLYN, July 15—Work has been started on the erection of a new service station here on property purchased by the Studebaker Corp. at Bergen and Dean streets. The expenditure, including the cost of land, will amount to about $500,000.

68,128 BODIES FORD'S OWN OUTPUT FOR MAY

Foundries Establish Record—Work on New Electric Furnaces Progressing

DETROIT, July 17—Ford Motor Co. body plant at the River Rouge reached a production of 68,128 bodies in May, 15,542 being sedan and the balance, 52,586, touring. With production of cars in that month reaching approximately 120,000 (excluding trucks and tractors), the company is now building more than 50 per cent of its own bodies. Of those made outside, the larger part is the coupe body, which is one of the company's most popular models.

Daily production schedules set in the body plant for June were 2400 phaetons and 900 sedans.

The Ford foundries at the Rouge established a record output for cylinder blocks in a single day on May 24, when 7687 were cast. The average daily output of cylinder blocks at this time is 7100.

Erecting of the electric furnaces at the Rouge is reported to be progressing rapidly.

Packard Has Big Quarter

DETROIT, July 15—Sales of the Packard Motor Car Co. for the third quarter of its fiscal year ending May 31 totaled 4305 vehicles and amounted to $11,226,958. Net profits from operation for the quarter were $317,959.

Factory inventories were reduced from $9,527,575 to $6,144,289 and inventories at factory branches from $7,250,487 to $5,117,016. The company's holdings of cash and bonds amounted to over $15,800,000, an increase of $5,000,000 in the quarter.

JEAN CHASSAGNE WINS FIRST ROAD RACE HELD IN GREAT BRITAIN SINCE LATE WAR

ISLE OF MAN, July 1 (*By Mail*)—The International Tourist Trophy Race run here under the auspices of the Royal Automobile Club and, incidentally, the first road race held in Great Britain since the war, was won by Jean Chassagne in an eight-cylinder Sunbeam at an average speed of 55.78 m.p.h. The course covered 37.75 miles.

F. C. Clement driving a Bentley finished the course only four minutes behind Chassagne Third place was won by O. Payne in a Vauxhall, six seconds ahead of the fourth arrival, W. O. Bentley, driving a Bentley.

Five cars out of nine entered, finished, the three Bentleys being the only team that completed the course.

Simultaneously the "Fifteen Hundred" Trophy Light Car Race over six circuits of the same course was won by Sir Algernon Lee Guinness, driving a four-cylinder Talbot-Darracq at the average speed of 53.30 m.p.h.

Inclement weather marred the race to a great extent, a heavy rain that set in at the start and continuing until the finish rendering the already difficult course still more trying.

The five cars finishing are as follows:

Driver and Car	Cylinders, Bore and Stroke	Time	M.P.H.
J. Chassagne (Sunbeam)	8—2 15/32 x 4 13/32	5.24:50	55.78
F. C. Clement (Bentley)	4—3 5/32 x 5 7/8	5.28:59 3/5	55.60
O. Payne (Vauxhall)	4—3 11/32 x 5 3/16	5.43:45 1/5	52.80
W. O. Bentley (Bentley)	4—3 5/32 x 5 7/8	5.43:51 1/5	52.69
W. D. Hawkes (Bentley)	4—3 11/32 x 5 3/16	6.28:41	46.61

ALL NORTHWEST SENDS DELEGATES TO MEETING

Washington Holds First Convention Since Formation of One Association

OLYMPIA, WASH., July 18—The biggest and best convention in the history of the automobile industry of Washington State opens here Friday with delegations from all parts of the Northwest in attendance. The gathering marks the first convention since the dealers and the trades merged into a single association, and will draw the largest attendance ever seen here.

Organized opposition to a proposed gasoline tax of three cents a gallon, better merchandising methods in handling used cars and higher efficiency in service practice, will be some of the big topics of the convention, discussed by those attending.

Among the guests of the convention will be P. E. Chamberlain, Lynn Shaw of the N. A. D. A.; Gordon Lee, chief of the automotive division of the Department of Commerce, Washington, D. C., and tire and service managers from all parts of the West. Seven craft conferences will mark Friday's sessions, ending with a banquet and dance Saturday night. The general session of the convention, in which all branches of the trade will participate, will be held Saturday.

EXPECT G. M. PROFITS TO EXCEED ESTIMATE

WILMINGTON, DEL., July 18—While the balance sheet for the General Motors Corp. has not been issued, it is learned on reliable authority that it will show operating profits of between $30,000,000 and $33,000,000 for the first six months of the current year, considerably exceeding the expectations of the officers.

The company has liquidated all of its bank loans, which at their peak totaled $80,000,000. Resumption of dividends on common stock depends on the volume of business for the remainder of the year. The inventory, it is said, will show under estimates of values, rather than over estimates. The company showed a final deficit of $65,000,000 at the close of 1921.

N. A. C. C. SETS DATE FOR N. Y. SHOW WEEK

BUFFALO, July 17—The most important action taken at the meeting of the directors of the National Automobile Chamber of Commerce at the Buffalo Country Club was the decision to hold the annual New York show the week of Jan. 6.

Colonel Charles Clifton, president of the N. A. C. C., presided at the meeting. Reports received by General Manager Reeves show that sales of cars and trucks are holding up well all over the country, but that something of a slowing up may be expected soon. Much gratification was expressed over the extraordinary production record of 271,000 cars and trucks in June.

MASON TRUCK MAKES 1949-MILE TEST RUN

FLINT, MICH., July 18—The Mason Motor Truck Co. has completed a test run to New York and return with an experimental model of its one-ton "road king" truck, which covered the distance of 1949 miles without a single mechanical repair. When the truck reached New York it was accepted by W. C. Durant without change.

Durant declared it was the first experimental job he ever saw which was accepted without change after its maiden trip.

The truck averaged 15.5 miles per gal. of gasoline for the entire distance.

Production of the one-ton model will begin at once. Experimental work has been started on a two-ton model which will be produced in about 90 days.

Black & Decker Pays Dividends

BALTIMORE, July 18—The Black & Decker Manufacturing Co., Towson Heights, paid a dividend of 2 per cent on the preferred stock for the second quarter and at the same time paid a dividend of 2 per cent for the fourth quarter last year, which is the only dividend that the company had passed.

Sales for the first six months of this year were nearly a million dollars gross.

G. M. C. WORKS OUT UNIFORM CONTRACT

Can Be Cancelled Only for Cause—Sliding Scale of Discounts

DETROIT, MICH., July 18—Following a series of conferences between executives of the several car manufacturing divisions of the General Motors Corp., a contract with dealers has been developed which will embody the best features of former contracts of the several units and make them available to dealers in all cars made by the five divisions of the corporation.

The contract itself is made in perpetuity with the dealer and can be cancelled only for cause. Each division will continue as formerly to enter into contracts with its dealers and these contracts will be filed with the division headquarters. Complete authority in the merchandising of its products is vested in the producing division.

Under the new form of dealer relationship, there will be no renewing of contracts at stated intervals, but instead changes that may be advisable from time to time will be made in the form of appendixes to the contract proper. These will vary according to the needs of the particular manufacturing divisions.

Discounts According to Volume

An outstanding feature of the contract is that it provides discounts according to the volume of business done by the dealer. There is a sliding scale which gives to every dealer an opportunity to increase his earnings by increasing his business. In providing for this the corporation wishes every man to know the basis upon which he is doing business.

Through the contract it is hoped to establish division control over the freight and handling charges incident to the shipping of cars, so that each division may be in position to know just what its product should retail for in any given section of the country. The fixing of these charges has to this time rested with the dealer entirely and varied largely. Under the contract these charges will be brought to a more uniform basis.

Kansas City Sees the Fordson at Work

The industrial uses of the tractor were featured at the recent Fordson tractor show in Kansas City. The exhibition drew an attendance of 15,000 people from which 1500 prospects were obtained. The show was conducted by the Greater Kansas City Fordson organization of 13 dealers

TRUCKS MAY BE USED BY MILK PRODUCERS

Steps Taken in Event I. C. C. Refuses to Allow Lower Freight Rates

WASHINGTON, July 18 — Steps are being taken toward the employment of motor trucks in the transportation of milk, on short line hauls from the "milk sheds" to large cities. This announcement was made here by Charles Holman, executive secretary of the National Milk Producers Association, composed of twenty-six allied associations having more than 200,000 members.

Because of the excessive rates on milk and cream, which are now being transported by the railways and on which the recent reduction of rates does not apply, the milk producers must turn to some other source of transportation, and the truck, the association believes, offers the solution.

Seeking a Solution

So convinced is the association that it will be necessary to resort to truck transportation that it has asked the National Automobile Chamber of Commerce to submit proposals and data on the best method of solving the problem of their members.

Pending the survey of the situation by the N. A. C. C., the milk producers are bending their efforts to have the Interstate Commerce Commission issue an order permitting them lower rates on the transportation of their product. Because of the fact, however, that all milk and cream is transported by passenger and express trains, little hope is entertained for a reduction in rates.

Chief among the problems submitted to the N. A. C. C. is whether it would be more economical for the association to operate its own milk trucks in fleets, or whether it would be best to organize a holding company, the stock to be sold to the milk producers, which would handle all short haul milk.

HUDSON JUNE SALES LARGEST IN HISTORY

DETROIT, July 17—Comparing business for the first six months of this year with 1920, the former leading production year, Hudson Motor Car Co. declares that sales for the six months period have been 95 per cent of the total sales in the same period in 1920. Before Sept. 1 production is expected to pass the production figure for the first eight months of 1920, and the output for the remainder of this year will run far ahead of the latter part of the former record holder.

July sales will be about 18 per cent greater than in July, 1920. The August output will be more than 50 per cent higher than in August, 1920, and more than 200 per cent greater than in 1921. June sales were the largest for any single month in the company's history.

Indications that the farmer will soon come into the market are found by the company in the fact that heavy orders are coming in from distributors in the farm belts. This is particularly true at the southern points. Dealers on the eastern coast and the Pacific northwest down to San Francisco and east to Salt Lake City are also reported placing unusually large shipments.

SAFETY-FIRST DRIVE HITS AT PEDESTRIAN

CLEVELAND, July 18—The entire community has been united under the leadership of the Safety Council of the Cleveland Chamber of Commerce in a drive to make the pedestrians obey traffic laws.

It is the first time since the automobile came into general use that safety drives have not been directed against owners of cars and the first time that the pedestrian has been directed in a city-wide campaign to watch his step.

The campaign was organized by Adam Lintz, secretary of the Safety Council, but a share of the credit for the movement is given M. F. Bramley, president of the Templar Motor Car Co. and president of the Safety Council.

On all down-town posts, pasteboard crosses similar to those at steam railroad crossings have been placed. Eighteen hundred of these are doing duty in the city. These warn pedestrians to "stop, look and live"; to "Don't Jay-Walk" and "Avoid Accidents."

One thousand boy scouts have volunteered for service, and they are distributing cards bearing this warning: "Don't be a Jay-Walker. Please cross at crossing; it helps to reduce accidents."

G. M. FINDS DEMAND FOR BUSES GROWING

PONTIAC, MICH., July 17—Healthy demand is being met by the motor bus model being turned out by the General Motors Truck Co. at the plant here, according to W. L. Day, general manager. Day said that while development of this field is naturally slower than with the standard truck models, there is every indication of big business ahead, and stated that the production of the plant thus far had been readily absorbed.

No special effort is being made to push the bus model at present, though factory officials have indicated that it is likely efforts will be made to place the bus generally on lines for interurban traffic and in consolidated district school use.

Gray Models Delivered

CHICAGO, July 18—The Gray car in the open model is now on display at the salesrooms of the Simmons-Handin Motor Co., Chicago distributor, and delivery is being made of the phaetons and chassis.

SENATE GETS STARTED ON GASOLINE PROBE

Huge Consumption of Fuel in May Draws on Reserve Stocks

WASHINGTON, July 18—The Senate's investigation of the price of gasoline and oil is under way. The inquiry is being conducted by a special committee, appointed from members of the Senate Manufacturing Committee, seeking to find the cause for recent increases in the retail prices of gasoline and allied products.

The personnel of the Committee includes Senator Robert M. LaFollette, chairman of the Manufactures Committee; Senators McNary of Oregon, Jones of New Mexico, and Smith of South Carolina.

Gasoline Consumption Jumps

Reflecting the tremendous increase in the use of motor vehicles during the late spring and early summer months, refinery statistics for May, as compiled by the Bureau of Mines, show that domestic consumption of gasoline is breaking all records. The May consumption figures are within 4,000,000 gallons of the August peak figures, although occurring three months before the customary month of largest consumption.

Stocks have been abnormally reduced through sales to jobbers and it is expected that the June consumption figures will exceed the high mark of August of last year. Total gasoline consumption for May amounted to 499,242,343 gallons against a production of 513,658,966. The daily average consumption amounted to 17,949,178 gallons, while the daily average production amounted to 16,798,834 gallons. These figures relating to consumption include exports and shipments to insular possessions. Production of gasoline increased 41,000,000 gallons over the month of April.

JULY WITH OAKLAND MAY SURPASS JUNE

PONTIAC, MICH., July 18 — More orders for motor cars are booked ahead for July production at the plant of the Oakland Motor Car Co. than have been on the books for any month in the past ten, according to W. R. Tracy, assistant sales manager. July promises to exceed June business, which was 50 per cent better than that of June, 1921, and closely approached that of June, 1920, according to Tracy.

Good Overland Quarter

TOLEDO, July 17—The Willys-Overland Co. reports that the second quarter of 1922 was one of the best business periods it has had in years. Orders on hand indicate that shipments for the next quarter will exceed 50,000 cars. Compared with the first five months in 1921, Willys-Overland sales increased 348 per cent in the same period of 1922. The increase in business was largest in the South, where it was 406 per cent.

PIERCE ANNOUNCES BIG PRICE SLASH

All Models Cut—Closed Cars Show Trend with Heaviest Reduction

BUFFALO, July 17—The Pierce-Arrow Motor Car Co. announces substantial reductions in the prices of all its passenger cars. The list follows:

	Old Price	New Price
4 and 7 pass. Touring..	$6,500	$5,250
Coupe	8,000	6,800
Sedan	8,500	7,000

The reduction of $1,000 in the price of the coupe and $1,500 in the price of the sedan are significant of the sharp downward trend in closed car prices.

CASE HAS NEW MODEL; ALL PRICES REVISED

RACINE, WIS., July 17—The J. I. Case Threshing Machine Co. has brought out its new Model W which replaces the previous Model V. The new car is slightly longer, the wheelbase being 129 in. as against 126 on the older model. The engine bore is 3⅝ in. as against 3½ in. The stroke is the same, 5¼ in. The prices on the new model are:

5 pass. phaeton.....	$2,200
7 pass. phaeton.....	2,250
Coupe	2,850
Sedan	3,250

These prices are several hundred dollars higher than the previous Model V. Prices on the Model X, which is to be continued, have been reduced. Following are the old and new prices:

	Old	New
2 pass. roadster (new).....	....	$1,750
5 pass. phaeton.....	$1,890	1,790
Coupe (new).....	....	2,550
Sedan	2,790	2,690

20 PER CENT PRICE CUT MADE BY MASON

AKRON, July 17—The Mason Tire & Rubber Co. announces price reductions averaging a little more than 20 per cent on all sizes of cord tires. The 30x3½ clincher has been cut from $18.75 to $13.95 and a new straight side 30x3½ line has been added at $15.85. The company also has cut its prices on fabrics in Ford sizes. The 30x3 has been reduced from $11.90 to $9.25, and the 30x3½ from $13.50 to $10.60.

These reductions bring the Mason prices into line with those previously established by the other larger companies.

Increases on Davis

RICHMOND, IND., July 15—The Geo. W. Davis Motor Car Co. has announced an increase in price of $100 on its Model 71, five-passenger phaeton, the new price being $1,295.

Stanley Prices Revised

NEWTON, MASS., July 18—The following price changes have been announced by the Stanley Motor Carriage Co., affecting its entire line of models:

	Old Price	New Price
2-pass. roadster	$2,800	$2,700
5-pass. phaeton.....	2,600	2,700
7-pass. phaeton.....	2,600	2,700
Sedan	3,850	3,950

Monroe Prices Increased

INDIANAPOLIS, July 18—An increase in price of the Monroe, affecting both the roadster and five-passenger phaeton, has been made by the William Small Co. as follows:

	Old Price	New Price
2-pass. roadster.....	$875	$950
5-pass. phaeton...	875	950

Lafayette Increases Prices

INDIANAPOLIS, July 17—Lafayette Motors Co. announces an increase in the price of its coupe from $5,000 to $5,500 and of its sedan from $5,175 to $5,500.

International Cuts Prices

CHICAGO, July 18—Price reductions on three truck models have been announced by the International Harvester Co., effective July 8. The models and prices follow:

	Old Price	New Price
Speed truck (2000 lb. capacity)	$1,500	$1,250
Model 21—1-ton.....	1,750	1,550
Model 31—1½-ton.....	1,850	1,650

Lauson Cuts Prices

NEW HOLSTEIN, WIS., July 18—The John Lauson Manufacturing Co. has made the following reductions in the prices of its tractor models:

	Old Price	New Price
Model 5.....	$1,495	$1,295
Model 21.....	1,875	1,675
Road Model....	2,100	2,000

New Earl Model

JACKSON, MICH., July 17—Earl Motors, Inc., has announced a new closed job, a four-passenger car, called the Cabriole, the price of which is $1,395.

PRO-HORSE CAMPAIGN INCURS RESENTMENT

TORONTO, ONT., July 18—The Ford Motor Co. of Canada, Ltd., has issued a strong protest against the campaign now being carried on by the Dominion livestock branch of the Department of Agriculture, Ottawa, encouraging the use of horses on farms.

The Ford company and other tractor manufacturers resent the use of their money in propagating ideas detrimental to their business. Appeals have been made to the Department of Trade and Commerce, the Canadian Manufacturers Association and the Association of Canadian Advertisers.

PRICE IS BECOMING CHIEF TIRE FACTOR

Cuts, Increases and Cheaper Lines to Meet Competition Demoralizing

AKRON, OHIO, July 17—Price cuts, price increases and production of cheap tires to meet competition by some of the larger rubber companies have added materially to the demoralization of the automobile tire industry in Akron.

The Mason Tire & Rubber Co. has announced a 25 per cent reduction in its entire line and also announced a new oversized, non-skid, air bag cured Ford cord tire to sell for $11.80.

At the same time the American Rubber & Tire Co. announced an increase in its cord tire line of 5 to 10 per cent.

Mason Tire & Rubber stated in its announcement that the time had come to bring tire prices definitely to rock bottom to prepare for fall business and spring dating orders.

"Special discounts by dealers must stop. Everyone must know the price of tires, and they must become stabilized if we are to get any volume of spring dating business this fall. The time has come for a new 'true value tire list'," D. M. Mason, vice-president and general manager, said.

The American statement gives evidence in an entirely new direction.

"We made a thorough canvass of our dealers before making the announcement regarding an increase in tire prices, and we feel that they will support us in this move," H. L. Hauck, general manager, stated.

"We placed the proposition of increasing prices and maintaining quality, or cutting the price and decreasing quality, squarely up to our dealers. We explained the predicament in which we found ourselves, and we have been agreeably surprised in the manner with which the dealers back us in our suggestion of price raising," Hauck said.

Increase Confined to Cords

For the present the increase is confined to cord tires, and it is not likely that the increase will be extended to fabrics.

Official confirmation of the production of new brands of tires to meet the cheapest possible competition cannot be obtained at the larger factories, but dealers report they are being flooded with announcements regarding the new tires.

Some of the industrial leaders have practically confirmed the report privately, although all hesitate to make any statement for publication permitting the use of the company name.

One official of a large company who refused to have his company mentioned as manufacturing this class of tires stated privately, however, that the cheap tire business has become necessary because of the large demand for original low cost equipment and to use up some of the high cost raw materials which still remain on hand.

CLEVELAND EXPANDS ASSOCIATION WORK

Under Buckman's Direction, Trade Body Is Active Through Three Divisions

CLEVELAND, July 19—A dealers' association with three active divisions is the achievement of only two months' work of the trade in Cleveland. Since the Cleveland Automobile Manufacturers and Dealers Association put itself on an aggressive trade association basis June 1 by employing a full time manager, it has organized a sales managers' division and service managers' division, in addition to the association proper, which includes only passenger car dealers.

The three groups are holding regular separate meetings and have in prospect joint meetings of two groups, or all three, as the work progresses.

The expansion of the association's work is being conducted by Herbert Buckman, who was assistant secretary of the association, publicity manager of the Cleveland show and editor of the Ohio *Motorist*, organ of the Cleveland Automobile Club, when the office personnel of the club and the dealers' association were one. When a complete separation came in June, Buckman severed all connections with the club and became the active head of the dealer organization.

Working on Trade Problems

The reorganized association took headquarters in the Stuyvesant Building in Euclid Avenue, in the heart of Automobile Row, and immediately undertook intensive trade activities. The association proper is working on the general problems of the trade, including study of the used car situation, investigation of methods of raising the quality of the employed personnel, in the city's dealer establishments, and planning for the annual show, which this year will be held in the new $8,000,000 Cleveland Exposition Building.

Buckman's first activity was the organization of the service managers' division, which meets every week with a chairman of its own and with no dealers present. Discussions have included the divergence in discounts on parts allowed other dealers and garages, the flat rate system, co-operation in hiring men so that good men will get good recommendations from one shop to another and poor men will not be able to impose their incapabilities on employers who do not know their history.

The sales managers' division also has been meeting weekly with its own chairman. One week's discussion was devoted to the question of raising the standard of salesmen in the business and the suggestion was offered that every effort should be made to use men of mental and personal quality, able to meet the biggest business men in the city, to talk the sale of cars. At one of the sales managers' meetings used car managers were called in and the discussion centered on the method of selling used cars, with considerable enlightenment for the assemblage through a frank interchange of ideas.

The association is getting along for the present with cramped quarters, while additional space, including restaurant facilities, is being provided. In the meantime, meetings are held at hotels and restaurants. In the case of divisional meetings, the firms represented pay the luncheon cost of the men who represent them.

The Cleveland association in past years gave most of its attention to the annual show. The present plan is to keep up a continuous round of trade activity, so there will be as nearly as possible complete acquaintance and understanding among dealers and their sales and service managers, thus avoiding employment of business tactics which cause loss to men in the trade without performing any constructive service for the public.

WORK ON SOUTHERN TRACKS UNDER WAY

KANSAS CITY, MO., July 18—The Kansas City Speedway Association is pushing work on the track and grandstand at the new speedway and expects to hold the first race Sept. 15.

Some of the topliners among the racing drivers will be entered in the competition.

HOUSTON, TEX., July 18—Work is in progress on the construction of a regulation speedway at Bellaire, a suburb of this city.

Present plans contemplate the building of the course only. If sufficient interest and support develops after the course is opened a grandstand will be erected.

NUMBER OF DEALERS INCREASING IN IOWA

Gloom Dispersed by Better Conditions That Exist Among Farmers of State

DES MOINES, July 18—Six months ago there was not a motor car dealer in Iowa who expected that the business would come back in Iowa as it has done in the past ninety days. Jan. 1 there was little but gloom in Iowa, as the business of the state is largely dependent upon the farmer and the collapse of produce prices had wrought havoc with him.

However, with general business rallying the motor car business came back with a bang, and during the past ninety days there has been a demand, particularly in the cities of the state, which was not expected for at least a year. Any number of Des Moines dealers report business far beyond that of 1921, and many of them are far behind their orders on account of failure to secure deliveries.

Although the demand from the farmers is still backward, the farmer has secured some money through the sale of hogs and the condition is better than it has been for eighteen months.

Evidences of the general improvement of the motor car business in Iowa are the renewing of contracts and the opening of new agencies in various parts of the state. Last winter there were a large number of retirements from the business by firms not well established. With the rebound there are at present almost the normal number of dealers.

SALES IN VANCOUVER REFLECT CONDITIONS

VANCOUVER, B. C., July 18—Taxes or no taxes, Vancouver people are buying new cars. During May over 300 were sold in Vancouver, representing every well known make. June sales will outstrip May, dealers believe.

Some idea of the prosperity of Vancouver may be gathered from the sales of new cars in this city during the past three weeks. Despite increased taxation they reached a total of 164, according to the motor license department at the provincial court house.

Philadelphia Accessory Business Men at Summer Outing

It's open season for annual outings of automotive associations, and not the least among those at which it is reported "a pleasant time, etc.," was the day's play of the Automobile Accessories Business Association of Philadelphia, at Betzwood, Pa., June 23. In the center, sitting, is W. H. Metcalfe, President.

ASSOCIATION ACTIVITIES

Indianapolis Dealers Close Sundays

INDIANAPOLIS, July 17 — A movement for Sunday closing of all retail salesrooms of members of the Indianapolis Automobile Trade Association is now under way, and July 9 saw a considerable number of establishments closed. John B. Orman, secretary and manager of the association, says that there will be no compulsion in this movement, but that a majority of the leading dealers have agreed to plant the custom firmly in the city.

Cards for display in doorways and windows announcing "Closed on Sunday" were distributed during the last week in June and a number of dealers who had not yet agreed to the plan signified their intention of giving Sunday selling a long vacation.

Several of the dealers who have been forced by the custom to keep open house on Sunday say that it has never paid, and that a large majority of the prospects who come down the row Sunday morning and afternoon are mere "lookers" and not likely buyers. Among dealers interviewed were several who said that even Sunday opening for service stations seemed more or less unnecessary, particularly so at this time of the year.

St. Louis Officials Take Office

ST. LOUIS, July 18—The officials of the Motor Accessory Trade Association of St. Louis, who were elected at the annual meeting May 9, assumed office at an open-air meeting at Forest Park Highlands. The retiring president, G. G. Giese of the Alastic Tire Cushion Co., who was chosen as a director, made a farewell address, in which he told of some of the accomplishments of his administration. The membership of the association was increased from less than 70 to 138 during the past year.

H. H. Fleer of the Fleer-Petty Co., the new president, outlined the activities proposed for the new year. The other new officials are: H. W. Kruse, Beck-Corbitt Iron Co., vice-president, and H. Kollmer of the Auto Salvage Co., sergeant-at-arms. Directors in addition to Giese are Charles A. Merien of the H. & H. Machine Co., J. F. Quan, Fred Campbell Auto Supply Co., and L. B. Tebbetts of the L. B. Tebbetts Co. Robert E. Lee, one of the organizers of the association, was re-elected secretary and treasurer for the fourteenth time.

Sherman Speaks at Columbus

COLUMBUS, OHIO, July 17—Ray W. Sherman, merchandising director of the Automotive Equipment Association, was the headliner at a meeting held here under the auspices of that organization. About 200 dealers and guests attended the meeting, which was opened with a banquet at the Elks' Club. Members of the local branch of the association are the Griswold-Sohl Co. Pennsylvania Rubber & Supply Co., Columbus McKinnon Chain Co., Ironsides Co., J. H. & F. A. Sells Co., Justus & Parker and the J. P. Gordon Co.

Kansas City Reforms Taxation

KANSAS CITY, July 18—The Kansas City Motor Car Dealers Association has recently accomplished much in the way of tax justice to motor car owners.

A joint meeting with assessors was recently held at which the association made recommendations in order to adjust inaccurate assessments. The association took the stand that it was ridiculous to assess cars for more than they would sell for in the market. Assessors in Kansas City have now agreed to assess all cars on a standardized basis.

Under former conditions, cases often arose where owners of a 1920 model, which was assessed at its 1920 cost price, were obliged to pay a higher tax than owners of a 1922 model. This inequality arose because motor cars were assessed not on their market value at the time of the assessment, but at the price they brought in the year when the purchase was made.

Houston After Members

HOUSTON, TEXAS, July 18—The reorganized Houston Automobile Trades Association is now engaged in an active campaign for members. The association in the future will pay as much attention to the wants and needs of the car owner as to the dealer. This will be done with a view toward establishing a closer relation between the dealers and the owners which will aid in making cars stay sold when they are delivered and create a desire always to own an automobile.

A new department in the association is the adjustment department. This department will consist of a number of citizens forming a committee which will look into all questions or complaints car owners have to make.

Another department of the organization will devote its time to aiding the officers enforce the laws with reference to traffic and to assist in every possible way to reduce thefts to a minimum.

Syracuse to Hold Outing

SYRACUSE, July 17—The third annual outing of the Automotive Service Association of Syracuse will be held at Bay Shore Inn, Oneida Lake, July 22. The automobile dealers of the city are expected to join in the affair to make it the greatest automobile outing day in the history of the city.

The general chairman of the outing is William E. Chambers with S. K. Bresee in charge of the entertainment. Frank Gabriel will handle the baseball game and S. W. Allen is in charge of publicity. A ball game between the service and salesmen will be a feature. In addition other land and water sports are on the program. Dinner will be served at 6 o'clock with dancing during the evening.

Syracuse Plans Show

SYRACUSE, July 18 — Members of the Syracuse Automobile Dealers Association are making arrangements for the automobile exhibit at the State Fair, Sept. 11 to 16. The dealers look upon the fair exhibit as purely educational, coming as it does near the end of the summer season. Dealers are now agitating for a special automobile building at the fair. As it is now, the display of automobiles, tractors, trucks and equipment is not concentrated at any one spot.

Service Body Has Emblem

PHILADELPHIA, July 17—The Automotive Service Association of Philadelphia, which now has a membership of more than seventy, is planning for its first annual outing. The organization has adopted emblem buttons having the association's initials in dull gold within a gold wheel, inlaid with blue enamel. The members are service managers and department heads in the service departments of car dealers.

Memphis Sets Show Date

MEMPHIS, July 18—The annual automobile show will be held under the auspices of the Memphis Automobile Dealers' Association at the Tri-State Fair Grounds, Sept. 23 to 30. Many improvements are being made at the grounds and the changes in location of the buildings will place the automobile show in the heart of the various exhibits.

Montreal Closed Car Show

MONTREAL, July 18—The directors of the Montreal Automobile Trade Association, acting upon a suggestion expressed at the annual meeting, have taken steps to hold a closed car show early in the fall.

A. A. A. TO FORM NEW OHIO ASSOCIATION

NEW YORK, July 17—The executive board of the American Automobile Association decided at a meeting here that the Ohio State Automobile Association was not functioning properly and admitted the Cincinnati Automobile Club to direct membership. A vote of appreciation was extended to the Youngstown club for its loyalty in refusing to join the state association in leaving the A. A. A. President Diehl announced that the Cincinnati and Youngstown clubs would be made the nucleus for a new state association.

The board announced that the Illinois association had been expelled from membership because of protesting checks and stopping payment on a recent check sent in payment of dues.

A committee consisting of David Jameson, Robert Hopper and Laurens Enos was appointed to investigate the sentiment of local clubs in all state associations which have withdrawn from the A. A. A. No action was taken in regard to the appointment of a permanent executive secretary.

Noma Handled in Middle West

CHICAGO, July 18—The Noma Motors Corp. of New York has begun to market the full line of Noma cars in the Middle West through Noma Motors of Chicago, a division of Tivoli Motors, Ltd., which has opened new offices and salesrooms at 2437 South Michigan Avenue. E. E. Glatt is president and H. R. Crume is general sales general. The distributor's territory includes 14 Mississippi Valley states in which dealers are being sought.

Rieman Heads Air Bureau

CHICAGO, July 18—Charles S. Rieman, president of the Elgin Motor Car Co., is president of the Chicago Aeronautical Bureau, under whose auspices an aircraft exhibition and aeronautical congress will be held here Aug. 4 to 13. Contests of airplanes and hydroairplanes will be held in Grant Park extending along the lake shore.

Digitized by Google

CHANGES IN THE TRADE

J. E. Smith Co., Detroit, will handle the Premocar in that city.

Kuhn Motor Co., Pittsburgh, has secured the agency for the Chevrolet.

Killy Motor Co., Omaha, has been appointed distributor of the Franklin.

Dominion Motors, Ltd., Halifax, is distributing the Nash in that territory.

Guaranty Motors Corp., Kansas City, has taken over the agency for the Mitchell.

Lymburners Motors, Inc., Montreal, have secured the distribution of the Stephens.

Annis & Haywood, Inc., will conduct the Maxwell and Chalmers agency in Greenfield, Mass.

Powers-Van Billiard Co., Philadelphia, has been appointed distributor for the new Portage tire.

Fred O. Clough has joined the **Mid-City Motor Co.** at Omaha as wholesale manager of the Maxwell.

Charles A. Revoir has been appointed sales manager of the **H. Barcroft White Corp.**, Syracuse, N. Y.

L. I. Ris, formerly with the **Star Rubber Co.** of Akron, has returned to the company as eastern district manager.

Missouri Motor Sales Co., Kansas City, has secured the agency for the Lexington. **Arthur Johnson** is the manager.

B. P. Strickland has been appointed manager of the **Quick Tire Service, Inc.**, Kansas City. Strickland was recently connected with the company's Atlanta branch.

Tenison & Blair, Marmon dealer and distributor in Dallas, Tex., has moved into its new quarters and has taken over the agency for the Oldsmobile car and Republic truck.

W. J. Daniel, Harry Daniel and **L. H. Reynolds** have organized the **Daniel Auto Co.** at Eastman, Ga., to distribute the Dodge Brothers car in five counties surrounding Eastman.

Keystone Tire Sales Co., Atlanta, has opened a branch in that city. **M. B. Kleinberg** of Atlanta is manager of the new branch. **D. C. Shepherd** is sales manager for the territory.

Frank Booghier, formerly wtih W. A. Kelley Ford agency, and **Virgil L. Circle**, recently with the George W. Higgins Co., have secured the agency for the Durant in Springfield, Ohio.

Clyde E. DeBolt has resumed his former position as sales manager of the Schillo Motor Sales Co., Mercer and Templar distributor in Chicago, after having been away for a year and a half.

Hannan-Odell-Van Brunt, Inc., Omaha, has been organized to handle the Ford and Lincoln. The principal stockholders of the firm are **Charles R. Hannan, Jr., George Van Brunt** and **R. S. Odell.**

W. E. Cobb has resigned as New York branch manager of Master Trucks, Inc., Chicago, being succeeded by **T. B. W. Zumstein**, formerly vice-president and sales manager of the Gary Motor Truck Co.

Lexington Sales Co., Nashville, Tenn., recently reorganized and has taken the Durant agency for middle Tennessee. **Clark E. Sloan**, formerly sales manager of the Broadway Motor Co., has assumed active management.

W. L. Sullivan, recently associated with the advertising department of the Oakland Motor Car Co. and later serving in the retail field in Washington state, is now connected with the Hudson-Essex agency at Mt. Clemens, Mich.

Conn. Motors, Inc., New Haven, Conn., has been formed to handle the Peerless in New Haven and New Haven County. **George D. Knox**, for many years Peerless distributor at Hartford, is president and general manager of the new company.

Robert Y. Jones, Syracuse, N. Y., has been placed in charge of sales of the Lee Tire & Rubber Co. in 13 counties in New York. He will be associated with Art Webb. Jones was formerly connected with the local branch of the Miller Tire Co.

R. P. Rice has sold his half interest in the **Rice-Miller Motor Co.**, Ford and Lincoln distributor in Kansas City, to **Don Miller**, the name of the company now being **Don Miller Motor Co.** Rice is continuing with his own business, **R. P. Rice Motor Co.**

Russell Y. Cooke has resigned as general manager of the Racine Rubber Co. to become head of the **Racine Distributing Co.** of Chicago. He has been succeeded by **L. M. Van Riper**, for several years western sales manager for the Ajax Rubber Co

George Pearson, Jr., has been appointed California distributor for the Deglarescope, a lens manufactured by a company of that name. Pearson was associated with the Union Motor Co. in Los Angeles and previously was associated with Maxwell interests on the coast.

R. S. Ledsinger and **M. R. Twitty** of Brunswick, Ga.; **P. S. Bird** of Darien, Ga., and **J. E. McMee** of Jacksonville, Fla., have purchased the Ford Sales Agency of Valdosta, Ga., from **G. G. Hearn**, who has operated the business for several years. This agency is one of the largest in the Southeast.

Hampden Rubber Co., for some time conducted as a Springfield, Mass., branch of the Standard Tire & Rubber Co., has been bought by a new company of which **I. L. Rachelson**, the former branch manager, is president, and **D. E. Newman**, formerly of the Citizens' Rubber Co., Boston, is treasurer.

Williams Motor Sales Co., Dodge Brothers dealer in Springfield, Mass., has had its sales territory increased by annexing a number of nearby towns in Connecticut. **Ralph L. Jager** has acquired from the **Northampton Garage Co.** the business of selling Dodge Brothers cars in that town as sub-dealer for the Williams Motor Sales Co.

PARDEE TO TAKE UP SALES CREDIT WORK

NEW YORK, July 18—The resignation of C. L. Pardee, Jr., who for the past two and a half years has been credit manager of the Commercial Investment Trust of New York, became effective July 15.

Pardee has been connected with automotive financing since 1916, and prior to his connection with the C. I. T. was assistant credit manager of the Continental Guaranty Corp., New York, and the Guaranty Banking Co., Chicago. It is understood that, after a few months vacation, he is planning constructive sales-credit work for one of the manufacturers to insure the extension of proper credit facilities to its dealers.

FORD RAISES PRICE OF LINCOLN MODEL

Town Car Now $7,200—Other Revisions, When Made, Will Be Increases

DETROIT, July 17—Forty-four aluminum parts for the Lincoln car are now being cast in the River Rouge foundries of the Ford Motor Co., in addition to the castings of the cylinder blocks and crankcases. The machining is continuing at the Lincoln Motor Co. plant. Additional equipment is being added at the Rouge to permit of handling castings for the entire Lincoln output.

Without formal announcement the town car of the Lincoln line has been remodeled and the price increased from $4,800 to $7,200. Previous to the sale of the plant to Ford in February the town car had been $6,000. The new town car is understood to represent an Edsel Ford idea in fine car construction, the body work being of an exceptionally fine type.

Since the severance of relations between the Fords and Lelands there have been no formal statements by either side, but a statement by Edsel Ford on Lincoln manufacturing policies is expected to be made soon. This statement will show that the Fords are undertaking to manufacture America's finest car, that the production will be on a limited basis and that prices, if changed at all, will be increases compensating for the extra fine character of the general construction.

Changes Have Been Increases

Changes in prices made by Ford since taking over the Lincoln have been increases, the new prices being materially higher than formerly. In both revisions to date the construction of the car has undergone important changes, the improvement being principally in the bodies. Apparently the thought of competition has not been allowed to enter into the manufacturing plans, as the sole idea has been to make a very high type of car, regardless of price.

Sales of Lincoln cars are reported to be running high, and orders are said to be four months ahead of production. Output at the factory is ranging from 30 to 35 cars daily. A constant flow of orders is reported to be coming in despite the long wait for deliveries. Sales are being handled through the Ford sales office, of which R. C. Getzinger, former Lincoln sales manager, is now a member.

Jordan Has Big Quarter

CLEVELAND, July 18—Notwithstanding price reductions, the volume of business done by the Jordan Motor Car Co. in the second quarter of 1922 exceeded the volume in the same period last year by 41 per cent. Production was 69 per cent larger than in the second quarter of 1921.

Eighteenth Annual Automobile Salon, National Automobile Chamber of Commerce, Commodore Hotel.

Chicago .....January
Annual Automobile Salon, National Automobile Chamber of Commerce.

New York.....Jan. 6-13
Annual Automobile Show held under auspices of the National Automobile Chamber of Commerce.

DURANT SUBMITS PLAN FOR BUYING LOCOMOBILE

NEW YORK, July 13—W. C. Durant has presented to the receivers of the Locomobile Co. a proposition to take over the property on a basis which is satisfactory to them. This proposal now has been put up to the creditors' committee with the recommendation of the receivers that it be accepted.

It is understood that the Durant plan does no contemplate a cash transaction, but rather the promotion of a new company and an exchange of stock for that of the present Locomobile Co. and to creditors in settlement of their claims. It is assumed that Durant will retain control. So far as can be learned he has not worked out in detail his plan for turning out the Locomobile in a lower price class if he gets the factory at Bridgeport. Announcement of a decision by the creditors' committee is expected very soon.

Dyneto Sold to Owen

SYRACUSE, July 8—The Dyneto Electric Corp., which manufactures electric starting and lighting systems for automobiles, has been sold for the benefit of creditors to R. M. Owen of New York for $205,000.

BUREAU INVESTIGATES LIGHTING EQUIPMENT

WASHINGTON, July 18—Because of the need of uniformity in illuminating registration plates on automobiles, the Bureau of Standards is investigating the proper illumination of these plates and the efficiency of the various forms of tail lights.

The research by the Government experts covers such points as color and position of tail lights on passenger cars. The bureau is also engaged in work covering automobile headlights with the idea of aiding in the unification of state laws governing these appliances.

MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

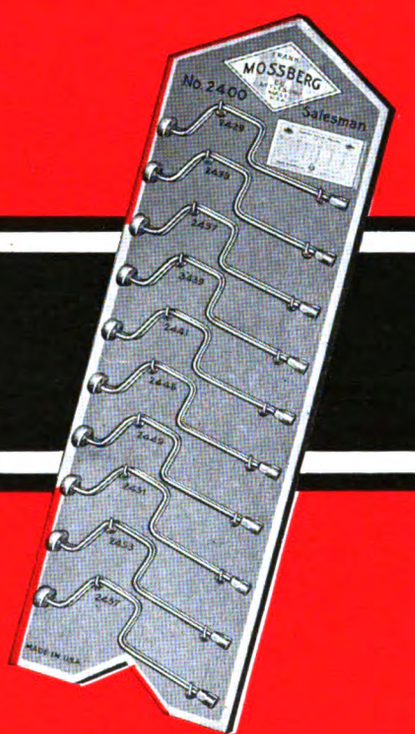
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board **assortment contains 70** Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

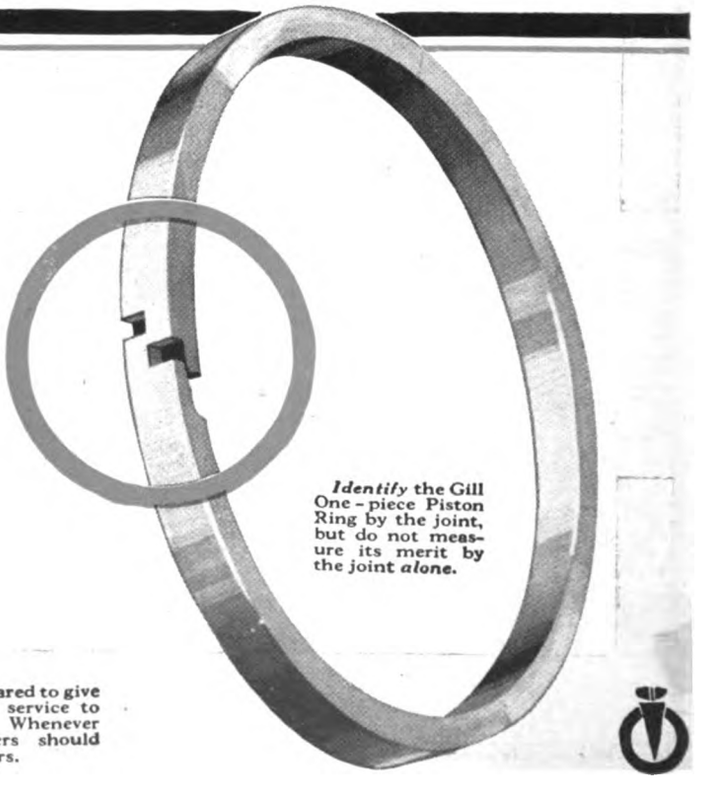
Gill One-piece Piston Rings

keep valves from pitting



BECAUSE: oil cannot work up beyond them and get into the firing chamber. Thus carbon is kept from collecting on the walls of the firing chamber, the spark plugs, and the valves. And if a valve does not become carbonized it will not pit. While Gill Piston Rings are holding oil out of the combustion chamber, they also keep condensed gas from working down into the crank case where it mixes with, and thins, the lubricating oil.

THE GILL MANUFACTURING COMPANY,
8300 South Chicago Avenue, Chicago, Illinois

Canadian Manufacturer:
BROWN ENGINEERING CORPORATION, Limited
Toronto, Ontario

Sole Export Agents:
AUTOMOTIVE PRODUCTS CORPORATION
Woolworth Building, New York, N. Y.

Price Reduced to 75¢

Identify the Gill One-piece Piston Ring by the joint, but do not measure its merit by the joint *alone*.

39 Branch Offices prepared to give practically 24-hour service to the entire trade. Whenever possible, however, dealers should order through their jobbers.

DEALERS, JOBBERS AND GARAGEMEN

Volume LXXII
Number 4

PUBLISHED WEEKLY AT 239 WEST 39th STREET
NEW YORK, JULY 26, 1922

Thirty-five cents a copy
Three dollars a year

Are you displaying this sign?

"Ask 'em to buy"—

DEALERS the country over are wiring and writing for the 1922 BOYCE MOTO-METER SERVICE STATION APPOINTMENT.

Under this new policy—authorized Service Stations may replace any BOYCE MOTO-METER which may have become damaged in any manner, with a brand new one at half price.

This new plan will make thousands of new BOYCE MOTO-METER boosters.

It is designed to bring BOYCE MOTO-METER owners to *your* store—giving you the opportunity of increasing your sales on *all* lines.

Write your regular jobber—or ourselves—for complete details today. Tomorrow may be too late.

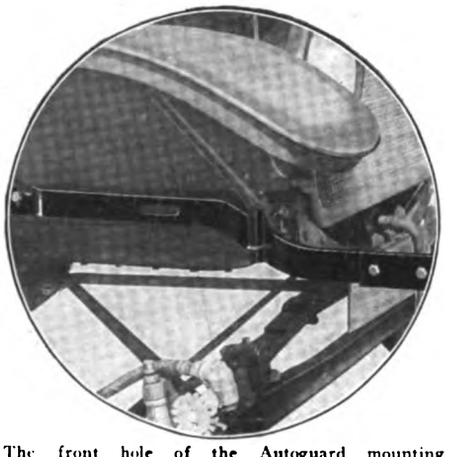
100% BUMPER PROTECTION



FOR FORD OWNERS

LIGHTWEIGHT MODEL 198 $12

Model 198 is furnished for front or rear installation. When installed, it gives the car a well balanced appearance. The double rails insure 100% protection.

The front hole of the Autoguard mounting bracket is fastened with a U bolt connection to a stud installed on the end of the front fender brace. With a longer bolt furnished with the set, the rear end of the bracket is bolted to the car frame, after removing bolt supporting rear fender brace. No drilling required.

THE three prominent features of the new Stewart Model 198 Autoguard make it a "live wire" addition for the bumper line of every dealer.

1. The new improved all-steel installation guarantees a firm, rattle-proof anchorage to the car frame. Quickly and easily installed.
2. It offers 100% bumper protection. Double rails extending the full width of the car prevent another bumper from slipping above or beneath to damage fenders, headlights, etc. The guardrails are of a lightweight but sturdy construction—not too heavy for the frame of the car.
3. The price is attractive. You can feature this double rail model at $12. With nickel-plated rails, $17.

DEALERS: Advertising on Stewart Autoguards includes full page advertisements in the Saturday Evening Post, Motor and Motor Life. Magazine advertising was supplemented with a nationwide newspaper campaign and a coast to coast poster and painted display. Model 198 is only one of the many models of Stewart Autoguards, the most widely advertised line of bumpers on the market today.

Write for our Autoguard Catalogue, giving complete information on all models and installations.

The Gasoline Hose without a Drawback

Here is where Goodrich's half century of rubber experience saves you money, time and trouble. Gasoline and rubber are natural enemies—it has taken Goodrich years to discover how to make them friends, and Goodrich has patented the secret.

No more rubber in "gas" tanks

The devitalizing action of gasoline on the rubber tube is conquered by a special Goodrich compound. The tube is further protected by a fabric liner held firmly in place by an inner coil of flat wire. Tube cannot check, soften, crack, become porous or peel. Particles of rubber cannot find their way to the automobile gas tank—there are none.

Weather-proof

Goodrich "HIGH DUTY" Gasoline Hose has an extra heavy woven cotton jacket—dampness, dust, sun, rain, and frost cannot rot or crack it.

Meets all requirements of underwriters.

Your Goodrich Branch has this perfect gasoline hose in stock—any length up to 50 feet; in ¾", 1", 1¼", and 1½" sizes

Are Used Cars Merchandise?

And Can ALL the Trade Treat Them as Such?

Trade Association Secretaries Will Have a National Conference on the Subject in September—Meanwhile, Some Association Used Car Activities Are Worth Studying

INVITATIONS have been mailed to automobile trade association secretaries throughout the country to attend a National Used Car Conference in Chicago, Sept. 14-15, under the auspices of the National Association of Automobile Show and Association Managers. Secretaries are urged by the association to reserve the dates. There will be addresses and discussions on individual and co-operative used car merchandising plans, with the object of informing the trade generally on the most practical and progressive methods of handling used cars without loss. If the secretary of your association has not received an invitation, tell him to write for one to the office of the association, 239 West 39th Street, New York.

AN automobile dealer, apparently considerably discouraged over methods of selling cars in his territory, wrote to Motor World a few days ago suggesting an industry-wide discussion of the subject, "Are Automobiles Merchandise?"

Truth would compel an answer in the negative in some dealer establishments but, taking the trade as a whole, the thought arises, wouldn't the question apply more widely to used cars than new ones?

Merchandising, as every one knows, implies selling goods at a profit. Keeping this definition in mind, how many men in the trade can say they are merchandising used cars?

Some dealers are doing it. After acquiring used cars at prices which will permit their sale at a profit, or at least at a figure which will not cut into the profit on new cars, they move their used car stocks by advertising them properly, displaying them properly, demonstrating them properly and employing real salesmen—not shoddy second raters—to present these cars to the public.

Many cities, large and small, have co-operative used car plans. Some exchange allowance information, with dealers stating reasonable allowances on back models of the makes of cars they sell. Others confine the exchange to prices obtained in sales of used cars. In most cities where there are co-operative plans the dealers get together once a week, or at least once a month, for frank discussions of the used car situation.

With the idea of bringing out into the light all that is progressive in used car merchandising, a National Used Car Conference of automobile trade association secretaries is to be held in Chicago in September.

The conference will be held under the auspices of the National Association of Automobile Show and Association Managers. The dates will be Sept. 14-15.

To this meeting all dealer association secretaries and managers will be invited, regardless of their membership in the national association.

At this meeting men who have given thought and study to the used car question and who have accomplished something in improving conditions in their territories will be speakers. And there will be a round table discussion of both individual and co-operative used car merchandising methods.

The national association's officers believe that the conference will serve as a clearing house for progressive used car ideas at a time when the trade most needs them—at the beginning of the fall season. They believe that association secretaries and managers who take the time and spend the money to attend will be repaid by worth while information for their associations.

The National Association of Automobile Show and Association Managers is an organization of several years' standing. Robert E. Lee, secretary of the St. Louis Automobile Dealers' Association, is acting president. Neal G. Adair, editor of Motor World, is executive secretary and treasurer. The directors, in addition to the president and secretary, are: Prince Wells, Louisville Automobile Dealers Association; H. H. Shuart, Detroit Automobile Dealers Association; Herbert Buckman, Cleveland Automobile Dealers Association. The membership hails from all sections of the country.

Boston Used Car Plan Turns Losses Into Profits

BOSTON has worked out a plan for scientifically arriving at allowance prices on used cars. With arbitrary allowance estimates as a beginning, the Boston Used Car Statistical Bureau is now making up figures as a guide to dealers by studying and averaging prices covering a wide range of sales of virtually all makes of cars, as reported to the bureau by member dealers.

The plan works like this: At the start—last mid-winter—it was decided, in order to put the plan in operation, to value used cars as follows: 1921 models, 68 per cent of list price; 1920, 40 per cent; 1919, 30 per cent; 1918, 24 per cent, and 1917, 17 per cent. At the same time the dealers co-operating with the bureau began making weekly reports of used car sales, giving allowances, selling prices and other essential information. Study of these reports from week to week has enabled the bureau officers to revise the guide book scientifically, on the basis of actual market value of the cars, but it is interesting to note that in six months the listings have been changed very little from the original figures, remaining virtually the same in the case of most cars selling new for less than $3,000 and being raised a few points on some cars in the class above $3,000.

The Boston loose leaf allowance book indicates prices

Digitized by Google

that dealers can allow, and avoid losses in trading. The figures are being widely followed, not only by members of the Boston bureau, but by many New England dealers outside Boston who have obtained copies of the guide.

The bureau, a co-operative effort of Boston automobile dealers, has been operating since late winter. Figures compiled show that the dealers participating lost $94,000, in the aggregate, on used cars in February and March. In April and May they made a profit of $9,574, that is, they did a little better than break even in those months.

The bureau was older and working more smoothly in the latter two months. They were months, too, when it was easier to sell used cars. Generally, conditions were favorable for the improved showing. The fact remains, however, that in April and May the dealers did not lose money on trades.

There are other interesting figures. In February and March Boston dealers handled used cars to the value of $593,807, on which they took the $94,000 loss stated.

In April and May used cars traded showed a total allowance value of $1,176,081. The dealers spent for repairs, replacements, storage and selling expenses, $216,644. That ran the total up to $1,392,257. These cars were sold for $1,402,300, showing a profit of $9,574.

The figures show that during April and May the dealers took in cars of their own make valued at $834,275 and spent $78,945 putting them into shape for resale, or about 10 per cent. In the same period cars valued at $341,806 not of the make dealers were handling were accepted by the dealers. And in reconditioning them for resale they spent only $11,086, or about 3¼ percent of the allowance price. This shows the different treatment accorded the dealers' own and other cars.

"If the Boston Used Car Statistical Bureau were to cease functioning to-morrow I would continue working along the lines upon which it is operating because I have learned motor values."

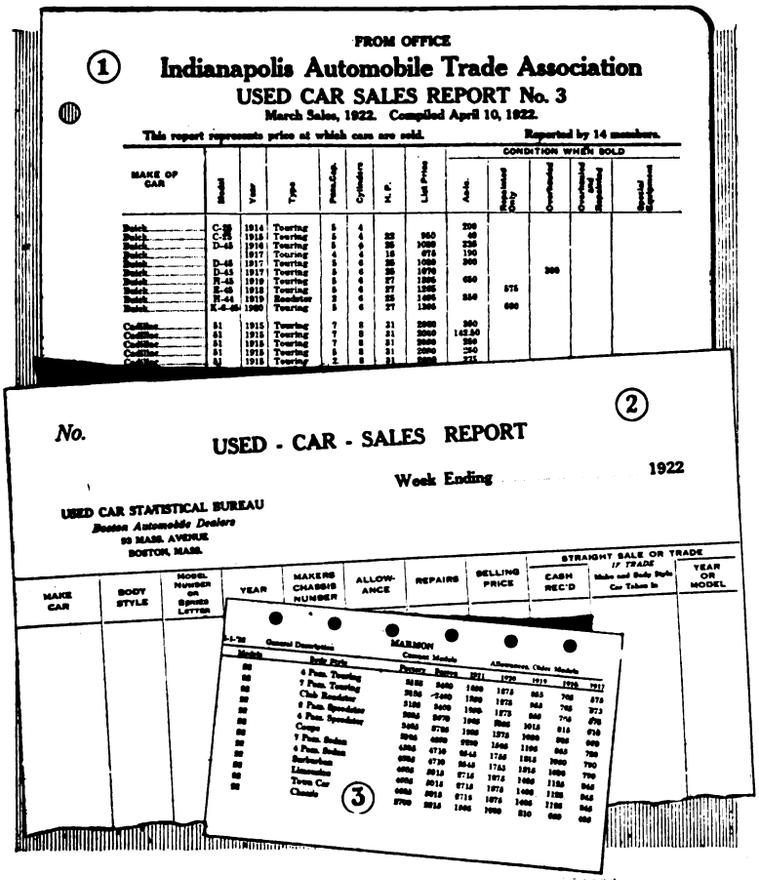
That is the way one of the best known dealers in Boston appraised it a few days ago.

Perhaps a good way to put it is that the bureau has been a sort of course in business administration for some of the co-operating dealers. Certainly it has taught many dealers what the fundamental principles are in the business world; what overhead means, what real commission values are, etc. Some idea of the widespread attention the bureau has achieved may be learned from the fact that while it has been in existence only a few months a stock of used car allowance books numbering 2000 has been sold, and among the buyers were dealers from the most northern points in New England to the New York territory in Connecticut.

When the bureau was formed quarters were chosen in the center of the automobile district and put in charge of an official who has had experience as a dealer. Now the bureau has on its list all but two or three dealers.

Each week there is a meeting of the general committee. Each month there is a meeting of the entire membership to hear reports. When necessary special meetings are held.

All the dealers send in to the secretary lists all models of their cars except current models, with reasonable allowance prices. These served as a working basis for the committee in getting up a loose leaf book as a guide to reasonable allowances. Dealers co-operating in the plan have copies of the book. Then each week a list is sent in of allowances and sales prices. Card indexes have been arranged whereby it is possible now to check up on, say, 10 sales of some particular model, showing whether the allowance price in the book is too high or too low.



These Boston dealers, when they take in a car, allow anything up to the listed allowance price. The sale depends upon themselves. Generally they charge 10 per cent for reconditioning and selling. Some sell the car "as is." The light of facts is turned on fictitious allowance prices and selling is put on a stable basis.

It is no longer guesswork. All the listed allowance values are based on the weekly reports from dealers on allowance and sale prices. As the number of transactions reported increases it will be possible to work out closer averages, giving dealers still more accurate information as a guide in making allowances and resale prices.

Naturally there was opposition from the car owning public. But "selling" of the idea of reasonable depreciation has met with considerable success, and the slowing up of new car business which followed the establishment of the bureau plan was serious only for a time.

The Boston dealers have no penalty clause for dealers who do not keep within the maximum bureau allowance

A Glimpse at Some Co-operative Used Car Systems

figures. The plan is to show by example and experience that allowing more than used cars are worth is inviting loss, and to rely on the dealers' good judgment to keep the plan in operation.

"By buying right," a Bostonian says, "the Boston dealers are able to sell used cars right. They have no big stocks on hand. To-day in Boston the used car 'problem' is being solved."

The Indianapolis Plan

THE co-operative used car plan of the Indianapolis Automobile Dealers Association includes a monthly report on resale prices of cars actually traded, which, in turn, is made up from reports to the association by individual dealers.

Now, according to the best information in the hands of the leading motor car merchants of Indianapolis, the dealers who sell 85 per cent of all the cars are following the most approved used car methods, are estimating correct values and are making money on used cars they handle.

To carry out the continuous study of the used car situation the dealers' association employed an assistant for John B. Orman, who has been manager of the association for a number of years. The whole time of this man is devoted to used car work. Besides this a series of weekly meetings of the used car heads of the various establishments was started. The weekly meetings for discussion of the fine points of used car merchandising were found of great help. These meetings were continued up to May of this year, when the weekly feature was dropped, but monthly and special meetings are still held.

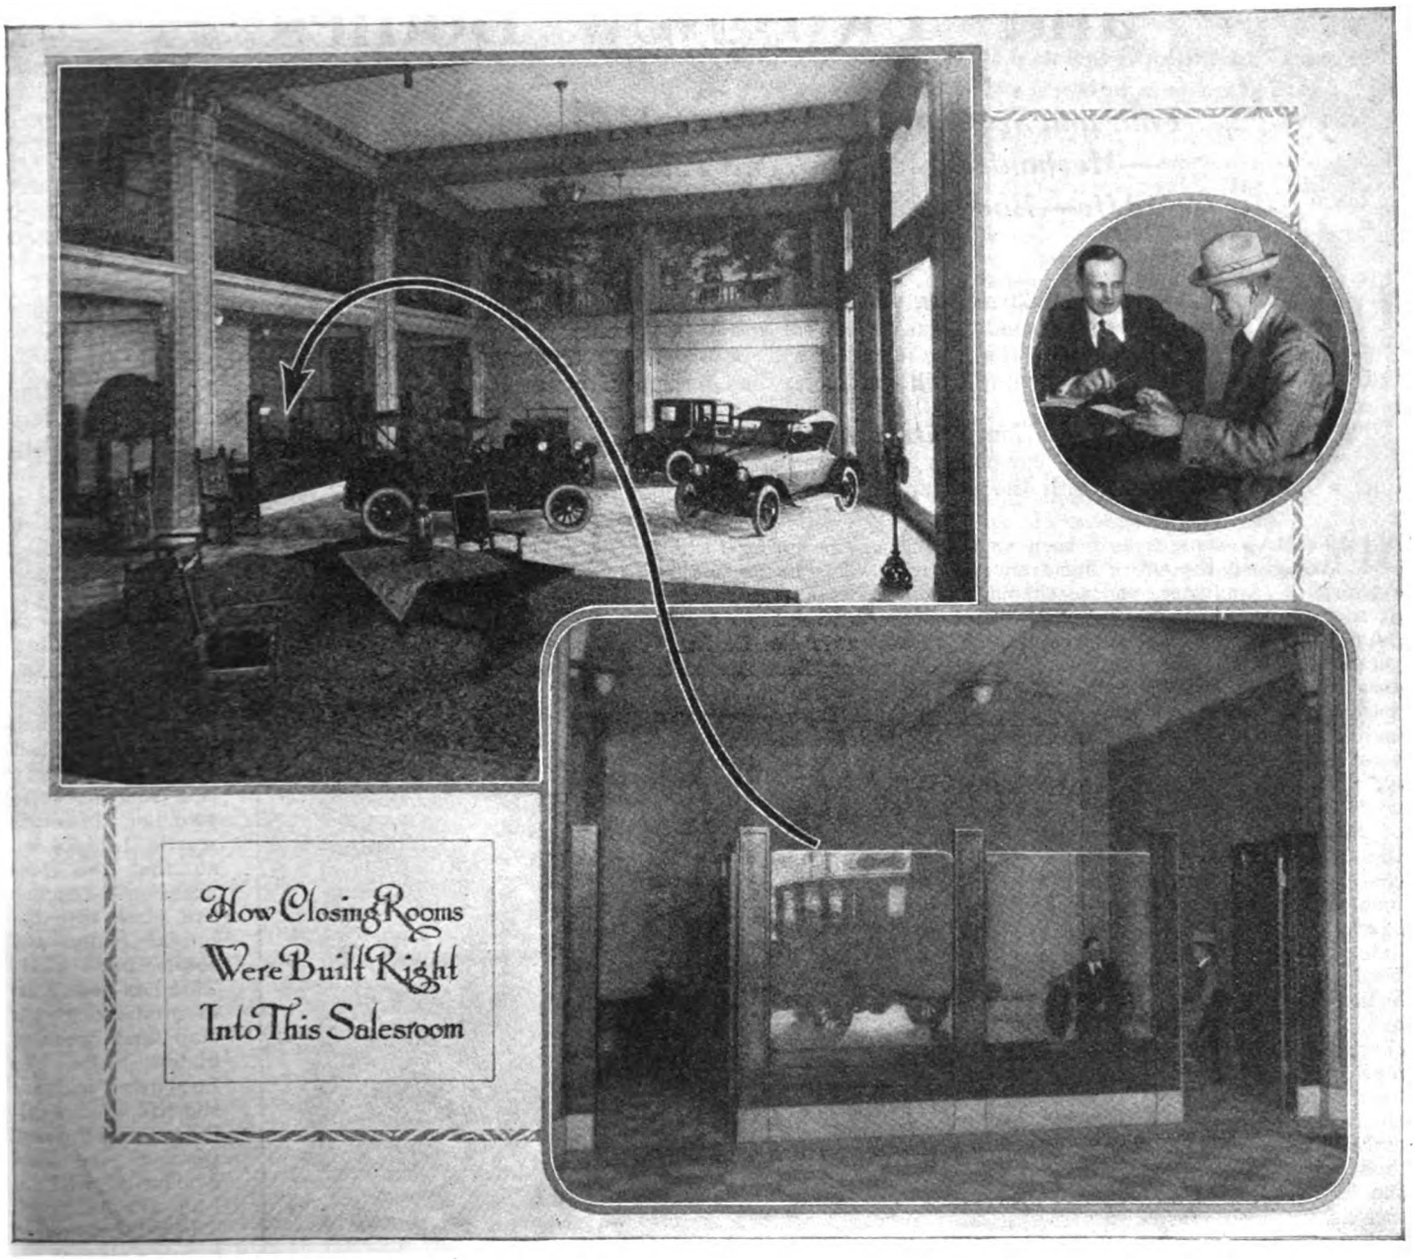
Back in the fall of 1918 the association began its first regular work on this problem. At that time the plan of gathering reports of prices at which used cars were sold from dealers was started. These reports gave the name of the car, the type, the condition in which it was sold ("as is," repainted, overhauled or renewed) and the price at which it was sold. These were then printed with omission of all dealers' names and distributed to all the local trade. These monthly used car sales reports are still being issued, and they serve to show the improvement that has been brought about by the seven months of educational work of the Indianapolis plan.

Just subsequent to the starting of the Indianapolis used car plan a local newspaper ran a story by an automotive writer that gave to owners the new used car slant, and warned them that the day of indiscriminate trade was gone. The story showed the subject in its true light and pointed out the advantage to the owner and buyer of having the dealer make money instead of losing it every time he traded. Eighteen thousand reprints of this news story were sent to local owners and prospects. They helped in the education of the owner to expect fair, but far less generous treatment than he had obtained in the past.

This Jobber's Store a Model for His Trade

IN order to improve the service to the wholesale trade, the Beck & Cordict Iron Co., equipment jobbers in St. Louis, has opened a branch in the center of the motor car industry in that city. It is the intention of the company to make this branch of the best possible service to the dealer. The general office and country shipping department will be continued at the old location at First and Ashley Streets.

The branch on Locust Street contains a fine salesroom with facilities for displaying accessories and equipment.



One of the strong features of the new store is a room on the second floor with a seating capacity of about 250 which will be utilized for sales and dealer meetings, forwarding sales promotion work and other merchandising activities of this jobber.

Here is a view of the salesroom of the new Beck & Cordict Iron Co. branch, St. Louis. This branch was established in the center of the automobile industry in St. Louis for the purpose of better service to the automobile trade. This is the west aisle, where an attractive display of garage equipment is made

Digitized by Google

Leading the Prospect to the Dotted Line

WHEN a salesman has a prospect warmed up to the point of closing, he should have some appointed place in which to invite the prospect to talk over the final details of the sale. The individual closing room is the ideal place, as, in the study of the psychology of salesmanship—the science of mind—it is found that a prospect can be swung to a favorable decision much more readily in quiet and more or less privacy than he can if the salesman is handling him out in the main salesroom in the midst of considerable activity, with many people possibly near at hand. In the closing room, the salesman can get the prospect to concentrate on the matter at hand—the purchase of an automobile from the house. There's nothing to distract his attention—nothing to "go wrong" if the salesman guides his "ship of salesmanship" properly.

The W. P. Herbert Co., Cleveland and Chandler dealer in Los Angeles, has an ideal arrangement for their closing rooms. They are, in fact, a part of the main salesroom but are cut off by glass partitions. There are several advantages to the glass partition. In the first place, the customer does not lose sight of the cars on display in the main salesroom, if he chances to glance around. Further, he is not removed from the "automobile atmosphere" so ideally generated in the attractive display room of the Herbert company. The Herbert company has two closi g rooms, and it finds these ample.

There are direct phone connections in each of the closing rooms. This is a rather important feature, as it is a decidedly unwise policy to call a salesman away from a prospect when negotiations for the sale of a car are in their last stages. As a matter of fact, the Herbert company has found that when a salesman has a prospect in the closing room, it is not advisable to call him on the telephone except for a message of the utmost urgency.

Closing rooms have proved their worth in small as well as in large establishments. A small private office will fill the bill.

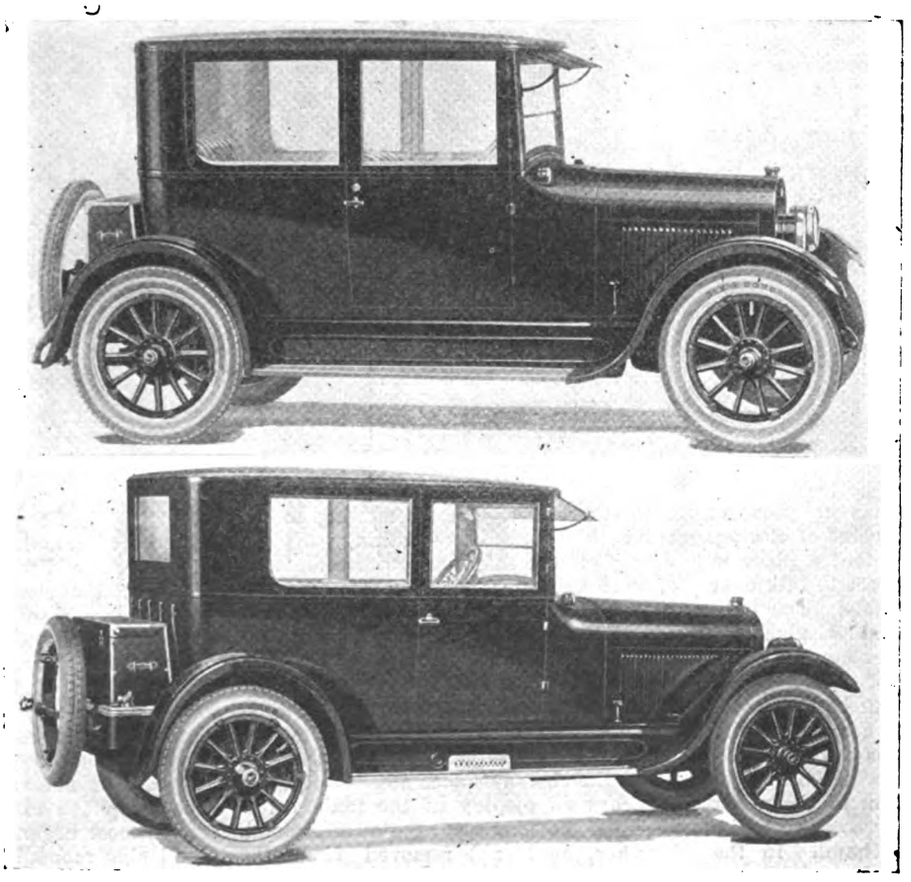
1923 Buick Has Chassis Changes and Two New Bodies

Four and Six Cylinder Lines Remain Fundamentally the Same —Mechanical Changes Tend Toward Quietness and Longer Life—Body Changes Made for Appearance and Comfort

BUICK has disclosed its 1923 models, which will consist of the four and six-cylinder chassis and the special delivery truck. On the two chassis will be fourteen different bodies, including both passenger and commercial.

The truck is mounted on the four-cylinder chassis.

Two entirely new passenger car bodies are shown in the line, a touring sedan on both the six and four-cylinder chassis. There are a great number of detail changes both in the chassis and the bodies.



While these changes are of importance and many of them of a major character, fundamentally the Buick line remains much as before. The sport models which were announced several months ago have been made standard in the new line. The prices on the complete line will be announced on Aug. 6.

MATERIAL changes have been made throughout the entire line from an appearance standpoint, and mechanically, although there have been no radical changes, there have been a remarkable number of detail refinements to promote durability, silence and absence of minor mechanical difficulties. With the sport and touring-sedan bodies, which have been added recently, the Buick line now offers a choice of nine bodies on the six-cylinder chassis, which is made in two wheelbases to accommodate the different body styles, five bodies on the standard four-cylinder chassis, which is made in one wheelbase and six body choices on the special delivery truck models mounted on the four-cylinder chassis.

The Buick six-cylinder models have been greatly improved from the standpoint of appearance, riding qualities and durability. All of the models on this chassis have been lowered approximately 3 in. The lowering has been accomplished by a modification of the spring suspension by which the offset of the cantilever spring has been increased 4 in., making the forward end of the spring 14 in. longer than the rear. This has resulted in lowering the car and reducing rebound sidesway. An important series of changes which has resulted in the Underwriters' insurance rating of Class A, has been obtained by fitting a transmission lock, a drip bowl under carburetor, extra clips on the gasoline feed line and tail lamp wires and flexible steel covers for the three wires leading from the generator to the switch and the rounding of corners on all covers for wires.

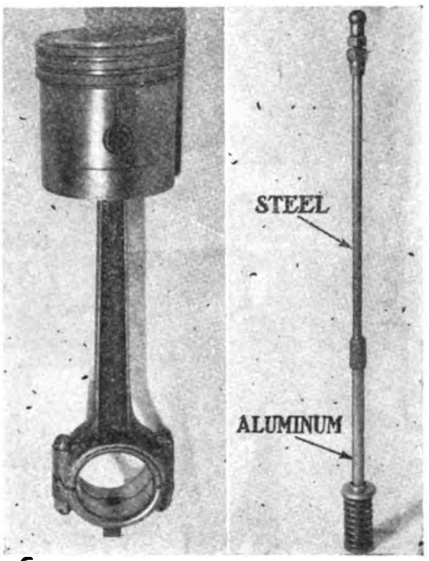
Improvements have been made in the six-cylinder engine by lengthening the piston ½ in. above the wrist pin, lengthening the connecting rod 1 3/16 in. and raising the entire block by the amount corresponding to the sum of these two, or, in other words, 1 11/16 in., so that the compression remains the same with the longer piston and connecting rod. This has been done to minimize piston slap and wearing piston walls. To further increase the life of the cylinder bore, the new pistons are machined with a tapered relief. There is no longer a guide ring at the bottom of the piston, the skirt being plain at this point. The pistons no longer over-run below the bottom of the cylinder at the lowest point of the stroke.

The chilling of the cylinder bores is something new in foundry practice for cylinders. It is done to overcome the natural annealing process which takes place in the part of the casting surrounded

The two new Buick bodies, the touring-sedans. The upper is the 5-pass. model on the 4-cylinder chassis and the lower is the 5-pass. model on the 6-cylinder chassis

Digitized by Google

by water jackets. Naturally, at this part of the cylinder, cooling is much slower, with the result that the castings are generally softer at the portion of the bore surrounded by the water jackets. As this is the point subjected to the greatest wear by the pistons, softness is an objectionable feature. By the chilling process, this part of the casting is cooled just as quickly as the remainder, resulting in a harder casting, although one which is just as readily machined, since the hard spots are not localized. The bores are finally finished by honing. The honing tool, which finally finishes these bores, is similar to a reamer, except that it has honing stones in place of the reaming cutters.



The crankshaft is now 2¼ in. in diameter and harder babbitt is used in both the connecting rods and main bearings. Individual pressure feeds are now brought from the oiling system to the center main bearing and the main bearing caps are drop forged with the babbitt tinned directly to the caps. To make the oiling of the piston more positive at high speeds, the oil troughs are covered to insure a supply of lubricant.

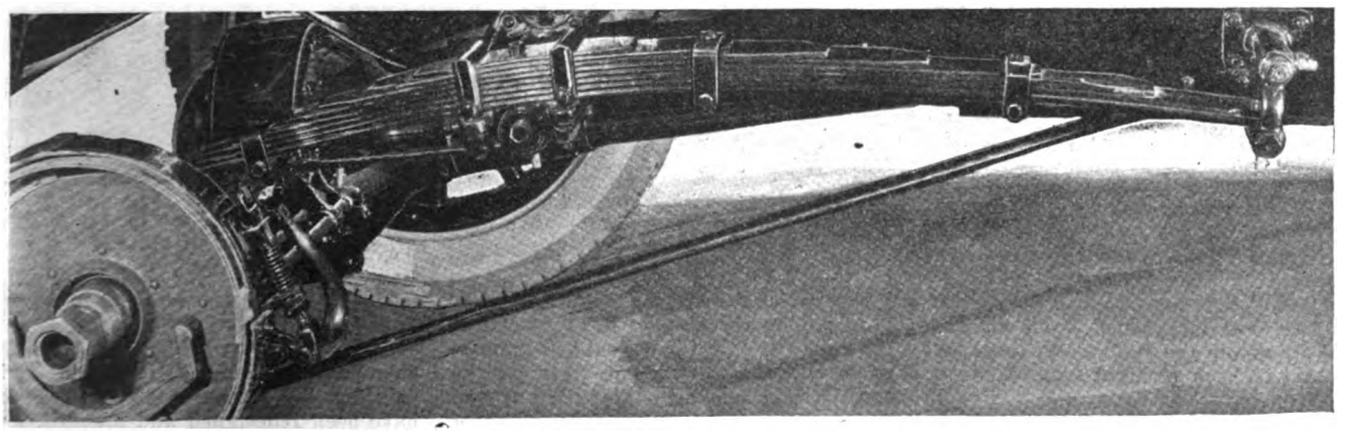
Other bearings throughout the powerplant have also been given attention to prolong life. The fan bracket bearing has been increased in length and diameter. The hole in the gearcase cover for the fan bracket now has a bronze bushing and holes have been placed in the rocker arm covers so that the rocker arms can be oiled without moving the large cover. These holes are provided with a sliding cover to close them against dust.

Quieting the Valve Action

A careful study of the valve system has been made with the idea of making this more quiet. In order to eliminate the varying clearance, due to expansion, a combination push rod of aluminum and steel is now being used, so that the valve will have about the same clearance from zero to boiling point. The lower portion of the push rod is aluminum and the upper portion is steel. The aluminum, on account of its greater coefficient of expansion, is employed to give a more rapid expansion to the push rods so that the expansion of the parts of the motor which tend to lift the rocker arms away from the push rod and to increase the clearance will be equalized by the expansion in the push rod itself. This permits the tappets to be adjusted several thousandths closer, eliminating push rod noises. Felt has been placed around the valve stems inside the valve springs to carry oil for the valve stems and guides. This provides enough lubrication to prevent sticking and squeaking valve stems. More positive lubrication is also assured for the front camshaft bearings by providing an oil well at this point.

Better construction is also employed for some of the auxiliary units. For instance, the means for driving the fan pulley have been revised so as to eliminate possibility of the key dropping into the timing gears. New water pump packing which eliminates cutting of the pump shaft has been employed and the pump shaft diameter is now stepped to insure proper assembly of the impeller. The location of the taper pin has also been changed to prevent damage to the water pump body in case the taper pin should back out.

At the left is the new Buick piston which is higher above the pin. The wiper ring has been eliminated. At the right is the composite push rod to maintain constant tappet clearance



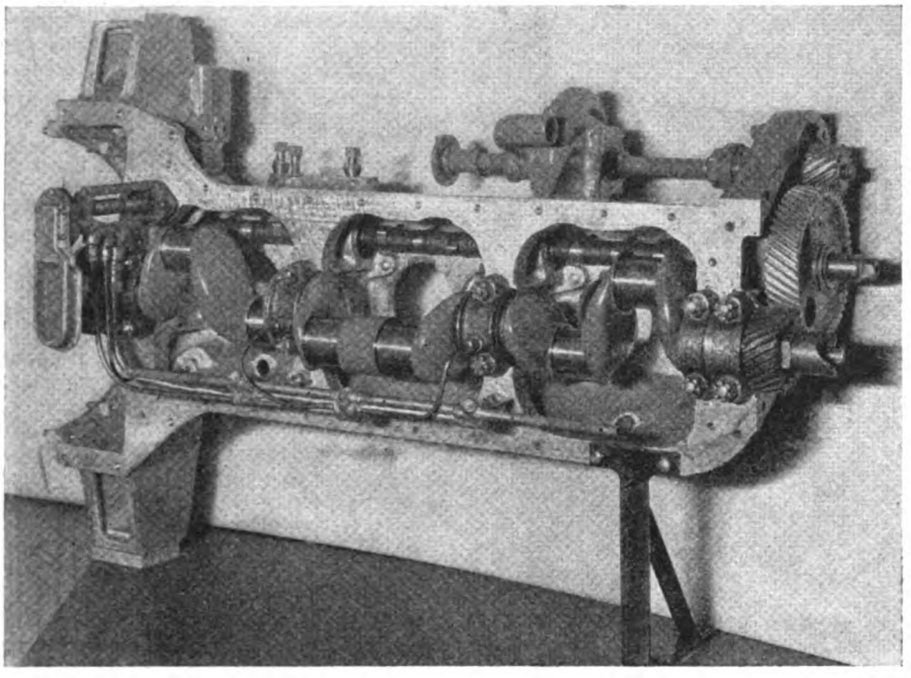
Greater durability has been secured in the clutch by changing some of the material. The material in the clutch hub, for instance, is now drop-forged steel in place of malleable iron. The splines are now case hardened and ground and the clutch plates are fitted to closer limits on the splines and pins. This will eliminate much of the wear and will take out rattles.

Electrical Equipment Changes

The electrical equipment has also been gone over completely. The motor-generator has been redesigned in regard to its electrical characteristics to give it a higher charging rate. The brushes and brush holders have also been altered to eliminate squeak and more accessible oilers are provided for the bearing. The brush holder is now a die casting with a bronze spring member which has sufficient give to eliminate the chatter which was found to be the foundation for squeaking. This new brush holder was worked out at the General Motors Laboratory in Dayton and is now standard equipment on this type of generator. A new type of silent over-running generator clutch is employed and spiral teeth are now used on the starting gears to prevent excessive noise when cranking the engine. A spring has been added to the starter pedal to prevent rattle.

The rear axles have been modified in some respects. On models 44 and 45, the three-passenger roadster and the five-passenger touring car, the brakes have been increased from 12 in. to 14 in., which now gives the same size brakes on all six-cylinder models. On the front axle, new style bushings are used in the steering knuckles and arms. These bushings are hard burnished bronze, which, according to the Buick engineering department, will give three times the life of the present bushing.

New Departure ball bearings are now used on the differential in place of the roller type formerly employed. The rear axle gear ratios are now 4.4 to 1 on all of the open cars and on the five-passenger sedan and 4.7 to 1 on the remaining models on the six-cylinder chassis. This is in combination with 32 x 4 cord tires on the three-passenger roadster and five-passenger phaeton, 33 x 4½ cords on the five-passenger touring sedan, the five-passenger sedan, the four-passenger coupe, seven-passenger phaeton and seven-passenger sedan. The tire size on



The new Buick spring suspension in which the hanger is much closer to the rear end to prevent sidesway

Digitized by Google

the sport model is 32 x 4½. The strut rods on model 45 have been increased from ⅝ in. to 11/16 in. in diameter and the truss rods on the model 45 increased from ½ to 9/16 in. in diameter. These are now of better steel and heat treated. The frame has been stiffened considerably by increasing the thickness of the stock in the side members from 5/32 in. to 3/16 in.

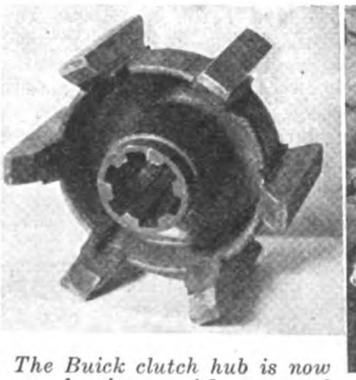
The spring suspension has been altered, as mentioned, and in addition to the change in location of the spring hanger, the main plate and all the front springs of the six-cylinder model have been changed from carbon steel to vanadium steel. The steering gear housing has been changed to bring the clamp boss on top, which also brings the slots on top and prevents leakage of grease. The oil can bracket has been moved from the left to the right side, where it is more accessible.

The radiator shell has been reinforced on the inside and a bracket has been placed on the outside to eliminate the opening in the shell and eliminate breakage at that point. The radiator core support angles have been increased in thickness and the bolts for fastening the core to the shell have been increased in size.

.The new Buick crankshaft has pressure leads to the main bearing instead of the splash lubrication used before

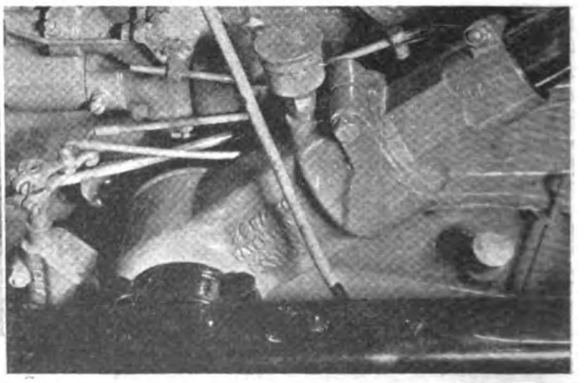
Changes in the Four

The changes in the four-cylinder chassis parallel almost exactly the changes in the six. In general, the appearance of the entire four-cylinder line has been improved by redesigning the bodies and tops. The radiator has been raised 1¼ in., the cowl lengthened 3 in. and the hood line from the radiator to the windshield has been straightened. The top has been lowered 2½ in. and a kick-up has been placed in the frame over the rear axle which permits the rear end of the car to be lowered. The new model 35 car, which is the standard touring design, is 5 in. lower than its predecessors and complete line of cars is lowered in proportion.



The changes made to secure the Class A Underwriters' rating have been also made in the four and the mechanical changes for quieting the engine and securing greater life throughout the chassis, which have been described for the six, have also been made in the four-cylinder engine and the chassis units.

Throughout the Buick body lines, there are certain changes which are common to all bodies and a few detail changes on each particular body model which apply to that body alone. On all of the six-cylinder models, nickel beading has been put on the cowl at the rear end of the hood not only for the sake of appearance, but also to prevent wear on the cowl. Nickel beading is also used around the radiator cores on all models except the sport. The sun shade design has been revised to give better appearance. It is of solid sheet metal panel with die-cast ends and is covered with imitation leather. The back lights in the bodies have been reduced in size and the rear quarter light frames have rounded corners. All of the molding is oval instead of sharp corners. In both the closed and open bodies the cushions have been lowered and the seats rearranged to increase the comfort for the passengers.



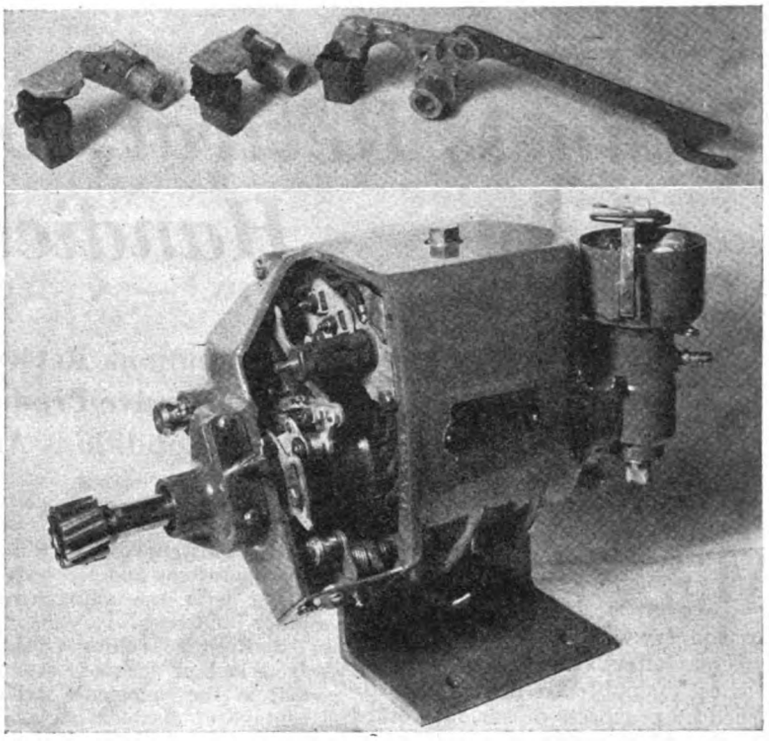
In the four-cylinder line, the body changes follow the changes in the six-cylinder line very closely. An interesting series of improvements amounting to really an entirely redesigned job have been made in the four-cylinder phaeton. Besides lowering the seats and rearranging the steering gear and control levers as in the six-cylinder model, the body is much more rigid in construction. The front pillar brace irons are heavier, as are also the rear tonneau brace irons. The windshield bracket and top seat rail have also been made heavier. The door locks are stronger and the entire body is tied to the chassis better by using ten body bolts instead of eight. All of the closed bodies have been entirely redesigned for greater rigidity and have been brought thoroughly up to date in appearance and trim. The general features outlined for the other models have been incorporated in them.

Probably the most impressive thing about the Buick body line is the great attention which has been given to detail and the number of small refinements which have been made in each of the bodies for appearance and comfort. The painting on the three-passenger roadster is now blue with gold stripes. A flush rear deck door with an improved lock is fitted, a tire carrier is used tilted toward the deck. The trimming at the sides of the seat is now piped instead of plain. The sides of the body under the cowl are trimmed. The rear curtain light glass is now 6 by 24 in. in a nickeled frame. The passengers sit lower in the car and although the top has been lowered and redesigned, more head room is provided.

On the six-cylinder, five-passenger phaeton deep black with gold stripe painting has been adopted. The tops have been redesigned and lowered, seats lowered and steering gear location

The Buick clutch hub is now a forging with ground splines instead of a malleable iron hub

The new Buick steering gear housing has been inverted with the slot at the top

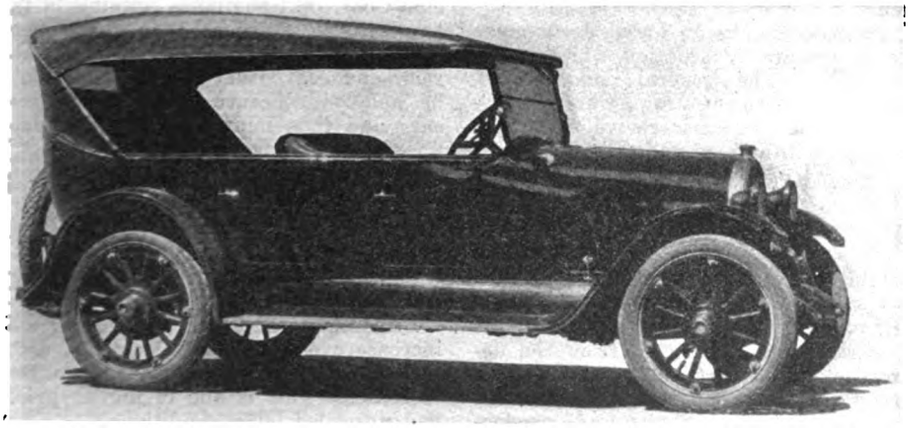


Digitized by Google

changed to provide greater ease in driving. The trimming of the back of the front seat has been changed and a roll added around the top to improve appearance. There is now a large compartment for curtains in the back of the front seat.

On the six-cylinder, seven-passenger car, a rear vision mirror, sun shade on the windshield and gasoline gage on the instrument board are included as standard equipment. More room has been given the body by widening the rear seat 1 in. The back of the front seat has been entirely redesigned and a roll added around the top for appearance. The trimming of the auxiliary seats has also been improved and the front seat frame is now trimmed.

The model 41 touring-sedan, which has been put on the six-cylinder chassis, is an entirely new body. It is a five-passenger car with special touring equipment, including a trunk rack in the rear. The lower part of the body is maroon with a black top and the wheels are also maroon, but several shades lighter than the body. Nickeled guard rails are placed on the rear of the body. As a touring convenience on this model, the gasoline tank is increased to 22 gal. Extra wide doors are provided and ventilating windows are placed in the doors and side windows. A heater and trunk are standard equipment.



With all of these changes in detail, the fundamental specifications of the Buick chassis remain the same. The wheelbase of the four remains as it was, 109 in., and the six-cylinder chassis is put out on two wheelbase lengths, 118 in. and 124 in. On the 118 in. wheelbase are the five-passenger touring-sedan, two-passenger roadster, five-passenger phaeton and five-passenger sedan. On the 124 in. are the four-passenger coupe, seven-passenger phaeton, seven-passenger sedan, sport roadster and phaeton.

The new Buick generator which as a higher charging and cranking rate and spiral gears. The new brush holders shown at the top are composed of an aluminum die casting with a bronze spring part holding the brush to prevent chatter and squeaking

A New Oldsmobile Light Eight Open Car, $1595

A FIVE-PASSENGER open body is now being mounted on the light eight Oldsmobile chassis. This new body has very similar lines to the four-passenger light eight which has been on the market for some time, and has been brought out to meet the demand for a body of a little greater capacity on this same chassis.

The new Oldsmobile phaeton, $1595

The fittings as well as the lines of this car are quite similar to the four-passenger model. The car is finished in a wine color known as Oriford Lake, and the side rails are of Circassian walnut. The instrument board, horn button, steering wheel and spokes, and ball on top of the gear shifting lever, are also of walnut. The upholstery is hand buffed leather of autumn leaf brown, to harmonize with the finish of the body color. A new point is the nickel plated flaring radiator shell, and a cowl ventilator in black.

The top and side curtains are a new design, the top being what is called the clear vision type; that is, free from side bows permitting full view for rear seat as well as front seat. The new two-piece windshield is adjustable from the inside and is equipped with a weather strip. Standard equipment includes windshield wiper, rear vision mirror, tubular robe rail and snubbers on the rear. Cord tires are provided as standard equipment, and a single tire carrier, with spare rim, is mounted at the rear. The car is priced at $1,595.

EARL BRINGING OUT NEW CABRIOLE MODEL

JACKSON, MICH., July 24—Earl Motors, Inc., has completed plans for a cabriole which will augment its line of enclosed cars and which will sell at $1,395 f.o.b. factory. Production on the new car will be started at once and deliveries will be ready in time for the opening of the fall business. The car is designed to meet the rapidly increasing demand for low-priced closed cars.

The chassis of the car will be of standand Earl type having 56-in. rear springs. The overall length will be 167 in. and height 74 in. The top and sides of the rear tonneau are covered with black Duratex fabric and the body panels will be finished in blue fenders and chassis are black enameled.

The upholstery of the car is gray Spanish leather. Door and rear quarter windows are lowerable, and the one-piece windshield swings either in or out. A rain and sun visor is standard equipment, as are also dome light and windshield wiper. At the rear is a trunk platform protected with maple slats in natural color. Rear body panel is protected by nickeled slat irons.

Business Revival Continues Despite Handicaps

Coal and Railroad Situations Retard Improvement and Are Likely to Affect Automotive Production and Distribution but Other Conditions Are Favorable

MEN in the automobile business who are looking beyond their own local horizons to learn how countrywide and sectional conditions may affect sales in their own territories undoubtedly have been disturbed by prospects of serious retarding of the business revival. There is cause for uneasiness and indications that both production and transportation of cars and trucks will be hampered by effects of the coal and railroad strikes. But, despite actual and indicated slowing up of business in some lines, the improvement in commerce and industry which began early in the year has continued and there are indications that it will continue throughout the last half of the year, though the recovery will be held back by the coal and railroad situations, regardless of their outcome.

There is no need here to dwell upon the giant forward strides made by the automotive industry Distributors, jobbers, dealers and garagemen have shared in the revival and the pages of MOTOR WORLD have kept step with it from week to week. The situation in other lines is not so well known. Complete June figures from all industries are not yet available, but there is enough information available to show that while the June gain over preceding months fell behind the gains of May and April, there was progress.

The United States Department of Commerce observes that "If a satisfactory settlement of the present labor difficulties can be reached in the near future there is every reason to believe that business will continue on its present level or even increase in volume."

Looking at the emergency situation created by the coal and railroad strikes, it is seen that:

1. The first pinch of an impending coal shortage is being felt. The iron and steel industry, which had been following a sharp upward curve until about a week ago, is suffering from lack of fuel and from congestion at railroad centers which is interfering with receipt of ore and shipping of finished products. This curtailment will affect building operations and highway construction, along with the automotive and many other industries.

2. Railroad rolling stock is suffering from lack of adequate attention as a result of the shopmen's strike. The percentage of disabled engines and cars is growing at a time when moving of the harvest will make heavy demands on transportation. Should full operation of the coal mines be resumed the situation would be complicated by the immediate necessity of devoting a large proportion of available railroad rolling stock to shipment of coal to the Northwest and other regions which are millions of tons short of the normal stocks of fuel at this time.

3. Production and distribution in the automotive industry and others undoubtedly will be affected shortly by curtailment of transportation of materials needed for manufacture and of shipment of finished products. Owing to the close association of the coal and railroad strike situations this temporary curtailment seems inevitable, whether the labor difficulties continue or are speedily settled.

The paragraphs 1, 2 and 3 summarize the emergency situation, which is unfavorable. The general condition of business is more encouraging and, fundamentally, the business revival is sound.

Crops will be good and prices are such that the crippled farm buying power will find itself in the late summer and fall well on the way to complete recovery.

Freight car loadings have increased steadily, showing the growing demand of reviving business for more transportation.

Building construction is still booming, giving new life to the lumber industry, which is not able to keep up with orders though running at full tilt.

The textile industry has held its own generally and has gained in some branches.

Wholesale and retail business in all lines, considered as a whole, is improving.

Bank business is on the upgrade and business failures are declining in frequency.

Business prospects in the automotive field are decidedly encouraging. Production and sales records of the first half of the year, which have broken all records, cannot be expected to continue, but the indications point to a good business through the fall and early winter. A normal seasonal decline is in progress in some of the large cities and on the Pacific Coast, but buying is gaining in the agricultural sections. If a curtailment of new car supply results from the railroad and coal situations dealers should be able to concentrate effort on used cars and thus improve their individual financial standings.

Interpreting the Curves on the Opposite Page

CAR and truck production continued to show an increase in June, which brings to an end the first six months of a most unusual recovery from the depression of the last half of 1921. The first six months will record 60 per cent and perhaps more of the total production for the year.

Parts and accessory business is continuing strong and shows the same rapid rate of recovery as production of cars and trucks.

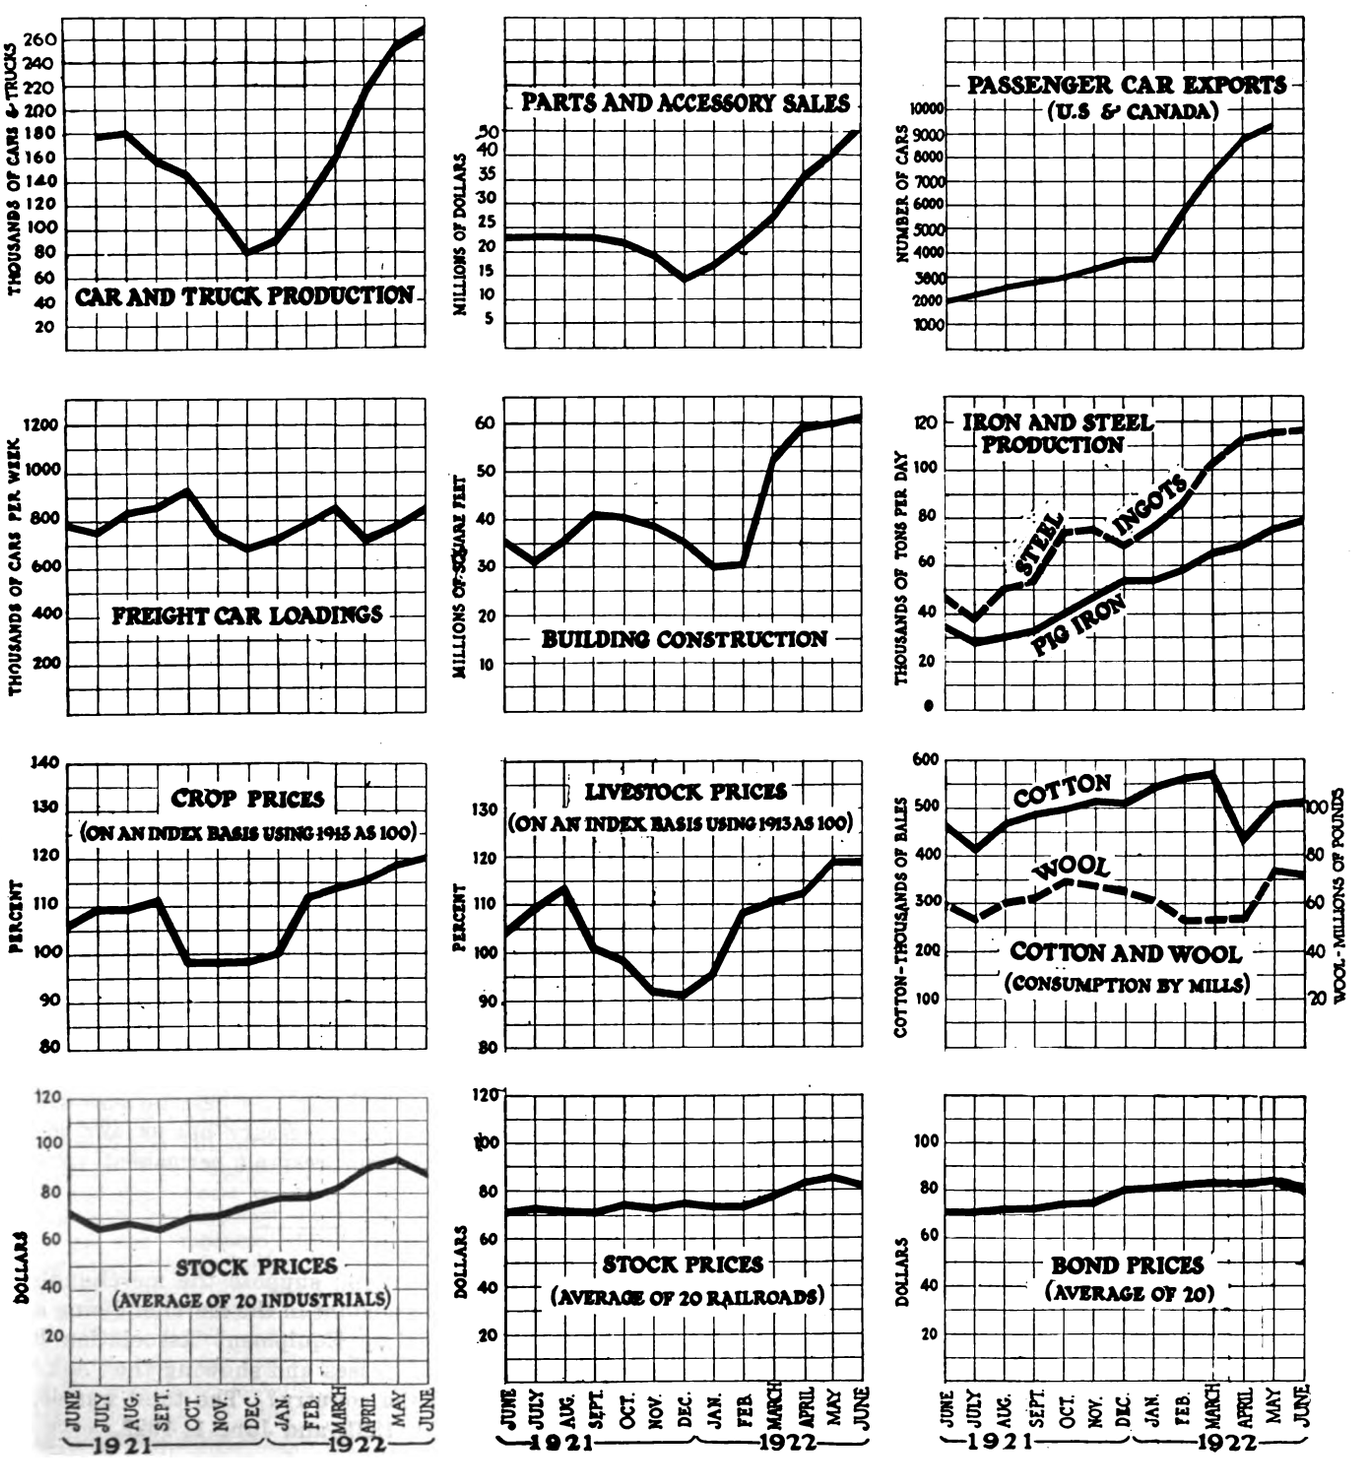
Freight car loadings are irregular, due to extraordinary influences, first the coal strike and now the railroad strike, but they have been running far ahead of last year. It takes good business everywhere to keep up the demand for transportation.

Building construction showed a slight increase over April and May, but nothing compared with the earlier monthly increases. This is due to higher prices and unsettled labor conditions.

Iron and steel showed a steady increase, due largely to purchases for building construction, railroads, highways and the automotive industry. The coal and railroad situations will bend the curve downward in July.

Crop prices have increased slightly over last month, while live stock prices have remained practically stationary during May and June after a marked

Digitized by Google



rise since the first of the year. Buying in the farm districts should be favorable this fall.

Cotton production, after a sharp rise in May, continued with a slight increase in June, while wool, which also had a sharp rise in May, showed a slight falling off in June due to seasonal and strike conditions.

Average stock prices of 20 industrials, after showing a steady gain the first five months, declined a little in June. Average stock prices of 20 railroads, after a slight recovery the first five months, suffered a decline in June, due to the railroad strike. Average bond prices have shown a steady gain the first five months with a slight falling off in June. Uncertainty caused by the coal and railroad situations has affected the securities markets.

What's Happening in Business—Curves Tell the Story

This is the fourth business chart printed this year in MOTOR WORLD, the others appearing in April, May and June. The chart shows the trends in twelve major divisions of American business for a year, ending June 30. It will help readers to understand the progress of the business revival and to supply the knowledge to finding and convincing buyers in their own territories.

Editorial Notes

Service and Sales

AN official report on the recent advertising managers' meeting conducted by the National Automobile Chamber of Commerce is headed: "Training of dealers next big step." The headline then goes on to quote a manufacturer whose ideas were generally echoed at the meeting as saying that "The chief task of the industry is to find men equipped to sell and service motor vehicles." These headlines, with the text which follows them, coming as they do from an association which includes nearly all the passenger car manufacturers and many of the truck builders in the country, suggest the train of thought which is running through the minds of manufacturers regarding the immediate future of the business.

To dealers it will indicate that the most successful among them will be those who make their personal and mechanical equipment for selling and servicing so efficient that they will not merely retain their distribution contracts, but will build profits for themselves and the manufacturers they represent on the basis of satisfied ownership of the cars and trucks they sell.

The demand of the industry, which is merely an echo of the public demand, is for sales methods in marketing cars and trucks which will put them into the hands of owners without misleading claims, and these selling methods must be supported by service methods which will make good on the reasonable assurances of salesmen and give owners their money's worth in satisfactory performance.

It is not to be denied that the future of a car or truck which is poorly designed, or poorly serviced, or both, is becoming more shaky every day. There are still cars and trucks whose design and construction are so antiquated that the servicing of one part requires disassembling and reassembling of other parts which should not be necessary. This is a condition which dealers cannot remedy but they can keep up continual pressure on their factories to make their cars more accessible to the maintenance worker. Cars in this class are becoming fewer, however, as succeeding models are brought out, and the burden of proper servicing is being put, month by month, more squarely upon the shoulders of the dealer and repairman.

Various agencies such as the National Automobile Chamber of Commerce, the National Automobile Dealers Association, The Automotive Equipment Association and local service associations are doing what they can to help dealers who need help in improving their service facilities and raising the quality of their service work. Largely, however, the job is one which dealers must do themselves. This calls for earnest study on the part of every dealer of progressive methods in handling the personnel, mechanical and financial phases of the service question.

The dealer who has courteous, well-informed men to meet his service customers, who has put his charges for service on a basis that gives him a profit without overcharging his customer and who has men and equipment capable of doing skilled repair work, is "sitting pretty," as the saying goes. He is making himself solid with his customers and his factory, assuring the permanency of patronage on one hand and at least working toward permanency of his dealership on the other. He is supporting the manufacturer in his claims of a car of low upkeep cost and he is avoiding any sort of back-fire when he takes space in his local newspaper to tell his public that his car is a thing of utility as well as beauty.

A group of shop equipment manufacturers have coined the phrase, "This is a service year." Unquestionably it is, and the next year will be still more a service year, and so on as the industry becomes older and more stabilized.

In view of this fact and of the apparent leaning of manufacturers toward more careful selection of their dealer representatives, it behooves dealers and would-be dealers to put their service houses in order and keep them there.

Another Contract

THE movement for better dealer contracts is gaining in the industry. General Motors is the latest organization to do away with annual expirations and renewals and shortly dealers in cars under General Motors control will be making agreements with the separate operating units which will be perpetual in nature and cancellable only for cause.

Under the new arrangement allotment and other clauses of annual or periodical nature will be contained in appendices, the contract itself standing year after year.

This move of General Motors is in line with liberalizations of contracts made by several other manufacturers. It is just the sort of action Motor World has been advocating in the belief that the good of the industry demands the building of progressive, permanent merchandising organizations, of which we have many, but not enough, to-day. Such building can best be encouraged by assuring men with the necessary brains and money that their investments will rest on permanent contract foundations.

HOW many miles do you suppose the merchandising director and his assistant in the merchandising campaign of the Automotive Equipment Association have traveled in making addresses and showing the "Ask 'Em to Buy" film around the country? The total was 43,869 miles between Aug. 1, 1921, and June 1, 1922.

How Cars Are Sold Through Finance Companies

The Dealer Gets All His Money at the Start and the Buyer Gives Notes, Paying About 18 Per Cent for the Accommodation

EDITOR, Motor World: We are considering the use of a finance company to assist us in financing the sale of cars on time. We would like some information on the following points:

How does the deferred payment plan operate?

On the average, what is the cost to the customer?

Is it necessary for the dealer to endorse the notes?

How do finance companies protect themselves against buying two sets of notes on the same car?

We understand that the finance companies borrow from the banks to carry on their businesses. Why don't the banks handle this business direct?—J. H. D.

Answer: The operation of the deferred plan is about as follows: The purchaser pays a certain part of the retail price, usually 30 to 50 per cent, in cash. He signs a series of equal monthly notes for the balance. These notes include the charge for the services of the finance company. They are arranged usually so that payment is completed in from 6 to 12 months. These notes bear the current interest rates, usually six per cent. On presentation of these notes with chattel mortgage, or other legal security on the car, to the finance company, the dealer gets the balance of the purchase price. As far as the dealer is concerned, he has made a cash sale. The purchaser makes all future payments to the finance company.

The cost to the customer for this service averages, in the case of many companies, 18 per cent. This includes the service charge, fees and interest, but not the insurance premiums. The service charge is usually five per cent of the price of the car, including tax and extras. In figuring the cash down payment, this service charge is added to the cost of the car.

Eighteen per cent is a heavy charge for this service. But the companies in this business say that the nature of the business, the hazards involved, the collection costs and overhead justify this charge. They claim that their profit averages about one-half of one per cent on the volume of business done.

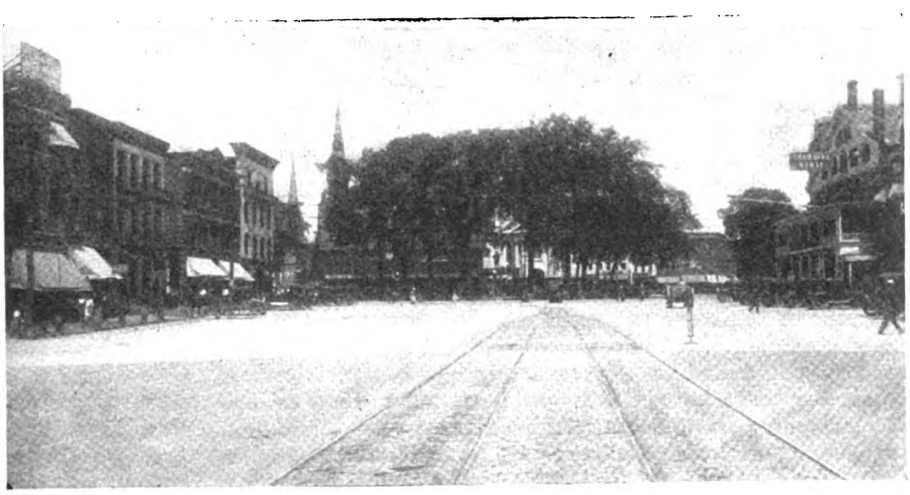
Whether you will have to endorse your customers' notes depends on the company you use. Some companies require the dealer's endorsement, in which case they use the "recourse" form of note. Other companies do not require the dealer's endorsement, in which case they use a "non-recourse" note.

When the dealer endorses the note, the finance company can look to him in case the purchaser defaults in payment. Under this plan the finance companies keep out of the used car business, as the dealer recovers it and sells it to protect himself. Furthermore, the dealer is more likely to investigate the credit of the purchaser carefully if he is contingently liable. The non-recourse companies depend more extensively on their own investigations of the responsibility of car purchasers. Such companies have cars come back, but they say that the number is so small that it causes them no difficulty.

Some dealers add a small amount to the service charge made by the finance company. Others have their customers pay only the charge made by the company. Where the dealer endorses the purchaser's notes there is some justification for his making an additional charge, as he is assuming a liability. But where the dealer does not endorse the notes, there is little reason for making this additional charge.

Many of the finance companies are banded together in the maintenance of a central record office in New York City. All member companies send a record of the make, model, engine number and purchaser's name for all transactions to this central office, where files are kept. Before accepting any paper, a report is obtained from this office showing that there is no lien on the car offered as security for the notes. If a dishonest dealer tries to defraud a company by selling two series of notes on the same car, this office will detect the fraud.

The car acts as security for the notes purchased by the finance companies. Just what legal instrument is used depends on the laws of the individual states. The chattel mortgage is one of the more common forms of legal security used.



Finance companies use banks to finance their businesses. They take an accumulation of small notes and use it as collateral security for their own notes to the bank.

The banks do not like to handle time-payment paper for several reasons. The amount of the individual note is small. Some of the notes extend over too long a period, as a bank prefers to handle short-time securities. The finance companies give short term notes in large amounts, which are more desirable from the standpoint of the bank. The banks have no machinery for investigating credits of this character, nor have they facilities for making collections on the large scale that the finance company does.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

The Widest Paved Street in America

When small cities and towns pave their streets, making connecting links with state-financed highways, we are beginning to get somewhere in providing adequate roads for automotive vehicles. Keene, N. H., has just done some paving and thereby has gained the distinction of having the widest paved street in the United States. Keene's Main Street is 140 feet wide and it has been surfaced with seven-inch concrete reinforced with steel mesh. Looks fine, doesn't it?

How the Tractor Is Coming Back in Farming and Industry

Despite Deflation Period the Number in Use Has Increased 60 Per Cent in Two Years—Suggestions for Using the Dealer's Leading Sales Appeals, Utility and Economy

By E. A. WHITE

THE tractor is coming back. In fact, it never was quite as flat as some people would like to have us believe. Farmers recognize the fundamental advantages of power farming to a much greater extent than many of us imagine, but this does not mean that the buyers are going to rush headlong into the market. These prospects want to be certain that they are right before they go ahead. This situation furnishes an unusual opportunity for the manufacturer who can produce the proper equipment at an attractive price and for the dealer who can sell it on a constructive basis.

According to census figures there were 246,083 tractors on farms Jan. 1, 1920. Reliable estimates place the number of tractors on farms Jan. 1, 1922, at approximately 400,000, an increase of more than 60 per cent. Granted that the major part of this increase occurred during 1920, the showing is still remarkable, for during two disastrous years from an economic standpoint the number of tractors on farms increased over 60 per cent! That doesn't sound as though the farmer had lost faith in power farming, does it? In addition, although the farmer is not completely on his feet financially, more tractors have been sold from Jan. 1 to July 1, 1922, than were sold in the entire year 1921, and one sales manager reports that more have been sold in this period than in any similar period in the history of the industry.

Supported by Farmers' Statements

This sales evidence agrees with the reports of tractor surveys made by neutral organizations such as the United States Department of Agriculture and various state agricultural colleges. In these surveys, covering various sections of the country, the percentage of satisfied users ranges from 70 to 90. This is a remarkably good showing and in connection with the present rate of sales throws convincing light upon the farmer's belief in the fundamental advantages of the tractor.

While the year 1921 was unsatisfactory from a sales standpoint there are evidences that the year's experiences have given a marked impetus to tractor design and to sales and service methods. It is entirely possible that looking back five years hence, 1921 may be found to have been a remarkable year in power farming progress. The slump in sales caused manufacturers to revert again to fundamentals in design and sales methods. Many old models are being discarded and new ones developed. The old models retained are being refined. Production methods are being revised.

Along with these changes at the factory the importance of a strong dealer organization is more keenly realized by manufacturing executives than ever before. The tractor industry has always recognized the dealer as the logical selling channel but to-day the value of the good dealer stands out as never before and conclusive evidence of this is found in the fact that, generally speaking, tractor discounts have been increased during the past year. This is concrete evidence that the dealer's position and importance is receiving increasing recognition.

The Potential Demand

While the "potential" tractor market has been discussed to death, the fact remains that it must be considered in any consideration of the market possibilities for power farming equipment. If there is not a potential demand for tractors how can there ever be an active one? The farmer is a big user of power. The fact that he often uses it in relatively small units serves to dwarf, in our minds, a realization of the total amount required. To lend perspective to this picture, consider the relative amounts of power used in industry and agriculture. According to census figures, industry had 18,755,286 primary horsepower in 1910. Nineteen hundred and twenty figures are not yet available. But let us assume that the 1910 figure was increased by 50 per cent in 1920, which may or may not be correct. This would give 28,132,929 primary horsepower for industry. The primary horsepower used in agriculture is not reported by the Bureau of Census but data are given from which a satisfactory estimate can be made. The figures used are for Jan. 1, 1920:

Units	Primary horsepower
21,743,243 horses and mules two years old and over, 2/3 hp. each	14,495,496
139,169 motor trucks, 15 hp. each	2,087,535
246,083 tractors, 20 hp. each	4,921,660
Total	21,504,691

Here is more primary horsepower than was used by industry in 1910, almost as much as the estimate for 1920, and it is conservative for it does not take into account the primary horsepower available from windmills, stationary gas engines, lighting plants and steam engines, to say nothing of the 2,146,362 automobiles on farms Jan. 1, 1920. On this basis it is perfectly safe to assume that agriculture requires as many primary horsepower as industry. Nor is the weight of this comparison lost when it is admitted that because of the more constant use of the prime movers, industry requires more horsepower hours than agriculture. The fact is that there is a big potential market for power generators in agriculture. And

Digitized by Google

there is need for a revision of the popular definition of power farming. It is more than tractor farming. The farmer's power needs for passenger transportation and hauling are just as vital as for power to work the fields and harvest the crops. The automobile and motor truck are just as truly power farming units as the tractor, although it has not been customary in the past so to classify them. In fact, the figures given below furnish irrefutable evidence that the automobile leads the power farming procession. On this basis large numbers of dealers are already power farming dealers and do not know it.

Motorization of the farm has been proceeding at a more rapid rate than is generally realized. Estimates for Jan. 1, 1922, give the following significant figures:

Automobiles on farms	2,000,000
Tractors on farms	400,000
Trucks on farms	150,000

In addition to the above there are a large number of stationary gas engines and farm lighting plants in use. Over 40 per cent of farms have automobiles, over 5 per cent have tractors and approximately 3 per cent have trucks. *It is no longer a question as to whether motor farming is a success but as to how far and how rapidly it will be extended.*

The farmer is interested in the tractor, truck, automobile and other power farming equipment. The sales during the first half of this year furnish conclusive evidence on this point, even though the farmer has not recovered complete economic balance. Fortunately the farmer's financial condition is improving. In this connection it must be remembered that power farming is relatively new. Few farmers have as yet a working acquaintance with its advantages. This is especially true with respect to the tractor. The tractor industry has just passed through a developing period and many of the causes of past failures have been removed by improved design. On the other hand the farmer is learning how to care for and use the tractor. Thus the failure gap is being narrowed from both ends and the dealer can do his part in this program by improved methods of selling and service.

The tractor offers a number of fundamental advantages which are the basis for sales effort. In the first place the tractor can be used for both belt and drawbar work. The farmer has never before known the advantages of a combination power unit of this character. It has been necessary to maintain two power systems, one for belt work and one for field work. Frequently when one of these systems is in use the other, or a considerable part of it, is idle. In many instances the farmer has not carried the investment in equipment for belt work but has had to pay prices to yield the custom operator a profit. It has been estimated that belt work constitutes from 12 to 20 per cent of the power requirements of the farm. The advantages of having one power system for both belt and drawbar work will show in reduced operating expenses and more timely completion of farm work. *In the past the farmer has not had control of his belt machinery operations, being dependent upon the inclinations of the custom operator, which interfered with the efficient planning and prosecution of the work. Belt machinery under the farmers' control, made possible by the use of the tractor, solves this continually pressing problem.* In practically every system of farming there is a peak of work for both power and man labor. This varies somewhat for different sections of the country but usually occurs at the time of seed bed preparation and planting. From the standpoint of efficient and economical farm operation it is essential that these peaks be cut down or taken care of in a more efficient manner than is possible with animal power. This the tractor does. This peak load problem is closely related to timeliness of operations. The farmer has relatively little to say regarding the proper time to do the most important farm operations. Nature dictates the general plan and man must govern himself accordingly. To get maximum yield from minimum efforts seed bed preparation, planting, cultivating and harvesting must be done at appointed times.

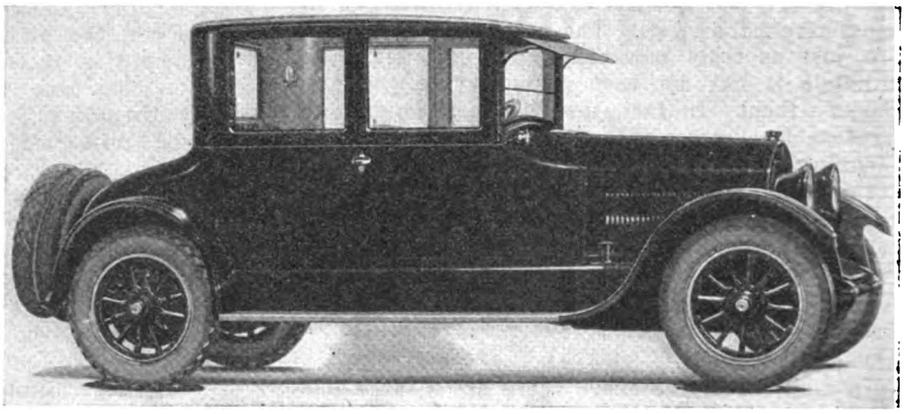
Power farming increases the efficiency of labor on the farm. A recent report on tractor uses made by the Michigan Agricultural College covering 312 farms says: "The average decrease in man labor hired due to the purchase of the tractor amounted to 2.6 months per farm. The labor was also better distributed, especially in the busy spring season." In regard to more efficient use of labor this same report says: "Better distribution of labor affords opportunity for better tillage of the land. The tractor may increase efficiency on the same acreage in two ways. It may come through getting the tilling done at the proper time, or through tilling the land more thoroughly. Eighty-seven per cent of the farmers reporting on this question stated that in their opinion they obtained increased crop yields due to better tillage because of the tractor." Allowing one man to do more work or to do the same work in less time is a fundamental advantage which is essential to a more profitable agriculture. The farmer is now giving much thought to ways and means of increasing his profits. To obtain this end labor must be used more efficiently.

It is possible to reduce the number of horses which must be kept for farm work by using the tractor. In some instances the horseless farm is already a reality, but for the present better sales results can be obtained in most cases by aiming at a reduction to the minimum number of animal motors required rather than their total elimination. Every horse which goes means just that much to apply toward the cost of tractor operation, and in many cases it is possible to reduce the number of horses or mules sufficiently to more than cover the cost of tractor operation. In such cases the other advantages are profit. In all types of farming there is some operation or set of operations coming at the same time which determines the number of animals which must be kept in conjunction with the tractor. In the corn belt, for example, it is the corn cultivating.

While there have been many reasons behind the sale of the tractor the farmer is more and more coming to ask: "Will it pay?" Therefore the logical sales appeal is an economic one. The fundamentals of this economic appeal are the same the country over but the details vary with the type of farming and the section of the country. The dealer is faced with the problem of working out these economic advantages for his own conditions and basing his sales appeal on this information. Ultimate utility is the foundation for tractor use and sales appeal.

Possibilities of Tractor Sales by Dealers

THE story beginning on opposite page says the tractor is coming back—then goes on to prove it. Sales opportunities are being multiplied for the dealer already selling tractors and allied equipment and for the dealer who may be considering their sale. This is true both in agricultural and industrial fields.



This story is the first of a series which Motor World will print taking up the fundamentals of tractor and power farming equipment merchandising. Early stories will go into the subject of prices and the industrial tractor field, and other stories will follow.

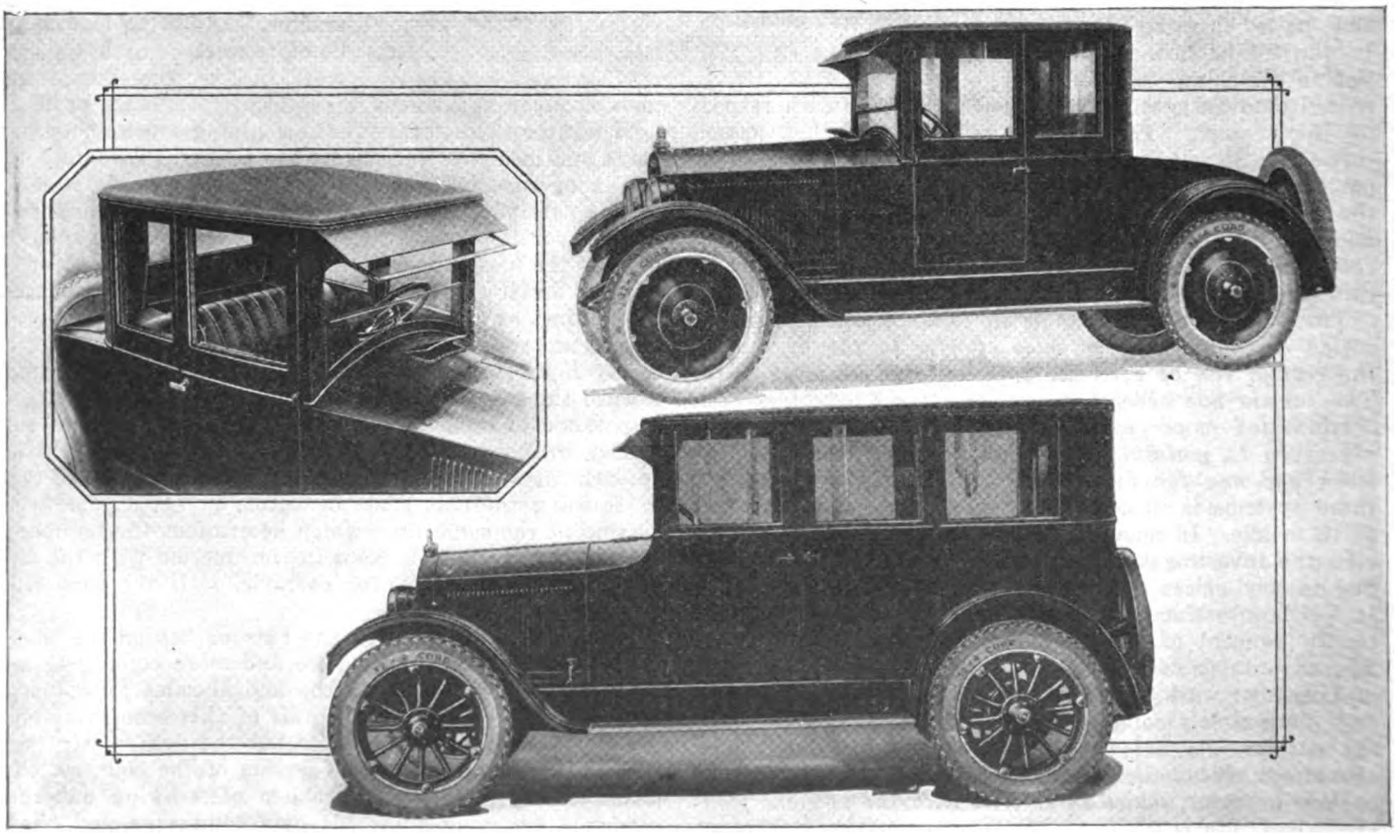
New Cadillac Victoria Body Fitted to Model 61 Chassis

A NEW Victoria type of body is now being put out by the Cadillac Motor Car Co. on its type 61 chassis. The new model, four-passenger Victoria, has been altered in dimensions to give the effect of greater length and less height. The interior has been considerably enlarged to provide more room for the occupants. The seats are longer and the driver's seat is now placed in such a way that it is directly behind the steering wheel. The auxiliary folding seat, which is beside the driver's seat, is so arranged that it gives added leg room for the person occupying it. The rear seat has also been lengthened and widened.

The interior appointments have been refined by the use of new types of pull-to handles on the doors and other fittings. The features in the former Victoria model have been continued. These include rear corner lamps, parcel compartment directly behind the driver's seat, foot rest, cigar lighter, leather panel sun visor and the rear deck compartment which is large enough to accommodate a small trunk, several bags, golf clubs or fishing kit. The price on the new Victoria is $3,875 f.o.b. Detroit.

New Cadillac Victoria body mounted on type 61 chassis



Gardner Has Two New Closed Models, a Sedan and Business Coupe

TWO new Gardner closed jobs are to be ready for delivery August 1. They are a 5-passenger sedan priced at $1,345 and a business coupe at $1,095. The body lines follow very closely the present phaeton. The business coupe has a wide, roomy seat upholstered in straight grain leather, and there is plenty of extra leg room.

Just back of the seat is a convenient compartment for carrying suitcases, packages, extra tools, etc. The door windows are raised and lowered with automatic rotary type noiseless lifters.

A special roof construction consists of cross bows covered with fine mesh wire screen and heavy duck, which is padded to give a smooth appearance and prevent sagging. Included in the equipment are a corrugated steering wheel, ventilator, sun visor and rain-proof windshield.

The sedan has smart straight lines which are accentuated by the finish, which is dark blue with black enameled fenders and nickel plated satin finish hardware inside the body. A forward tilting ventilator throws air around the feet of those in the driving compartment. The windows are fitted with silk shades and the hardwood is satin finish. The four door design allows easy entrance to both front and rear seats without disturbing those already seated. All doors lock from the inside, except the right front which locks with a Yale lock from the outside.

Overloading Is Worst Motor Bus Evil

This and Other Features Dealers Should Consider With Prospective Operators Discussed by Expert

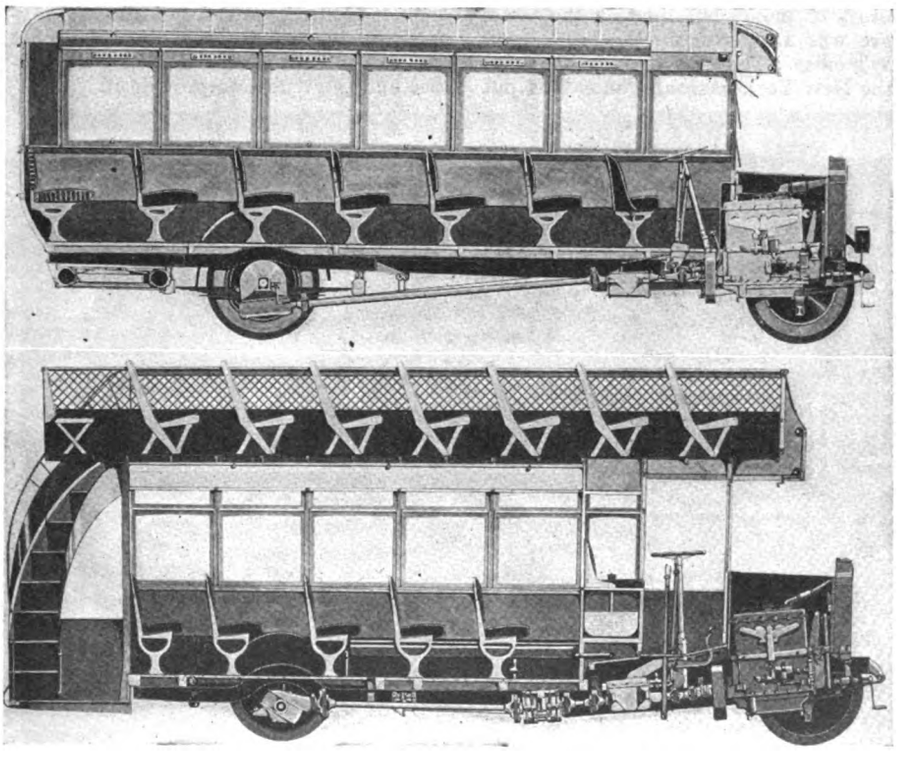
THE greatest danger in bus operation, and the point that motor truck dealers need to bear in mind in selling buses, is that of overloading.

In speaking before the Society of Automotive Engineers, George Green, vice-president and general manager of the Fifth Avenue Coach Co., New York City, gave reasons why overloading cannot be profitably carried out on bus lines.

Green as general manager not only has charge of the operation of the Fifth Avenue buses, but the company manufactures its own buses which are designed by Green. Thus Green sees a bus from the viewpoint of the maker, the owner, the operator and the person who has to service it and maintain the schedule.

Trolley lines permit or have a regulation allowing for 30 per cent standees, which can be done in a trolley car, as overloading to this extent is not important or injurious to the equipment because of the excessive weight of the trolley car. Overloading with a motor bus is an entirely different problem. On the bus the spring suspension at best has to be a compromise between minimum and maximum loads. If there is overloading, the springs are overloaded and the tires as well. Overloading means because of this discomfort for 90 per cent of the overload. To get a good riding bus springs should be suited to the average load. Overloading increases the maintenance to such an extent that it should be discouraged at all cost. As proof that excellent service can be had out of motor buses when they are not overloaded and when they are properly cared for, is evidenced by the fact that the Fifth Avenue Coach Co. has its buses operating 358 out of 365 days in the year. In other words each bus is running every day in the year, except seven.

During these 358 days the buses of the Fifth Avenue Coach Co. average 30,000 to 60,000 miles, according to the routes they are on. Only once in twelve months are they given a major overhaul, and they generally run 2000 miles without an adjustment of any character. They are inspected every 2000 miles, and the bus is not expected to require any repairs between inspections. These inspections take place practically every two weeks and the maximum allowance of time for an inspection is 8 hours.



Colonel Green places the maximum life of a bus at 5 to 7 years, which is approximately 1800 days of service.

From a business point of view the comfort of the passengers is one of the secrets of financial success. If the passenger has a separate seat, is always sure of a seat, has a comfortable seat, and the bus rides easily, there is no difficulty in getting passenger fares adequate to make the business a success, providing it is conducted on a business basis. Colonel Green uses what he describes as a progressive spring, that is, one in which the upper leaves take the weight of the vehicle and a certain portion below it, and as the load is increased additional shorter leaves come into service. This gives easy riding, even with the solid rubber tires used on New York City streets.

The question of accessibility in a bus is one of prime consideration largely because a bus service to be successful must maintain a regular schedule. If a schedule is not maintained failure is certain to result. To get accessibility Col. Green has featured the unit system of assembly. The designer has given more thought to the subject of repairing or replacing units than to merely that of fitting them together when building the bus. In this there is one dominating rule, namely that units must admit of removal without dislodging other units. Very frequently repairs and adjustments must be carried out at night and often this work is done under the most unfavorable conditions. Because of this the successful bus must be designed from start to finish with this thought of accessibility in repairs constantly in mind.

Colonel Green, because of his long experience in connection with the design, construction and operation of buses, is convinced that modified or unmodified trucks or automobiles are incapable of giving satisfactory and economical service if operated as buses. He does not believe that the motor bus has reached a perfected state of design. We must bear in mind that the motor bus has not made good in some localities where it has been tried out. We know of such failures as those in Des Moines, Toledo, Kansas City and others, and Colonel Green declares that analyses have invariably shown that the failure was due to the combination of unsuitable buses, overloading and general lack of experience in operation.

Types of Successful New York Buses

Ever Have a $16,000 Idea?—Here's One!

It Is Just Another Proof of the Fact That Good Ideas Are the Basis of Good Sales

THIS is a story about a $16,000 idea.

Like all good old-fashioned stories it has a moral—in this case a merchandising moral—but it also carries a practical suggestion that may mean truck sales and truck profits to some dealer.

Unlike the old-fashioned stories this one is going to carry the moral right up here near the beginning. It is: *Sell a man a good transportation idea and he'll buy trucks.*

That's what the Katz brothers, trading as the Katz Motor Car Co., White truck dealer in Paterson, N. J., did.

These Katz boys, Carl and Ed, were going to a baseball game in New York a few weeks ago by train, a ride of 20 miles. In the smoking car they met a dozen friends from their home town, and a lot more, some with their wives and sons and daughters when the train reached the Jersey City terminal.

Observance of this large gathering of baseball fans making the pilgrimage to New York was responsible for the birth of the idea.

"How much pleasanter it would be to make this trip direct to the ball grounds from Paterson in a fine, big, easy riding WHITE bus?"

When the Katz boys got home that night they talked about the idea some more. Then they phoned a few proprietors of motor bus lines in the town. There was a meeting in the truck company's office. The idea of daily bus trips to the New York baseball games was put to the bus operators. It was SOLD to them by the Katz boys in one sitting. And, along with the sale of the idea went the sale of two White bus chassis and fine big bodies for them—for $16,000.

The practical suggestion in this story is that in your town there may be some use for trucks in a similar capacity, for trips to ball parks, race tracks, amusement parks, summer resorts, etc., that has not been recognized and filled by anyone, and there may be sales and profits for you in selling the idea of such service and the trucks to provide it.

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer Equipment and Tire Dealer Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Bus that takes Jerseymen to ball games. Could you sell transportation like this in your town?

The White buses that came into existence as a result of the Katz boys' idea are making regular daily trips from Paterson to New York and return now, and they are in considerable demand, also, for group rides to adjacent cities and resorts nights. On the whole the investment promises to be a very profitable one for the bus operators.

Some Salesmen Find Writing Letters Helps

THE letter-writing habit is a mighty good one for the motor car salesman to acquire regardless of how much or the nature of the direct mail advertising done by the dealer.

Every salesman who has been selling for a reasonable period has built up a fairly wide acquaintance with a number of persons who sooner or later will be an active prospect. While it may not be profitable for him to spend very much time in canvassing them regularly, he can, with very little effort and time, keep himself and the car he sells before various prospects with an occasional note.

Such notes are most effective if they are just an informal communication written in the salesman's own handwriting, short, cheerful and individual. An Elgin salesman, in telling how he operated his plan, in the *Auto-Gram*, house organ of the Elgin Motor Car Corp., says that he devotes all of his spare time to checking his prospects and writing them short notes. Sometimes a newspaper item gives him a hint that one of his friends may be a prospect. Births frequently form a good excuse for approaching a man on the sale of a new car. Letter-writing has become a hobby with the salesmen. It keeps them busy and happy, in addition to being a very material benefit.

A Standard Demonstration Route

LAY out a standard demonstration route made up of roads that will impress the prospect with the capabilities of the car you sell. Your demonstrator drivers will get to know the route and their driving will improve. And with carefully selected road conditions, you can show the selling points of your car to the greatest advantage.

The route may be advertised as your standard demonstration trip. You can ask your prospects to compare the performance of your car with any other car over the same route. Of course, if the prospect desires a demonstration over another route, his selection should have the preference over the standard route.

Telegrams Used to Collect Old Accounts

Here's an Idea That Might Be Profitably Used by Some Jobbers and Dealers

WHILE this little story concerns a plan used by a retail clothing merchant to collect some old standing accounts that had been on his books for months, it is nevertheless of as much value to the automotive dealer as to the clothier, for in the collection of accounts the principle of getting the money and the methods employed in doing so are exactly the same in one field as they are in another. So the method employed by this clothing merchant can doubtless be just as successfully used by the automotive dealer, and it commends itself to action because of the somewhat remarkable results it obtained for the merchant referred to.

It was during the latter part of June that the George Muse Clothing Co. of Atlanta, Ga., one of the large retail clothing firms in the South, employed the unique plan of trying to collect a number of old standing accounts by sending telegraphic reminders to the customers in question, and with the result that out of 80 telegrams dispatched a total of more than $1,000 was collected in less than ten days' time.

A few of the accounts referred to were only three or four months in arrears, but the majority of them were from eight to twelve months behind, and were customers either located in other cities or who had left Atlanta to take up residence elsewhere without going to the trouble of paying the bill due the Muse store. The old standing accounts ranged from $50 to as high as $300, while there were a few only three or four months in arrears ranging from $10 to $25.

The average cost of sending out these telegrams was 50 cents each, nearly all of them going as night letters. Therefore, it will be seen that the total investment amounted to only about $40, whereby collections resulting from these telegrams exceeded $1,000. Truly an entirely satisfactory return, considering the fact that most of these accounts had been standing on the company's books unpaid for many, many months.

Dozens of the customers thus appealed to paid from one-fourth to one-half of the entire account due, while several paid the full amount. The largest check received in direct response to the telegraphic appeal was for $75, while the smallest was for $10.

In addition to sending out the telegrams the store also used the plan of calling up a number of the customers throughout Georgia and also in the city of Atlanta on the telephone, and thus reminding them of the old account still unpaid, while a few others were billed by registered letters. The latter two methods netted several hundred dollars more in collections from the old bills.

The basic principle here involved is the psychological effect this method had on the customer's mind. The receipt of a telegram, a long distance telephone call or a registered letter reminding him of his unpaid account was sufficient to show the customer that the store was right behind him in the effort to get this money, and that apparently the time had come when he should either pay part or in full to save himself possible embarrassment. One of the most interesting features about the plan, and one, too, that indicates its real worth as a money-getter, was the fact that several of the accounts on which payments were made had been considered by the Muse store as virtually "dead," with suit the only hope of every collecting the amount due. To such accounts the messages were sent merely as a last resort, or in other words as a sort of an experiment. Of these accounts, which were all from 10 to 12 months in arrears, the total amount collected was well above $250.

Following are a few of the telegrams sent out which accomplished the best results:

"We must insist on remittance of $76.50 to cover your August and December account. As this account is now considerably past due we believe we are entitled to immediate payment. Let us hear from you at once."

"Failing to hear from you in the next few days relative to your account of $104.75 of last October and November, we shall be compelled to pursue another course to perfect settlement."

"Is there any reason why we should not receive a remittance covering your account of $98.65, due now since last November and December?"

"We wish to advise that it is necessary we have your check at once covering your account, which now is nearly one year old. Failing to hear from you at once, we shall be compelled to force settlement."

"We find that your October and November account, amounting to $88.90, remains on our books unpaid. At time purchases were made we understood same would be paid according to our terms. Inasmuch as the account is long past due we must insist on check to cover same at once."

"We have received no reply to our telegram sent you several days ago. What may we expect in the way of remittance covering your old account? We must hear from you without fail or we shall be compelled to employ another means to perfect settlement."

Signs Carry the Selling Story

The use of signs makes this display window showing Kester Acid Core Wire Solder a real "talking" exhibit. It suggests how this and other items in small cans may be made into attractive displays

Washing and Polishing the Automobile

Methods and Appliances Show Little Change in Ten Years —Finer Finishes Require Greater Care

By J. HOWARD PILE

A SERVICE that practically every garage and service station is called upon to perform frequently is washing and polishing. Very few owners are able to do their own washing unless they have help skilled in this work. The big bulk of the washing business goes to the garage. The service station does not do washing as a regular business, but does wash cars that are sent in for repairs.

There are a number of different parts of the car to be considered in washing, and each of these is of a different material or is finished differently. In considering the problem of washing, these different parts and finishes must be treated separately. But before taking up the actual operations, it is well to consider the equipment necessary.

The Wash Rack

The most important requirement is a place to wash the car. Most garages have a space set aside for this purpose and call it the wash rack or wash stand. The space required is from 10 to 15 ft. wide and from 14 to 18 ft. long for one car. The floor should be made of concrete and should have a drain at the center to carry off the water. The floor should slope from the sides toward the drain. Cars stored near the wash rack will be better protected if there is a water-tight partition around the rack.

A water hose is needed for washing the body and chassis. In a small shop this can be a simple piece of garden hose connected to a faucet, the hose being long enough to get all around the car. There are better and more convenient washers that are attached to the ceiling and which swing around on a swivel so that the hose is not dragged on the floor. Some of these are turned on and off with a rope or chain and others operate by a slight pull downward on the hose. Still others have the water stop at the end of the hose and operated by the washer's thumb. Where cars are washed in quantities, it is economical to consider using one of these improved forms and the work can be more quickly done and the hose will last longer. Where such washing is done a heavier grade of hose is used, as the ordinary garden hose would not last very long. Ordinarily the hose is not equipped with a nozzle as accidental scratching of the finish might occur.

The washer will need a pair of hip boots and a rubber apron which comes almost to his neck and extends to his knees. It is pulled around well in back with tapes, so that any splashed water which hits him from the chest down will run off.

Washing "Tools"

Additional equipment needed at the rack are sponges, chamois skins and two or more 10 quart galvanized pails. The sponges should be of the grade known as wool sponge and should be free of grit and cinders. Sponges are liable to contain cinders in the interior due to the discharge of cinders from ships steaming over the sponge beds. Genuine chamois skins are hard to get, and most of the skins on the market are sheep skins which are heavier and a little harder to work with. There are a number of washing brushes on the market which are very excellent. These brushes have hollow handles and are attached to the hose so that a constant stream of water flows over the surface being brushed.

The polishing equipment needed consists mostly of soft wool or canton flannel cloths and brass and nickel polish. There is extremely little brasswork on the modern car but the use of nickel, especially on the sport models, is increasing.

The general conception of a wash and polish is a brushing out of the inside of the car, the washing of the outside of the body and chassis, cleaning the top and polishing bright metal parts and washing windows and lenses or glasses. The price for a wash and polish varies considerably, according to locality, reputation and competition.

Here are the different parts that are to be considered in washing and polishing:

Top	Upholstery
Body	Floor coverings
Windows	Running gear.

On open cars tops are either of mohair or similar material or else of artificial leather. The mohair tops are cleaned by brushing on the top and underneath with a whisk broom, or, still better, cleaning with a vacuum cleaner. Stains or grease are removed with castile soap and water on a rag. Gasoline, naphtha or benzine must not be used on the top, as it dissolves the waterproofing material in the top and makes it leak. Artificial leather tops are washed either by turning the hose on top of the car or with a sponge soused with water. Stains are removed in the same way. The underneath side is cleaned either with a whiskbroom or vacuum cleaner. The bows are washed with a wet sponge and wiped off, and leather straps after washing can be made to look more presentable by applying some harness dressing.

The Upholstery

The upholstery treatment depends on the material. Leather and imitation leather is cleaned with a sponge wet with clear water, squeezed out and wiped over the surfaces. If the surface is very dirty, use a little castile soap and follow with a good rinsing to get all the soap out. After the leather is thoroughly dry, a good leather dressing may be applied or the luster can be brought up by rubbing with a small rag on which a few drops of 3 in 1 oil have been squirted. This is followed by a brisk rubbing with a clean soft wool cloth. Whipcord, broadcloth and other fabric materials are cleaned by beating with a carpet beater or light stick, followed by a good brushing with a whiskbroom. A still better method is to use a vacuum cleaner. Stains on fabric material are difficult to handle. Gasoline and benzine have a tendency to spread the stain and also to leave a ring where the liquid stops. A better method is to use castile or Ivory soap on a piece of rag. If the soap is made too strong or the rubbing is too hard, this treatment is liable to lighten the color of the material and leave a much worse appearing spot than the original stain. All the soap must be rinsed out after the rubbing is done. Sometimes a small brush like a finger nail brush will work better than the rag. An old familiar remover for butter and lard and other animal oil stains is to cover the stain with a clean blotter or piece of absorbent brown paper and apply a hot flat iron over it. The heat thins the grease and the blotter or paper absorbs it.

The floor coverings can usually be

Better Mechanics

Digitized by Google

taken up either by lifting right out or by undoing the snap fastenings. Carpets can be treated the same as any house carpet, with a vacuum cleaner or a broom. Stains are removed the same as in fabric-covered upholstery. Rubber mats are best washed off with soap and water. Do not use any gasoline on rubber mats to remove grease. Gasoline will soften up the rubber and leave it gummy on the surface and will also separate the fabric backing which is cemented to the mat with a cement soluble in gasoline. The steering column, spider, rim, brake and clutch pedals and emergency brake lever can be washed off with gasoline to remove grease, which may otherwise find its way to the mat or to the hands, shoes or stockings of the driver. The instrument board can be simply wiped dry unless some grease has gotten to it, in which case a gasoline rag followed by a good wipe will do the trick. If the surface remains dull, apply a few drops of oil on a soft rag and rub briskly.

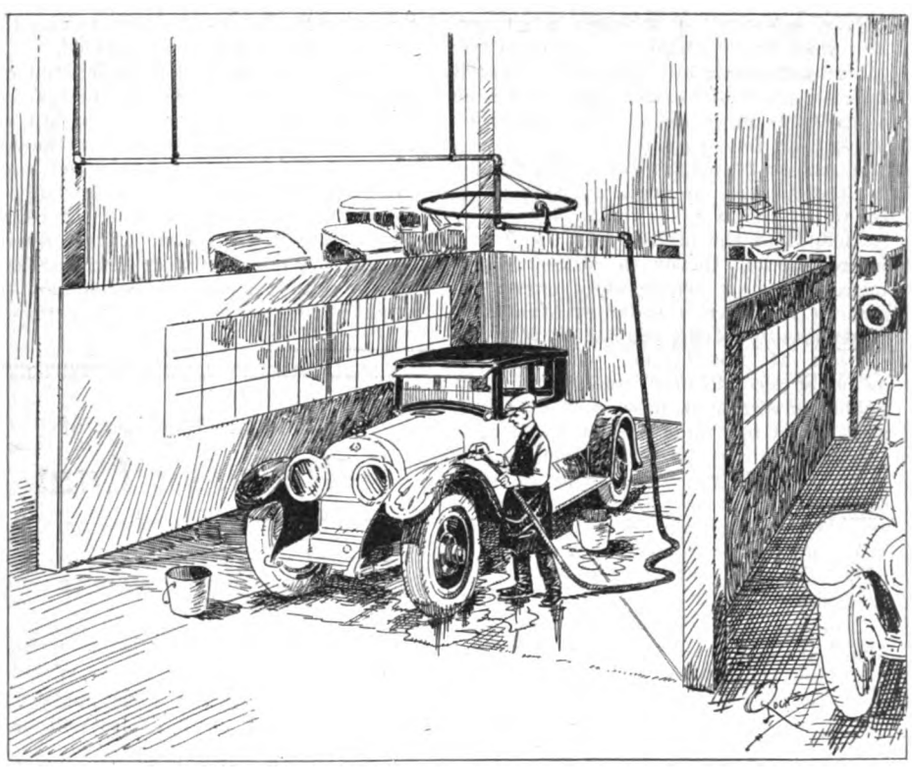
Washing the Body

The washing of the body proper requires considerable care and some little skill. Plain water is used here, and the water should be between 50 and 70 deg. Fahr. Water which is either too hot or too cold will harm the finish. The washing is started by flowing water gently over the body, working one side at a time. If there is mud caked on the finish, it is soaked with water till it drops off itself or can be easily loosened. The water must flow out of the hose in a gentle stream, not more force than will push the water 6 in. from the end of the hose. A strong stream or rubbing while mud is still on the finish will act just like fine sandpaper, driving the fine particles of sand against the finish. After the flushing has removed all caked dirt and mud, a sponge is used. The sponge must be absolutely clean and free from grit. Do not use a sponge that has been used on the wheels or running gear, as it is liable to have grease on it. The sponge is used by turning the hose into one of the buckets and letting it run. Soak up water from the bucket and dash it gently against the body, doing as little wiping as possible and following by a good rinsing with the hose. Soap is never to be used on the body finish, except as a last extremity, and then only a neutral soap or one containing no alkali. Linseed soap answers the requirements. A new car especially should never have soap used on it. Sometimes a body gets particles of tar on it, and the removal of this requires time and patience if the finish is not to be harmed. Gasoline or kerosene will remove the tar, but will dull the finish also, so these should never be used, except on the running gear. Vaseline will soften the tar, and this is probably the best thing to use. If the tar is caught while it is still soft, it will come off fairly easy, but if allowed to harden there is likelihood of pulling the varnish and paint off along with it.

After the body has been thoroughly washed, dry off with a chamois skin which has been soaked in clean water and wrung out dry. If the body has dried in the meantime, wet it again before applying the chamois. The chamois should make the surface practically dry and should give it a gloss. Be sure that the chamois has no grease on it, and do not use a chamois that has been used on the running gear.

The body should never be dusted dry nor should a feather duster be used at any time on the varnished surfaces. Dusting simply rubs the tiny particles of sand and grit over the surface, and while there may be no apparent injury from doing it once or twice, it will eventually dull the surface.

There is no particular trick about washing the windows. They are simply rinsed off with clear water, rubbed with a sponge, rinsed again and then wiped dry with a chamois. Any bits of paint or tar can be removed from the glass with an old safety razor blade which has been fitted to a wooden handle.



Chassis and Running Gear

The chassis and running gear are washed in much the same way as the body, but it is permissible to use a strong stream of water and to use a good neutral soap generously. Where grease and oil have collected very heavily, they can be removed with gasoline and a small paint brush.

If the radiator is clogged with mud, this is removed by squirting the hose from the back of the radiator. Do not squirt it through from front to back, as the water is liable to get on the electrical equipment and possibly into the breather of the engine. Do not poke any sticks or metal objects into the radiator spaces, as the metal is extremely thin and is liable to be punctured.

The car should never be washed in strong sunlight, as it will not be possible to wipe the water off before it dries itself and the result will be a streaky and spotty finish.

The hood should not be washed while hot, as this will cause water marks, spots and streaks. Wait till it cools down.

A well arranged wash rack with partitions

Mud spotting and rain spotting can sometimes be cured by frequent washings with cold or cool water.

Polishing

Brass parts of the car can be polished with any one of the hundreds of metal polishes on the market. Care must be taken not to get any of the polish on the varnished parts of the car, as this will cause stains that cannot be taken out. If the brass part comes very close to a varnished surface, cut a mask out of cardboard so that the rag with the polish will hit the cardboard.

Never use metal polish on nickeled surfaces. The action of most metal polishes is a scouring one, and the abrasive will remove the nickel plating which is usually very thin. Nickel is best cleaned with a soft woolen rag with a speck of vaseline on it. If the nickel is badly corroded use 3 in 1 oil or a fine silver polish which will not scratch.

When necessary to polish the headlamp reflectors, use only putz pomade and a soft canton flannel rag, rubbing always from the center where the bulb is to the rim, using straight line strokes. Use no more rubbing than necessary, as the silvering is thin and too much rubbing will remove it.

Can Garageman Hold Car for Old Repair Bill?

Vexatious Question Still Unsolved in New York State—Some Opinions For and Against Procedure

THE question of whether a garageman or repairman can hold a car for an old repair bill when it is brought into his place of business has long been a vexatious one in New York. The New York Lien Law provides:

A person keeping a garage or a place for the storage, maintenance, keeping or repair of motor vehicles, as defined by Article II of the highway law, and who in connection therewith stores, maintains, keeps or repairs any motor vehicle or furnishes gasoline or other supplies therefor at the request or with the consent of the owner, whether such owner be a conditional vendee or a mortgagor remaining in possession or otherwise, has a lien upon such motor vehicle for the sum due for such storing, maintaining, keeping or repairing of such motor vehicle or for furnishing gasoline or other supplies therefor and may detain such motor vehicle at any time it may be lawfully in his possession until such sum is paid.

Time and again dealers who have been unable to collect for storage or repair of motor vehicles have been confronted with the question as to whether they could hold a car on an old bill when the owner of it brought it into their place of business for further repairs. It has been sometimes contended that the dealer had the right to hold the car for the first bill and also for the second bill. On the other hand it has often been contended that the dealer's right of lien only extended to the amount due under the second bill. Unfortunately, up to this time the courts have never passed on this point and the New York statute which gives a lien to dealers has not been legally construed.

Those who contend if a motorist who owed a bill for work done several months ago brought his car to a garageman for further repairs that the garageman would have a lien for the old bill as well as the new, arrive at their decision because of the provision in the lien law which says: "A person keeping a garage, etc., has a lien upon such motor vehicle for the sum due and may retain such motor vehicle AT ANY TIME it may be lawfully in his possession, until such sum is paid."

They contend that the lien law is plain and that it gives a garageman a lien any time the car is lawfully in his possession until he is paid.

Before this statute was enacted, garagemen had a common law lien for storage and repairs, but that lien was lost where the owner was allowed to take the car out. Thus, before the present enactment, garagemen had practically no lien where cars were kept on live storage. It was to remedy this that the law set out above was passed.

Those who claim that under the circumstances outlined above the garageman has a lien only for the new bill, say that, although it is true that the law provides a garageman has a lien on a car at any time he may be lawfully in possession of it, this means before the transaction is concluded, that is, during the time a motorist keeps his car in a garage and that the garageman's lien attaches every night that he brings it back to the garage even though he may take it out every day. When the car is finally voluntarily given up by the garageman, however, the transaction is ended and the lien is waived.

Those who uphold the latter view allege that when a lien is once waived it is waived forever and they say that where a car is voluntarily surrendered the provision of the law that a garageman may have a lien at any time a car is in his possession does not apply, because it relates only to a case where the dealings between the owner and garageman are not terminated.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER

Some Interesting Rulings on Yellow Taxi Cases

In a recent issue of Motor World, the New York case of American Yellow Taxi Operators vs. Quinn was reviewed at length. In this case an injunction was sought against the owners of taxicabs who, it is claimed, so closely imitated the "Yellow Taxis" as to mislead the public. The injunctions were granted on that ground.

Since the printing of the decisions in the above cases on this page, a number of other cases have come before the Special Term of the New York Supreme Court. The decisions in these other cases, which are also applications for injunctions, are as follows:

American Yellow Taxi Operators, Inc., vs. Pias—Denied, with leave to renew in case the defendant adopts any lettering upon his car, calculated to mislead the public into believing that the cars of the defendant are those of the plaintiff, as was the case when this action was commenced.

Same vs. Scheiner—Denied, with leave to renew in case the defendant causes any lettering upon his car calculated to mislead, as existed when action was commenced, but which has now been discontinued by the defendant.

Same vs. Lauter, Same vs. Katowski, Same vs. Comfort Touring Co., Inc., Same vs. Gantz, Same vs. Lee Auto Service Co.—Granted. Submit orders on notice in accordance with the decision of Mr. Justice Cohalan in the Quinn case (reported in N. Y. Law Journal, April 17, 1922).

Same vs. Cohen—Granted. Settle order on notice. See memorandum in case of this plaintiff against Diamond et al., this day decided.

Same vs. Vassallo, Same vs. Trivero—Denied. The defendant uses no lettering upon his car, and the plaintiff is not entitled to an injunction under the decision of Mr. Justice Cohalan in the Quinn case (reported in N. Y. Law Journal, April 17, 1922.)

Same vs. Barry—Denied. The answering affidavit of the defendant shows that, about one week prior to the commencement of this action, he changed the lettering upon his taxicab, so as to strike out the word "Yellow." Thus the present lettering and name of "Globe Taxi" would not mislead the public, and the plaintiff is not entitled to an injunction under the disposition of Mr. Justice Cohalan in the Quinn case.

American Yellow Taxi Operators vs. Travelers Taxicab Corp., Inc.—Denied. The corporate name of the defendant, adopted before plaintiff was incorporated, is so entirely different from that of the plaintiff, and the lettering and general appearance of the name upon the defendant's taxicabs are such as not to mislead the public into the belief that the cars of the defendant are those of the plaintiff.

Same vs. Giordano—Granted to the extent of granting leave to the plaintiff to bring in the Pleasantville Taxi Co., Inc., as a party defendent by supplemental summons and complaint, and with leave to renew this motion after such service of said summons and complaint on said corporation, of which the defendant is the president.

Complete Dealer Building on Unit Plan

Property Divided Between Sales, Service and Storage Units— Main Street Frontage Used for Display Exclusively

THE plan on this page is for a typical dealer building on a corner property. It provides for car, accessory and parts sales, storage and service. The building is arranged on the unit plan. The salesroom, accessory store, stockroom, battery shop and office form one unit across the front of the building. The second unit is the storage garage and the third unit the service station.

The street frontage is divided equally between the car salesroom and the accessory store. The former has a display capacity of two cars. Both have fine display window facilities. The store is intended for accessory, tire, parts and battery sales. It is provided with counters, shelves and tire rack. It is conveniently located with respect to both the tire and battery shop and the stockroom.

The cars in the garage are placed facing an aisle extending across the width of the building. The indicated capacity is twenty cars. In planning a building of this character, the dimension of the garage parallel to the length of the building should be at least 50 ft., as this space is necessary if the movement of cars in the garage is to be convenient. If it is impossible to provide this space, it is usually better to make an entirely different type of layout.

The service station is large and well-lighted. There is plenty of room around the cars. Only such cars as can be worked on should be run into the shop. Cars awaiting their turn should be kept in the garage.

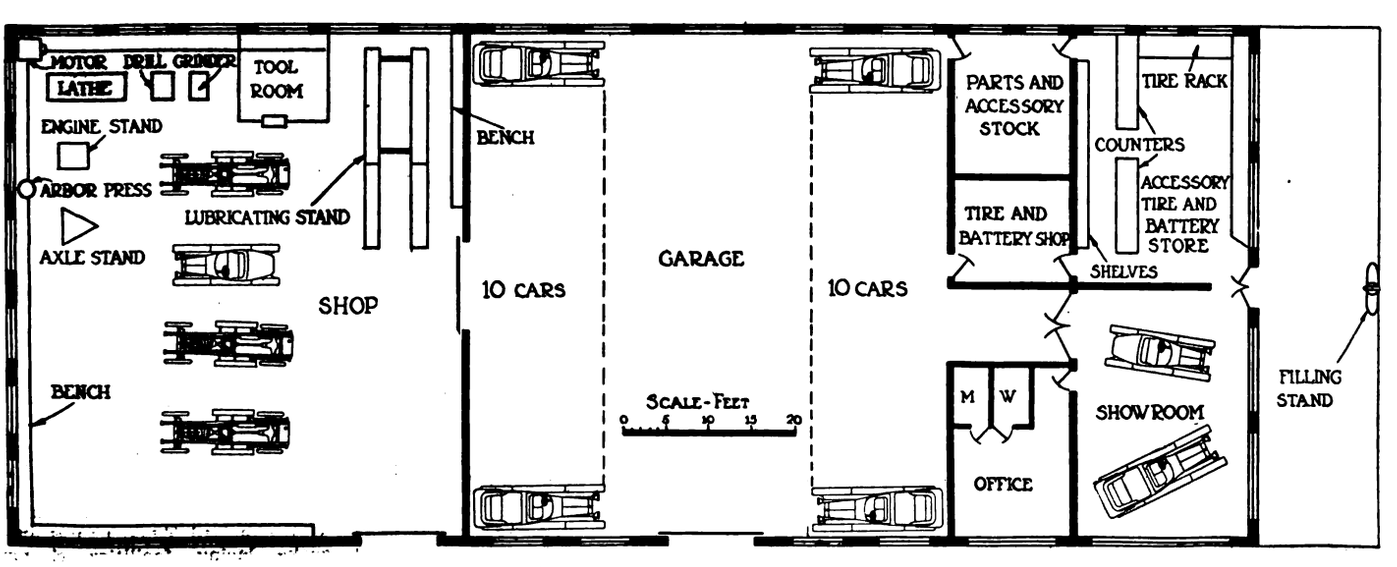
The lubricating stand shown in the corner consists of two elevated tracks with inclines leading up to them. This stand can also be used when it is necessary to perform mechanical operations underneath the cars. The machine equipment shown includes lathe, drill press and grinding stand. The drill press may also be used for cylinder reboring if it is desired to handle this class of work. Other equipment indicated is the engine stand and the axle stand.

The roof should be carried by trusses. There are two arrangements possible—one with the trusses across the width of the building and the other with the trusses parallel to the length of the building. In the latter cases, the partitions separating the units would be used to support the ends of the trusses.

Motor World's Department of

Better Business Buildings

Is a weekly feature of the paper. Motor World is glad to receive and answer inquiries for salesroom or garage plans, but in order that there may be as little delay as possible in submitting the plans desired it is imperative that the following information be given:



Size of plot, with rough sketch showing shape and its relation to adjoining plots; name and number of departments operated; number of cars to be shown in salesroom; number of cars in garage; any other pertinent details.

NEW YORK DEALERS PLAN CLOSED CAR SHOW

NEW YORK, July 24—Virtually all space available in Grand Central Palace has been sold for the closed car show of the Automobile Merchants' Association of New York, which will be held Sept. 23 to 30. This is the first time the metropolitan dealers have attempted anything so elaborate as a closed car show in the Palace, scene of the mid-winter show conducted by the National Automobile Chamber of Commerce.

It is planned to charge an admission of 75 cents, with dealers' tickets for distribution to prospects at 35 cents. Space will sell for $1 a square foot.

The show plans are being made by a committee including Charles H. Larson, Oldsmobile, chairman; Harry W. Gaston, Lexington, vice-chairman; H. T. Porter, Lafayette; Harry S. Houpt, Hudson-Essex; William C. Poertner, Durant and National; Lee J. Eastman, Packard; and E. P. Herman, Stewart truck. It has not yet been decided whether there will be an exhibition of trucks in connection with the show.

Floor plan for complete dealer building on corner property 60 *x* 158 *ft. The salesroom has a two car capacity. The indicated storage capacity is* 20 *cars*

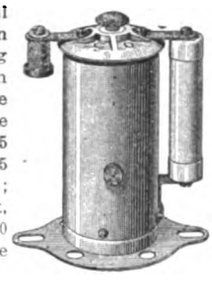
Equipment to Sell

New Devices for the Car and Truck

Elmco Pearlite Piston

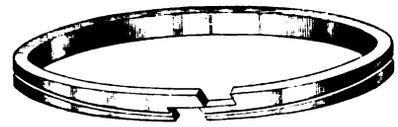
Electric Machine Corp., Indianapolis, Ind.



The pistons are semi-finished or finished in all sizes and oversizes for all makes of automobiles, trucks and tractors. The Pearlite metal is gray iron of great density. The machined oil grooves have drains below all ring grooves and the oil grooves on the joint of the spiral oil groove. The head rims permit a lighter piston and brace strips on the top of the boss to the piston heads give additional strength. Circular rims on a line with the bosses and below the bosses reinforce the piston wall and maintain a uniformity of expansion.

Rico Standardized Coil

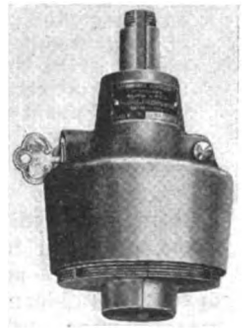
Rico Ignition Co., Pittsfield, Mass.



Price $7 for coil units.

A replacement coil that can be installed on any make of car having battery ignition with the exception of the Ford. Parts besides the coil units are base, 15 cents; brackets, 15 cents; adapter, 10 cents; 6 volt resistance unit, 25 cents; condenser, 90 cents; 12 volt resistance unit, 25 cents.

Wicaco Twin Cut Piston Ring

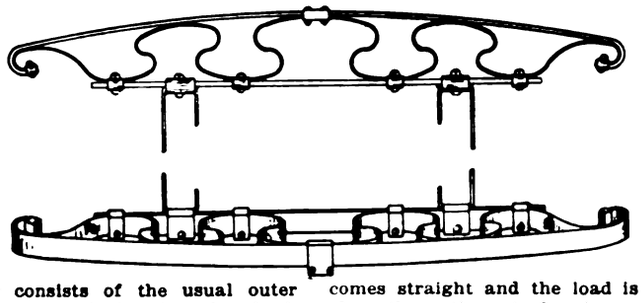


Wicaco Screw & Machine Works, Inc.
Stenton Avenue & Louden Street,
Philadelphia.

The rings are concentric and ground to size. The joint combines a diagonal and step joint and has a wandering oil groove which on account of its sloping construction is said to carry the oil on the up stroke to lubricate and to scrape on the down stroke. Made in standard over sizes .005, .010, .020, .030, and .040.

Defiance Lock for Fords

Disco Electric Mfg. Co., 2100 Howard Street, Detroit.

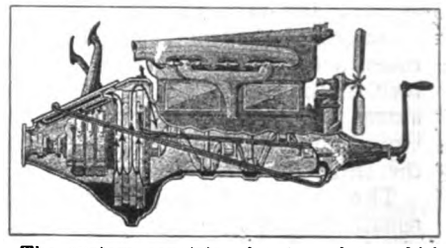


A loose wheel lock with a split bottom plate, comprising two separate parts which fit around the steering column and to screw into the housing of the lock. This prevents tampering with the gears from underneath. Turning the key raises the gear clutch above the lower pinion throwing the steering gear into neutral. Thus the wheel is caused to revolve freely on the steering post, making it impossible to steer the car. A safety plunger prevents the lock from becoming operative while the car is being driven. The wheel is 17 in. walnut with aluminum spider arms.

Protection Automobile Bumpers

Protection Automobile Bumper Co., Grand Rapids, Mich.

Price $20 to $27.



The bumper consists of the usual outer bar and a back rail which takes the shock at four points through the curved springs which go between the outer bar and the back rail. The front bar is convex and deflects the impact to a certain degree and when the load is extreme the front bar becomes straight and the load is then divided along the entire set of springs, equalizing the shock. Made in two sizes, one for 3,000 and one for 4,000 lb. car class. The prices are $20 for black, $22 for nickel in 3,000 lb. class; $25 black and $27 nickel in 4,000 lb. car class.

Ford Faithful Oiling System

W. O. Thompson Mfg. Co., Pasadena, Cal.

Price $5.75.

The system consists of a top plate which replaces the transmission cover door, a tube which extends from this door to the foot plate at the front of the engine. The oil drawn by the flywheel is taken up by a receptacle underneath the new cover plate and goes down the tube to the front of the engine.

Ames V. D. A. Electric Horns

Ames Products Corp.,
30 Church Street, New York City.

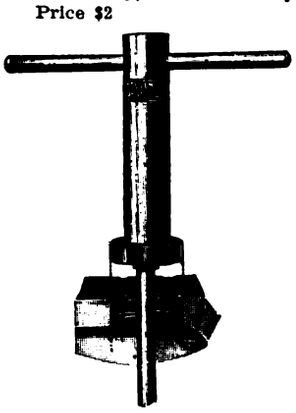
Price $3.50.

An electric horn operating from the battery. It is said to use a minimum of current and have a note sufficient to cut through noisy city traffic.

Hayes Demountable Rim Wire Wheel

Hayes Wheel Co. of New York,
250 West Fifty-fourth Street, New York City.

The wire wheels are for Ford, Chevrolet, Durant, Nash, Dodge and Earle. The attached lug rims are used on all types and the wheels are held on by the same nut and pin as are used for wood wheels. The wheels are equipped with standard Timken races and a special spoke lacing facilities cleaning. Standard colors are cream, white, red and black.



Digitized by Google

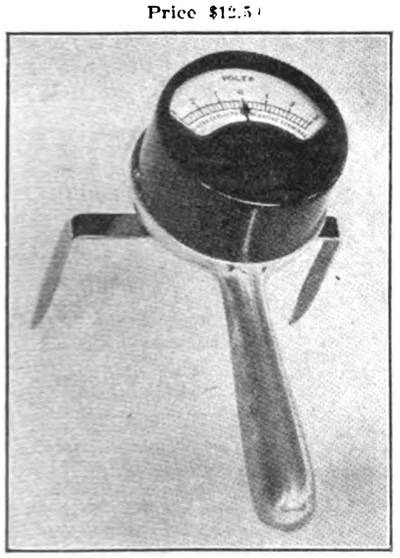
Equipment for the Shop

New Machinery and Tools

Stevens Valve Port Reamer for Fords

Stevens & Co., 375 Broadway, New York City
Price $2

A reamer for increasing the diameter of the valve port on the Ford engine. This is used when the seats have widened out through wear or excessive grinding.

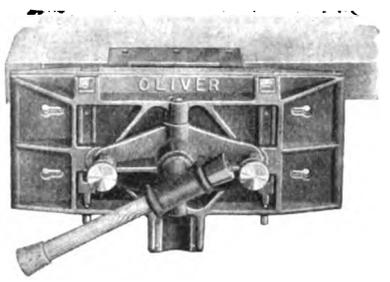


Warner Liquid Solder

Warner-Patterson Co.,
914 South Michigan Avenue, Chicago

A radiator sealing compound which is placed in the radiator at any time and seals leaks as they develop. It is claimed that the solution does not interfere with circulation and that it prevents rust and corrosion and does not injure the metal parts of the rubber hose connection.

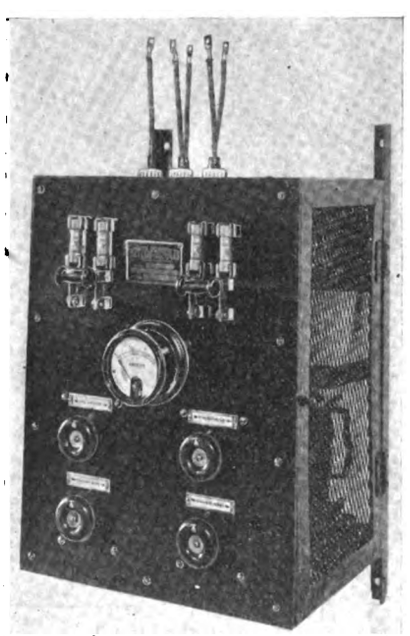
Hyrate Volt Checker



Service Station Supply Co., 30 East Larned Street, Detroit
Price $12.5[illegible]

The volt checker is a voltmeter with a zero center scale reading to 3 volts on either side. It is equipped with two side spikes and a handle. Only one hand is necessary to make the reading, leaving the other hand free to record the readings of the instrument and with the zero center scale there is no danger of reversing the meter as the needle will swing either way. The checker will also find polarity as the needle swings always to the negative post.

Oliver No. 1 Universal Vise



Oliver Machinery Co., Grand Rapids, Mich.

The vise is for pattern makers and wood workers and is especially adapted to handling awkward, special or irregular work. The jaws are 7¾ in. wide, 18 in. long and will open up to 16 in. The screw is steel 1⅛ in. in diameter with a self-centering and detachable nut.

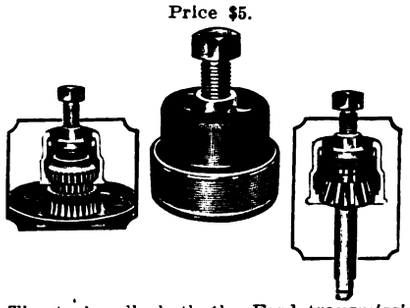
Heyer Thirty Battery Charger

A. T. Heyer, 34 Valley Road, Montclair, N. J.
Price $195

The charger is for use on alternating current and has a capacity of one to thirty batteries, and charging rates from 1 to 12 amperes. The transformer is designed to operate on 220 volt, 60 cycle circuit, or 110 volt, 60 cycle circuit. It has a 1½ kw. rating. The machine will pick up at 2 or 3 amperes and will not let the battery discharge back in case the power is shut off. It will then pick up automatically when the power comes on again. The two fuse panel switches make it possible to use either one or two volts if desired, depending on the number of batteries to be charged and the rate. An ammeter indicates the charging rates, and hinged side makes the bulb easily accessible.

Invincible Acid Apron

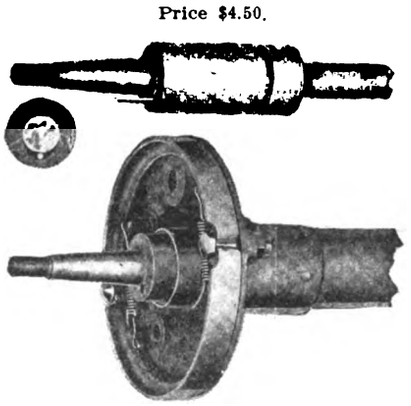
Defiance Welding Co., Defiance, Ohio.



40 x 24 in..... $3.00
46 x 32 in..... 4.25
24 x 24 in.
(waist style) 1.75
Overalls
(split style).. 5.50

Acid proof aprons and overalls are made of a fabric that will stand acid without cracking. In addition to the acid resisting qualities, the material has unusual mechanical strength. The material is said not to crack or scale. The articles are furnished complete with adjustable neck tape and chain waist fasteners.

Stevens Duplex Gear Puller



Stevens & Co., 375 Broadway, New York City.
Price $5.

The tool pulls both the Ford transmission drive gear, No. 3317 and also the Ford drive shaft, No. 2597. The screw and nut are made from forged steel and the body of the tool is a malleable casting.

Barny's Emergency Axle for Fords

Hoeffler Robechaud Co., 275 Fifth St., Milwaukee, Wis.
Price $4.50.

An emergency axle for Fords which allows the car to be driven. The roller bearing is removed and the emergency axle inserted, and locked to the broken axle by inserting the locking pins through the end of the emergency axle wedging the parts together.

Repairshop Shortcuts

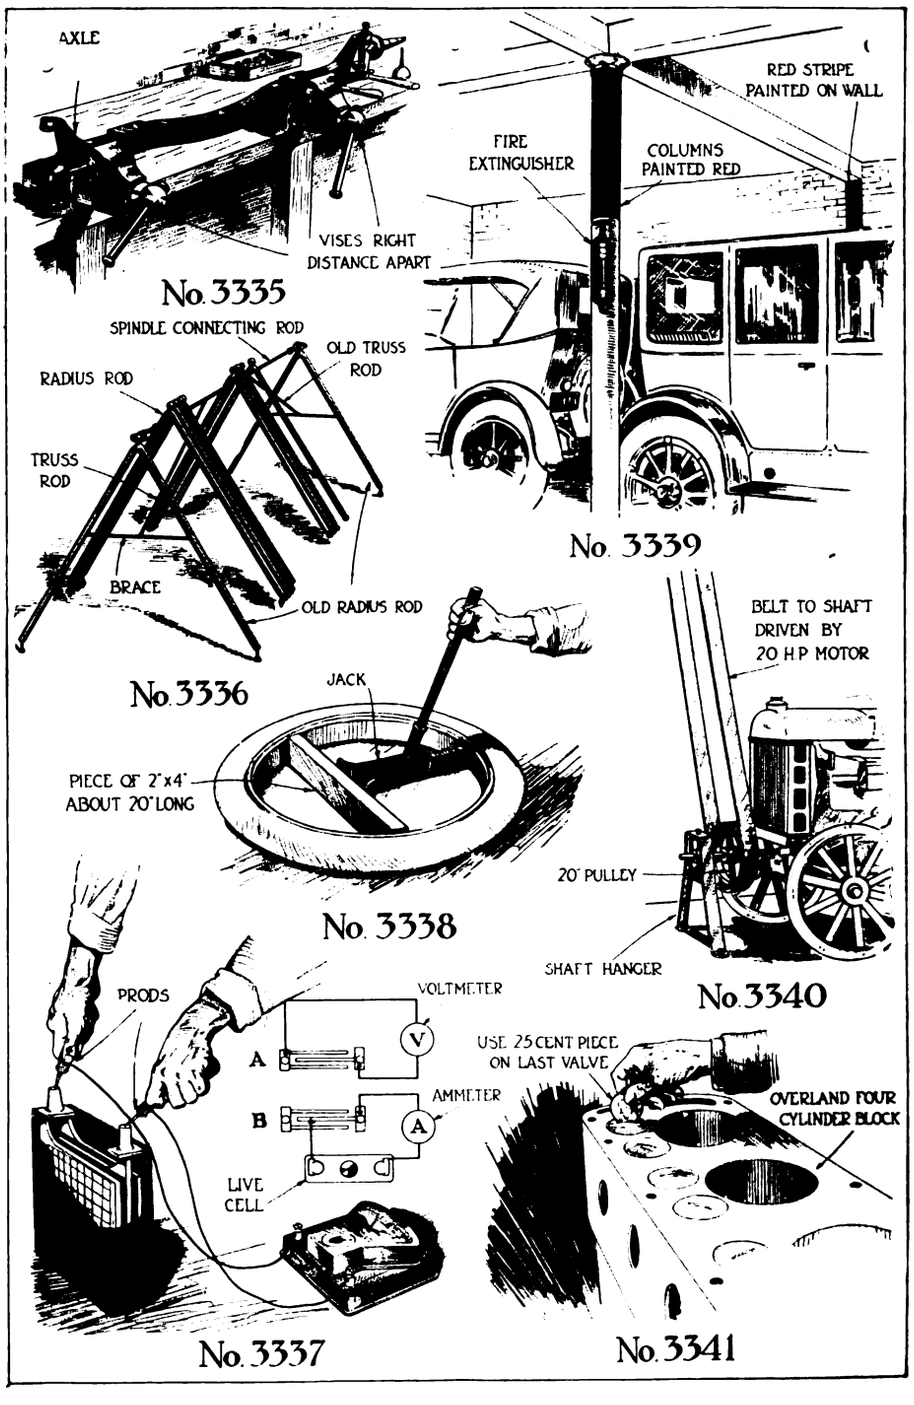
Using Brains to Save Money

ON this page are several shortcuts from the shop of Williams & Hastings, Detroit distributor of the Hupmobile. More are to appear in issue to come. Don Hastings, who looks after the service end of the business, has worked out many ideas for doing work more quickly and in a better manner. He is responsible for the Hupmobile flat rate schedule that was published several weeks ago. It is in such advanced shops as these that men think up ideas that save money. The smaller shop can profit in proportion. Look over these ideas of Hastings. They are good. So are the others. Save yourself time and money. Then send Motor World some of YOUR ideas.

We will pay $1 *for any ideas which are practical and which have not been used previously.*

No. 3335—Vise Mounting for Front Axle Work.—Two vises are mounted on the bench the right distance apart to grip the front axle for bushing work, straightening and aligning.—Don Hastings, Williams & Hastings, Detroit.

No. 3336—A Ford Radius Rod Rack.—A rack to hang radius rods on is made from two old radius rods with a spindle connecting rod between the two balls. A hole is drilled and bolts put through and tightened up so that the two radius rods act as the end frame.—Fred S. Tatman, Manager, Cains Garage, White Halls, Ill.

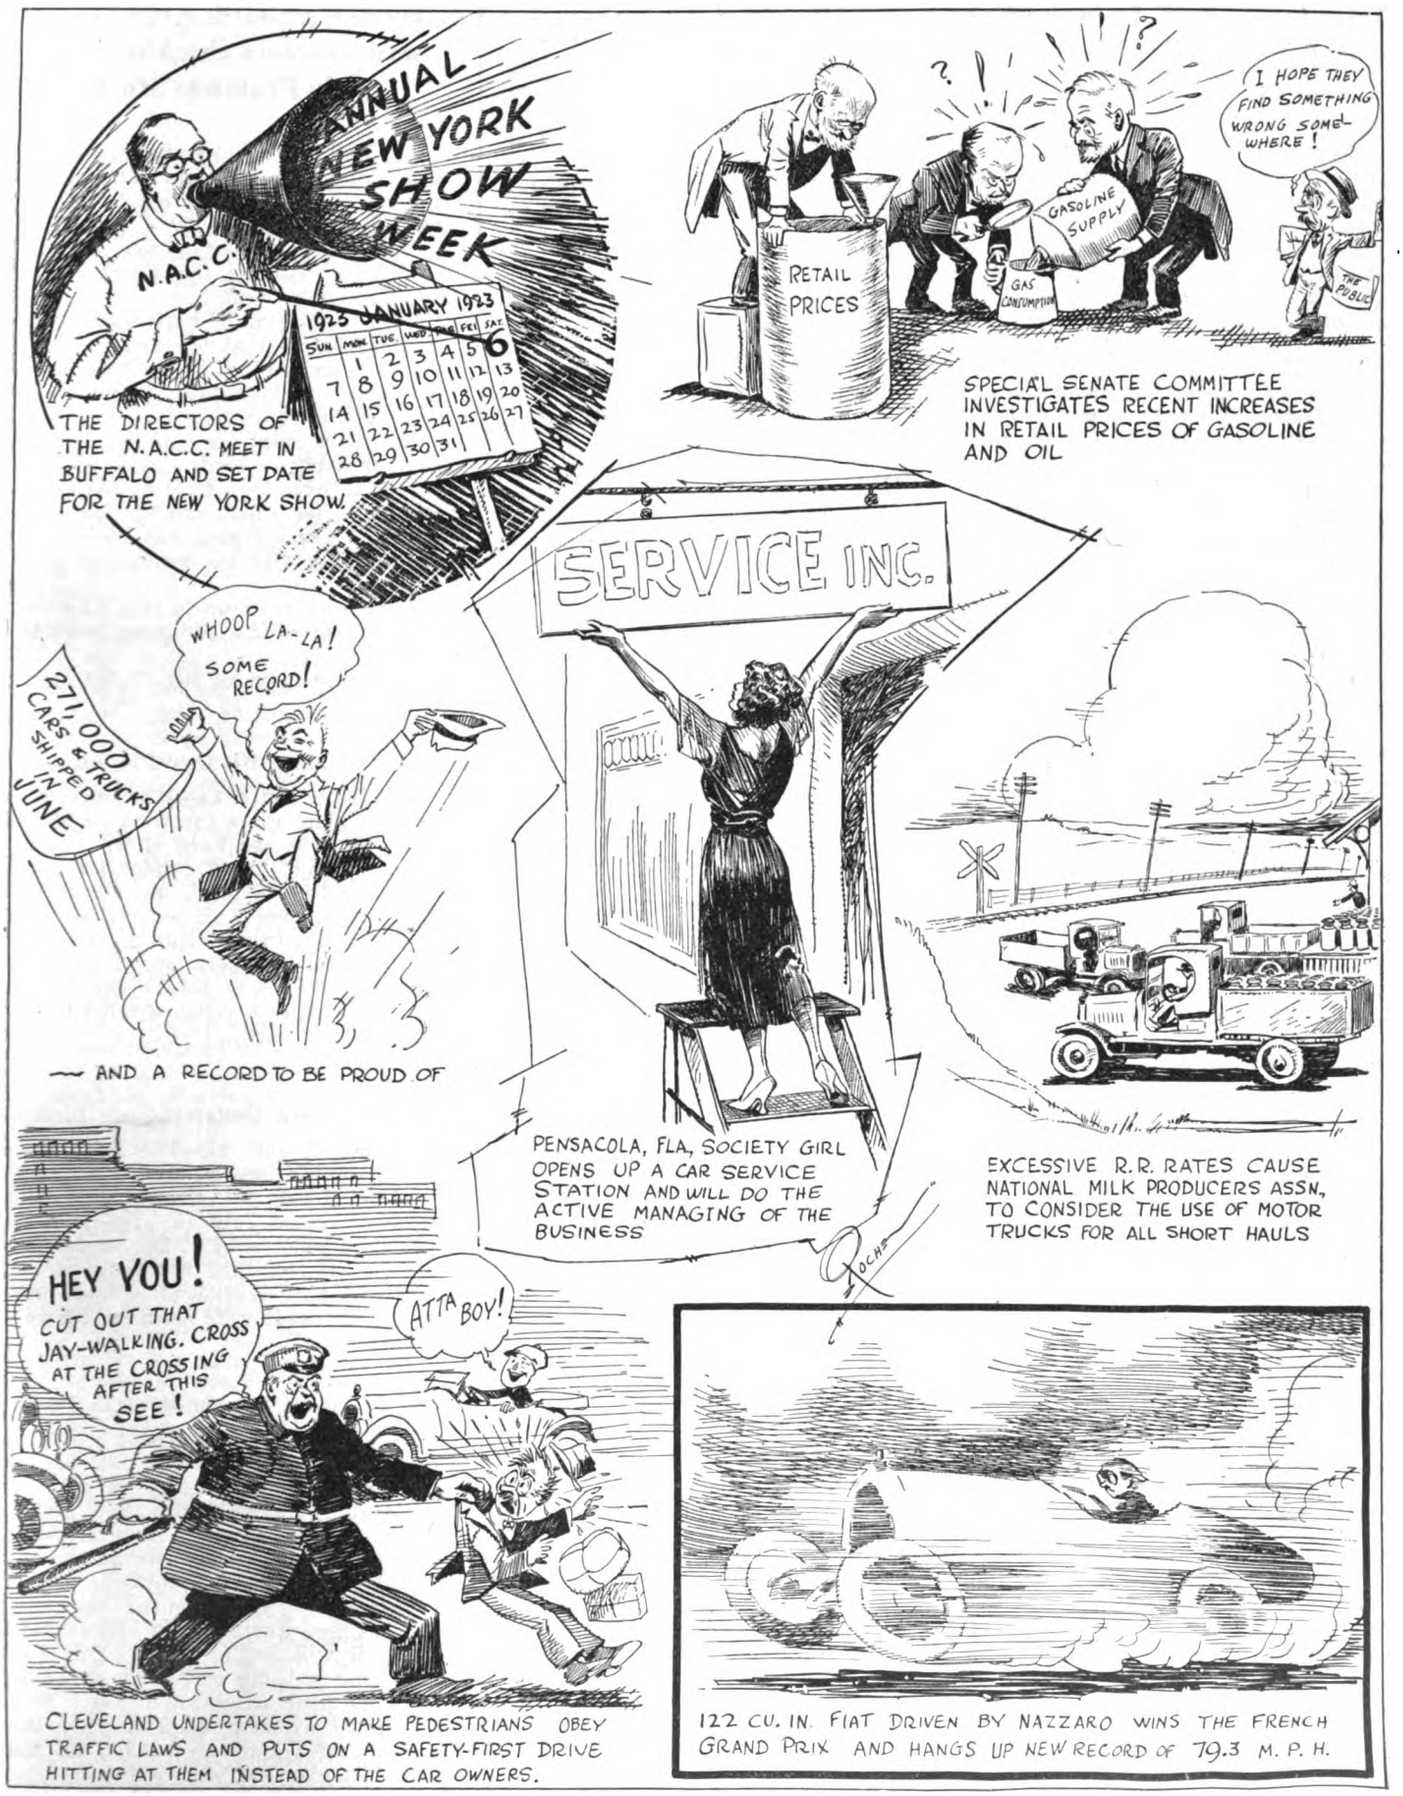


No. 3337—Determining Battery Cell Condition and Polarity.—To tell the polarity of a storage battery cell, whether alive, dead or reversed, a ringing out circuit is used. There is a positive or negative plate in the center seen through the vent. In an 11 plate cell this is positive. In a 13 plate cell it is negative. A voltmeter placed on this plate will show voltage when the other prod is struck in the terminal of the opposite group. —Orin F. Niebuhr, Madison, Wis.

No. 3338—Replacing a Sprung Rim.—A sprung rim can be replaced by using a jack and a piece of two by four about 20 inches long.—H. W. Moffett, J. E. Moffett & Co., Bradford, Pa.

No. 3339—Locating Fire Extinguishers.—A bright red band of paint about 6 in. wide is put on the wall over every extinguisher in the shop, this running clear to the ceiling. Where the extinguisher is on a post, the whole post is painted red.—Don Hastings, Williams & Hastings, Detroit.

No. 3340.—Burning Bearings in a Fordson Without Removing Motor.—A shaft is turned up the same size as the crank and a hole drilled for starting pin. A pulley 20 in. in diameter is mounted on the shaft and the outer end hung in the shaft hanger. The tractor is set in line with a line shaft or driven by a 20 hp. motor and rods are set up from the bottom.—H. R. West, Hall Motor Co., Fort Collins, Col.



No. 3341—Grinding Overland Four Valves.—A twenty-five cent piece held in the fingers will grind the last valve on the Overland Four if no special valve grinder is available.—H. V. D. Sweet, Canajoharie, N. Y.

INDUSTRIAL CENTERS FEEL STRIKE EFFECT

Shipments Meet Delays—Continuation of Walkout Will Slow Up Operations

NEW YORK, July 25—While the coal and rail strikes have not yet seriously interfered with automotive production, their effects are becoming apparent in such centers of the industry as Detroit and Cleveland. If the walkouts continue another week, they will result in a considerable slowing-up of operations.

Curtailment of steel production and reluctance of companies to accept orders has brought keener competition and the payment of larger premiums by automobile makers for immediate deliveries of much needed supplies. This shortage will rapidly become more acute.

Parts makers have encountered no actual car shortage as yet, but deliveries of their shipments of finished products and of raw materials to them are showing steadily lengthening delays. Freight congestion is becoming more severe at the strategic gateways, and embargoes are being declared at such important centers as St. Louis.

Passenger car and truck manufacturers will be able to deliver a large part of their products by resorting to the expedient of driving their vehicles from the factories to their destinations, but their output will be seriously impeded in a very short time by difficulty in obtaining supplies. "Driveaways" from the factories are no novelty for automobile makers. The Detroit Edison Co., which supplies power to most of the plants in that city, still has on hand considerable stocks of coal.

The seasonal decline in passenger car sales has become a little more general in the past week, but has not reached serious proportions and is considerably less than normal. If serious industrial stagnation results from the strikes and the shortage of railroad rolling stock, buying power naturally will diminish and the demand for automobiles will fall off.

The market for heavy trucks is dull, but it probably will be stimulated by inability of the railroads to move the freight offered them. Farm demand for light trucks is expected to increase in a short time.

Manufacturers in the automotive field will resort so far as possible to the use of trucks to bring in their supplies, and they probably will be able to avoid closing their plants, provided the strikes do not cause comparatively complete suspension of iron and steel production. This would be a situation with which trucks could not cope.

Messenger Company Expanding

DES MOINES, IOWA, July 24—The Messenger Manufacturing Co. has taken over the manufacture and sale of all the products formerly produced by the Auto Metal Parts Co. of this city.

PLACES AND DATES FOR MAJOR SHOWS

NEW YORK, July 22—The directors of the National Automobile Chamber of Commerce have decided to use the Grand Central Palace again for the 1923 show, which will be held the week of Jan. 6-13. The Chicago show will be held from Jan. 27 to Feb. 3 in the Coliseum and the First Regiment Armory as usual.

DURANT PRODUCTION HAS REACHED 24,456

NEW YORK, July 24—Durant Motors, Inc., turned out 5119 fours and 767 sixes, a total of 5886 cars, in June. July production will somewhat exceed 6500. June output was divided among the different plants as follows: Long Island City, 2587; Lansing, 2191; Leaside (Toronto), 341; Muncie, 767.

A total of 24,456 Durant cars now has been produced.

The first of the new Stars was delivered from the Long Island City plant Saturday. The company took formal possession of the Willys Corporation Elizabeth plant on Tuesday of last week. Large quantities of parts for the Star were on the side tracks adjoining the factory ready to be unloaded and it now will be possible to get into production within a very short time.

WILLYS-OVERLAND SHOWS GOOD PROFITS

TOLEDO, July 24—The position of the Willys-Overland Co. has been greatly improved in the last three months. May was the first month in a year and a half to return a profit of a definite nature of more than $600,000. June profits are believed to have been between $900,000 and $1,000,000. Inventories have been reduced to $19,000,000, as compared with $35,000,000 at the end of 1920. The company has approximately $10,000,000 in cash. Production for the second quarter was approximately 33,000, as compared with 17,000 for the first quarter. The first half year thus exceeded by 2,000 the total output for 1921.

Coast Plant for U. S. L.

NIAGARA FALLS, N. Y., July 24—U. S. Light & Heat Corporation of California has been organized as a subsidiary of U. S. Light & Heat Corporation, manufacturer of USL storage batteries, railroad car lighting devices and electric arc welders. A site has been leased and construction started on a new plant at Oakland, Cal. The purpose is to enable the corporation to handle more efficiently its growing business on the Pacific Coast. It is anticipated that production will start in the new factory about Oct. 1.

JUNE A RECORD MONTH IN FORD PRODUCTION

Average of 5709 Cars, Trucks and Tractors Established—July Promises Much

DETROIT, July 24—Sales of Ford cars, trucks and tractors established a new record in June with a total of 148,439, an average of 5709 a day. Sales by the Ford Co. of Canada were 6054, and 9435 were sold by the European and South American branches.

With the closing of business for June, records showed that the total sales for the first six months of 1922 were 652,251, which is materially ahead of any previous half-year record.

July Ford sales are expected to equal and probably exceed those of June. Schedules have been fixed at 151,767, although dealer orders call for more than 200,000. The company has been unable to keep pace with the demand for closed models.

Ford truck sales up to this time show an increase of 84 per cent over last year.

Ford now is employing 75,000 men in Detroit.

Ford Making His Own Plate Glass

DETROIT, July 24—Manufacture of its own plate glass for windshields has been begun by the Ford Motor Co. in a modern plant. Ford production methods have been applied, and there is a radical departure from established practice. The Ford continuous conveyor system features the operation, so that from the time the glass leaves the furnace until it becomes a polished windshield it is always in motion.

Canadian Ford Declares Cash Dividend

DETROIT, July 24—The Ford Motor Co. of Canada has declared a cash dividend of 15 per cent payable July 20 to stock of record July 15. Stock of the company, which sold at 260 in January, has passed 440. The company has had cash on hand exceeding $10,000,000 when its current needs were not more than $3,000,000.

Ford Going Slow on Mexican Plans

DETROIT, July 24—The Ford Motor Co. stated to-day that it has not yet definitely decided to erect an assembly plant at Tampico, Mexico, and that no action will be taken for several weeks, pending investigations now being made into Mexican trade conditions. Unless the company is convinced that the potential business warrants the erection of a plant, it will not be built. This business now is being served by shipments from the plant at Houston, Tex. While shipments are being made steadily, they are not of record proportion, as they were last year.

BUSINESS RAPIDLY GAINS MOMENTUM

Packard Questionnaire Brings Favorable Reports from All Sections

DETROIT, July 24—Five hundred inquiries on business conditions made by the Packard Motor Car Co. in as many sections of the country brought back the response that the general outlook is improving all the time. The inquiries were directed to dealers, bankers, state officials and others, and with few exceptions told of perceptible gain over former conditions.

In Kansas City and Omaha there was a somewhat pessimistic tone to be observed from the responses, but this was due rather to conditions as they have existed than to prospective conditions. The banking situation there has left a bitter taste with dealers and the prospect of bumper crops and better prices has not eradicated it.

Southern Crops Good

J. E. Bouden, Jr., president of the Whitney Central National Bank, New Orleans, said business is improving rapidly. Crops promise to be excellent, he said; were planted at low cost and from present indications will bring good prices.

Robert F. Maddox, president of the Atlanta National Bank, Atlanta, Ga., said bank deposits show increases, money is easy and business outlook is cheerful.

Edgar T. Bell, farm statistician, Oklahoma City, reported Oklahoma farmers will get $30,000,000 for their wheat alone this year.

"We expect a continued improvement in business," said M. N. Avery, vice-president of the Security Trust and Savings Bank, Los Angeles, Cal. He said labor is well employed at good wages, crops are abundant and there is a gradual increase in bank deposits.

Pacific Northwest Improving

J. W. Spangler, president of the Seattle National Bank, Seattle, Wash., said business conditions throughout the Pacific Northwest are gradually improving in substantially every line with prospects for a continued betterment.

Samuel R. McKelvie, Governor of Nebraska, predicted a big era of prosperity in his state. "I believe," he said in a telegram, "that there lies ahead of the farmer an era of sustained prosperity which, in turn, will insure general prosperity."

T. W. LaQuatte, Des Moines, Iowa, sent word that there is no reduction in acreage, cost of farm production is reduced, surpluses are disappearing and crops and prices point to great prosperity for farmers of the state.

A report from Denver was that conditions are steadily improving, with good mercantile business, good prospects for crops and increasing bank deposits.

CANADIAN SHOW SPACE BOOKED TO THE BRIM

TORONTO, ONT., July 24—Every inch of space has been taken for the automobile show at the exhibition slated for September, and two big tents will be necessary to house the overflow already booked, according to a report from George Pink, president of the Central Canada Exhibition Association.

Clearing house banks in Boston, the National Shawmut Bank reported, show increased deposits of $50,000,000 in the last three months.

Banks in Philadelphia agreed that business conditions there are improving with industries, except shipbuilding, making a better showing each day.

The Continental and Commercial Bank of Chicago says a new business cycle has begun with business barometers indicating the beginning of a slow expansion.

J. D. Ayres, vice-president of the Bank of Pittsburgh, said the steel industry now is operating at about 80 or 85 per cent of normal. There is little unemployment outside of the coal industry, and business conditions generally are good and growing better, he said.

EDUCATIONAL TOUR SELLS OVERLANDS

INDIANAPOLIS, July 24—The Indianapolis branch of Willys-Overland, Inc., is conducting an eight-car caravan educational tour throughout its Indiana territory, showing all the models of the Willys-Knight and Overland and introducing the new commercial Overland chassis with several body types built by the Martin-Parry Company. The caravan leaves Indianapolis every Tuesday and makes a circle of important territory, visiting every Overland dealer en route and returns to the city Saturday night. During the first week a circle of northern Indiana was made and stops made at twenty-two cities. A total mileage of 1000 miles was run up during the first week of the caravan trips, and every dealer visited bought new commercial chassis and most of them ordered special bodies of the sort exhibited on four of the vehicles.

More Than 500 in A. E. A.

CHICAGO, July 24—It is announced at the offices of the Automotive Equipment Association here that for the first time the membership of that organization exceeds 500. The membership has hovered about the 500 mark, for several years, always just below that number. A recount of the happenings at the Colorado Springs meeting shows that the number has reached 507. Of these members, 240 are jobbers and 267 are manufacturers.

JULY IS SURPRISING DEALERS IN NEW YORK

Sales So Far Have Exceeded Expectations and Seasonal Decline Is Slight

NEW YORK, July 24—Distributors and dealers of the Metropolitan territory have gone more than a week past the middle of July without knowing what might be termed a real slump in passenger car sales. The June selling record, of course, is not being equalled, but orders in the majority of establishments are running above what the trade has expected, and the seasonal decline is so slight that it would hardly be termed normal up to this time.

Dealers are beginning to get recapitulations on the first six months' business, and in some cases results have been little short of amazing. One distributor handling a car outside of the first 15 had a retail sales record in New York for the first four months of the year which ran far ahead of the entire year 1921, and sales for the first six months were 275 per cent of all of 1921. More than a dozen distributors and branches could easily be found on Broadway with sales of the first six months running 100 to 150 per cent of the total for 1921. There still is a shortage of cars with several of the dealers in the fastest selling lines. Others are suffering from a shortage of closed cars, owing to demand for these models which is running ahead of factory expectations even for the metropolitan territory.

Heavy Demand for Closed Jobs

The low-priced closed jobs, including those with soft tops, have been in heavy demand right along. Such cars as Hudson and Essex coaches, the Nash Cabriole, Hupmobile coupe-roadster and the Dodge Brothers business coupe have been selling heavily, and distributors are far behind on deliveries. The territory is in good shape on used cars, generally speaking.

The used car market has fallen off since the latter part of June, but stocks have not approached an alarming stage, and expected care in trading from now on probably will prevent anything resembling a crisis, provided business holds reasonably good throughout the year.

It is significant that several cars which are not in the first 10 or 15, nationally speaking, have had remarkable sales records in New York this year. Intensive selling methods by the organizations distributing these cars has put them up front.

N. M. A. Headquarters

WASHINGTON, D. C., July 24—The National Motorists Association has opened headquarters in this city in the Edmonds Building at 911 Fifteenth Street, N. W. A touring and information bureau has been established, the use of which is extended to all tourists

HOOSIERS SELL MANY USED CARS IN MONTH

INDIANAPOLIS, July 24—Sales of used cars in Indianapolis in June were about 20 per cent better than in May. Reports to the Indianapolis Automobile Trade Association show that 21 members have sold 368 cars in June, as against 24 establishments that sold 334 in May. The dealers who generally report but who did not do so in June also are known to have sold about as many cars as they did previously, but the reports to the association were not on hand when the tabulation was made up.

In certain quarters retail sales for June were a little slower than they had been, but on the whole there seems to have been little slowing up in the local situation. State business, according to the distributors, was at least as good and in some cases much better than it had been. Rains that began about the first of the month and which have continued have put heart into the farming districts and dollars into the pockets of farmers who have a vast acreage in corn. The day after the first rain one wholesaler reported that three men from the rural districts came in to drive cars home.

DISTRIBUTOR LICENSE TAX WILL BE FOUGHT

CHARLOTTE, N. C., July 22—The North Carolina license tax of $500 on automobile distributors is again being contested, it is learned here. It was announced in the last meeting of the local automotive trade association that the General Motors Truck Corp. is preparing a test case to fight the tax. Originally the law exempted automobile manufacturing companies in the State from this tax. Payment was contested and the law held invalid.

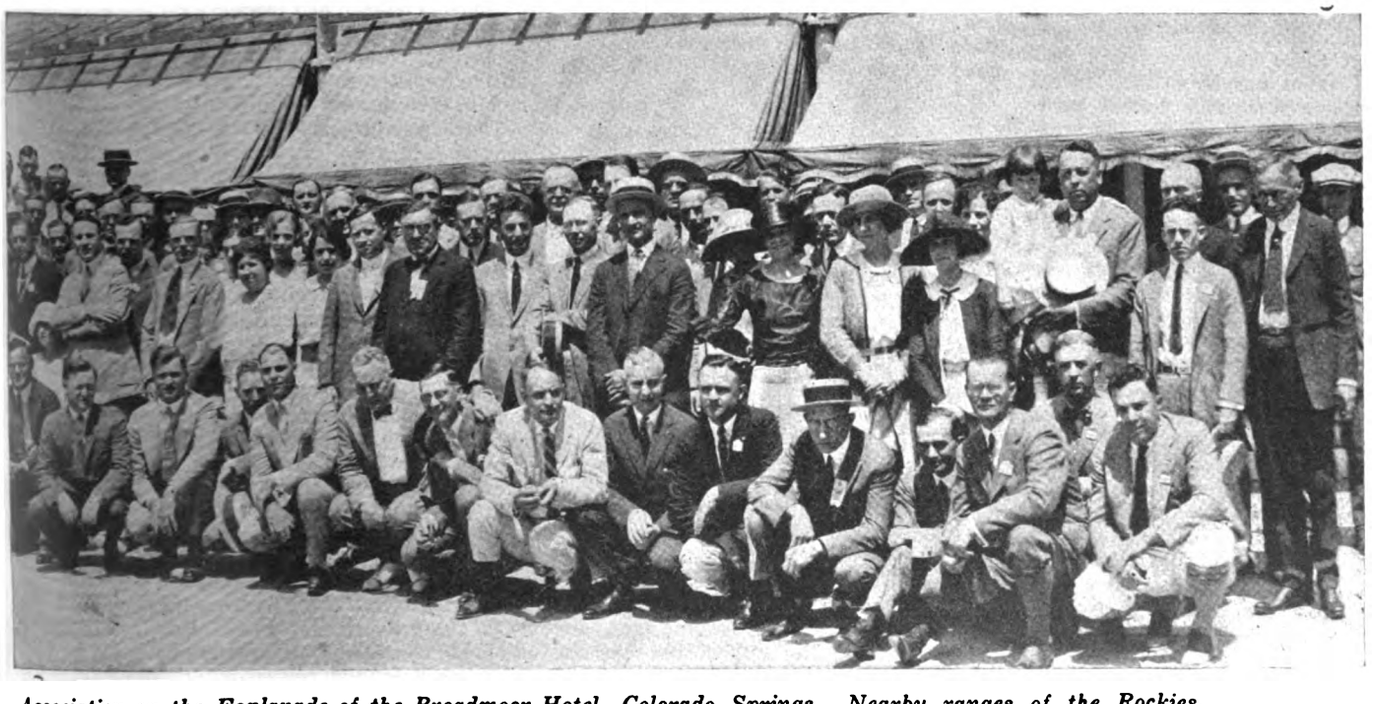
PIERCE-ARROW WILL REORGANIZE FINANCE

NEW YORK, July 24—Bankers for the Pierce-Arrow Motor Car Co. are working out a readjustment of the company's financial affairs, but the details have not been divulged. It is stated officially, however, that some new securities will be offered. Bank loans have been reduced another $250,000, which brings them down to $7,900,000.

The company has rearranged its production departments to speed up output and sales are said to be steadily expanding. The high-priced inventory has been practically liquidated and the company now is in position to take advantage of current conditions. The sharp price cut is expected to stimulate sales.

Setback for Henry Ford



WASHINGTON, July 24—The Senate Committee on Agriculture has rejected by vote of 9 to 7 Henry Ford's offer for the purchase and lease of the Government projects at Muscle Shoals, Ala. Notwithstanding the adverse vote, the Ford proposals will be presented to the Senate for final decision.

PORTLAND REPORTS HEAVY SALES VOLUME

PORTLAND, ORE., July 24—June was an excellent month for the dealers, particularly those handling the standard makes of cars. Several firms reported doing a greater volume of business than ever before in their history, exceeding even 1920, and with prospects for July to surpass June by a considerable margin. For the dealers handling the little known lines, but little improvement has manifested itself during the last several months.

GENERAL MOTORS HAS BIG HALF YEAR

First Six Months Show Net Earnings of $26,839,391 on the Common Stock

NEW YORK, July 24—Preliminary estimate of the income account of the General Motors Corp. for the first six months of 1922 shows net earnings of $26,839,391 on the common stock. Net sales for the half year aggregated $218,490,887, of which $137,800,000 were in the second quarter. Net earnings, before Federal taxes and interest charges, were $35,116,481 with $25,970,000 in the second quarter. Net earnings, after all charges, for the six months were $29,997,391. Dividends on the preferred and debenture stock for the six months required $3,158,000.

In the six months ending June 30, approximately $6,200,000 net has been added to reserves for depreciation and the balance in these reserves now stands at $43,700,000.

Bank Loans Paid Off

All bank loans were paid off by June 30 and, except for approximately $5,400,000 of purchase money obligations, General Motors Corp. has no indebtedness underlying its preferred and debenture stocks, except ordinary current accounts payable for merchandise, etc. Cash in bank as of June 30 was approximately $35,000,000.

Net working capital as of June 30 was approximately $123,000,000, an increase of $26,000,000 over December 31. Inventories which were written down to cost or market on December 31 were well balanced and have been reduced to below $98,000,000, a reduction of some $10,000,000.

The preliminary statement demonstrates that there has been sound reason for the recent activity in the General Motors common stock and that, if earnings continued at anything like the present rate, the corporation soon will be in a position to resume payments on the common.

Objects to Parenti Sale

BUFFALO, N. Y., July 24—About 1000 stockholders of the defunct Parenti Motor Co., Inc., living at Farrell, Sharon and New Castle, Pa., through an attorney, filed papers in the Federal Clerk's office here yesterday, asking that the sale of the company, by the Marine Trust Co. as trustee, to the Hanover Motor Car Co. of Hanover, Pa., be declared null and void. The out-of-town stockholders claim that the option given to them at the time the firm went into bankruptcy did not cover a long enough period, and it is now understood they are ready to buy the factory. The property is appraised at $328,000. Federal Judge Hazel appointed William C. Reilly temporary receiver of the property until the decision is made.

FREE GASOLINE AIDS SALE OF USED CARS

DALLAS, TEX., July 24—The Oakland Motor Car Co. disposed of its accumulation of used cars in a "hurry up" sale. The company put forty of these cars, all standard makes, practically rebuilt and all guaranteed for specific duties under one roof, then announced the coming of the sale through the daily papers. As an inducement to buy guaranteed cars a 50-gal. barrel of gasoline was given free with each car purchased. The prices were marked down to the rock-bottom. Terms were given and the cars were removed. The forty used cars were taken before the time for the sales had expired and the company put on what other used cars it had in shape to back with its personal guarantee, and disposed of them.

CALIFORNIA SETTING PACE IN SALES GAIN

OAKLAND, CAL., July 24—A survey of automobile sales in California made recently by Motor Registration News shows that there were 41 per cent more cars sold in the state during the first six months of this year than there were in the same period last year.

Since January 1, 1922, sales have amounted to 66,246, as against 46,725 last year. Southern California sold more than the north, 51 per cent, as against 30 per cent increase, in each case compared with last year. Of the counties, Los Angeles made the most sales in the state.

If the present average is maintained California will advance its position among the states of the Union to third and possibly second, for while every state is showing an increase this year none are registering a total which ranks with this state, says the survey.

Crawford Producing Dagmar

HAGERSTOWN, MD., July 22—A new sport model to be known as the Dagmar has been announced by the Crawford Automobile Co. and is priced at $3,500. The specifications of it are as follows: Continental 6, 3⅝ x 5¼; 135 in. wheelbase with 33 x 5 tires. This model is similar in all other respects to the regular Crawford chassis.

House Organ for Durant

NEW YORK, July 24—Durant Motors, Inc., has blossomed out as publisher of a house organ for dealers, entitled "Durant Success." In addition to information about the Durant line of cars and the facilities for making and developing them, the publication has an interesting section devoted to the activities of Durant dealers.

CHAMBER FEELS PULSE OF THE RETAIL TRADE

Data Gathered by N. A. C. C. Show Prospects Are Brighter Than Usual

NEW YORK, July 24—Retail sales data gathered by the National Automobile Chamber of Commerce for the information of its directors show that prospects for July and August are better than the seasonal outlook for the mid-summer months. Cities which state that sales for the next six weeks probably will be "very good" are Denver, Peoria, Des Moines, Cleveland, Sioux Falls, New York, Seattle and Kansas City.

Reports of a slight seasonal decline were made by Indianapolis, Boston and Richmond.

Atlanta reports that the outlook for July and August is not good, and there has been a considerable decrease in Detroit.

Fall Closed Car Sales

All these cities without exception report that the prospects are good for closed car business in the fall.

The used car market is good in Denver, Boston, Detroit, Sioux Falls, Richmond, Seattle, Kansas City and Los Angeles. It is slowing up in Peoria, Indianapolis, Fargo, Atlanta and Cleveland.

The reports generally give little encouragement for increased truck sales for the next six months.

CAR MAKERS PLANT SAFETY FIRST SEED

NEW YORK, July 24—Prizes aggregating $6,500 for the best essays written by school children and teachers on Safety in Highway Traffic are announced by E. S. Jordan, chairman of the special committee representing the National Automobile Chamber of Commerce.

There were 500,000 contestants in the contest last year. School teachers will be awarded $1,500 of the prize money and the remainder will go to their pupils. Direction of the contest will be under the direction of the highway and highway transport education committee at Washington, which will supply information.

In a statement regarding the contest, Jordan says that it is not too much to hope that 1922 will see the number of automobile injuries cut in half. While many estimates have been made of the annual total of automobile injuries, he contends that the correct figure is not over 325,000. The number of motor fatalities in 1921 was 12,500.

Dorris Increases Production

ST. LOUIS, July 24—Simultaneously with the reduction of prices the Dorris Motor Car Co. has increased its production schedule and proposes an aggressive selling campaign.

DYER ANTI-THEFT LAW PRODUCING RESULTS

Department of Justice Has Investigated 2391 Cases and Secured 1113 Convictions

WASHINGTON, July 24—A total of 2,120 automobiles, valued at $2,567,208, have been recovered by the Bureau of Investigation, United States Department of Justice, since the passage of the Dyer anti-theft Automobile Law in October, 1920, according to figures of the Bureau. The department has investigated 2,391 cases of stolen cars involving 4,385 persons. There were 2,773 arrests made in connection with the theft of the mentioned number of cars and of this number 1,533 have been indicted and 1,113 were convicted.

The average sentence was slightly more than two years in the case of each person indicted for the theft of an automobile.

In a great many cases the investigation was made in connection with the American Automobile Association, which is generally accredited in successfully supporting the anti-theft bill, introduced in Congress by Congressman L. C. Dyer of Missouri.

The outstanding feature of the law is the fact that it places interstate transportation of stolen motor vehicles under Federal law and makes such an action punishable in Federal courts.

Before the passage of the Dyer Act it was found that there had been built up a growing traffic in stolen motor vehicles by thieves who maintained assembling factories at various points and who through their ability to transpose parts of various machines were able to so alter a stolen automobile as to make it practically unrecognizable to the original owner. Under the Dyer measure this practice has been materially lessened, says the Bureau.

OAKLAND COUNTS ON BIG FALL BUSINESS

PONTIAC, MICH, July 24—Oakland Motor Car Co. branch managers to the number of sixty attended the two day sales assembly held at the plant here.

Two business sessions were held daily at the plant, and an evening meeting took place at the Bloomfield Hills Country Club, with C. J. Nephler, general sales manager, in charge, assisted by W. R. Tracy, assistant sales manager.

The branch managers agreed that the autumn months offer a bright prospect for even better business than has been experienced in the spring. July production of the Oakland has held up at a level consistent with June business, but it is anticipated that increased output will be necessary for August and September.

Branch managers of the General Motors Truck Co., representing ten factory branches, were at a three day convention held at the plant here. Business at the General Motors plant has been brisk on light models of the truck produced, and, while there has been considerable heavy duty business, it has only recently begun to feel the stimulus that has attended the ton-truck demand, according to V. H. Day, general sales manager.

METROPOLITAN DISTRICT REGISTRATION HEAVY

NEW YORK, July 24—Registrations of new automobiles for ten counties in and around New York City numbered 9068 in June as compared with 9431 in May and 9290 in April. Registrations for the year up to date are 39,579 as compared with 24,577 for the first six months of 1921.

The June registration report as compiled by Sherlock & Arnold, publisher of the *Automobile Sales Analysis*, shows that eight cars have what might be termed a considerable lead over their competitors in the high priced class, while in the medium and low priced classes five cars are far ahead of the field and ten others well in the lead of those following.

A summary of registrations for the first six months in the high and medium and low priced classes follows:

	High Price	Medium and Low Price
January	283	2,017
February	273	2,231
March	632	6,354
April	862	8,428
May	961	8,470
June	865	8,203
Total	3,876	35,703
Total (1921)	2,491	22,086

$750,000,000 READY FOR ROAD BUILDING

WASHINGTON, July 24—Compilations of monies now available, made by the Bureau of Public Roads, Department of Agriculture, for automotive highway construction, show that there is approximately $750,000,000, which includes the Federal as well as local funds.

Reports made by each of the 48 states show that California leads in the amounts to be spent the current year for good roads with $53,000,000. Pennsylvania has $52,000,000; Illinois, $47,500,000; New York, $47,000,000, and Texas, $43,000,000.

White Building in Oakland

OAKLAND, CAL., July 24—The White Co. has commenced construction of a building here, extending still further the range of Automobile Row. The new building will be 90 x 100, one story, with provision in foundations and side walls for the addition of another story if necessary. It will house the offices of the White company on the mainland side of San Francisco Bay, of which C. L. O'Brien is manager. It also will contain a service station for White trucks and a factory branch for assembling purposes.

G. M. C. WILL BUILD 5000 OF NEW LINE

Production of Copper Cooled Cars on Small Scale Will Be Started at Flint

DETROIT, MICH., July 24—The General Motors Corp. has placed commitments for material for 5000 of its "copper cooled" cars, shipments to begin in August. The corporation is planning to get into production on a small scale in August the original commitment being intended for first work on the new car and will cover production over a period of several months.

The first cars in the "copper cooled" line will be built at the Chevrolet factories in Flint, but no announcement has been made as to whether this car would bear the Chevrolet nameplate. Prices will be higher than the Chevrolet 490 line, but the car will be in the low priced field and is intended to meet primarily the demand for a low priced air cooled vehicle.

CHICAGO TACKLING BIG GARAGE PROJECT

CHICAGO, July 24—Plans for the construction of a 10-story garage, or automobile hotel, in the loop district of Chicago, first announced in August, 1921, are nearing completion, according to Homer D. Jackson, president of the Interstate Garage Corporation, the company which was organized to carry out the undertaking.

Jackson expects work on the construction of the garage to start within 60 or 90 days, and be ready for operation by next summer. The financing of the company, having an authorized capital of $1,750,000 and incorporated under the Illinois law, is practically complete, Jackson said.

The building is to be at Wabash Avenue and South Water Street, just north of the loop and one block from Michigan Avenue, the city's great north and south through automobile boulevard. As planned it will have storage space for 1000 automobiles and it is to be so constructed that its capacity may be doubled by the addition of 10 stories if business justifies it.

As planned the building will be in two sections with floor levels of one falling midway between the levels of the other, so that the ramps or inclined planes connecting the floors will have a rise of only six feet from one floor to the next. Elevators are to be provided.

Death of Henry Stryker

KINGSTON, N. Y., July 24—Henry Stryker, head of Stryker & Youmans Co., Mitchell, Oakland, Chandler and Stewart dealers in the Kingston territory, is dead. Stryker was president of the Automotive Dealers of Kingston, which is affiliated with the Chamber of Commerce.

DURANT ADDS TWO MORE TO HIS LINE

Takes Over Locomobile—Will Sell Redesigned Chrysler as Flint

NEW YORK, July 22—Two more spectacular moves for the expansion of Durant Motors, Inc., have been announced this week by W. C. Durant.

The first was that Durant will assume the presidency of the Locomobile Co. and control its destinies hereafter.

The second was the incorporation in Michigan of the Flint Motors Co., which will manufacture at Long Island City and in Flint a light six-cylinder car which will sell for $1180.

The Locomobile announcement, which came first, had been discounted. It did not include details of the financial arrangements under which Durant takes control, but it paid high tribute to the character of the Locomobile and stated emphatically that this car will be continued in its present exclusive class and that it will be manufactured as originally in the factory at Bridgeport. No price change is contemplated at this time. Present owners will be assured of adequate service. Production will be governed entirely by demand.

By the incorporation of the Flint Motors Co., which will have a plant at Flint, Durant has kept the pledge he made to the city of Flint, his former home, when he organized Durant Motors, that one of its plants would be located there. The factory will be similar in size to that built at Lansing for production of the Durant Four.

The Flint car will be a refinement of the so-called Chrysler Six which was to be manufactured in the huge Elizabeth, N. J., plant of the Willys Corp., which recently was taken over by Durant Motors. When Durant purchased this plant he acquired the rights to the Chrysler car, which had been designed at a cost of approximately $2,000,000. The car will be redesigned and made somewhat larger than the original model. It will include the seven bearing crankshaft and other special features.

The Flint will have its first showing September 15 and deliveries will begin January 1, 1923. It is named after the city of Flint, where the main plant will be located.

Flint cars to meet the Eastern demand will also be manufactured at the Long Island City plant, which has been occupied by the Durant Motor Car Co. of New York to manufacture the Durant Four. The building of Durant Fours for the Eastern territory will be transferred to the Elizabeth plant, which is large enough to house both the Durant Four and the new Star.

With the addition of the Locomobile and the Flint to his line, Durant will have factories at Bridgeport, Conn., Long Island City, Elizabeth, Muncie, Ind., Lansing, Flint, Leaside (Toronto) and Oakland, Cal.

The Durant line will include the Locomobile, Durant Six, Flint Six, Durant Four and the Star. He also will control the new Mason truck, which will be manufactured in its own plant at Flint and in the Locomobile plant at Bridgeport.

Durant's achievements with the General Motors Corp. never were so spectacular as those which have attended the building up of Durant Motors, Inc., to its present size in almost exactly two years.

QUESTION PURPOSE OF TRACTOR "SURVEY"

CHICAGO, July 24—A purported survey of the farm tractor industry of the United States, sent out from Minneapolis and St. Paul over the signature of the "Farm Implement Research Bureau," whose identity and place of business were not made known, has aroused considerable interest in tractor and farm implement circles here.

At the headquarters of the recognized national organizations of the industry, including the National Association of Farm Implement Manufacturers and the National Institute of Progressive Farming, it was said that nothing was known of such an organization as the "Farm Implement Research Bureau."

The purported survey, which painted a dark future for most of the tractor manufacturers, was mailed in plain envelopes on which there was no printing or writing other than the address to which it was sent. The survey was in typewritten form with typewritten signature. A notice at the end stated that similar surveys would be issued later on on other agricultural subjects.

S. A. E. Calls October Meeting

NEW YORK, July 24—A national meeting of the Society of Automotive Engineers will be held in Detroit, Oct. 26 and 27, to discuss problems of automotive production. Papers relating to production problems will be read at the morning sessions each day and the afternoons will be devoted to factory inspection trips. These inspections will appeal particularly to tool inspection and production men.

A dinner will be held the evening of Oct. 26. K. L. Herrmann is chairman of the committee which is arranging the program.

May Expand Territory

MILWAUKEE, July 24—That the Rolls-Royce Co. plans to enlarge its field of distribution was made evident by a conference held by R. B. Jackson of Chicago, the Western sales manager of the company, with officials of the Milwaukee Association of Commerce.

TIRE PRICE UPHEAVAL THREATENS INDUSTRY

Goodrich Blanket Cut Effect Uncertain — Manufacturers Look Toward Price Increase

AKRON, OHIO, July 24—Possibilities of another tire price upheaval face the tire industry following the unexpected announcement of the B. F. Goodrich Co., of a blanket 10 per cent cut in the prices of all Goodrich cord tires, and a 15 per cent price reduction on all Goodrich fabric casings, which were made effective as of July 20.

Goodrich is the first major tire company to slash tire prices instead of introducing new lines of cheaper tires in lieu of price cuts, as has been done by several others of both the larger and smaller tire producing corporations in the Akron district.

Last month the Goodyear Tire & Rubber Co. and several smaller concerns took action tantamount to a price cut by introducing new lines of cheaper cord tires to sell from 20 to 25 per cent below the standard cord tire price lists. The new Goodyear casing is known as the cross-rib.

The Goodrich policy, according to announcement of officials, will not be to continue a standard grade of tires at standard prices and at the same time to put out a cheaper tire in lieu of a price reduction, but will be to cling to the well advertised, popular and long standing standard Goodrich tires and of adjusting their prices downward to compete with other companies. No revision is made by Goodrich in truck tire or tube prices.

The Mason Tire & Rubber Co. this month made a 28 per cent cut in tire prices, while the American Rubber & Tire Co. increased prices 5 and 10 per cent.

Just what effect the Goodrich blanket cuts will have on other major companies is problematical, for the Goodrich cut comes at a time when nearly all manufacturers admit there is more justification for a price increase than a price reduction.

Goodrich Cuts Line

NEW YORK, July 24—New Goodrich tire prices announced July 20 follow:

CORDS

	New Price	Old Price
30 x 3½ cl	$13.50	$18.00
32 x 3½ s.b	22.95	25.50
31 x 4 s.b	26.45	29.40
32 x 4 s.b	29.15	32.40
33 x 4 s.b	30.05	33.40
34 x 4 s.b	30.85	34.25
32 x 4½ s.b	37.70	41.90
33 x 4½ s.b	38.55	42.85
34 x 4½ s.b	39.50	43.90
35 x 4½ s.b	40.70	45.20
33 x 5 s.b	46.95	52.15
35 x 5 s.b	49.30	54.75

FABRICS

	New Price	Old Price
30 x 3 "55"	$9.65	$10.35
30 x 3½	10.65	10.90
32 x 3½ s.b	16.30	19.15
32 x 4 s.b	21.20	24.95
33 x 4 s.b	22.35	26.30
34 x 4 s.b	22.85	26.85

OLDSMOBILE MAKES CUT IN CAR PRICES

Biggest Reduction on Light Eight—Large Eight and Truck Unchanged

DETROIT, July 26—Lower prices on the Oldsmobile eight and four-cylinder lines are effective July 30, the reductions on the eight ranging from $100 to $150, and on the four from $30 to $50. Prices on the large eight and the Oldsmobile Economy truck are unchanged. Comparison of new prices and old is as follows:

	New	Old
8 Cylinder		
Touring and roadster	$1,495	$1,595
Sport	1,725	1,825
Coupe	1,995	2,145
Sedan	2,145	2,295
4 Cylinder		
Touring and roadster	1,095	1,145
Semi-sport	1,225	1,265
Calif. top tour.	1,395	1,425
Coupe	1,595	1,645
Sedan	1,745	1,795

Velie Reduces Prices

MOLINE, ILL., July 22.—Velie Motors Corp. announces a price reduction on Model 58 open body types as follows:

	Old Price	New Price
2 pass. roadster	$1,395	$1,275
5 pass. touring	1,395	1,275

Pierce Price Revision

BUFFALO, July 22—The Pierce-Arrow Motor Car Co. price reduction is effective on all models. The complete list is as follows:

Model	Old	New
Runabout	$7,000	$5,250
4 pas. touring	6,500	5,250
7 pas. touring	6,500	5,250
Brougham	8,000	6,800
Landaulet	8,250	7,000
4 pas. sedan	8,250	6,900
Coupe	8,000	6,800
7 pas. sedan	8,500	7,000

Kline Reduces Prices

RICHMOND, VA., July 24—The Kline Car Corp. has cut prices of its two, five and seven-passenger touring cars from $1,970 to $1,690. The coupe has been reduced from $2,850 to $2,750, but no change has been made in the price of the sedan.

Power Truck Slashed

GREENVILLE, MICH., July 24—Price revisions made by the Power Motor Truck Co. follow:

Model	Old Price	New Price
1½-ton	$2,900	$2,000
2½-ton	3,200	2,475
3½-ton	4,100	3,475

International Makes Cut

CHICAGO, July 24—The International Harvester Co. has increased the capacity of its delivery wagon from ¾-ton to 1-ton, and has cut the price from $1,500 to $1,250.

288,000 FINAL JUNE PRODUCTION FIGURE

NEW YORK, July 21—Practically complete returns to the National Automobile Chamber of Commerce on production of cars and trucks for June show that the total approximated 288,000. This exceeded by 17,000 the estimate of 271,000 based on returns from companies making 90 per cent of the motor vehicles turned out. It was an increase of 12 per cent over the May record of 256,000.

The June figures, according to of N. A. C. C., indicate a production of more than 2,000,000 motor vehicles for 1922. The output for the second quarter now stands at 763,000.

Huber Tractor Lower

MARION, OHIO, July 22—The price of the light four tractor manufactured by the Huber Mfg. Co. has been reduced from $1,185 to $985.

Beck-Hawkeye Cuts Prices

CEDAR RAPIDS, IOWA, July 24—The Beck-Hawkeye Motor Truck Works has made the following price revisions on three of its models:

Model	Old Price	New Price
1½-ton	$2,050	$1,725
2-ton	2,150	1,810
2½-ton	2,850	2,395

Aultman & Taylor Tractor Reduced

MANSFIELD, OHIO, July 24—The Aultman & Taylor Machine Co. has cut the price of its 15-30 tractor from $2,200 to $1,900; its 22-45 tractor from $3,400 to $2,800, and the 30-60 from $4,500 to $4,000.

New Model for Stanley

NEWTON, MASS., July 24—The Stanley Motor Carriage Co. is bringing out a new model 740 which embodies a number of changes in both body and chassis, and an increase of $100 in both open and closed models. The new model is built closer to the ground, has lower running-boards and mudguards. The boiler is higher and has a 30 per cent increase in heating surface and 50 per cent in power storage capacity. Other changes include larger drive shaft, keyed wheels, increase in braking surface, improvement in lubrication system and changes in the burner. The 5 and 7-passenger open cars are $2,700, the roadster $2,700, sedan $3,950, and the brougham $3,950.

Daniels to Double Production

READING, PA., July 24—The Daniels Motor Co. has made plans to double its production beginning Sept. 1. It is expected that the closed car business will be larger than ever as the fall season approaches. The Daniels company will be in a position to meet this demand as it builds all its own bodies.

ALLAN RYAN FAILS OWING 18 MILLION

Stutz and Frontenac Unaffected by Failure—Had Severed Connections Recently

NEW YORK, July 24—The personal failure of Allan A. Ryan has been recorded through a voluntary petition in bankruptcy filed here, with liabilities fixed at about $18,000,000 and assets at $643,533. Secured claims, held mostly by the financial institutions, amount to about $14,000,000. The principal creditors are the banks which took over the management of Ryan's affairs following the famous Stutz corner of 1920. The brokerage house of Allan A. Ryan & Co. and his other business interests are not affected.

Ryan has figured most prominently in the automobile industry through his financial support of Stutz, Stromberg carbureter, Bethlehem Motor and the Times Square Auto Supply Co.

Stutz Not Affected

INDIANAPOLIS, July 25—Officials of the Stutz Motor Car Co. say that the bankruptcy of Allan Ryan will have no effect whatever on the Stutz company as Ryan has not been identified with Stutz control since last January when he relinquished his position on the Stutz board of directors. Neither will the Ryan failure have any effect on the Frontenac Motor Co., as he has not been associated with the board of directors of that company since early May.

NEW PROCESS GEAR PLANT UP FOR SALE

SYRACUSE, July 24—The plant and all other assets of the New Process Gear Corp., estimated at more than $3,000,000 in value, will be sold here on August 22 by Mayor George R. Lunn of Schenectady and Francis G. Caffey of New York as special masters appointed by Federal Judge Frank Cooper of Albany. The upset price has been fixed at $1,900,000.

This sale will complete the liquidation of the Willys Corp. so far as physical properties are concerned. There will remain, however, several million dollars worth of Willys Corp. treasury assets to be sold.

The New Process Gear is to be continued, it is learned through an authoritative source. It is understood that strong interests in the automotive field are preparing to bid in the property and carry on the work. The plant is at this time working day and night shifts of men, more than 800 being employed, which is about the capacity of the plant. The work at this time is the manufacture of gears for the Durant car and also the new Star car.

John N. Willys, president of the Willys-Overland Co., Toledo, acquired the New Process Gear Corp. from the late Thomas W. Meachem and other members of the Meachem family, in November, 1918.

MILWAUKEE DEALERS FIND NEW BUSINESS

Conservative Business Men, Now Satisfied with Conditions, Are in Market for Cars

MILWAUKEE, July 24—Dealer business so far in July has come up to every expectation, and while some have not been able to maintain the average of May and June, others are able to report increases in sales. It has been expected generally that, as usual, July might show a uniform decline that might carry through August, with a rising sales curve in September, under the influence of offerings of 1923 models, the exhilaration of the annual state fair in Milwaukee upon local and state business, city and rural, and the fall buying period.

Heads of corporations, department managers, merchants, salaried men and small business men who have been delaying purchases to await developments and determine whether or not the rising trend of general business was of a momentary or permanent nature, are now coming into the market slowly but steadily. This source of new business is compensating for the gradual elimination of prospect lists by past sales.

Thus there has been no real exhaustion of prospects; on the contrary, while the cream has been skimmed off, new layers are forming on the top every day and there is plenty of material for salesmen to work upon. While selling is a harder proposition than it was one, two, three and four months ago, its prosecution is made more intensive as the difficulties increase, with the result that the level of business is not developing into a downward curve.

Motor truck sales are increasing steadily, and unless the railroad labor troubles are settled soon, with a consequent serious impairment of service, makers as well as dealers look for a spurt in commercial car business.

Central Ohio Prospering

COLUMBUS, OHIO, July 24—Demand for passenger cars in Columbus and central Ohio has shown a rather remarkable increase during the past two months. All classes of cars are selling briskly, but the principal demand centers in lines priced between $800 and $2,500. In some instances agents can not make deliveries on cars sold, and this applies especially to closed jobs. All lines are moving freely however, including touring cars, runabouts, limousines and sedans.

The farming sections of the State, helped by rather bountiful crops and gradually getting over the pessimism into which the people were thrown a year ago are buying passenger cars. Farmers are paying cash to a certain extent, showing that money is much easier in agricultural sections.

Agents and distributors look for a continuation of the good demand for the remainder of the summer months.

Association Activities

Atlanta Has New Quarters

ATLANTA, July 24—The Atlanta Automobile Association has moved its office from 305 Connally Building to the new Gould Building at 9 Edgewood Avenue. C. V. Hohenstein is secretary.

Atlanta Set for Outing

ATLANTA, July 22—All preparations are ready for the annual summer outing of the Atlanta Automobile Association to be held Aug. 2. Floyd Norcutt, general chairman on the committee on entertainments, assisted by Bob Martin, has arranged a golf tournament and other sports. The outing will be held at the Brookhaven Country Club.

Baird Chosen Secretary

YOUNGSTOWN, OHIO, July 24—Charles A. Baird has been chosen new secretary of the Youngstown Automobile Dealers' Association. He was a member of the Board of Education for almost six years. He has already assumed active charge.

Indianapolis Show Decided

INDIANAPOLIS, July 22—A lease has been signed by the Indianapolis Automobile Trade Association with the Indiana Board of Agriculture by which the association renews a three year lease of the automobile show building on the state fair grounds.

This building erected by the State Fair Board in 1919 was the direct result of concerted action and pleas of the directors of the Indianapolis association which had striven for a long time for the erection of a proper building for exhibition purposes.

The renewal of the lease makes certain the holding of the automobile show at the time of the next fair, the first week in September. Like all the fair shows held in the building the association makes no profit. No admission to the building can be charged during fair time, general admission to the grounds giving free entrance to the automobile exhibit.

N. A. D. A. STATEMENT WELCOMED BY TRADE

ST. LOUIS, MO., July 24—The statement of merchandising principles recently sent out by the National Automobile Dealers Association has been widely used by the trade.

One of the strongest reactions according to the association, was the number of letters from members asking about the possibility of a national advertising campaign to acquaint the motoring public with the high standards adopted by the Association and calling attention to the advantages of the car user to patronizing the merchant who is a member of the association.

This, doubtless, was caused by the fact that some manufacturers of important articles used daily have carried on strong advertising through their associations resulting in a great educational work being done with the public.

The association has taken suggestions offered and summarized them. It is now seeking ideas on the subject from all members.

AID FOR CAR DEALERS FOUND IN NEW SERVICE

Monthly Tabulation of Registrations in New Jersey and Part of New York Available

NEW YORK, July 24 — Publication monthly of new car registrations for the entire State of New Jersey has been undertaken by Sherlock & Arnold, of this city, publisher of the Automobile Sales Analysis, which covers the same information for ten counties in and around New York City. In New Jersey the publisher will record not only passenger car but motor truck registrations, and for the convenience of distributors and dealers, some of whom are in the New York territory and others operating in Philadelphia, the report will be published in two sections, one for 13 counties of North Jersey and the other for eight counties in South Jersey. The publisher expects next to undertake a compilation of registration information in Pennsylvania and eventually hopes to have records for upwards of 15 states which, combined, would give an accurate indication of sales conditions.

Complete Sales Information

The Automobile Sales Analysis for New York and vicinity has been furnished to a steadily growing list of dealers, manufacturers and others in the industry for more than a year and there are now several hundred subscribers of the service, which includes a monthly tally sheet showing the number of new cars of each make registered by counties and in the territory as a whole and giving also the territorial sales for each preceding month of the year, as well as grand totals for the preceding year. Another section of the service gives the names and addresses of new car registrants during the past month, together with the make, model and other detailed information regarding the car purchased.

The report, which subscribers usually receive about the middle of the month, effectually clears up any doubt which dealers have regarding sales made by representatives of various manufacturers. Owing to frequent delays in delivery, the report does not show the actual sales made during the month, but taken month by month throughout the year, it gives a complete report of cars placed in the hands of owners.

The Automobile Sales Analysis is compiled on the basis of reports filed daily by a representative of the publisher at the various county registration offices. This, together with compilation and printing, is necessarily an expensive process, but the large number of subscribers permits the work to be carried on, thus giving individual subscribers at a minimum charge information which they could not obtain for themselves, except at prohibitive cost. The New York report, including the tally and the names of the owners, is sold on yearly contracts at $10 a month.

CHANGES IN THE TRADE

Eugene Dautell, has become manager of the **Toledo Cadillac Co.,** to succeed **Ralph A. Parker,** who goes to Atlanta for the Cadillac.

Clark & Breck Co., distributor of the Winton and Velie, has opened a new and larger store in that city, with maintenance station in connection.

L. E. Watson, recently manager of the **Gramm-Bernstein Motor Truck Co.,** of Philadelphia, has become associated with the White Co. in that city.

Polhemus-Cram Motors Co., Syracuse, N. Y., factory representative of the Hatfield Motor Car Co., has been appointed distributor for the Gardner.

Harry U. Sharp, formerly sales manager for the **Fanning-Hatch Co.,** Philadelphia, has been appointed sales manager of the **Lexington Motor Co.** of Penna.

W. S. Arbogast, who for several years has operated a big accessory department store in Toledo, has taken over the distribution of the new H.C.S. line in this section of Ohio.

The Burr Reilly Co., Milwaukee, Wisconsin, distributor of Oildag and Gredag, has moved its offices, store and warehouse to new and larger quarters at 522 East Water Street.

Universal Motor Co., Portsmouth, Ohio, has begun the erection of its new $80,000 garage, which will be of fireproof construction throughout and contain 51,000 sq. ft. floor space.

Louis C. Block, formerly general manager of the Ford Motor Co. in Philadelphia, has opened as distributor of the new Gray car for eastern Pennsylvania, New Jersey, Maryland and Delaware.

Glenn E. Holmes Co., Ford dealer in Chicago for a number of years, located in the loop district, has just been incorporated for $100,000 by Glenn E. Holmes, Mary L. Holmes and Louise Holmes.

Simmons Motor Car Co., Cleveland, Ohio, Chandler distributor in this district, will move into the former quarters of the Packard company on Aug. 1. This will double the sales and service quarters.

Osmond Barringer Co., Charlotte, N. C., has been appointed distributor for the Chandler in this territory. The company will continue to handle the Peerless and will increase its service department.

Stanton Latham, formerly in charge of eastern Connecticut territory for the **Wetmore-Savage Co.,** has been made sales manager of the automotive division of the company's Springfield, Mass., branch.

United Tire Jobbers has opened a wholesale and retail tire store in Springfield, Mass. It is under the management of **Maurice Ashley,** formerly of the **Southern Tier Tire Co.,** Binghamton, N. Y.

Sherwood Hall, original Paige-Detroit distributor in Boston, and later handling the Hupmobile line for Metropolitan Boston, has sold out his various business enterprises and gone to California to settle permanently.

Arthur E. Barker, vice-president in charge of sales of the Maxwell Motors Corp. and Chalmers Motor Corp., sailed this week for Europe on a six weeks' vacation trip, on which he is accompanied by Mrs. Barker.

W. S. Kip Motor Co., Philadelphia, has been appointed distributor of the National, which it will handle in connection with the Dort. Territory includes eastern Pennsylvania, southern New Jersey and Delaware.

James M. Lincott, Reo distributor in Boston, has secured the entire State of Vermont in addition to territory already held which includes Massachusetts east of and including Worcester County and all of New Hampshire.

Prasp Motor Car Co., headed by **F. W. Prasp,** has taken over the distribution of the Moon in Oregon and southern Washington. The Prasp Motor Car Co. for nearly a year was the Lincoln distributor for this territory.

Traffic Truck Sales Co., Syracuse, N. Y., has been organized to handle sales and service for the Traffic truck. **Thomas Bailey and D. M. Foley,** factory representatives, are in charge. **Jack Bellings** is associate sales manager.

Columbia Reo Motor Co., Columbia, S. C., has been chartered by the Secretary of the State with a capital stock of $25,000. Officers are **J. N. Jordan** president, treasurer and secretary, and **W. M. Sandifer** vice-president.

Fred B. Clark, of Los Angeles, has been appointed Pacific Coast representative of the **George W. Davis Motor Car Co.,** of Richmond, Ind., manufacturer of the Davis. Clark is widely known to dealers and distributors in that territory.

Greenfield Oakland Co. has been formed to take over the Oakland agency in Greenfield, Mass. **Carroll F. White** heads the new concern which will occupy the same quarters as the old **Dunbar-Lyon Co.,** with maintenance station in connection.

John R. Boyd and Mrs. Boyd were given a dinner and dance by the sales and office force of the **United Motors Corp.** of Louisville, Ky. Boyd is president of the organization which acts as distributor for the Hupmobile and Wills Sainte Claire.

James O. Laughlin has been appointed sales manager of the J. F. O'Connor Sales Co., Syracuse, N. Y., to succeed W. G. De Havens. Laughlin will have charge of Jordan and Oldsmobile retail sales in fifteen counties in this part of New York State.

Parmenter Co., Springfield, Mass., has become distributor for the Spicer and Hartford joints, Perfection Springs and Gurney ball bearings, in addition to the various lines of the **Campbell Motors Corp.,** which they handle exclusively in this territory.

Ray Battery, Philadelphia, under **W. D. Shepheard,** has territory that includes eastern Pennsylvania, south Jersey, Delaware and the eastern shore of Maryland. **H. L. Archey** has been appointed eastern sales manager and **W. W. Carter** service manager.

David J. Willoughby, sales manager of the **Columbia Motor Co.,** and **Norman I. Taylor,** sales manager for the **Albee** corporation, advertising counsel for the company, are on a business trip through the Middle West on which they will hold dealer and distributor meetings in eleven cities.

D. C. Briggs and **David A. Ahearn,** both well known in the motor trade, are recent additions to the sales force of **C. P. Rockwell, Inc.,** Nash distributor for New England. **Joseph S. Porter,** formerly with Locomobile and other big companies, has been added in a supervisory capacity.

E. L. Smith and **C. H. Bliss** have been appointed assistant sales managers of the Nash Motors Co. Smith leaves the position of district manager of a large automobile concern having headquarters in St. Louis to join the Nash organization. Bliss has been with the Nash company since its organization.

John W. Odlin, advertising manager for the Wickwire-Spencer Steel Corp, has resigned to take effect Sept. 1 to become head of the **John W. Odlin Co.,** advertising agents. The headquarters of the new concern will be in Worcester and the New England states will be covered specializing in manufacturers' advertising.

Frank H. Willard has been elected vice-president and general manager of the **Graton & Knight Mfg. Co.** by the directors. Willard has been with the concern for 30 years and was formerly vice-president and a director, but resigned from office, remaining connected with the organization, at the time of reorganization a few months ago.

Flathers Garage Co., Springfield, Mass., will occupy Aug. 1 a larger service and repair establishment, operating as an associate of the **Parmenter Co.,** wholesale parts dealers. The proprietor, **George H. Flathers,** was for some years with the Knox factory and until a few months ago was service manager for the Byrnes Motor Co., Springfield.

A. P. Kemp has been appointed president and treasurer, and **J. I. Farley** has been appointed first vice-president of the Auburn Automobile Co., Auburn, Ind. Kemp will continue in the capacity of general manager which he held before his new appointment. Farley will continue as director of sales in addition to his new duties. Kemp succeeds **Morris Eckhart.**

Clarence E. Triphagen, for the past three years manager of the Detroit branch of the Reo Motor Car Co., has been called to the factory to become identified with the sales division under R. C. Rueschaw, sales manager. Triphagen had been connected with the factory sales force formerly and before going to Detroit was manager of the Lansing factory branch.

Oregon Motors, Inc., Portland, Ore., has been formed to handle the Chandler and Cleveland in Oregon and southern Washington. This line was recently represented by the Twin States Motor Car Co. **E. O. Armstrong** is at the head of the new organization. **A. H. Knaus,** who headed the Chandler-Cleveland dealership in Portland for two years, is vice-president and sales manager.

Moreland Motor Truck Co., of Los Angeles, has opened a northwest factory branch to handle wholesale business for the entire Pacific Northwest at Portland, Ore. **C. H. Smith** will be in charge as northwest manager. At the same time a local company to be known as the **Moreland Motor Truck Co.** of Ore. was formed to handle retail sales in this territory. The company is composed of **F. H. Nash, C. E. John** and **W. M. Fried.**

Clarence P. Fisken of Racine, Wis., has been appointed general manager of the Wisconsin sales division of the Mitchell Motors Co. under the reorganization of the sales department of the factory by A. G. McMillan, general sales director, since taking charge recently. Fisken's headquarters will be at the Racine factory. He was formerly manager of the Wisconsin branch of the Burroughs Adding Machine Co., resigning to join the Mitchell sales organization some time ago. He is a director of the Racine Chamber of Commerce and engaged also in some notable civic projects.

CHARGES MONOPOLY IN GASOLINE FIELD

Federal Commission Would Prohibit Interlocking Stock Ownership

WASHINGTON, July 22 — Asserting that a "monopolistic situation," with respect to the gasoline market, prevailed over the entire country, due to the fact that an interlocking stock ownership in the several Standard Oil companies "has perpetuated the very monopolistic control which the court sought to terminate," the Federal Trade Commission recommended in a report to Congress the enactment of legislation prohibiting "common stock ownership in corporations which have been members of a combination dissolved under the Sherman law."

Montana Prices Too High

Giving the results of an inquiry made on the complaint of the Montana State Railway Commission regarding gasoline prices, the commission reported that although the prices of high-grade crude petroleum were lower in Montana and Wyoming than in any other crude producing states, the refinery prices of gasoline and kerosene were "much higher than at midcontinent refineries."

The report says:

The unsatisfactory situation in Montana and adjacent Rocky Mountain states is evidently due to the fact that the oil trade in this region is practically monopolized by Standard Oil interests.

To-day the entire country is divided into 11 standard gasoline marketing territories in which a standard marketing company is the dominating factor and in which there is no real competition between the various standard units. This monopolistic situation is possible under the terms of the Standard Oil dissolution decree, by which the different Standard companies are, for legal purposes, supposed to be strangers to each other, but there is, as is generally known, an interlocking stock ownership in the different organizations, which has perpetuated the very monopolistic control which the court sought to terminate.

The commission is of the opinion that this situation cannot be effectually remedied by existing law and that adequate relief can only be secured through additional legislation. It recommends, therefore, that Congress pass a law prohibiting common stock ownership in corporations which have been members of a combination dissolved under the Sherman law.

Bill Will Protect Sales

SALT LAKE CITY, July 18—Automobile and insurance interests will introduce a bill into the next legislature that will have for its object the compelling of a person who purchases a car on the instalment plan and falls behind with his payment, to disclose its whereabouts on pain of arrest. Under the state law at present there are no means by which a delinquent who conceals the car may be brought to justice.

ASSOCIATION STARTS GOOD ROADS UPLIFT

MINNEAPOLIS, July 18—Leading business men have formed the Hennepin County Good Roads Association for a general uplift movement in the road conditions, an important function now that Minnesota is becoming a great tourist state for motorists. The organization is the outgrowth of the Lyndale Avenue Bridge Association, which has consummated a great arterial highway from the South.

Five business groups are behind the plan, and the directorate will contain representatives of the manufacturers', jobbers', retailers', bankers' and the automotive interests. Archie Walker, connected with the Pence automobile interests, is secretary of the association.

It is expected that eventually this will become a state-wide organization in its operations. The organization is formed to get quick results, particularly in the way of better roads to the South and within the city itself.

NASH BALANCE SHEET TELLS OF BIG BUSINESS

KENOSHA, WIS., July 24—Earnings of the Nash Motors Co. from Dec. 1 to April 30 were $2,173,000, as compared with $2,226,000 for the full fiscal year of 1921. The balance sheet of the company as of April 30, last, follows:

Assets: Real estate, plant, equipment, etc., $4,847,828; investments, $2,114,112; Liberty bonds, $1,200,802; materials and supplies $3,334,388; notes receivable, $527,896; accounts receivable, $2,129,154; cash, $8,204,122; U. S. Treasury certificates and notes, $5,857,588; prepaid expenses, $3,888; total $28,219,778.

Liabilities: Preferred stock, $4,000,000; common stock, 54,600 shares of no par value, $510,000; accounts payable, $2,710,902; reserve for Federal and other taxes, $3,285,662; other reserves, $2,808,106; surplus $14,905,108; total $28,219,778.

The surplus of $14,905,000 is equivalent to $273 a share on the 54,600 shares of common outstanding.

In the six months ending June 30 Nash Motors Co. sold more passenger cars than during the entire year of 1922. This also is the largest half year of business in the history of the Nash company. The factory still is behind on orders, and indications point to a continuance of the heavy demand throughout the summer months. Additions now are being made to the four cylinder plant in Milwaukee which, when completed, will enable the company to catch up some on orders. This new building is to be 600 feet long by 100 feet and three stories high. At the same time the Nash Six plant in Kenosha will be in a position to increase its production.

ROAD STUDY TO CUT COST OF OPERATION

Preliminary Report Out—Expect Benefits to Transportation and Highways

WASHINGTON, July 22—Preliminary results of the investigations being carried on under the auspices of the Bureau of Public Roads, the Quartermaster Corps and the Advisory Board of Highway Research of the National Research Council, studying tractive resistance on roads, has been made public by the Department of Agriculture.

The incomplete tests, says the report, show that there is a great difference in the power required of an automobile or truck in traveling over different types of surfacing, the amount being more than twice as great on some of the lower types when compared with that on higher types.

The most valuable result, thus far, it is stated, is that the tests have shown conclusively that the power required to overcome the road resistance is not proportional to the speed of the vehicle, and after a certain speed is reached increases very rapidly.

Details of the investigation, which is being pushed through the summer months, will not be made public until completed. It will cover tests with various types of motor vehicles with the load, tire, and spring equipment varied on different types of surfacing and at varying speeds. The data will include gasoline consumption, internal engine, wind and road-surface resistances.

The purpose of the investigation and tests is to enable highway engineers to determine under a given set of conditions what type of surface should be built for a given volume of traffic to result in the least total cost for roads and automotive operation. The same sort of study will be made as to expenditures for grade reduction to reduce operating costs.

The tests will give the automobile operator valuable information as to the effect of tire and spring equipment, lubrication, size of load and speed of vehicle on fuel consumption, which, it is expected, will aid him in producing cheaper transportation.

Iowa Buys Low Priced Cars

DAVENPORT, IOWA, July 24 — Growth of sales of cars around $1,000 has been the outstanding feature of sales analysis in this city just completed by a statistical company. June sales were 187 cars, reported by all agencies in the city, as against 141 sales in June, 1921, and for six months ending July 1; sales have totaled 816 cars as against 738 in the same period last year. The car selling in greatest number was bought by 81 persons, making 390 sales of this particular car by one agency in the six months marking first half of the current year.

CHANDLER SIX

Widest Sales Appeal Insures Dealer Profits

THE special appeal of Chandler Six and the reason for its sales success is the combination of custom-built style and smartness, flawless performance and amazingly low price. Ten distinctive models on one standard chassis give widest sales opportunity with lowest cost of servicing.

Before you assume that your territory is permanently closed, write and find out.

You Can Replace Anything Except the Good Will of Your Customers

Another pleased customer!
How did you obtain the good will you already have? Wasn't it through serving your customers—supplying them with dependable auto equipment? The *"Ask 'Em to Buy"* idea, coupled with CHAMPION DEPENDABLE SPARK PLUGS—the most universally used equipment—enables you to continually build good will with every automobile owner in your community. Your knowledge and experience is of great benefit to your customers. They welcome your suggestions of practical equipment that add to the pleasure of motoring and save them time and trouble.

To secure the good will of all your customers—to earn the gratitude of all the car owners in your community—see that they spend their money wisely. Suggest only dependable auto equipment that will enable them to get "full service from their cars." Furthermore, don't let any motorist leave your shop or garage without suggesting that he may need a couple of extra CHAMPIONS. Remember to *sell them what they need as well as what they come to buy.*

Champion Spark Plug Co., Toledo, Ohio

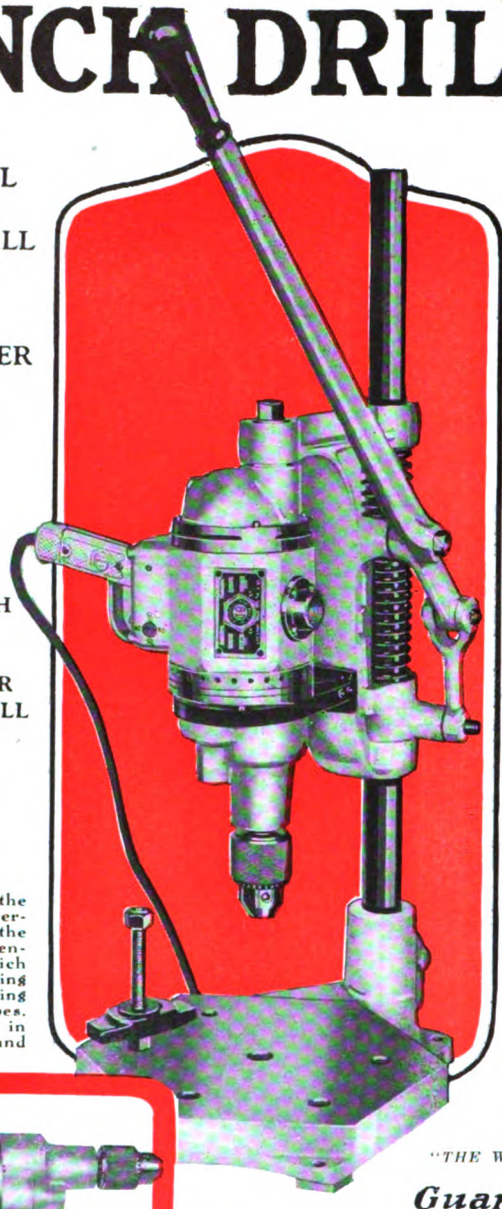
BLACK & DECKER BENCH DRILL STAND

BENCH DRILL STAND WITHOUT DRILL

$33.00

BLACK & DECKER SPECIAL HALF INCH DRILL



$85.00

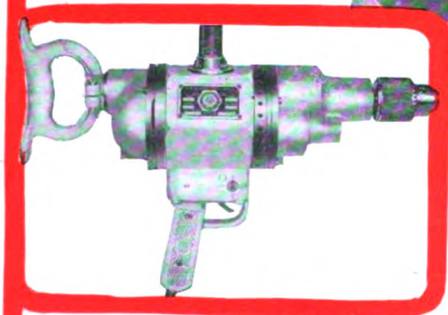


ILLUSTRATION SHOWS BENCH DRILL STAND *with* BLACK & DECKER SPECIAL ½" DRILL

COMPLETE AS SHOWN

$118.00

The bracket supporting the drill may be raised or lowered to suit the height of the work and may be swung entirely around the post, which is a big advantage in locating the hole and for handling large jobs and odd shapes. The bracket is secured in position by means of a hand screw.

This is the new Black & Decker Special Half Inch Drill, which has created such a sensation in the trade by reason of the fact that it combines Black & Decker quality and an exceptionally low price.

YOU can always tell a good mechanic by his tools. He never buys inferior tools because they are cheap, if he can avoid it. But if he is a good business man as well as a good mechanic he guards against unnecessary expenditure.

In most shops a portable electric drill is absolutely indispensable and a drill press often necessary. Good mechanics everywhere are using Black & Decker Portable Electric Drills; and to make it possible for them to have the advantages of a drill press at minimum expense we have produced the Black & Decker Bench Drill Stand.

The Black & Decker Portable Electric Drill can be mounted in this stand in a few seconds and dismounted just as readily. The Stand sells for only a fraction of what it would cost to install a drill press.

The Black & Decker Post Drill Stand is similar in all respects to the Bench Drill Stand except that it has a longer column and is arranged with brackets so that it can be mounted on wall or post and the drilling table is secured on the vertical column with a hand screw so that it can be raised or lowered or swung around.

Be sure to see the Automotive Equipment Association "Shop Profits" Film at your first opportunity

Advertisers' Index 130 and 131

EVERY camping site is electric lighted when the car is Auto-Reelite equipped. And the tire change enroute, that was so troublesome and consumed so much time, is made as simple as at high noon with "the only spotlight on a reel."

It is a perfect spotlight for driving—then a convenient utility light for all purposes by merely giving the knurled ring two twists with the thumb and forefinger. This allows the lamp to be taken twelve feet from the car in any direction. The automatic reel retrieves the cord and keeps it clean and free from kinks when the lamp is returned to the car.

Every customer of yours who drives a car after dark this summer is a prospect for a spotlight—you'll make him a better customer and a stronger friend by insisting upon its being an Auto-Reelite. It is the spotlight plus—a guaranteed spotlight—a convenient utility lamp—and an unsurpassed trouble lamp.

A New Poster to Help You Sell

The illustration shown above has been enlarged and used in a new dealer window poster. This will tie your store up with advertisements on camp use of the Auto-Reelite as features in the current issues of national magazines reaching hundreds of prospects in your own vicinity.

Write for the Auto-Reelite Camp Poster to put in *your* window—it will make sales for *you.*

Speed up repair jobs in your shop with WEAVER Twin-Jacks

A great help in unloading cars

If you've ever unloaded automobiles from freight cars, you'll appreciate what a big help these Jacks will be in this work.

The castor wheels enable the operator to shift the car in the desired direction with little effort and very little space is required for manipulation, as the Jacks are confined within the limits of the car.

EVERY square foot of floor space in your shop represents a definite investment. It's up to you to make each pay a profit. You can't, if you are propping up dismantled cars on boxes and wooden horses so that they're hard to move around and thus tying up the most valuable floor space in your shop.

Think how much time and labor you would save by using Weaver Auto Twin Jacks. With one of these Jacks under each axle *one* of your mechanics can easily move the car wherever it is needed in the shop.

The safety features of this Jack---the two point support, screw hoisting mechanism and broad wheel base---will appeal to your mechanics, too. They will do more and better work, because they know there's no danger of injury.

If you would like to know more about these Jacks and other Weaver profit increasing equipment, write for our catalog--- today

Soon They'll Be Legislating Again

And What Are YOU Going to Do About It?

The Automotive Trade Can't Accomplish Anything by Merely Fighting Legislators but Every Automotive Man Can Help Make Legislation Helpful to the Industry and Fair to the Public

By NEAL G. ADAIR

BEFORE many months have passed a majority of the forty-eight State Legislatures will be in session. Whether new laws are needed or not, the legislative machinery will begin grinding them out. That is what Legislatures meet for.

Some of the bills that get into the legislative hopper will be automobile bills. Men who get seats in State Capitols take to automobile legislation like a duck to water. This is only natural because, next to the weather and a few other things, the automobile is the subject of more conversation than anything else in the country. Some of the automobile bills to be drafted in the forthcoming sessions will be good, some bad and some just foolish. *But all of them will be of vital interest to the automotive industry.*

This makes it necessary that automotive men watch legislation. And it is imperative that not merely a few natural leaders among the manufacturers, jobbers and dealers, but all automotive tradesmen be among the watchers. This can be accomplished, to an extent, through city and sectional trade associations. It can best be thoroughly accomplished through state associations, of which every distributor, jobber, dealer and garageman can and should be a sustaining member.

But simply having an association won't get results. The association must do something about legislation—watch bills proposed, learn what is intended by them and take a hand in their passage or defeat, according to their justice or injustice.

This is more easily suggested than done, but by taking a look at the general types of legislation brought forward during the past year or two, and fairly certain to be considered for some time to come, it is possible to see the trend of legislative thought and plan action to guide it in a constructive direction.

Different Legislatures, of course, have different local problems inspiring varying forms of legislative activity but in the main it may be said that legislators all over the country are thinking along five principal lines, which cover the subjects of—

Taxation.
Restrictions on the size and weight of loads.
Rules of the road.
Compulsory insurance.
Common carrier regulation.

Let's examine these subjects, one at a time, and try to determine where the trade should stand regarding them.

Taxation of automotive vehicles is necessary and good public policy. Everybody recognizes that. The question is, how shall they be taxed and how much?

In some States it has been the habit of the automotive trade to fight any and every new tax bill. This has had the effect of antagonizing legislators and creating unfavorable public opinion for the industry. What should be done is to investigate the need for the proposed tax and, if it is needed, help its proponents levy it in a scientific manner.

There has been much opposition on the part of the trade here and there to gasoline taxes. As a matter of fact, such a tax would distribute the tax burden more evenly among motor vehicles than some forms of assessment now in vogue, but the gasoline tax as an *additional tax*, with various license fees also prevailing, may impose an unfair levy on users of cars and trucks and so make the dealer's business more difficult by increasing sales resistance.

IN any State where taxation is to be a legislative issue next winter the men in the industry might well start *now* to determine what revenues should be raised and how the process can be most equitably applied.

There is a sound basis for such an inquiry. It is generally conceded by well informed persons that highway building should be financed by the public at large and the abutting property owners and that maintenance funds should come from users of the highways, largely, of course, car and truck owners. The cost of this maintenance, including administration, together with the expense of maintaining the motor vehicle registration and traffic control, will represent about what should be raised by taxation of the vehicle owning public. If highway maintenance and administration is going to cost a State a million dollars next year and the motor vehicle licenses and kindred forms of taxation will yield a million or a little more it is obvious that an additional tax of any kind is not justified and if the facts are properly presented to the Legislature and the public it is not likely that legislative opinion will approve nor public opinion permit passage of a tax increase law. In one large State last winter the automotive interests brought about the defeat of bills levying additional

Digitized by Google

motor vehicle taxes, including an all but prohibitive levy on trucks, by showing the legislators and the people that the revenues already available were sufficient. In some States it may be advisable to change the system of taxing motor vehicles. The trade should not blindly oppose such a change because it is a change and perhaps looks on the surface like another attempt to bleed the motorist and truck owner, but should set intelligent committees to work with the legislative and highway officials to bring about the changes in a manner equitable to everybody concerned.

IN several States bills are likely to be introduced restricting weights and sizes of vehicles and their loads. Some restriction is necessary else motor trucks will destroy highways, injuring their own and the motor car's interests as well as the public's. But there is a reasonable limit to restrictions. Some legislators have been decidedly unreasonable in their attitude toward truck loads. Others have seemed to be unreasonable because they lacked definite information to proceed along sensible lines. Justifiable truck weights vary on different types of roads and the highway authorities and motor truck builders, merchants and users of a State usually can get together to determine them. However, there is a central point of information and advice in the Motor Vehicle Conference Committee, with headquarters in New York. The committee has worked out an elaborate schedule of recommended truck weights and sizes which can be had for the asking.

Rules of the road, including speed limits and varied forms of regulation having to do with traffic control may be the subject of legislation or administrative act, or both. Rules of the road may be so restrictive and rigid as to discourage motor car and truck use and thus set up a serious factor of sales resistance. They should be so drafted as to provide for prompt and regular movement of vehicles at speeds in keeping with their capabilities and at the same time recognizing the factor of safety, for motorists and pedestrians alike. Some States have capable men, some of them with engineering ability, directing the preparation of traffic control regulations. Other States might well employ such men and the automotive trade can encourage action along this line. It goes without saying, however, that men who make, sell, service and drive motor vehicles can contribute to the adoption and enforcement of sane traffic rules and in every State and city there should be committees representing all these interests to sit in on meetings of public officials called to revise rules of the road.

The subject of compulsory liability insurance for the car and truck owner, which has been coming to the front within the past two or three years, is closely associated with traffic regulation. Highway accidents caused by motor vehicles have reached such proportions that a considerable element of the public is demanding legislation which will insure financial responsibility on the part of a driver to pay for personal or property injury resulting from his recklessness. This demand has led, in some cities, to bonding of taxicabs. In several States there is agitation for legislation to compel carrying of liability insurance or accident compensation insurance by all motor vehicle owners. Loosely applied, any of these arrangements would have the effect of penalizing the careful driver, because the carrying charges on bond or insurance would have to be high enough in all cases to meet the indemnity or insurance paid the victim of an accident in which the speed hound or the heedless driver figured.

There are men in the industry who believe that compulsory liability insurance is bound to come. But they argue that everything possible should be done in the building of additional and better highways and in more scientific control of traffic, so that the rates may be kept down by holding down the number of accidents. In any State where the subject is brought up it should have the closest attention of the automotive trade. If conditions in any locality justify the enactment of a compulsory insurance law it should be framed with the utmost care, else the expansion of the industry will be dealt a severe blow through the setting up of an arbitrary discouragement of motor vehicle use.

Common carrier legislation, affecting motor vehicles which transport persons or freight for hire, is under discussion in virtually all States. Some authorities favor putting such vehicles under State commissions regulating fares, schedules and service to the public in general, in much the same fashion as railroad and trolley service is regulated. Others oppose such supervision. Local judgment must be applied. And in such application the automotive industry, with its expert knowledge of motor transportation, should be a factor.

On all questions of legislation affecting the sale and use of motor vehicles the automotive trade can get a hearing if the men in the trade will demand it. If the trade will insist upon justice, that is, fairness alike to the vehicle owning and the non-vehicle owning public, it has at least an even chance of winning its case. The trade need not go before its Legislature as a supplicant, nor should its arguments be presented with bluster or accompanied by attempts at undue influence taking the form of pernicious lobbying. A fair, firm presentation of the case of the motor vehicle, termed by President Harding "an indispensable instrument in our political, social and industrial life," will command the influence and friendship necessary to maintaining its position at the bar of public opinion, which, despite occasional lapses, is the dictator of legislative opinion.

This is midsummer and Legislatures do not convene until late fall or early winter, but the people who have special interest in legislation, some of them special interest in legislation unfavorable to the automotive industry, are at work, like professional politicians, the year around. The automotive trade, NOW, should be taking a hand in the *selection* of legislators. And from now on it should be watchful to detect the trend of prospective legislation and active to prepare for the protection of the trade's interests when the legislative wheels begin to whirl.

WHEN the Legislatures convene associations and committees of automotive men who feel the need of expert advice and assistance on legislative matters can take encouragement in the fact that there is an agency always ready to answer legitimate calls for aid. It is the Motor Vehicle Conference Committee, supported by the American Automobile Association, the National Automobile Dealers Association, the National Automobile Chamber of Commerce, the Motor and Accessory Manufacturers Association, the Rubber Association of America and the Trailer Manufacturers Association of America. Its headquarters is at 366 Madison Avenue, New York. Its staff will work with local and State committees whenever possible and in every State it has a local conference committee.

How Shall the Industry Pay Its Salesmen?

Gross Profits Rather Than Sales Should Be Basis of Commissions, Accountant Says—Dealer Discusses Straight Salary Plan and Condemns Used Car Gambling

TWO discussions of methods of compensating salesmen, one by an accountant and another by an automobile dealer, are presented here for the consideration of Motor World readers. Both discussions suggest practical lines of thought for men in the automotive trade.

One is by J. Pryse Goodwin, of Pryse Goodwin & Co., public accountants and management engineers of New York, who writes under the subject, "Gross Profits as a Basis of Sales Commissions."

The other is by Frank R. Tate, Dodge Brothers dealer in St. Louis, who declares the present scheme of compensating salesmen is antiquated.

The discussions are presented with the recommendation that Motor World readers will find them interesting and, in some cases, some of the ideas brought forward, may be worth adopting.

Gross Profits as a Basis of Sales Commissions

By J. Pryse Goodwin. Reprinted, with permission, from *Administration*

THE idea that the true basis for salesmen's commissions is found in sales has been long established. Perhaps no one has ever thought to challenge it. Perhaps also it is only in an epoch like the present that a hearing can be obtained for a challenge to the established order of things. Inasmuch, however, as changes in conditions call for changes in methods, the writer has the temerity to challenge sales as the true basis for salesmen's commissions.

During the period of advancing prices, prosperity was accelerated by the fear that prices would go still higher and whatever efforts were made to control public demand by increasing prices seemed only to add fuel to the fire. During the same period, however, costs of production were increasing at the same rate as selling prices or even faster, so that margins of profit did not show an increase corresponding to advances in price. In many cases the normal margin was not maintained, while in those cases where it was possible to increase the margin, the government took care, through income and excess profits taxes, that manufacturers did not get away with it all.

Nevertheless, each advance in price spelled increased earnings to one class of the industrial community, namely, salesmen employed on a commission basis, and not only did the basic unit of their commission increase, but the general fear that prices would go still higher had the effect of increasing the demand so that such sales gained both in basis of commission and also in volume of sales. Many salesmen under these abnormal conditions grew rich with perhaps less effort on their part than in normal times. There was nothing rapacious about their success nor are they to be blamed. It was merely the result of a system by which commissions were based on sales.

During the following depression, the salesman's commission per unit was reduced with each cut in price. When a buyers' strike was declared as a result of the feeling now dominating the public that prices were going still lower, not only were his commissions per unit smaller but their number was also curtailed by a reduction in volume of sales. This in turn brought with it the need of readjustment of relations both business and domestic, causing in some cases severance of relations of long standing, all of which is demoralizing not only to the victim, but to the industry and the public at large.

Refer now for a moment to the position of the employer of this same salesman during these two periods of inflation and deflation. And what do we find? During the period of inflation if he were a manufacturer, he was confronted with increased costs of labor and material and manufacturing expense, all of which cut down his margin on profit. He was

How Do You Pay Your Salesmen?

For several months there has been an animated discussion in the trade about methods of paying salesmen. There has been much complaining about straight commission compensation, which subjects this class of workers to sharp peaks and depressions in their periodical earning power. Motor World has told of the plans of some dealers who have found ways of modifying the commission plan, to their own and their salesmen's advantage. Stories of other dealers with unconventional compensation plans are in preparation.

Here are set forth the views of an experienced accountant and management engineer on the subject, with some comment on his views by a veteran automobile dealer.

What do you think of the suggestions of Goodwin and Tate?

Write to Motor World About It

Digitized by Google

forced to look for places to effect economies that would offset these increases in cost, or else he must increase his selling price. Failing in the former he adopted the latter and then found that by so doing he had increased his selling expense, namely, salesmen's commissions. During the subsequent depression, the salesman's employer was confronted with the same problems only in the reverse direction and without that moral stimulus that comes of business activity which helped business men weather the troubles of the previous period.

At a time like the present, when everything should be done to stimulate trade, the manufacturer finds that he has to reduce his prices to move his goods and in turn cut salaries, administrative expenses, and manufacturing costs. At such a time he is in need of the closest co-operation from his selling force. Meanwhile, the salesman, paid commission on gross sales, finds that each cut in price reduces his commission per unit and, what is more discouraging, that the goods are harder to sell because the public has learned to wait in anticipation of a further cut. Both of these conditions bring him in conflict with his employer. His business efficiency and his social standing are once more disturbed.

Even in highly organized industries, traditions have a way of persisting long after the reasons for them have disappeared. A case in point is in the automobile industry where commissions for salesmen still follow the traditional method of being based on sales. However this might work in normal conditions, as things are now the automobile industry is facing a problem which makes the traditional method inhibit rather than encourage sales. This is the problem of the used car exchange which has come to be such a common feature of automobile sales.

Generally speaking, automobile salesmen are paid on a commission basis, with or without salary, the commission being based on the selling price of the car. When a trade is made, the commission is sometimes based on the amount of cash, but never on the amount of gross profit made in the deal. What is the result? Ask any automobile dealer and he will tell you that the industry is confronted with a chronic condition of large inventories of unmarketable used cars. These cars have been purchased and taken in trade through the influence of salesmen hired on a sales commission basis to sell new cars, who suffer no part of the loss of millions in trades which is annually borne by the automobile sales industry. *The capital sunk in used cars is colossal, the thought given to the problem immeasurable, and yet the problem remains just as much a problem to-day as it ever was and this, in the writer's opinion, is attributable to basing salesmen's commissions, not on gross profits, but on gross sales.*

In looking over the solutions of any problem it is well to profit by past experience and to consider briefly what methods have been applied and with what success.

Many agencies, and perhaps the more experienced, have concentrated their efforts on the purchase side of the problem and have applied their remedies at the point in their organization where the commitment is made. For example, in practically all agencies permission to make a trade must first receive the sales manager's approval. In some houses the amount of the allowance is fixed by the manager of the used car department, his department being charged with the used car at the price allowed; in other houses a bid of a second-hand dealer is obtained

The basis of a salesman's commission where a trade is made should not be the gross sale but the gross profit

and the amount of the allowance is determined by his bid. There are yet other houses, particularly those who desire to control the market for their own used models, who form a separate corporation to handle their used car business, thinking that by so doing the executives of a separate organization are able in making allowances to be more independent and conservative. There are, of course, numerous variations of these methods and many of the agencies employ the good points of several.

While all of the above plans have merit, nevertheless, the unfortunate condition still existing shows that the solution of the problem has yet to be found. Let it be conceded that the effective point of attack for the mastery of any problem, business or otherwise, is its source. Let it also be granted that a car well bought is half sold, and further that an ounce of prevention is worth a pound of cure. With these hypotheses we can proceed to analyze the conditions surrounding the making of a trade.

Despite all camouflage to the contrary, is it not the fact that used cars are practically all purchased through the new car department and that the new car salesman is really the purchasing agent who determines the price? He, however, is hired to sell new cars and is paid a salesman's salary and commission for so doing, while for his services as purchasing agent he is paid nothing at all. Right here, therefore, is a conflict of interests between salesman and employer because while trades help gross sales and the salesman's commissions, they seldom help gross and net profits, and the house immediately finds it necessary to protect itself against unprofitable trades, adopting one or more of the plans already enumerated.

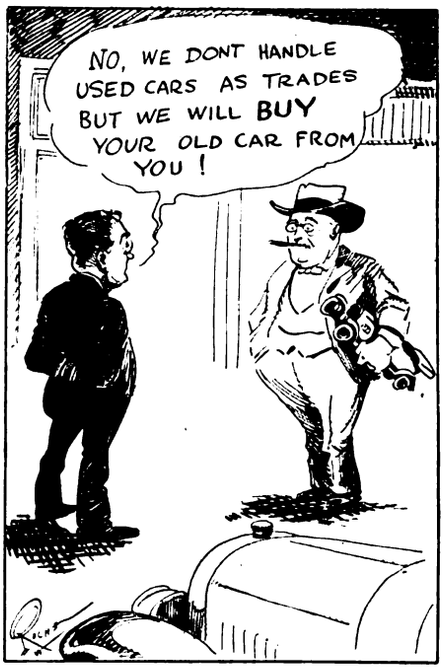
A study of the subject from the psychological standpoint shows that automobile salesmen are among the most capable and energetic men in the business. Of all automobile employees, they are the highest paid and their personality usually dominates the other members of the staff. Unless, therefore, their ability and energy are scientifically directed along lines that harmonize with the interests of the house, the result is apt to be like that of placing a thoroughbred in inexperienced hands.

With his commission based on gross sales a salesman is not apt to discriminate as to where his effort is applied. If the conservative policy of the used car department stands in the way of a trade, is it not natural that the same ability and persuasive effort will be directed to selling the trade to its manager as is used on the prospect to sell the new car? The salesman is hired to sell and the surmounting of obstacles, no matter from what quarter they arise, is, as he sees it, just part of the game. Is it the salesman's duty to restrict his sales effort entirely to the customer and to exercise no persuasion upon the executive whose valuation is about to queer his trade? Is it not natural to expect that to both parties the tricks of salesmanship will be applied?

How often does it happen that the sales manager authorizes a salesman to make a trade if he can get the customer to reduce the allowance demanded, by, say, a couple of hundred dollars? Learning of this habit from previous experience and having worked on his prospect as he thinks to the limit, is it not human to suppose that the salesman will use his brain to outmanoeuvre his sales manager by adding $200 to the allowance demanded when presenting the case for preliminary approval?

From the standpoint of organization and management, the principle it is desired to emphasize here is that internal "company politics" are not just a matter of individual human nature, but will surely develop in any organization improperly planned. Such might be the unscientific nature of a contract, under which some salesmen are working to-day, that they are practically forced to adopt such methods to maintain their quota of sales and hold their positions.

It must be clear from the above examples that the incentive created by a commission based on gross sales is unbalanced, directing energy to sales even to the point of a loss. For this reason, in the writer's opinion, this method of payment is the main cause of the problem at hand. Where the salesman becomes both buyer and seller as he does



Digitized by Google

in the case of a trade, the efficiency basis for his remuneration is surely one that measures his ability in both capacities. Naturally if he be remunerated for one service only, the other will suffer, where they conflict. It is certainly not human to expect that he be a conservative buyer when as a seller that conservatism will kill his commission.

In solving such difficulties as above outlined one must go to the root of the trouble and study out the real principles involved. In the case of our automobile salesman, the basis of his commission is on the gross sale. On the other hand, the agency's interest is not in gross sales so much as in profits. The basis of the salesman's commissions where a trade is made should therefore be not the gross sale but the gross profit, and the gross profit for the purpose of calculating his commission should be ascertained by deducting from the profit on the new car the loss on the trade plus the cost of any accessories thrown in. The calculation is simple, but how different the situation to which it leads. On this basis the salesman had no interest in overpersuading the sales manager or the manager of the used car department as to the condition of the trade; rather he has an interest in fighting every dollar of allowance and will appreciate their judgment because in the actual realized profits their relationship is that of partners.

For example, assume that under the present basis, the commission be 5 per cent on the gross sale, while 50 per cent on the net profit is the suggested plan; that the customer demands $400 and the used car department will only allow $300 which is all the trade is worth. Under the present plan this difference of $100 in allowance would cost the salesman only $5 of his commission where the agency suffers a loss of $95, giving rise to the usual friction between the new and used car departments, resulting in lost motion, lost money, and a large inventory of used cars. Under the method suggested, namely, basing the commission on the gross profit, the situation is quite different. The extra allowance would cost the salesman not $5, but $50 in commission and the agency loss would be reduced from $95 to $50. Their interests, therefore, are now identical, making it to their interest to work together. Might it not be that under this system neither would lose but that the salesman would succeed in persuading his prospect to accept the lower allowance? Further, he would also have the incentive to assist the used car department to dispose of the used car, thereby reducing the inventory.

Here is a system that is scientific in that it discriminates between a good and a poor sale. It also discriminates between good and poor salesmen. Good salesmen will earn considerably more under this system, the increase in their commissions coming out of what is now lost through excessive trade allowances. The salesman's position is also more dignified, being that of a quasi-partner rather than a mere employee and there can be no question in which relationship the best work is produced.

The time is not far distant when the survivors in the automobile business will buy used cars and not consider them as trades.

To sum up it is claimed for the method of basing commissions on gross profits rather than on gross sales that:

1. *It tends to stabilize prices.*
2. *It obviates the demoralizing of salesmen during periods of advancing prices.*
3. *It prevents a large disparity in earnings during periods of depression.*
4. *It multiplies salesmen's potentiality in proportion to the increase in rates without increasing the cost of his services,*

and that as applied to industries with exchange features:

5. *It is basically scientific in that it measures the salesman's effort both as purchasing agent and as salesman.*
6. *The full potentiality of the salesman is directed toward reduction of losses on trades.*
7. *It tends to reduce the inventory of used models.*
8. *It is more profitable to both the agency and the salesmen by welding their interests.*
9. *It places the salesman in a more dignified and at the same time more responsible position.*
10. *It promotes co-operation between the new and used model departments.*

There is no physical difficulty against basing commission on gross profits instead of on gross sales. Whatever difficulties exist are mental, and these can easily be met. Should it be desired not to disclose to salesmen what is the margin between cost and market, an arbitrary margin can be determined and if there be no such problem as that of the used car, there are always salesmen's expenses which can be deducted from the arbitrary margin of profit before arriving at the true basis for commission. By this basis, salesmen are stimulated not only to increased sales and profits, but also to reduce selling expenses, which is a factor overlooked by the old basis of commission based on gross sales.

It is the writer's belief that in any commission arrangement it is worth while to make a careful study to see if proportioning commissions to the profits will not make a more satisfactory arrangement for everyone concerned than would the traditional method of basing them on percentage of gross sales.

Present Commission Plan Is Antiquated

By Frank R. Tate, Dodge Brothers Dealer, St. Louis

THIS subject has been quite a hobby with me for the last three years, and I feel that for my personal needs I have worked out a satisfactory solution. It is still subject to some variations and modifications, which I am about to put in effect.

Mr. Goodwin's ideas, as expressed, in covering the general automobile industry, are very excellent, particularly in reference to the element of used cars, but I do not believe that dealers in some other makes of automobiles would be as successful in arriving at a satisfactory settlement by paying salaries instead of commission, as a dealer who has a Dodge Brothers franchise. My experience of the past shows conclusively that the salesman's personal effort in selling our product is of a secondary consideration. For instance, I recall recently one day one floor salesman took signed orders for 12 Dodge Brothers cars, and not one of the 12 patrons had ever been in our prospect file under his or any other salesman's name, and had he been on the customary 4 or 5 per cent commission basis his earnings would have been in excess of $700 for the day.

By a careful analysis, and a series of statistics, I find that our salesmen's efforts are very much affected by having a floor day, and almost equally as much

Digitized by Google

by being given, or not being given, the names of prospects who call over the telephone for catalogs or information regarding our cars. It is hard to say whether the floor prospects or the telephone prospects are the greater, but so far, as nearly as I can find out, they are of about equal importance. This subject alone should have considerable bearing on the method of compensating a salesman.

Mr. Goodwin's reference to the second-hand car situation seems to entirely point to that as a necessary evil, and an admitted loss. This need not necessarily be true, but in my opinion will continue to be true just as long as dealers continue to trade in all manner and makes of automobiles, without regard for their real and true value. Whenever a dealer allows more in trade for a car other than the make which he handles than the dealer who handles that same make of car can afford to, or dare allow, he can rest assured that he is bound to suffer a loss, as it is practically a foregone conclusion that it is impossible for him to sell the used car for the same amount, or any more, than the other dealer.

No successful dealer should allow his salesmen to act as purchasing agents for him, in considering an allowance on used cars, and if the dealer is thoroughly up on his business, the allowance price made, and the disposing of the used car, should be segregated from the new car sales department entirely, thereby placing it on such a basis that it would have to stand on its own feet. Consequently the salesman's compensation should not in any way be affected by this used car purchase, and at the same time he should be put on the basis of the amount of cash involved in the transaction, by deducting the amount of the allowance on the used car.

Will Buy Used Cars in Future

I think the time is not far distant when the survivors in the retail automobile industry will buy used cars, and not consider them as a trade. In buying them they will be considered on the same basis of any other purchase of merchandise, with the idea in mind that they must be sold at a profit or they will not be considered as a safe and profitable merchandise. If traded on this basis by all dealers it would be but a short time until the alleged "used car evil" would be entirely removed from the retail business.

My idea of proper compensation for salesmen is a stipulated salary of a reasonable amount, in order to free the mind of a salesman from worry over living expenses in dull periods, and thoroughly instill in the salesman that he is an employee of the house and not a commission broker working on his own time, which breeds a feeling of the right to come and go as he pleases.

In arriving at salaries by good accounting, it is an easy matter to figure up a possible commission basis against a set salary, thereby creating a plus and minus account for comparative purposes, and if the salesman's efforts are producing enough to place his comparative plus account ahead of his stipulated salary account, he should be given gradual raises in salary up to a point of reason. One should have in mind at all times that this salary should not be built up into a fixed overhead that would be prohibitive during dull seasons and necessitate reductions in salary. For additional compensation, or effort, a certain percentage of his earnings, in excess of a reasonable comparative percentage, should be given him at the end of every six months, or at the end of a year, in the form of a bonus.

I agree thoroughly with Mr. Goodwin that the automobile industry particularly is a victim of lack of progression, inasmuch as the majority of retail automobile dealers have stuck to the old form of commission for salesmen ever since its inception, and it is now time that the subject should have some sane treatment.

Selling a Man His Job—

MAKE your employee know you and understand his job—in other words, sell him his job before putting him on the payroll, and a good many of your problems of "hired help" are licked right at the start. That is the theory of John Pennell of the Pennell Auto Co. of Fort Wayne, Ind., Ford and Lincoln dealer.

It makes no difference who or in what department, the routine of the newcomer is largely the same.

The man who is to become a grease hound in the shop gets the same picture of the Pennell Auto Co. and its executives and department head as the man who is to become a salesman, a sales manager or a publicity man. John Pennell has the vision that the automobile merchant can become no bigger than his most insignificant employee.

For example, an applicant for a job in the shop is largely treated as though he were a customer, a person who should be made familiar with the policies and practices. The foreman exhibits the equipment, tool supply and work rooms; time cards, job cards and other shop systems. The service superintendent shows the applicant through the service office and its functions, how the customer is met and handled, the jobs booked and scheduled. The bookkeeper explains the cost accounting and the profit and loss findings, methods of billing and checking and time computing; taxation costs, etc. The sales manager gives him the story of how the sales department finds and handles a prospect and how a sale is made and recorded, and how a delivery is scheduled and made.

JOHN PENNELL
Pennell Auto Co., Fort Wayne, Ind.

By the time the applicant is introduced to the "boss," John Pennell, he has a feeling that is far different from that of a man who is shunted through an ordinary cursory hiring process. Pennell has a man who has become awed by the magnitude of the plant, or a man who has become inspired by its spirit and its ideals; or a man who has become elated at the prospect of his own importance in the cogwheels of this institution. He has a man who is in one of two mental conditions—thoroughly determined to hold his job if he can get it, or, ready to withdraw his application for a job with an institution which obviously expects a man to use his brains as well as his hands.

Pennell finishes the job, much as he would finish the job of selling to a customer of the type who wants to deal with the boss.

"You have seen our establishment. You know what our equipment is and how well you can do the work with that equipment. You have heard the story of our policies. You have come to realize that we are here to serve and to please and deliver a dollar for a dollar. You know how high are our ideals and what a man must do to make himself a part of our business," says Mr. Pennell.

"Do you still want to work for this company and can you fit into the circle that we have here?"

The applicant, of course, has first passed the usual scrutiny and has been found to be of a type that the Pennell Auto Co. could use. Otherwise not so much time would have been devoted to him. But it is the routine procedure and never is deviated from. It is a fixed rule. And Pennell has found that the plan reduces his labor turnover and that his organization has a longer average service than under previous practices. The system has been in use for many months and Pennell does not expect that it will ever be abandoned.

In What Kind of a Store Do Folks Like to Buy?

Isn't It One That's Bright, Clean and Well Arranged?—Here's How a Merchant in a Small Florida Town Is Combining Pleasing Appearance and Strong Selling

LET'S let the pictures tell this story, for hardly a word is necessary to drive home the lesson of the importance of cleanliness, neatness and good display that they contain. These are dominant success factors in the business of every automotive equipment merchant, and when combined with courtesy, quality of merchandise and service, good accounting and aggressive selling they comprise about all that there is to successful merchandising and profits.

The pictures on this and the following pages are glimpses of a store in Lakeland, Fla. Census figures for 1920 give the town a population of less than 8000, yet in this small city is to be found one of the neatest, cleanest, best arranged automotive equipment stores in the South. This store is operated by Henry W. Conibear, trading under the name of the Standard Tire and Battery Co.

Let's take a mental trip through Conibear's store. On entering, the windows attract attention through their neatness and effectiveness. They indicate the proprietor's desire to avail himself of the merchandising assistance that the manufacturers are extending. How well he uses the factory cutouts, literature and window display ideas in getting his selling appeal *through* the plate glass.

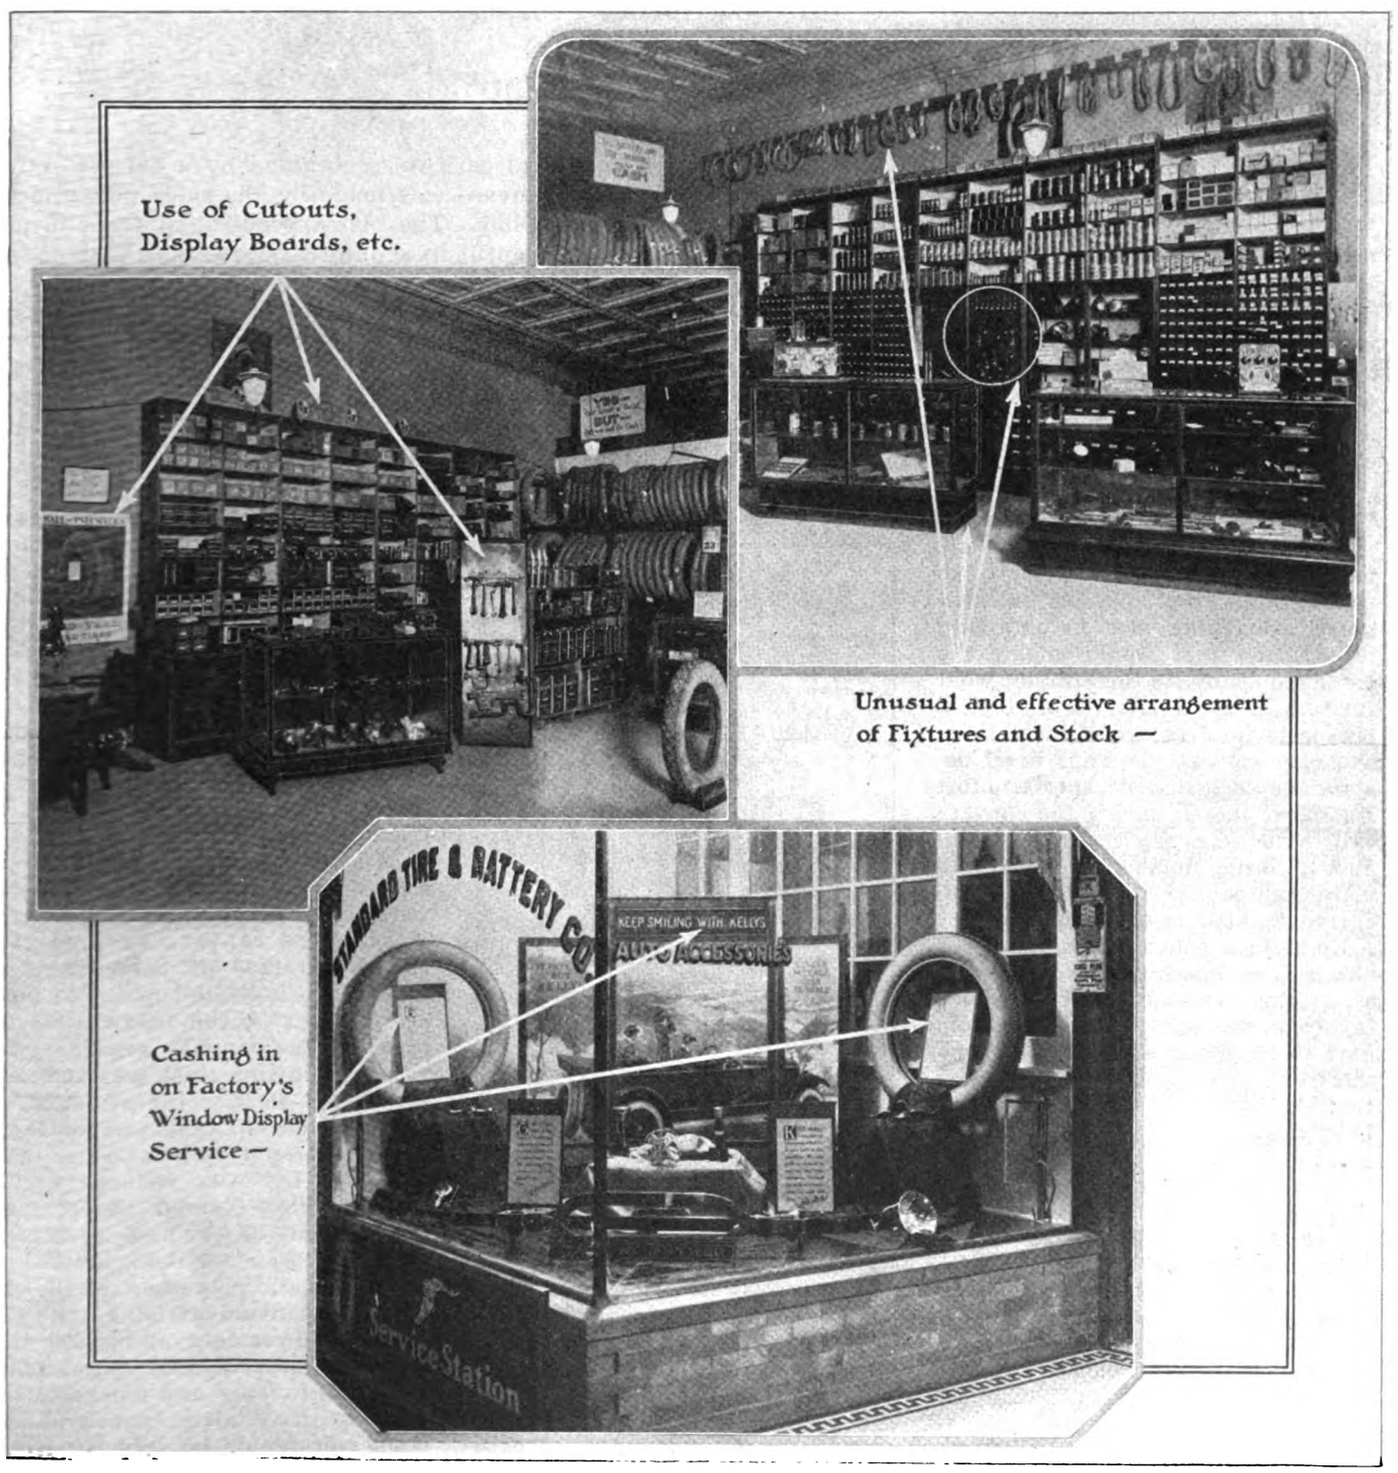
Inside, the spotless tile floor bids a welcome, and the pleasing arrangement of display cases seems to beckon politely for closer inspection and acquaintance with their contents. The general atmosphere of the store seems to give the stock a stamp of quality and dependability.

But, one is not inside the store long before he realizes that there is more than merchandise on sale here. There is service and satisfaction as important things that are delivered with the purchase of automotive items. And there is the actual selling of service. A sign, at the back of the store, one of the first objects that meets the eye entering, sells tire service.

The staggering of display cases and the arrangement of the tire racks as a screen for the service department in the rear are interesting little lessons in store arrangement. The stock is neatly shelved, which always makes a good impression, and that's not a bad arrangement for displaying fan belts along the wall, is it? Then, too, there's considerable taste used in displaying factory advertising of some of the items used. The walls are not plastered with them, like the side of a barn in circus season, but there are a few of them, and they seem to carry a strong selling message.

Appearance is a strong feature of this small town store with a big town selling plan

Conibear's business is divided into departments including tires, accessories, tire repairing and retreading, and new batteries and battery repairing, and each is expected to show a profit, and each does.



This automotive equipment merchant counts courtesy, quality, appearance and service as the four outstanding success elements in his business. He uses a letter service to a mailing list composed of customers and names from the registry list of his state and reminds customers regularly when tires and batteries should need attention. Mile sign posts on all roads leading to Lakeland tell motorists of Conibear's store and station.

It is not surprising, after viewing his store, to learn that he does a large volume of business for such a small city, and that the business is returning him a comfortable profit. A clean, well kept, well manned store is the stamp of a good merchant. People like to do business with merchants who are successful.

How does your store compare with Conibear's?

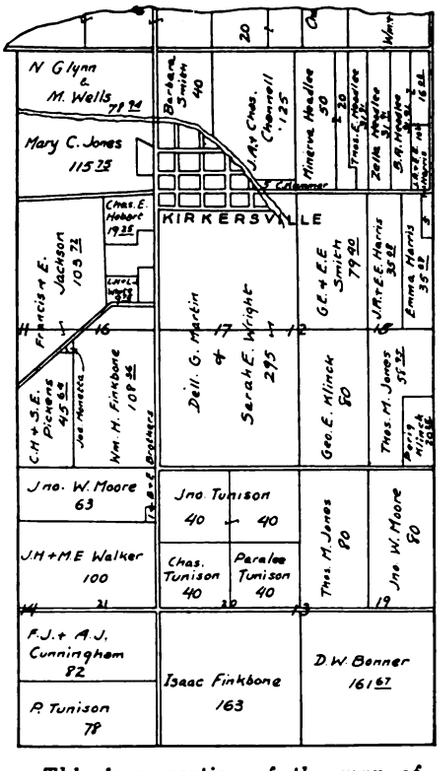
Winter Canvass of Farms Yields Summer Harvest of Tractor Sales

Ohio Fordson Dealer Makes 2500 Visits in 12 Townships —Result, 900 Spring Prospects

By DONALD D. BLANCHARD

NINE hundred logical prospects for Fordson tractors and Ford cars were obtained by a farm-to-farm canvass of 12 townships of Licking County, Ohio. The canvass was made by the sales department of the A. P. Hess Automobile Co., Ford dealer in Newark, Ohio. The primary object of the canvass was to obtain tractor prospects, but information that would be helpful in selling cars was obtained at the same time.



The canvass was started on Dec. 1, 1921, and continued through February. During this period, 2500 farmers were called upon and 12 townships completely covered. At the outset, the intention was to cover the entire county of 26 townships, but the press of spring business necessitated taking the men off the work with 14 townships still to cover. In these 14 townships there are about 3100 farms. These will be covered next winter and the entire county will be re-canvassed in succeeding winters as the farm-to-farm canvass will be made a permanent feature of this company's sales work.

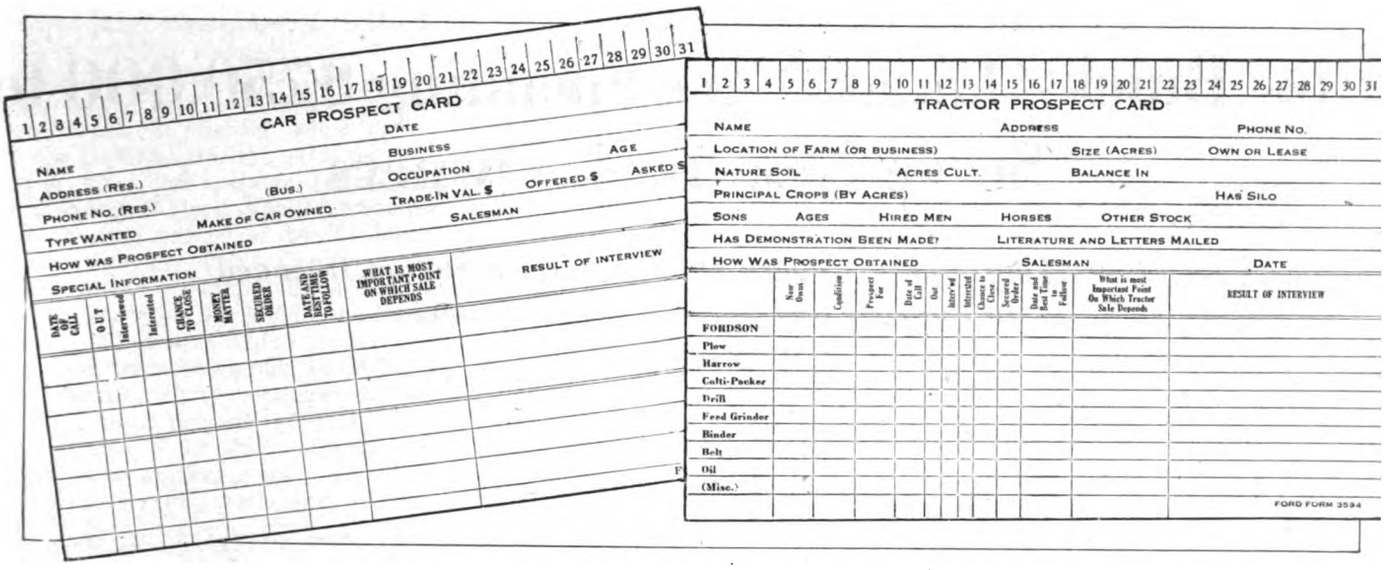
THE canvass was undertaken primarily to determine the sale possibilities of the territory. In making calls, the salesmen subordinated everything else to obtaining information that would enable the Hess Company to determine what farmers in the territory were logical prospects for tractors or cars. However, the canvass paid for itself despite the fact that no special effort was made to sell during the canvass call. The salesmen secured a sufficiently large number of orders to more than pay for all the expense incurred in making the canvass.

Up to June 1 30 tractors and about 325 cars had been sold. Obviously all of these sales can not be traced to the canvass as many of them would have been made anyway and, furthermore, the canvass covered less than half of the county. But the Hess company can trace a sufficiently large number of them to the farm-to-farm canvass to convince them that it is a practical method of locating prospects and one that will be profitable to repeat.

As a preliminary to the canvass, maps of each township in the county were secured from the County Surveyor. These maps showed the size and location of each farm and the name of its owner.

The township was used as the unit of territory in canvassing. Each salesman was given a township to cover. He was instructed to call on every farmer, secure the information required to fill out prospect cards and correct any inaccuracies on the map. When a salesman completed the canvass of a township he was given another to cover.

This is a portion of the map of Harrison Township, Licking Co., Ohio. It gives the location, size and owner of every farm. Maps of this type were made the basis of the farm-to-farm canvass made by the Hess company



The prospect cards are standard forms furnished by the Ford Motor Co. In securing the information required to fill out the cards, the salesman endeavored to place the interview on a friendly basis. Inasmuch as the canvass was made during the winter months, the farmers were not busy and most of them seemed glad to talk to the salesmen. In a majority of cases the desired information was obtained in the course of a friendly chat.

After the canvass of the 12 townships had been completed, the cards were sorted to eliminate the undesirables. The canvass secured 2500 names and 1200 of these were retained as "indicated possible prospects"—that is, the information secured by the canvass regarding the prospects in this class was sufficient to warrant further investigation.

One follow-up call was made on each of these prospects. From these calls the list was reduced to 900 names, which formed the prospect list for the 12 townships covered. These prospects are being worked intensively both by personal calls and by direct-mail advertising.

About 30 per cent of the 900 were tractor prospects and the balance prospects for cars and trucks. Many of these have already bought and many more would have placed orders if they could have given notes that were acceptable to the Hess company. No notes were accepted in payment that extended over a pe-

FORD FORM 3594

In making the farm-to-farm canvass, the salesman secured the information required to fill in the tops of these cards. This information together with personal knowledge and that obtained from other sources was used in separating the desirable from the undesirable prospects. All those retained in the first class received at least one follow-up call

riod of more than one year.

When the car or tractor is purchased with notes, the credit of the buyer is, of course, scrutinized very carefully. Tax lists secured from the County Auditor were of material assistance in checking credit information received from other sources and also in eliminating undesirable names from the prospect file. These lists are prepared by townships and are arranged alphabetically. The lists showed the amount of cash, real and personal property on which each person in the township paid taxes.

Each of the tractor prospects receives a copy of Fordson Farming each month. In addition, two sales letters have been sent out to the entire list.

In addition to the prospects secured and the sales made as a result of the canvass, the Hess company feels that it has done much to build good will. The members of the sales organization established friendly contacts with the farmers in the territory. Frequently farmers stop into the salesroom in Newark and ask for the salesman who called on them during the winter. These calls are entirely the result of friendships made during the canvass.

The work of the Hess company shows that a dealer in an agricultural community can successfully apply intensive selling methods to his territory. It shows that the house-to-house canvass idea is practical in the country, as it is in the city. The canvass produced a complete list of the prospects in the territory covered and this list was obtained at a cost that made the work profitable.

The work was done during a slack period when it would otherwise have been difficult to keep the sales force engaged in productive work. Fortunately the slack period in the automotive business comes in the winter which is coincident with the time when the farmer is least busy. He has the leisure to talk to the salesman and is glad of the opportunity

When Picking a Paper for Advertising

AN automobile advertising man connected with an aggressive daily newspaper has suggested a list of questions that dealers might ask themselves before placing their advertising in a particular newspaper or newspapers. Here are the questions:

Are you familiar with the Audit Bureau of Circulations?

Have you ever seen its reports of newspapers in your city?

Have you analyzed the decrease or increase in circulations?

How do the papers handle motor news, not publicity?

Does any paper have a weekly motor leader giving real stories about the industry, legislation, analysis to aid dealers?

How do the papers give attention to legislative hearings; do they try to cover them fully or give the side of the motorists or the industry?

Do you know how the circulations vary; are they limited solely to the city; how they go out into zones, etc?

Do you know whether your sales are in zones where some papers are stronger than others?

Have you ever studied the newspapers to note how other advertisers use them; the type of high grade advertising, and where placed?

Have you ever sought to make an analysis between daily or Sunday advertising?

Does the factory advertising appeal to you, or have you any suggestions to make?

Are you studying the manner in which your competitors are advertising, and where?

Sets Territories and Quotas for Salesmen

ONE of the local Ford dealers has divided the territory surrounding Birmingham into ten equal parts, using as his guide the roads leading into the city and the census of 1920. A salesman has been assigned to each one of these territories with a quota of twenty-five cars to sell during the last six months of the year. In this way it is expected to cut down the total number of miles traveled in seeing prospects and to increase the efficiency of the whole force.

All salesmen are allowed to sell anywhere in the city of Birmingham.

Book Lists Price of Ford Service Jobs

TO show the proper charge on each repair operation as plainly and as definitely as the Ford catalog shows the price of each part, Hamlin W. Nerney, Inc., Ford dealer in Los Angeles, has issued a booklet to its customers and prospective customers giving a price list of all labor operations. The booklet not only gives the price of the jobs, but the various operations are explained in detail in order that the customer will know just what is to be done.

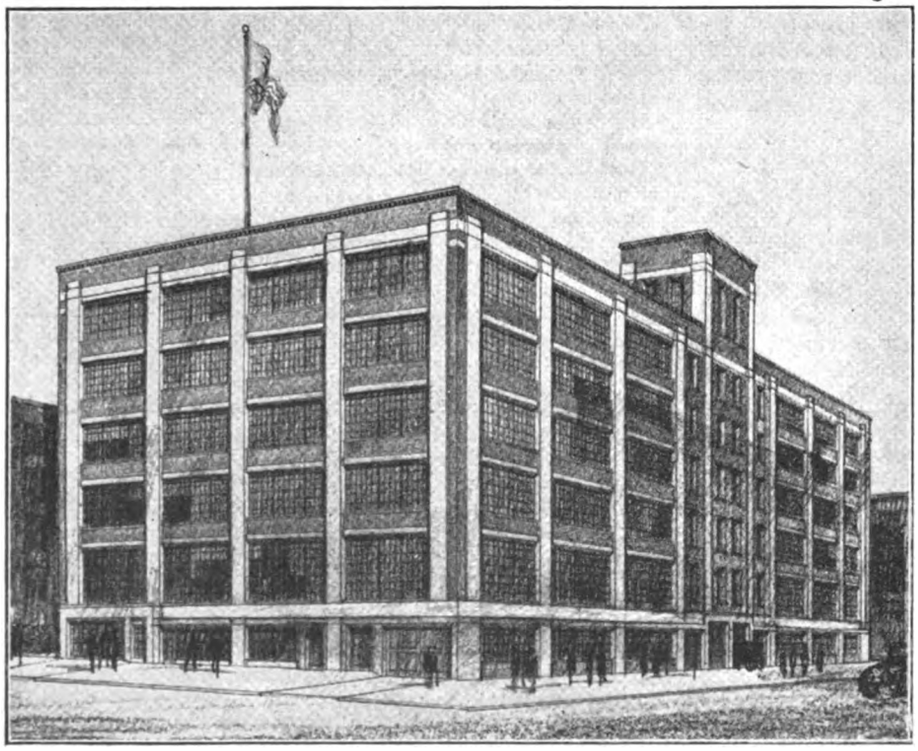
How Buick-Oakland Are Spending $750,000 to Serve New York Owners

Huge, Thoroughly Modern Double Service Station Intended to Improve and Speed Up Maintenance— A Story of the Plans

By J. HOWARD PILE

GIVE the service customer prompt, courteous attention, repair or adjust his car quickly and efficiently, work as hard for his good will after he has bought his car as when he is thinking of buying it, in short, make service a real partner of sales—this is the idea behind the building in New York of a huge service station with the most modern layout and equipment to care for the needs of Buick and Oakland owners. It will really be two service stations in one. There will be but one roof, but otherwise the big building, already in course of construction, will have all the facilities of two separate service stations, each serving its own class of owners.

It goes without saying that the equipment will be thoroughly up-to-date. Beyond that, the plans provide for waiting rooms, numerous parts windows, inspection service and special car elevators, along with other features, which will speed up attention to the customer and make his visits to the service station convenient and pleasant.



The two service stations will translate into action in New York the ambition of General Motors executives to raise service to owners of General Motors cars to a high plane—all this in keeping with the conviction of these executives that owner satisfaction is the basis of a stable, growing automobile business.

The building is located on the east side of Eleventh Avenue, occupying the block between Fifty-fifth and Fifty-sixth Streets. This gives a floor plan of 200 ft. x 100 ft. The building will be of reinforced concrete, six stories high, and the total floor space for the present will be 123,000 sq. ft. Provision is made for the future erection of another mezzanine of 3000 sq. ft., and if desired another floor can be added in the future, which would bring the total floor space to 146,000 sq. ft.

The first floor of the building is from 2 to 3 ft. below grade, and there is no basement, except on the Fifty-sixth Street side, where the boiler room, coal storage room, etc., are located. Both the first and second floors are divided by a wall, exactly in the center of the building, extending at right angles to Eleventh Avenue. Buick will occupy the first and second floor on the Fifty-sixth Street side, and Oakland the first and second floor on the Fifty-fifth Street side. The entire third and fourth floors will be devoted to Buick service and the entire fifth and sixth floors to Oakland service. Thus, the entire building is divided equally between the two organizations, and while housed under the same roof, the organizations, employees, machinery and everything else will be entirely separated.

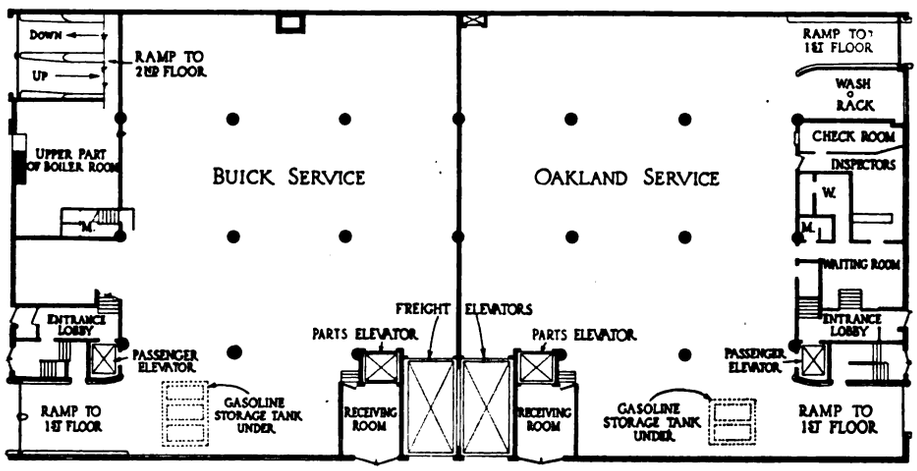
In the center of the building, on the Eleventh Avenue side, there are four elevators, two small elevators for parts and two large elevators for cars. The large elevators are freight elevators and are entered directly from the sidewalk. The parts elevators are set back so that a truck can be backed up beyond the building line for unloading or loading at the elevator platforms.

Ramps are used on the first and second floors. Owing to a natural grade in the street, it is possible to use a ramp from and to the second floor on the Buick side. On this side of the building there

The Buick-Oakland service station will look like this

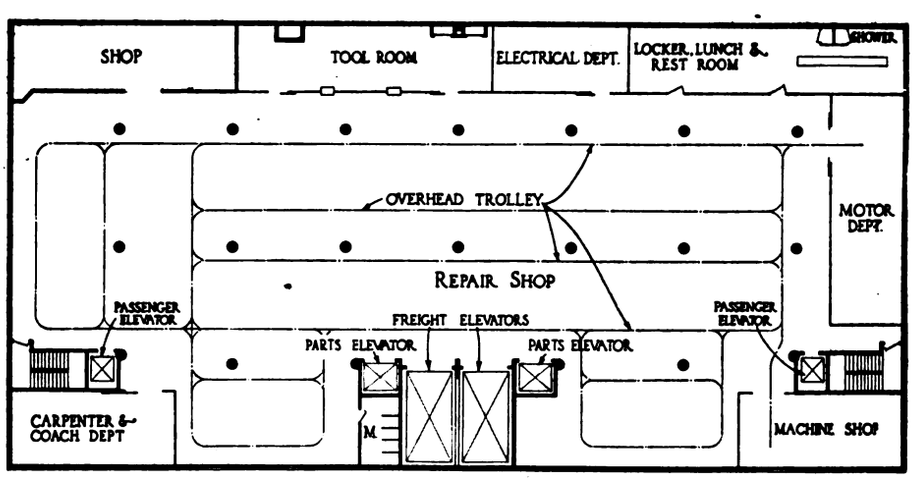
Digitized by Google

are two large doors, one of them admitting to the ramp to the second floor, and the other admitting to the ramp to the first floor, which, as before stated, is slightly below grade. On the Oakland side the natural grade of the street does not admit of a ramp to the second floor, and two ramps, one on each corner of the building, run to the first floor. Owing to the boiler rooms occupying a portion of the space on the Buick side, the Buick service offices are located on the second floor, there being only an entrance lobby, stairway and passenger elevator in the central part of the Fifty-sixth Street side. On the Oakland side there is a waiting room, inspector's room, check-room, wash-rack, women's rest room, entrance lobby, stairway and passenger elevator, in the corresponding locations.



The second floor on the Oakland side has a parts office, service office, and private office, and a large lobby with parts counter, with eight windows to the parts room. It is here that Oakland customers will go to purchase parts over the counter. On the Buick side, a portion of the wall space is occupied by the ramp from the street to the second floor, and the balance is occupied by an inspection room, check room, women's room, cashier's and waiting room. Owing to the fact that a portion of the first floor on the Buick side is taken up with the boiler room, it has been necessary to give further space to Buick, and a mezzanine to the second floor has been built, containing the technical office, storage room, private office, stationery room, repair office, etc.

The third floor, which is devoted entirely to Buick repairs, has a large open bay, extending clear through from Fifty-sixth Street, nearly to Fifty-fifth Street. There are a number of smaller shops partitioned off with wire screens around the side, these being carpenter and coach, tool room, electrical department, locker, lunch and rest room, engine department, etc. The third and fifth floors are practically duplicates, both being fitted up with a large central bay, and smaller shops around the outside. Both are equipped with a system of overhead tracks and trolleys for conveying heavy parts from one portion of the floor to another. There are over 1000 ft. of trackage on each of these two floors, with numerous switches and crosses so that the overhead trolley is available at practically any point in the shop. Switches go into the engine department, machine shop, and cover practically every point in the bay.



The Buick parts storage occupies the fourth floor, and at one end of the floor is the parts office and files, coat room, claims office, etc., together with a lobby and eight windows to the office and eleven windows to the parts room.

The plans call for installation of storage tanks of 550 gal. capacity buried underneath the first floor, and an oil separator pit, which is also below the first floor level. This is for the purpose of complying with local regulations regarding the separation of oil and gasoline from water before the water is allowed to enter the sewer.

In the planning of this new building, every facility is given to both the Buick and Oakland companies to quickly and economically serve their customers, and special pains have been taken in the design to prevent delays due to lack of accommodations, counter space, or anything of that sort. The first floor will be devoted to quick service by both companies and the major jobs will be performed on the upper floors.

FIRST FLOOR PLAN

THIRD & FIFTH FLOOR PLANS

The first floor plan shows the dividing wall. The second floor is divided the same way. Other floors are not divided

Designs for Camp Ground Equipment

EQUIPMENT that is serviceable and durable adds to the attractiveness of tourist camping grounds. These grounds have sprung up so rapidly that persons interested in their construction have been forced to depend largely on their own ideas. They have not been able to make use of the experiences of others. Plans and specifications for the construction of camp ground equipment have been made by the Portland Cement Association, 111 West Washington Street, Chicago. Copies of this data may be secured by application to that association. These plans and specifications cover the construction of sign and light posts, tables and benches, drinking fountains and provision for water, outdoor toilets with sanitary vaults, cook stoves, refuse and garbage burners and boxes, outdoor shower baths, and automobile washing or repairing platform.

Mid-year Registration Figures Show 10,608,127 Cars and Trucks

Increase of 1,350,552 Since July 1, 1921, Indicates Marked Progress of Industry—New York Still Leads

CAR and truck registrations in the United States totalled 10,608,127 on July 1, 1922. This is an increase of 1,350,552 over the registration figures for July 1, 1921, and an increase of 102,467 over the figures for Jan. 1, 1922. Using July 1, 1921, population estimates as a basis, there is now one motor vehicle for every 10.16 persons in the United States.

Inasmuch as several states do not tabulate car and truck registration separate, it is impossible to state how the registrations are distributed between cars and trucks. It is estimated, however, that passenger cars constitute about 89 per cent of the total. This means 8,350,000 cars and 1,260,000 trucks.

The registration fees collected total $125,052,346, an increase of $27,390,364 over the amount collected on the same date of last year.

New York maintains its place at the top of the list with registrations of 812,138. New York also shows the largest numerical gain during the year, the increase amounting to 161,608. The largest percentage gain for the same period has been made by the District of Columbia, which jumped 48 per cent.

Registrations in six states are less this year than they were at the same time last year. These states are New Mexico, Wyoming, West Virginia, South Dakota, Utah and South Carolina.

The "saturation point" is evidently not so near as some pessimists would have us think. The largest percentage gains have been made in the states which already had the largest number of motor vehicles. New York, Ohio, California, Pennsylvania, Indiana, New Jersey—all high registration states—each show an increase of more than 15 per cent over last July. Iowa, which had the greatest number of cars per person in 1921, shows a gain of 8.2 per cent over last July. Registrations in New York, which has more cars than any other state, have increased 24.8 per cent.

The Southern states made distinct gains during the last year. The inactivity in the agricultural states is indicated by the tables of registration gains.

The general tendency on the part of the states to increase registration fees is indicated by the totals paid by motor vehicle owners. The total fees collected show an increase over last year of about 12.7 per cent. The average cost of registering a motor vehicle in 1922 is over 11 per cent more than it was in 1921.

Inasmuch as registrations for the first six months of 1922 are in excess of total registrations for 1921, all registrations made during the second half of 1922 will represent the gain over 1921.

The quick recovery and the phenomenal growth of the automotive industry following the recent depression constitutes a record of which everyone in the industry may be proud. No more conclusive proof of the essentiality of the motor vehicle could be desired.

A Dollar's a Dollar But—

Some Are Bigger Than Others

By NEAL G. ADAIR

FOR two weeks Cornelius J. Reilly had been riding the roads, some good, some not so good, in the Callawassa territory. He had been calling on his dealers and had found them something like the roads.

There was no one in the salesroom nor the combination office and accessory store when he drove up to the Circleville Garage. Finally he located Bailey, the proprietor, in a far corner of the shop, washing a car. Bailey waved a wet hand in welcome and went on with his job. A little later, when the garageman returned to the office and greeted his visitor, Reilly handed him a slip of paper containing a name and address.

"Chap from Upton; seemed to be interested in that roadster out there on the floor," the distributor observed.

"Hope so," said Bailey. "Roadsters don't go very strong around here. Everybody wants a family car."

"I sold him pretty well on the Sennett," Reilly continued. "Tried to keep him here until you got out of the mud, but he said he didn't want to buy to-day; guessed he'd come back next week."

"I'll drive over to see him," Bailey promised, sticking Reilly's memorandum on a pin file on his desk.

"Going over today?" the distributor asked, more suggestively than questioningly.

"Can't," Bailey replied. "Got to unload a carload of cars this afternoon."

"Where's your salesman; still have him?" Reilly asked.

"Collins? Sure."

"Why not send him over—today. That bird looked like a sure fire buyer," Reilly persisted.

"Got to use Collins to get those cars out," Bailey said. "Can't spare more than one man from the shop and it'll take three of us to swing the job."

Reilly shook his head. "Same old story," he mused. "Driving tacks with a sledgehammer."

"Huh?" Bailey grunted.

"Been bumping into the same thing all around the territory," Reilly continued. "Dealers and salesmen, fellows capable of hitting up a pretty good pace, stuck in the mud instead of hitting along on a clear highway."

"What's the idea —," Bailey began; but Reilly ignored the attempted interruption.

"Ten dollar a day men throwing the ten out the window to make three or four, washing cars or unloading them or tinkering with them."

"But you've got to wash cars and unload 'em and tinker with 'em, sometimes, haven't you?" Bailey demanded.

"Sure you have, that is, somebody in your place has, but you can't afford to do that kind of work and you can't afford to have your salesmen do it," said Reilly.

"And I can't afford to hire another man to do it," Bailey persisted.

"Let's not talk in circles," Reilly suggested. "Let me tell you some things I've seen these past two weeks, dodging in and out of the sticks.

"In one town—pretty good town, too, bigger than yours—I found our dealer and all his three salesmen down at the railroad station unloading cars. They spent nearly a whole day at the job, forgetting their prospects and neglecting their customers while they did a piece of work that the boss himself or the shop foreman, with one experienced man and a couple of laborers, could just as well have handled.

"In another place I found the salesmen were making a practice of doing free service work—minor adjustments and so forth—on cars they had sold, instead of turning them over to the shop and going about their business earning profits for the house and commissions for themselves. The dealer claimed it kept the salesmen close to their customers. I watched the process for awhile, with the owner fussing around the car while the salesman got all gummed up with grease, and I suspect the owner had about the same notion I did, that he would rather have had the job done by a regular mechanic.

"In still another place the salesman—there was just one, like your business here—had to wash his own demonstrator. Fine way for a salesman to start a day of calls on prosperous farmers and business men—and some women.

"And in half a dozen places, some larger than yours, some not so big, I found the boss out washing a car, turning his back on possible customers and fixing himself so that he wouldn't be fit to meet them when he did get back to the front of the building.

"I saw a lot of other things, too, Bailey, all along the same line—dealers working to save wages instead of to earn profits, and cutting down their own chances for more profits and their salesmen's chances for commissions by putting them on laborers' jobs."

"But you can't have an extra man sitting around half the time just to keep him handy for odd jobs," Bailey objected.

"Now you're talking," Reilly responded. "Certainly you can't. Nowadays every man around the place has got to be a producer. And the way to make every man a producer is to lay out a definite plan of work for the entire organization. Some of these places I've been telling about need another man, a combination laborer and mechanic's helper, to look after all kinds of odds and ends. Some others can't afford an extra man; all they need is to have the work planned so that one of the mechanics can drop his tools and turn to something else once in a while without having the shop tied up and urgent repair work delayed. And it can be done, because it is being done—in some of the places I have visited during these same two weeks.

"You can boil the whole thing right down to this, Bailey. There's only one way to sell cars and that is to keep everlastingly on the job, seeing people who can buy them. You can't do that when you are down at the freight house or under a car or back on the washrack. And you can't make a salesman's work profitable for you and satisfactory to him unless you give him every chance to sell."

"But in my place here —," Bailey began.

"It's your place," Reilly retorted.

"But what would you do?"

"It's your place. Think it over—and you'll do something."

Editorial Notes

Courtesy on the Highways

THE efforts of the motor truck committee of the National Automobile Chamber of Commerce to get home to truck drivers the importance of courtesy on the highways deserve the co-operation and support of the motor truck dealers.

The object of the campaign is to create a better feeling toward the use of the highways by trucks through removing the practice of hogging the roads by trucks and the incivility sometimes observed in truck drivers.

In a pamphlet entitled "Common Sense on the Highways" the thought is being placed before those interested in trucks on the highways in these words: "Courtesy is as cheap as the air you breathe—Practice it on those with whom you come in contact on the highways. IT PAYS! When you are aware that a faster moving vehicle is trying to pass move to the right at the first opportunity. Give the passing vehicle a cheerful greeting as it goes by.

"Cheerfully sharing the road with others makes friends. Blocking the road makes an unnecessary enemy. You can't afford to make enemies—they may prove expensive."

Seeking the Motorist

MOTORISTS in the New England States have interpreted as an act of retribution the recent advertising of the Maine State Highway Commission inviting motorists to visit that state.

They see in it a warning to other states that drastic laws regulating automotive vehicles sometimes become boomerangs and that in considering legislation for the control of motor vehicle traffic and the raising of funds for state highways there must be full appreciation of the importance of the motor vehicle in the general scheme of present-day life.

Maine recently put on its statute books a law aimed primarily at motor trucks which denied trucks from other states the right to be operated on its highways, there being but a five-day grace period. Putting the law into effect brought retaliation from Massachusetts and then a conference and a controversy which is still unsettled.

Motorists in other New England States, believing that the law applied to motor cars as well, have been keeping out of Maine. As a result the tradespeople have suffered and the state, as a means of righting itself with the tradespeople and correcting the apparent misinterpretation of the law by out-of-state motorists has been using the following advertisement in some New England newspapers:

"The State of Maine does not require passenger cars from other states to be registered when coming into Maine —Maine's automobile laws are liberal and cars from other states are not required to be registered unless they remain within the state for a period exceeding 30 days. Operators from other states are not required to take out a license. The doors to the State are wide open and everybody is invited to come and enjoy the natural attractions that the State affords."

(Signed) THE MAINE STATE HIGHWAY COMMISSION.

There is no means of estimating the loss to Maine tradesmen as a result of the drastic law, but it is believed to be considerable.

Is there a warning in the fact that Maine has gone into advertising to attract motorists for other states contemplating drastic motor vehicle legislation?

What About Mechanics?

THERE is a good deal of complaining by motor car and truck owners about the quality of work done in automotive repairshops. Some of it is justified. There is a good deal of complaining, too, by repairshop operators about the lack of ability of the mechanics they are able to get. Some of this is justified. There is a countrywide shortage of thoroughly competent garage mechanics. What are we going to do about it?

The repairshop operator says he can't get the men. They simply "ain't." This doesn't imply that there is a shortage of man-power. But there is a shortage of competent man-power. New mechanics, that is, intelligent, painstaking, conscientious mechanics, are not being developed fast enough to take the places of those who go into other fields of work and to keep pace with the demands of a rapidly growing business? Again, why?

There are several reasons. One is that repairshop work is dirty work and many men refuse to enter it, others leave it for this reason. It cannot be made as clean as office work, but it can be made reasonably clean by care of floors, benches, tools, stock and other items of the shop and its equipment. And it need hardly be said that they will be kept only as clean as the proprietor wants them to be. Another objection to the mechanic's job is its long hours in many cases. The plumber, carpenter, machinist and many other classes of artisans work their eight hours, or at the most, nine or ten, then they are through. This prevails even in small towns. The garage mechanic in some shops in many small towns and some cities often is compelled to labor from early morning to late evening. There is little joy in life for him. No wonder he quits.

This is not a plea for the "downtrodden mechanic." It is simply a suggestion to the men who operate garages and service stations that the hours and conditions that go with the mechanic's job have much to do with the difficulty of getting and keeping good men. It is a suggestion that the garage business, like older and better established businesses, will have to consider the possibilities of making speed machinery and tools shorten and lighten, even more than they have, the burden of manual labor in the shop.

What Happens When You Go to Court

An Explanation by the Legal Editor of How the Wheels of Law Turn When You Start a Suit Against Someone

UNLESS a dealer has actually been sued a number of times, or has had occasion to sue somebody else, his notions of the courts and their procedure and practice are bound to be somewhat erroneous.

Of course, it is not necessary for a dealer to be familiar with all the different court rules and methods of procedure, as that is something he pays his attorney to know. On the other hand, however, there are numerous little things which may help in a great measure toward winning your case, if at some time you find it necessary to bring someone into court, or are yourself brought in by someone else.

For all ordinary purposes we may divide the courts into Civil Courts and Criminal Courts—the first class taking care of all civil action, such as disputes arising out of contracts, sales, repair work, etc., and the second class, criminal offenses, such as speeding, driving a car without a license, etc. At this time, we are more interested in the first class of actions.

A question frequently asked by dealers is, When has one person a legal right to sue another? A person may start suit against another whenever he feels so inclined—if he has a good case, or even if he has no case at all. Unfortunately, there is no way of preventing one man from suing another just to harass and annoy him, and if the case is thrown out of court on the ground that the party bringing it has no cause of action, the only penalty he has to pay for his spitefulness or foolishness are the costs of the action. Of course, it would be hard to find a reputable attorney who would start a court action when he saw there was really no merit in his client's claim, but, as it is not difficult to find one of the other kind, it frequently happens that such actions from time to time are started.

Costs and Fees

Where a case is dismissed and costs rendered against the party bringing it, the person who has been haled into court may find that he is out of pocket a much greater sum than that which the costs amount to. The court costs do not include the attorney's fees, but are simply certain arbitrary sums allowed by statute for certain things, such as serving summons and entering judgment.

We have any number of courts in this country which take care of civil actions. These may be brought in the United States Courts, the State Courts and Municipal Courts in the various cities, according to the residence or citizenship of the parties, the amount of the claim and the subject matter of the suit.

An action is usually started by the service of a summons and complaint; the summons commanding the adverse party to appear in court on a certain day and answer the claim made against him, and the complaint setting out at length in technical language the details of the claim. The complaint is usually sworn to by the party bringing the action.

The party against whom the suit is brought then has a certain number of days, which varies according to the court in which the suit is brought, to answer the complaint. In his answer, which is also usually sworn to, he puts in his side of the case and sets out his counterclaim, if he has any. The next step with which the party is intimately concerned is the trial of the action, in which he will appear as a witness, together with such other people who are familiar with his side of the case as he may choose to bring into court, or subpoena.

In the majority of cases, the trial of a case is not so easily reached, however, as it is common practice in the courts for the parties to amend their complaint or their answer to require a Bill of Particulars, which is an itemized statement of the matters in controversy, and to make motions in court regarding this, that or the other thing, until a long period of time has elapsed.

It is impossible to state how long it will take before a case will come to trial. In some of the lower courts, like the Municipal Courts, a trial may be reached within two or three weeks, while in others, like the Supreme Court of New York, it is likely that it will be a year or more before a trial is had, owing to the fact that there are always so many cases remaining undisposed of.

The case, of course, may never come to trial, as the complaint may be dismissed before trial, at the beginning of the trial, or when all the evidence is in. Even if the case is tried and judgment rendered, it does not necessarily follow that you will get the money you are suing for, as a judgment itself is only a lien on whatever real property the debtor may have, and in order to reach the personal property, execution must be issued to the sheriff who, when he calls around to levy on the debtor's property, may be told that the property belongs to someone else. In that event, the sheriff will refuse to touch any personal property, unless you can assure him that the debtor is the actual owner of the same and agree to indemnify him against any damages which may possibly be recovered from him in case that it does turn out that the property is owned by someone else.

Most states then allow an examination, in which the debtor can be put under oath and questioned concerning all of his property, both real and personal, and if it finally appears that he has no real or personal property, his weekly wages (if he earns over some certain amount) may be levied upon and he may be made to pay a certain percentage every week until the indebtedness to you is paid.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

New York Lien Does Not Justify Forcibly Retaking Car

IN a late New York case it was decided that the garageman's lien law of that state does not justify a forcible retaking of a car on which a lien is claimed.

"Section 184 of the Lien Law gives no right to retake a car by force," said the court. It pointed out that a lien is lost by voluntary surrender of possession, but if the car is merely temporarily surrendered the lien is not thereby invalidated.

The court also took occasion to direct attention to the fact that damages for the loss of use of a pleasure vehicle may be recovered in New York.—Rapp vs. Mabbett Motor Car Co., 194 N. Y. S. pg. 200.

Outsider May Repossess Car in Mississippi

THAT the seller of an automobile in another state may recover possession of the car in the State of Mississippi, was the ruling in the case of Harrison vs. Broadway Motor Co., which was tried recently.

Accordingly a Tennessee seller of a motor car who retained title was allowed to recover possession of the car in Mississippi, even though an innocent purchaser for value, without notice, had bought the car.—91 So. 453.

Service Follow Up Increases Repair Jobs

Letter and Return Post Card Check Back on Shop Work and Help Keep Customers Satisfied

IN order to popularize its service department and to uncover any possible causes for dissatisfaction, Clark & Leonard, Los Angeles Ford and Fordson dealers, follow up every repair job with a letter and postcard to the owner. On the postcard the following questions are asked:

"Were you pleased with the work? If not, why? Were you waited on promptly? Did you receive courteous attention? Do you think we could improve our service to make it more efficient and satisfactory? If so, how?"

The form letter accompanying the card reads as follows:

"A short time ago you entrusted to us the responsibility of making repairs on your Ford car.

"We earnestly hope the work was satisfactory in every respect, but if not, we would consider it a great favor if you would tell us about it.

"While we shall appreciate any kind words relative to the various departments of our organization, we will also welcome a frank and honest criticism of our service as a whole.

"Will you kindly fill out the attached card and mail it to us? Thank you."

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer
Equipment and Tire Dealer
Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

From the many replies received, the company worked up an attractive form letter that is sent to all Ford owners in its territory. Facsimiles of the cards filled out by owners and carrying words of praise for the service rendered by the organization are reproduced on letter paper.

Very little needs to be added to these testimonials, and the form letter that is sent is especially brief and to the point. It reads as follows:

"These facsimiles tell their own story. We have dozens more on file for your inspection.

"May we serve *you?*"

There has been a substantial increase in the volume of repair work done by Clark & Leonard as a direct result of this follow-up system.

Artist in Mitchell Window Display

This is a picture of the model display room at the plant of the Mitchell Motor Co., Racine, Wis., which is used as a laboratory for developing display ideas for dealers. Two artists are shown making drawings of important features of the car. This idea has been tested out in the New York Mitchell salesroom, where it attracted a great deal of interest. When the salesman has finished his description of the car, the artist explains further by means of sketches various parts of the engine

How Southern Dealer Sells Used Cars

THE Standard Auto Supply Co., of Montgomery, Ala., does not use the phrase "used cars" or "rebuilt cars" in its used automobile advertising, but refers to the machines as "reconstructed cars." This firm's newspaper advertising is unique in its originality. Here is a quotation from a recent ad:

"We used to 'strut' our girls on Dexter Avenue on Sunday afternoons, but now if we can't 'catch air' with them we are simply out o' luck. Boys, don't let the other fellow drive away with your own little Lucinda, but get down here real early in the morning and pick up one of our honest-to-goodness bargains and be all tuned up and rearing to go when next Sunday comes around."

This Display Idea Always Brings Results

THE McCarty-Greene Motor Co. of Birmingham recently put on a window display, the total cost of which did not exceed $5, to which they traced directly the sale of four automobiles. A car was placed in the window, while on the plate glass were placards calling attention to certain features of the automobile. A ribbon was run from each window card to that part of the machine which it described. The motometer was attached to the motometer card, the windshield wiper to the corresponding card, etc. The display attracted unusual attention, considering its low cost and the amount of work involved.

Uses College Boys to Build Prospect List

A DEALER in Birmingham, Ala., has employed several college boys for the entire vacation period and has them out making up a list of prospective purchasers of automobiles. These boys, while looking for prospects, also solicit shop work, tire business and accessory sales. The dealer expects to build up a valuable prospect list.

Service Properly Sold Makes More Sales

The Equipment Merchant Gives More Than Merchandise for Money—So Why Not Tell Folks About It?

THE accessory merchant's service is something that he cannot put up on the counter and display like he does a spotlight, or an electric drill. But it deserves to be sold and it is just as salable as many of the items that the customer can take in his hand and examine before buying.

Some accessory merchants have found that they can successfully sell their service and appreciably increase the sales of certain articles that involve installation and maintenance service by having a neatly lettered sign made and hung in a conspicuous place which lists the various services performed by the merchant. A sign of this kind hung over the cashier's desk, on the wall behind the counter at convenient points, and occasionally in the display window, generally is effective.

Then, there is the opportunity of selling the store's service through the advertising columns of the local newspapers, through sales letters, post cards and pamphlets, and also as a part of the selling dialogue in direct contact with customers in the store.

Even when service is given away it can be "sold" in such a way that it creates a good impression on the customer, gains his good will, and makes him want to buy again.

If service were something that could be displayed on the counter or in the window it wouldn't be so hard to sell it, but since it isn't it is necessary to use other means of directing attention to it.

No Tire

is really cheap unless it performs to your satisfaction.

When you select your next tire keep that *important fact* in mind.

Buy a

McCREARY TIRES
"Built for Longer Service"

and you will find there *is a difference* that will leave a *lasting impression.*

ORIGINATORS OF FREE ROAD SERVICE

"Ready to Jump"

The Prescriptions Were Delivered

At about 10 o'clock one night a druggist called our store by telephone.

His delivery car was temporarily disabled by tire trouble, and some important prescriptions awaited delivery.

The sick tire could not be cured immediately, but Quick Tire Service did not want the sick people to lack relief.

Our salesman, with his car, acted as chauffeur for the druggist's delivery boy, and the medicine reached the patients without delay.

In the meantime, our service truck had been sent to the drug store, with our service man to work on the tire. When our salesman, having completed the deliveries, returned, the druggist's car was again ready for action.

Quick Tire Service cooperates with its customers. It maintains facilities to meet every tire emergency, and a force to whom it is always a great satisfaction to serve a little more than is expected.

Quick Tire Service, Inc.

Harrison 8840 — Note telephone number.

McGee at 27th St. — Read address again.

The large advertisement shown above is a good example of the effective "selling" of service. This was a service that was given away and yet it has been so effectively sold in the advertisement that it is bound to create a good impression on the reader. The small ad above sells the idea that satisfaction, which the dealer is ready to insure through service, is the real test of economy in purchasing tires

A 29 Million Dollar Investment in Better Traffic Facilities

New York and New Jersey Now Building Highways Under Hudson River to Accommodate Motor Vehicles

THE much talked of saturation point threatens to manifest itself not in motor car ownership but in the inadequacy of highway facilities. National, state and municipal provisions for accommodating the increasing number of motor cars and trucks is not keeping step with the increased use of the highways.

For a time the direction of traffic streams through existing highways, the establishment of one-way thoroughfares, and similar provisions were effective. But to-day it is recognized that we must BUILD to meet the demands of motor vehicle traffic.

A notable example of directing traffic over existing highways to facilitate its movement is the designation in New York of Brooklyn Bridge, recently, as exclusively a horse-drawn vehicle highway and Manhattan Bridge as exclusively a motor vehicle highway.

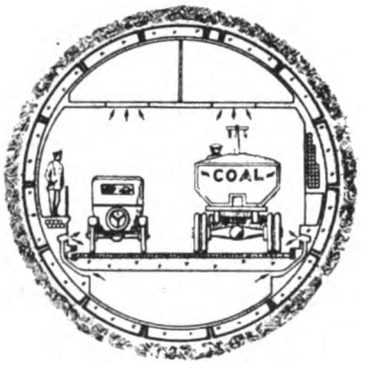
The greatest example of building to meet traffic conditions is the Hudson River Vehicular Tunnel, which is being constructed now at an estimated cost of $29,000,000. What this great project actually amounts to is the building of two highways under the Hudson River connecting New York and Jersey City, thus providing a direct route for motor cars and trucks from the mainland to the heart of Manhattan Island. Although a dozen or more ferries, with large boats plying on five to fifteen minute schedules, carry an average of some 25,000 vehicles a day, there are times when many of the ferries have lines of vehicles blocks long waiting for accommodation.

It is believed that the completion of this great project will accomplish the following results:

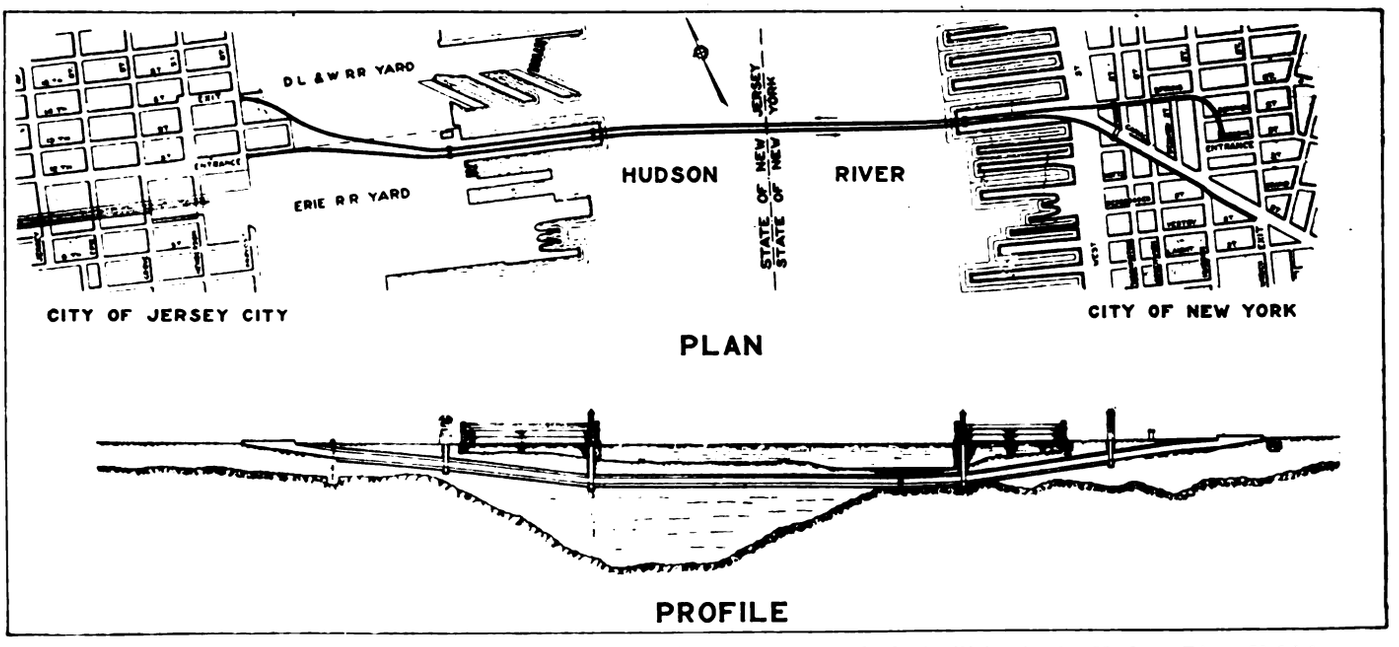
1—Considerably shorten the time of transit across the Hudson between the State of New York and the State of New Jersey, thereby affording a continuous means of communication between the states unaffected by climatic and other possible interferences.

2—Relieve to a great extent the present traffic congestion.

3—Alleviate conditions of distress due to inability to get supplies and necessities to New York City, which conditions now exist to a dangerous degree.



4—Increase the tax value of real property within a very considerable radius at the terminals of the tunnel.



5—Pay its cost three times over in 21 years, figuring the tolls at the rate now charged by the Hudson River ferries.

6—Directly affect the cost of living to a large portion of the population of both states by reducing the cost of trucking and saving time in the transportation of commodities.

7—Increase the facilities for commerce in the port of New York and serve to a very considerable degree to eliminate difficulties existing by permitting the prompt removal of freight from the railroad yards in New Jersey without dependence on lighters and other floating equipment.

8—It would furnish a means for the uninterrupted movement of troops and

One of the greatest single enterprises in the interest of better motor vehicle facilities is the Hudson River Vehicle Tunnel, connecting New York City and Jersey City, now being constructed. When completed in 1924 this tunnel will provide two motor vehicle highways connecting Manhattan Island with the mainland with an hourly capacity of nearly 4000 vehicles. The above plans show the location and grade of the tunnel. Each bore will be constructed as shown in the small illustration above

Digitized by Google

supplies to and from New York City in time of need.

It is to provide these advantages, in recognition of the growing demand for better highway facilities for motor vehicles of all description that the States of New York and New Jersey have undertaken this great project jointly. Each state is to pay one-half of the cost.

The Hudson River Vehicular Tunnel will consist of two tubes running parallel under the Hudson River. One will be the eastbound highway and the other the westbound. Each will provide a highway a little more than a mile and three-quarters long, more than a mile of each being under the river. Each highway will be 20 ft. wide, permitting passenger cars to pass the slower moving motor driven and horse-drawn commercial vehicles at any point along the way. The highways will have headroom of 13½ ft. The maximum up-grade will be 3.6 per cent and the maximum down-grade, 4.05 per cent.

The tunnel will have an hourly capacity of 3800 vehicles, and a yearly capacity of 15,000,000 vehicles. The estimated traffic through the tunnels when they are opened in 1925 is set at 5,610,000. This is expected to increase to 12,900,000 vehicles in 1934.

Ground was broken on Columbus Day, Oct. 12, 1920, and the first contracts for the sections under the river, the work on which is now in progress, were awarded this spring.

The building of this great vehicular tunnel by the States of New York and New Jersey is a mighty attestation of the importance of the motor driven vehicle as a transportation unit.

It is the greatest single act in recognition of the fact that we must BUILD to accommodate more motor vehicles.

The Proposed Hudson River Bridge Above Peekskill

Span, 40 Miles Above New York, to Be Built by Private Capital—State to Purchase in 30 Years

The proposed Hudson River bridge above Peekskill, 40 miles above New York City, which is to be built by private capital and become State property by purchase in 30 years. It is an important contribution to better highway communication in eastern New York State

ANOTHER contribution to better highway communication between New York and the country west of the Hudson River is the proposed Bear Mountain-Hudson River Bridge near Peekskill, some 40 miles above New York City.

The structure will cost about five million dollars. It will accommodate vehicular and foot traffic and will be approximately 55 feet wide. The western approach will be at Bear Mountain, five miles below West Point, and the eastern approach three and one-half miles above Peekskill.

The charter provides that it will be a toll bridge for 30 years. At the end of that time it will be taken over by New York state. The state also has the option of buying the bridge at any time before the 30 years elapse.

While the bridge is located some 40 miles from New York City, it is expected to have a decided effect in relieving congestion and facilitating traffic. In addition it will provide a highway from New England to upper New York State and the summering regions of the Catskills. Short haul motor traffic will be greatly facilitated.

The collection of tolls is under the supervision of the Public Service Commission. The present plans call for a charge of one dollar for a touring car and 15 cents for each passenger. Truck rates will be slightly higher according to tonnage capacity.

To estimate the amount of traffic that would use the bridge, and from that the necessary toll charge to pay for the investment and yield a yearly return, traffic census was used.

The final estimate for the Hudson River bridge, determined from the various data collected by the builders, Terry & Tench, totals half a million motor vehicles for the first year (1924) and allows a 2 per cent yearly increase.

To those who are interested in getting motor vehicles in the hands of operators and those who are interested in keeping them on the road once they are sold, the problem of highway congestion has real significance. Sales resistance cannot easily be laid to this or that cause to a specific degree, but it is evident the resistance due to overcrowded roads is increasing and will continue to do so until the problem of highway congestion is solved.

Valve and Ignition Setting on the Lincoln

Detail Methods of Locating Trouble and Maintaining the Parts in Their Correct Adjustments

THE Ford Motor Co. is rapidly developing standardized service methods for the Lincoln car. The following methods have been developed for setting the valves and ignition:

To Check Spark Timing

The most simple and accurate method of checking timing is as follows: 1—Remove floor boards and plate over clutch housing.

2—Remove distributor head and rotor.

3—Inspect breaker points and if necessary dress them down to a smooth surface, using an oil stone, as these points cannot be filed. If an oil stone 1/16 in. thick can be procured the points can be dressed down without removing them.

4—Adjust both breakers so that a .015 feeler gage will just pass through at the widest opening when the breaker is on the highest point of cam. Both breaker points should be as near the same gap as possible.

5—Never attempt to check timing without first cleaning and adjusting breaker points as mentioned above.

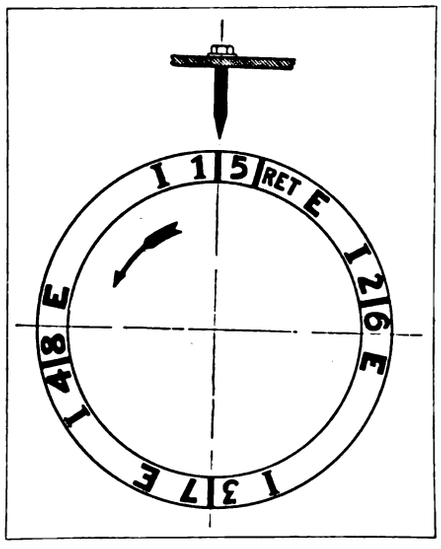

Fig. 1—Lincoln flywheel and clutch ring marking diagram

6—Open all pet cocks, and crank engine until No. 1 cylinder is on compression and piston is nearly at top center. Then look at the markings on clutch ring. Nos. 1 and 5 should be nearing pointer. Have engine cranked slowly until mark RET, which is ⅝ in. from Nos. 1 and 5, is about 2 in. from the pointer.

7—Retard spark lever all the way.

8—Place small piece of paper between left breaker points. (Left or right side is always determined from driver's seat.)

9—Turn on ignition switch and watch ammeter closely, as it will show approximately 8-10 amperes discharge.

10—Have engine cranked very slowly by tapping crank handle so that flywheel moves only a fraction of an inch at a time.

11—The instant right breaker points separate the ammeter hand will show 5-6 amperes discharge. If RET mark is within ⅛ in. of pointer the spark setting is correct.

12—If the RET mark is found to be past the pointer more than ⅛ in., the spark is late. This can be corrected by loosening screw in center of distributor cam and moving cam slightly in an anti-clockwise direction.

13—Then crank engine until No. 1 piston is on compression again and check timing again as outlined above.

14—If spark is timed too early, distributor cam should be moved slightly in clockwise direction.

15—It may be necessary to check timing two or three times before obtaining the correct setting.

16—The screw in distributor cam should not be pulled down too tightly, as it is liable to pull out of locking wedge and cam could not be moved again without considerable trouble.

Better Mechanics

Article No. 251

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

Locating a Miss in the Lincoln Engine

1—First determine which block is not firing properly.

2—This can be easily done by disconnecting distributor low tension terminal on left side, which will allow engine to run on right block.

3—If right block is O.K., connect lift low tension terminal and disconnect terminal on right side.

4—The engine will then run only on left block.

5—The distributor low tension terminals are located on distributor near mouth of ignition conduit.

6—After determining in which block the miss occurs, short each spark plug in turn and miss can be easily located.

7—If changing spark plug does not overcome trouble, disconnect wire to plug and hold it about ⅛ in. from plug. If spark does not appear regularly, or does not show at all, it indicates a short circuit in high tension wires.

8—By holding wire still further from plug the spark can be heard jumping and the short circuit can be easily located.

9—The most likely places that this will occur is at conduit cover stud and junction of conduit and dash.

10—Care should be used when replacing conduit covers that wires are not pinched when cover is fastened down.

11—If spark and spark plugs are O.K. and cylinder still misfires, look for valves riding due to tappets set too closely or exhaust valve sticking and holding open slightly.

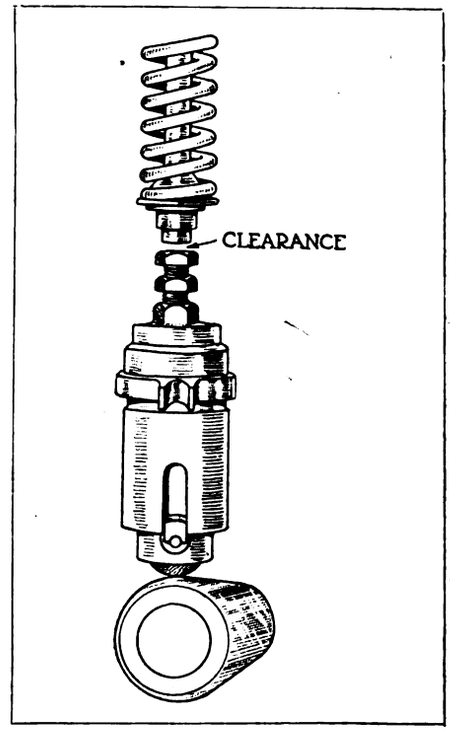

Fig. 2—The valve tappet adjustment on the Lincoln

12—An uneven hissing sound in the carbureter of a thoroughly heated engine is indicative of a sticking exhaust valve.

Adjusting Valve Clearance

The usual practice in adjusting valve clearance is to have piston on compression stroke, and set clearance with both valves closed. This should *never* be followed on the Lincoln engine.

The cams are ground with the back

Digitized by Google

or heel or cam cut in approximately .004 in. from a perfect circle. This is to allow for a sufficiently close adjustment and still insure that the valves seat properly on the compression stroke. Fig. 2 shows the arc of the cam on which cam roller should rest when valve clearance is adjusted.

Place cam in this position as follows:

1—Hand crank engine and watch exhaust valve in No. 1 cylinder right block.

2—When nearly closed the letter "I" of 1-5 center of Fig. 2 should be nearing pointer.

3—Tap crank slightly, until letter "I" is under pointer.

4—Then set inlet valve clearance on No. 1 cylinder at .003 to .004 in., using feelers.

5—Note that letter "E" is now about 3 in. away from pointer.

6—Have engine turned slightly until letter "E" is directly under pointer, then set exhaust valve clearance at .003 to .004 in.

7—Take the rest of the cylinders in the following order, 3-5-7-2-4-6-8, and proceed as outlined above.

8—The two center and two outside valves are exhaust.

9—Always remember to watch exhaust valve until nearly closed to determine correct position for setting inlet clearance for that cylinder.

10—Bear in mind that extreme care must be exercised in making this adjustment. Noisy or riding valves and burned valve seats will result from improper setting of tappet clearance.

Some Interesting Developments of the "No Trade" Idea

IN June, 1918, in Youngstown, Ohio, The Elton Motor Co. adopted a policy of "no-trade." Someone, elsewhere, may have adopted this policy earlier. But this particular instance is used because the company distributes Cadillac automobiles. Through many months, automobile dealers in that territory debated the wisdom and the efficiency of the plan.

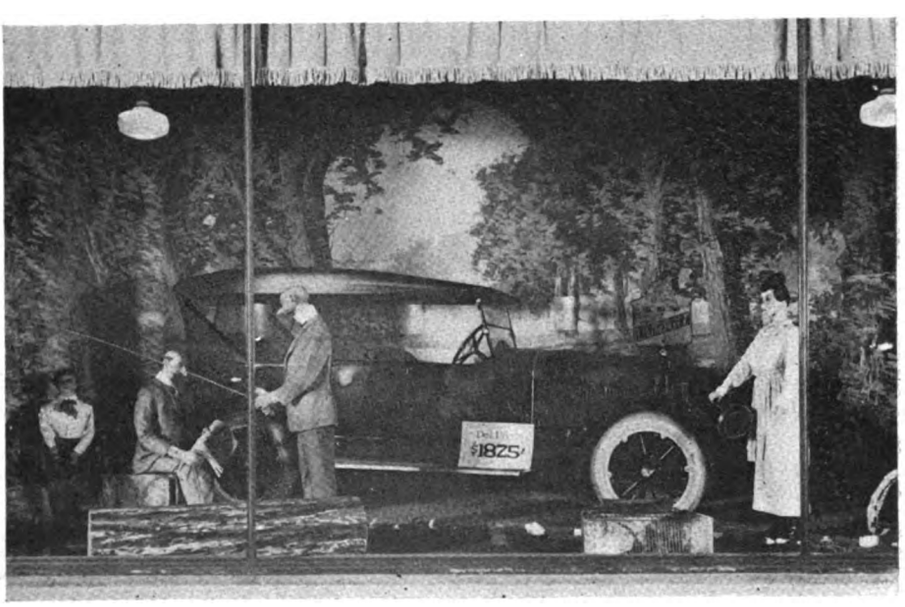
Companies which were selling low priced cars of around $1200 and less, steadily maintained that it was not possible to sell their products on such a basis. They maintained that the prospective buyers of high priced cars were persons having sufficient income to permit of buying the car and holding the old one until it was sold. On the other side, the owner of the low priced car, has practically all of his down-payment possibility represented in the equity in the old car which must be traded, because of the inability of such prospective buyers to have the cash for the down payment.

In Fort Wayne recently, there was a very definite movement toward a no-trade policy by all automobile merchants. The foregoing argument against the no-trade idea was advanced by the dealers in low priced cars there. One merchant there, however, met this argument with an idea that had not been expressed before.

"If the prospect is one who cannot produce the one or two hundred dollars necessary to make down payment on a low priced car, why is he a good prospect? Why do you want that kind of business?" And this dealer was one who handled a low-priced line as well as a high priced line.

In Mobile, however, is a dealer who has blasted into smithereens the argument that the dealer in low-priced cars cannot adopt a no-trade policy.

This dealer sells—and he does—a car selling for less than $600. In 1920 he was trading cars. In 1921 he adopted a no-trade policy. His business in 1921 on the no-trade plan was 126 per cent greater than it had been in 1920.



Some of the salesmen for this company have however, strenuously contended against the no-trade idea. They have said that there was business that could be gotten on a trade basis.

To test this out, the company has made an additional provision for handling this particular business. The general policy remains—no-trades. But it has provided to the used car department a small fund, of $2500. With this fund, the used car department may buy outright cars that it will accept, at its figures, whenever the owner of that car has reached the place where the new car sales is about to be completed.

This is worked out on this basis. Any owner can have his car appraised. If his car is submitted for appraisal and consideration by the used car department as a possible buy, the owner is made to understand that the appraisal price becomes an agreement, providing the owner of the car decides to buy a new car from the new car department.

And this interesting thing was found. Of the first 57 cars submitted in the first 12 hours this plan was offered, owners of nine cars who later came back to make trades, had boosted the price, as agreed on between appraiser and owner, an average of $50. These experiences, and others as interesting, have confirmed this company in its determination not to trade and not to use more than $2500 in purchasing cars from owners who otherwise could not raise money for a down payment. A significant fact is that practically all of the deals involving the purchase of the old car, if put through, would be time sales and would amount to an enormous amount of contingent liability or capital investment.

Cartoon Characters in Car Window Display

A window display that hooks up with some popular thought usually provides a mighty fine publicity feature when used in a window display. Torbert McGregor, Inc., Durant distributor in Minneapolis, attracted a lot of attention and favorable comment recently with a window that featured the "Gumps," a widely syndicated newspaper cartoon. The picture shows how features of the principal characters in the Gumps were portrayed by wax figures in a salesroom window with a Durant car. At times, in the evenings, cars were stopped four and five deep and great crowds gathered before the window, which, of course, was mighty good publicity

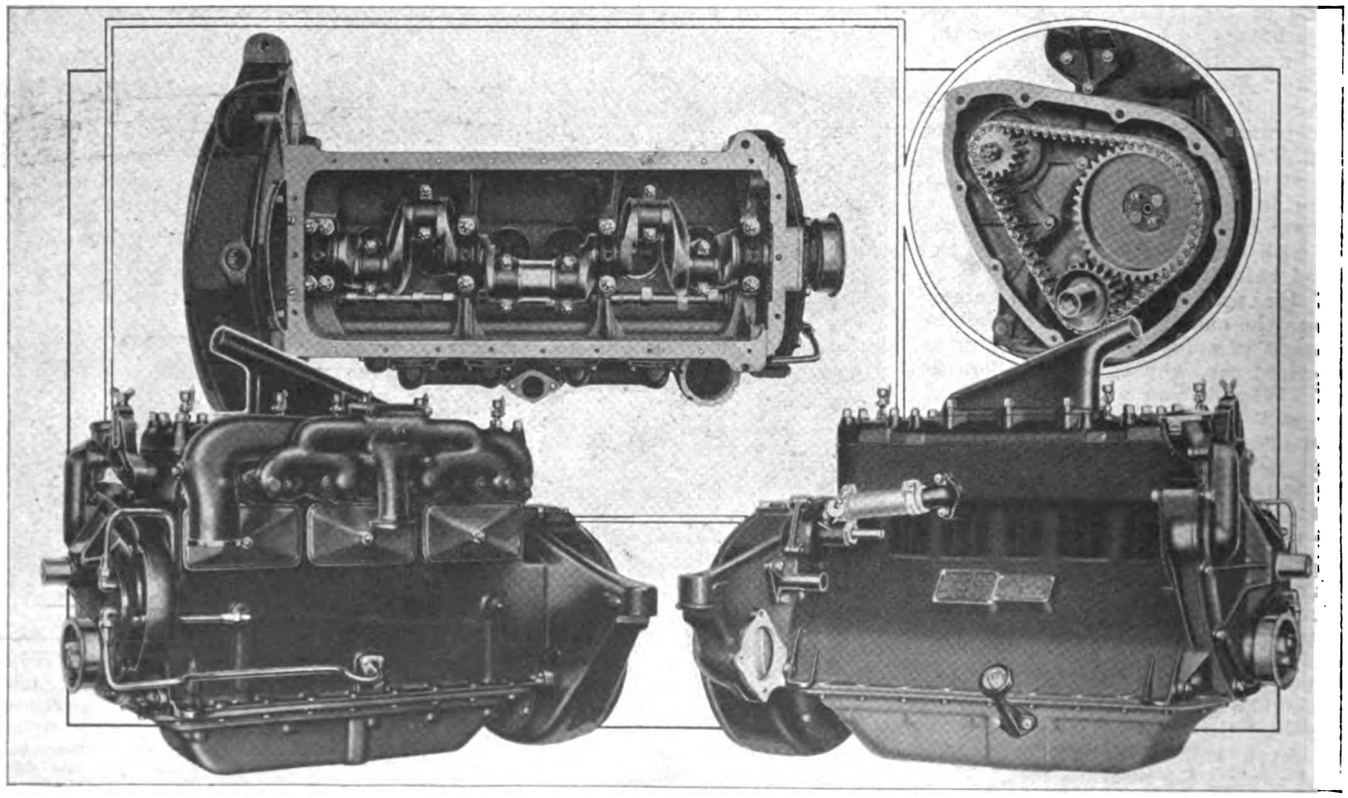
Continental Model 6-Y with Chain Drive Camshaft

THE Davis, Columbia and Moon companies are producing in quantities a car generally classed as a $1,000 six, although the prices are not this exact amount. These cars were brought out at the Chicago show or about that time and are all equipped with a new type of Continental engine known as the 6-Y, particularly designed for this type of vehicle.

As would be expected from the field for which this engine is designed, that is, a light weight, economical six-cylinder car, the engine is designed from the standpoint of production ability as well as performance from moderate dimensions. With a bore and stroke of 3⅛ by 4¼ in., giving 195.6 cu. in. piston displacement, the engine peaks at 2600 r.p.m., at which point it develops slightly in excess of 50 hp. with 20.5 per cent compression volume on a car fitted with the experimental model, the speed range has been shown to be from 3 to over 60 m.p.h. on high gear.

The engine is an L-head type with the cylinders cast in a unit with the crankcase. One of the features of the cylinder casting is the layout of the water spaces, which are designed not only to provide adequate cooling, but to maintain the proper operating temperature around the combustion chamber. The cooling water surrounds each cylinder, valve seat and valve stem. The removable cylinder head is attached to the cylinder casting by twenty-one studs. Four lifting lugs are supplied to simplify the removal of the head and to prevent damage to the copper asbestos gasket.

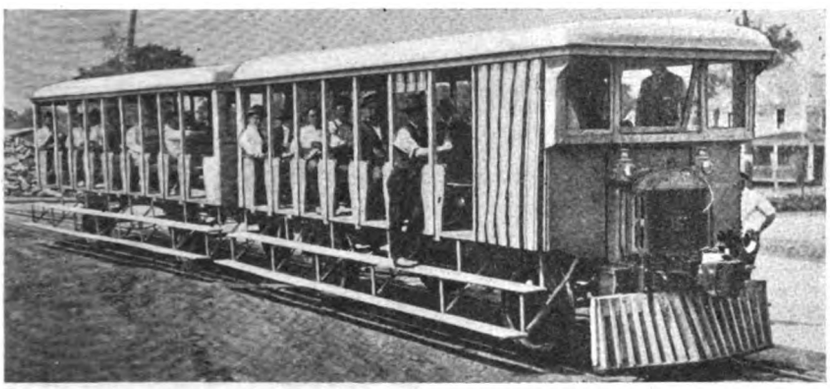


The cast iron pistons are 3⅛ in. long. They are provided with three piston rings of one-piece, diagonally split type. They are hand fitted, first to the cylinder bore and then to the grooves of the piston. The piston pin is clamped in the connecting rod, the clamp bolt passing through the connecting rod just below the piston pin, which is grooved to fit the bolt. The connecting rods are 8¼ in. long from center to center.

The camshaft and lighting generator are driven by a triangular Morse silent chain layout. An eccentric adjustment on the generator provides a take-up for the chain. The valve mechanism is particularly simple, the push rods riding directly on the cams. The push rods are fitted with an adjusting screw and locking device in the usual manner and the valve guides are removable. The guides are 3-9/16 in. long and are reamed to fit the 5/16 in. valve stem. Three cover plates are employed to protect the valve mechanism and retain the oil mist in which it operates. The push rod guides are removable and are made in three groups of four each and arranged in such a manner that they form a sub-assembly which can be removed as a unit.

Lubrication is by pressure feed with a gear type oil pump. The pump is located in the chain case. The oil is drawn through a copper tube leading from the oil reservoir to the pump, from which it is forced to the main distributing line, which has branches running to each of the four main bearings. The oil enters the drilled crankshaft at these points and is distributed under pressure to the connecting rod bearings. Other points are lubricated by the oil which is thrown from the connecting rod lower end bearing. As an added protection to each of the four camshaft bearings, a catch basin is provided from which oil flows through drilled ducts.

Cooling is by centrifugal water pump bolted to the flywheel housing and driven by an extension shaft from the electric generator. The fuel system is arranged to provide an adequate amount of heat to assist in the vaporization of present-day gasoline. The intake and exhaust manifolds are separate castings, but arranged so that the heat of the exhaust is utilized to assist in vaporization.



The engine is designed to be installed with a three-point suspension. The third point of support is 1½ in. in diameter by 1⅝ in. long and is integral with the chain case cover. The rear supporting arms are cast integrally with the flywheel housing. This housing is a separate unit which bolts to the crankcase. The crankcase is machined to accommodate a gearset with a No. 4 S. A. E. bolting flange. Provision is made for starting motor with a No. 1 S. A. E. flange mounting.

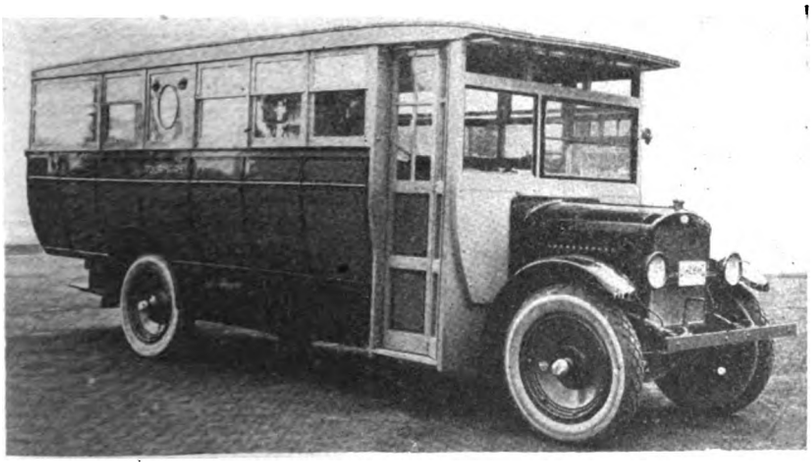
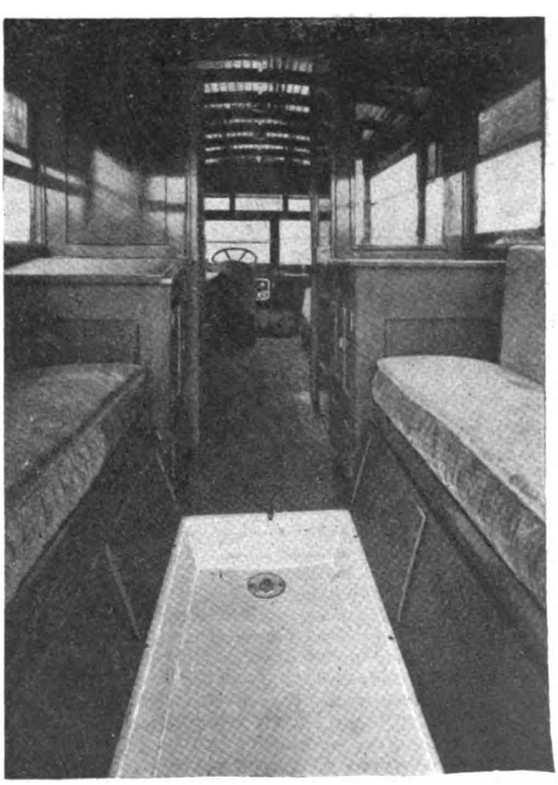
Trucks Still Finding More Jobs to Do





Adaptation of motor trucks to rail service has brought many interesting developments. Here is one using a pair of F. W. D. chassis. The "train" is used on trolley lines with considerable success

Interesting not only as a development of bus building, but in the manner in which radio service was supplied passengers, this White bus is in service between Minneapolis and St. Cloud. Note the heavy upholstery and the door construction

(Above) "Tourmore," probably one of the most completely equipped cars of its kind. Built to order for C. F. Rouze, of Pontiac, for cross country touring. (At right) Interior of "Tourmore" showing bath tub under floor. Seats unfold and form beds. In the middle of the car is a clothes closet on one side and a lavatory on the other. The car also carries an ice chest and a small kitchenette. The chassis is a G. M. C.

Equipment to Sell

New Devices for the Car and Truck

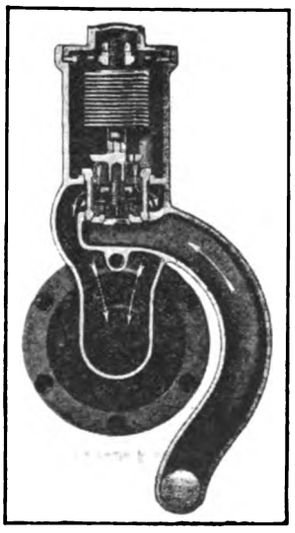
Little Gas Saver

Rockford Motor Products Co., Rockford, Ill.

Price $4.25.

This is a fuel economizer which breaks up the gas particles into smaller and finer form, adding the proper amount of air to produce a combustible charge. The charge is given a rotary motion and the two tubes and the lever assist in the vaporization of the fuel.

Band Ease



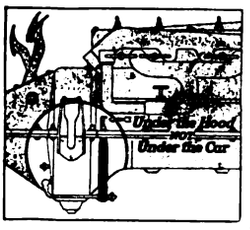
Laboratory Products Co., Detroit, Mich.

Price 75 cents per box.

A compound applied to Ford transmission bands and claimed to prevent chattering by removing the hardening or glazing of the bands.

Bishop-Babcock Thermostat

Bishop-Babcock Co., Cleveland, Ohio.

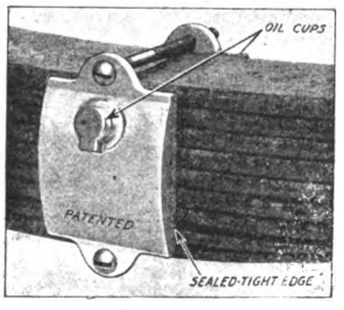


A thermostatic control for engine temperatures consisting of a housing that can be mounted directly on the pump housing of the cooling system. Inside is a bellows containing a volatile liquid that responds to the temperature change in water. When the engine is cold all the water passes around the bellows, being led by a by-pass by a discharge pipe of the radiator. When the water reaches a predetermined temperature, the liquid in the bellows becomes a vapor and in expanding closes the inlet pipes of the engine block and opens the passage from the radiator.

Dean Oil Gage for Fords

Fielding-Dean Co., Philadelphia.

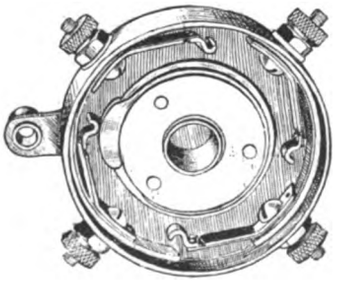
Price $3.



A float oil gage under the hood. The lower end of the float well is connected to the lower pet cock hole on the Ford transmission case, and the upper end of the float well is attached to the crankcase just back of the carbureter. One of the crankcase bolts is removed and the float well attached in the hole.

Jarmie's Oil Lubricator

Jarmie Mfg. Co., Inc., New Haven, Conn.

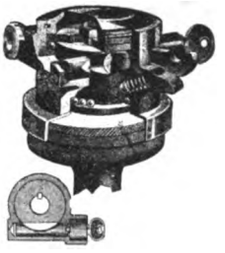


Price 45 cents to 75 cents per pair.

The lubricator consists of two metal caps attached on both sides of the spring by bolts. Each pair of lubricators has two pieces of felt ¼ in. thick with a large hole. The felt covers the edge of the lubricator acting as a gasket when the lubricator is bolted to the sides of the spring. Dust-proof oil cups are used to inject oil into the reservoir.

Leich Magnetic Timer for Fords and Fordsons

Tractor Appliance Co., New Holstein, Wis.

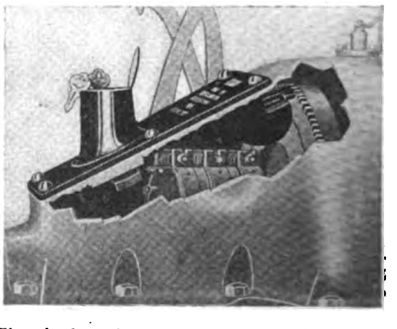


In this timer the brush or motor is magnetized and has a dual wipe contact to prevent interference of cold oil or dirt with the contact part. When the timer is in operation the magnetized rotors draw the brushes in.

Hearing Tilting Steering Wheel Lock

Hearing Tool Co., Columbus, Ohio

Price $15.



The locking device itself consists of a tumbler which is cut out on one side so that when the cut out side of the tumbler is next to the hub, the wheel will spin around without moving the wheels. When the tumbler is moved around the other way, it locks the wheel to the hub. The tumbler is operated by key. The wheel also has a tilting feature to give more room in the driving compartment. The locking mechanism is of straight hardened steel and a double ball race reduces wear. The exposed parts are nickel plated and the ends of the spokes are inset to relieve strain on screws and add to the appearance. The rim is polished natural walnut, 17 in. in diameter, corrugated, and no drilling or tapping is necessary in installing.

Remy Lock for Fords

Hercules Mfg. Co., Indianapolis, Ind.

Price $13.50.

The lock takes the place of the regular transmission cover and prevents the engine from being turned over by the electric starter or by hand or under its own power. The installation and operation do not change the design or mechanism of the car and the lock permits the car to be moved and steered by hand in case of fire or other emergency. The lock lid comes just above the floor board near the brake pedal so that the key can be operated from the driver's seat. The car is locked by giving the key a quarter turn causing the teeth of a steel forging to project into the ring gear of the fly wheel preventing the engine from being turned over. The locking operation also causes a malleable iron arm to extend under the edges of the transmission case opening thus making it impossible to remove the lock even with the screws taken out.

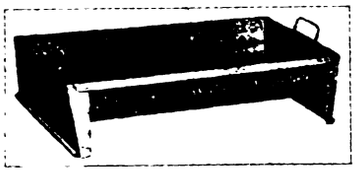
Equipment for the Shop

New Machinery and Tools

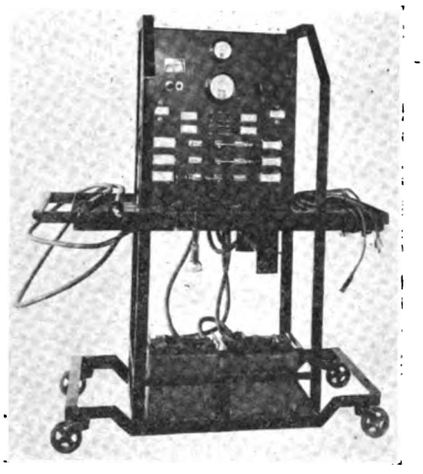
Stix-on Wrench



Efficiency Device Corp., 173-177 Lafayette Street, New York City.
Price 35 cents to $2.40 each.

The wrench is operated with one hand and without adjustment for any size or shape within the capacity of the wrench. Made of pressed steel, case hardened and in the following sizes: No. 1, capacity 3/16 to 11/16 in. Price 35 cents. No. 2, capacity ½ to 1¼ in. Price 60 cents. No. 3, capacity 1 to 2¼ in. Price $2.40.

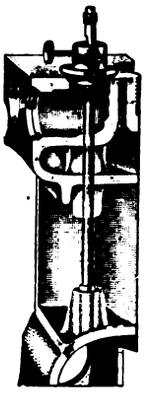
Handi-Pan



Standard Motor Parts Co., 1427 South Michigan Avenue, Chicago.
Price $2 each.

The pans are made with large handles that will admit a heavily gloved hand and are of one piece construction of heavy gage galvanized steel. The pan is 25 in. long, 15 in. wide at the top and 5½ in. deep. The capacity is 4 gal.

Heyer Portable Electric Tester



A. P. Heyer, 34 Valley Road, Montclair, N. J.
Price $200 without batteries.

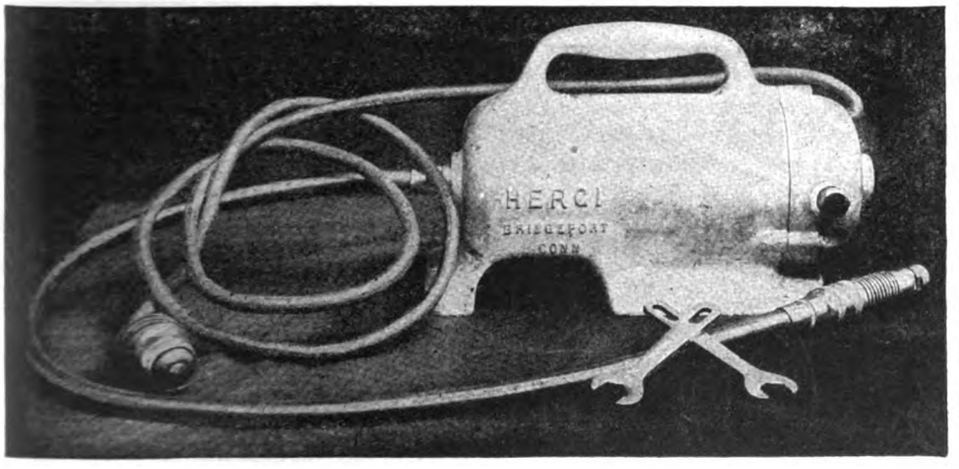
The portable electric tester combines all necessary testing equipment for garage, service shop or street testing. The panel can be removed from the unit and can be purchased separately for a wall mounted test set. The meters are especially built for shop work and can be read at a considerable distance. The voltmeter has a 3 and a 30 volt scale and the ammeter a 50 and 500 ampere scale. A circuit tester is provided for tracing circuits, locating grounds, opens and shorts.

Stevens Filing Fixture for Ford Valve

Stevens & Co., 375 Broadway, New York City.
Price $2.

A jig for filing Ford valves to the proper length. After the valve length gage is inserted in the filing fixture the hardened nut is adjusted until flush with the length gage. The gage is then taken out and replaced with the valve and then the projecting end of the valve is filed down until flush with the nut. The small clamp holds the valve in position for filing. The fixture also insures a square end on the valve. The length gage separately is 75 cents; complete with the filing gage $2.50.

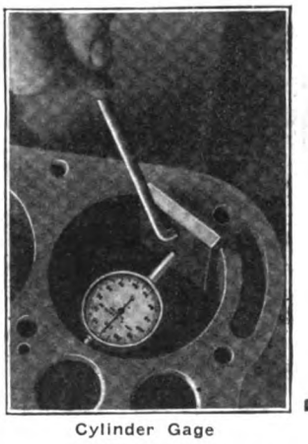
C. & S. Engine Cleaner



Codman & Shurtless, Inc., 535 Albany Street, Boston.
Price $2.

The cleaner has two connections, one for compressed air, and the other for kerosene or liquid cleaner. The pressure of the air draws the liquid up from a bucket or other container and throws a powerful spray to remove dirt, oil and grease.

Hergi Type H-250 Flexible Shaft Outfit



Hergi Mfg. Co., 250 Fifth Street, Bridgeport, Conn.

A motor driven flexible shaft outfit with a universal motor of approximately 1/6-hp. used on 110 AC or DC current: It is enclosed in an aluminum case having a base and handle all in one piece, enabling the workman to pick up the motor easily. The armature shaft has a ventilating fan. Each motor is supplied with 6 ft. of drop cord with attachment plug. The shaft is ¼ in. in diameter, wire-wound, 3 ft. long. The handpiece is ball bearing with ⅛ in. chuck and two wrenches for handpiece.

Atlas Mikro-Indicator Cylinder and Piston Gages

George H. Wilkins Co.,
180 North Market Street, Chicago

Cylinder Gage

Piston Gage

A description of the piston gage in Motor World issue of July 12 and of the cylinder gage in the issue of July 19 unfortunately had the illustrations switched. We are showing the two illustrations here to correct any wrong impression that may have been given to our readers.

Repairshop Shortcuts

Saving Ten Cents' Worth

"SHOP PROFITS," a booklet printed by the Automotive Equipment Association, says that saving 10 cents is the same as selling $1 worth of business if the net profit is 10 per cent. Time wasted and materials wasted soon count up to more than 10 cents. Some shortcuts on this page will help you save many times 10 cents. Look at No. 3344, for instance —stockroom doors are kept closed to prevent unauthorized taking of materials, yet often enough time is wasted in opening the door to pay for all the material that might be taken.

If you have some good ideas in your shop send them to Motor World. We will accept those that are practical and which have not been used before at $1 each.

No. 3342—Holder for Shims—Thick bearing shims are filed by driving three 10 penny nails in the flat top of the work bench. The nails can be driven in or out, according to the thickness of the shims as the nails extend through the bench.—T. F. White, Foreman, King Motor Co., Columbia, S. C.

No. 3343—Crankshaft for Fitting Bearings—A crankshaft is bolted upright on the bench for fitting connecting rod bearings. Where one make of car is handled, the shaft is left there permanently.—Don Hastings, Williams & Hastings, Detroit.

No. 3344—Spring Operated Door Catch—The latch on a tool room or stock room door can be operated from a distance by fastening a small lever to the knob with two machine screws and putting in an auxiliary spring to counteract the tension of the string. The string can be led to any convenient point.—Robert D. Peebles, Blue Ribbon Garage, Inc., Bridgeport, Conn.

No. 3345—Parking Space for Castor Jacks—To prevent castor jacks from being run over or fallen over by workmen, a particular place on the floor is assigned to the jack and this is indicated by a white line painted on the floor.

No. 3346—Retaining Grease in Ford Axle Housing—Grease is retained in the Ford axle housing by removing the outside sleeve and trimming down an axle roller bearing felt and metal washer to fit the housing. This is driven in ahead of the sleeve.—Frank B. Warren, Mansfield, Mass.

No. 3347—A Fan for the Shop—To keep the shop cool in summer, a board is attached to the shop line shaft. It revolves with the shaft and makes a current of air. If the board is large or heavy, it is balanced by splitting it and attaching one half to each side.—W. G. Gow, Studebaker Sales Co., Newark, N. J.

No. 3348—Hub Cap with Alemite Fitting—A hub cap has a hole drilled in it and an Alemite fitting soldered in or threaded if the metal is heavy enough. For greasing front wheel bearings this cap is put on in place of the regular cap. —Don Hastings, William & Hastings, Detroit.

INDUSTRY TURNS OUT 200,000 CARS IN JULY

Possibility of Curtailment of Steel Production Is Chief Worry Now

NEW YORK, Aug. 1—Production of passenger cars and trucks for July probably will approximate a little more than 200,000 or around 75 per cent of the record figure of 288,000 established in June. Output of some companies will be practically as large as it was last month, but others are falling somewhat behind.

The expected seasonal decline in retail sales has become apparent but it has not been sharp and is considerably less than the average for the last few years. Unless the situation is seriously complicated by the mine and rail strikes it is expected that business for the third quarter will approach 75 per cent of the second quarter. This would mean a somewhat larger output than in the third quarter of 1921, which was the best of that year.

Automotive manufacturers are not as much disturbed about their supplies of coal as they are about the effect on the steel industry of the railroad priority order of the Interstate Commerce Commission. They were forewarned of the miners' strike by their trade associations and laid in surplus supplies which are standing them in good stead. The priority order is something over which they have no control, however.

Steel Supply the Problem

If the steel mills which supply automotive manufacturers are compelled to close or curtail their production sharply because they are unable to get coal or cars, the effect upon automobile output naturally will be serious. Car and truck manufacturers have their inventories extraordinarily well balanced, and they are well covered by commitments, but if steel is not forthcoming they cannot continue indefinitely to turn out motor vehicles in large volume.

No serious complaint has come from the Detroit district of inability to obtain cars in which to ship finished products, but even if there should be a car shortage it would cause no great concern. The automotive industry has learned how to deliver its products on their own wheels under their own power, although it involves some inconvenience. It delivered nearly 80,000 vehicles in this way in March, 1920, when rail congestion was most acute.

The most disturbing factor in the present situation, therefore, is not lack of demand but the possibility that supplies of steel may be shut off.

New Kelly-Springfield Model

SPRINGFIELD, OHIO, July 31—A new model truck known as K-61 has been announced by the Kelly-Springfield Motor Truck Co. The specifications are as follows: 5-7 ton capacity, 4½x6½ motor, tires 36x6 front, 36x7 dual rear. The price of this chassis is $4,800.

U. S. FIGURES GIVE FIRST HALF'S OUTPUT

WASHINGTON, July 31—Figures compiled by the Department of Commerce from reports made there by approximately ninety passenger car manufacturers and eighty truck manufacturers show a total of 1,148,788 motor vehicles produced in the first six months of 1922. Trucks made in the first half numbered 114,058, or almost exactly 10 per cent of the total.

June production totaled 287,875, of which 261,963 were passenger cars and 25,912 were trucks.

Production figures by months follow:

1922	Passenger Cars	Trucks	Totals
January ...	81,693	9,344	91,037
February ...	109,170	13,121	122,291
March	152,959	19,651	172,610
April	197,221	22,227	219,448
May	231,724*	23,803*	255,527
June	261,963	25,912	287,875
Grand total	1,034,730	114,058	1,148,788

*Revised.

BUICK MAKES PLANS FOR RECORD PRODUCTION

DETROIT, July 28—Buick Motor Car Co. has set the biggest schedule in its history for the fiscal year beginning Aug. 1. The largest previous year the company has had was 130,000 and the total output for the fiscal year just ended was 100,000. The company is preparing to launch a vigorous sales and advertising drive that will continue throughout the year, $2,000,000 having been set aside for advertising purposes.

Small profits and large sales will be the business policy of the entire General Motors organization. It is persistently reported that the prices of the 1923 models displayed this week will be somewhat lower than in the 1922 line.

Thomart Reducing Capitalization

AKRON, OHIO, July 29—Stockholders of the Thomart Motor Co. of Akron and Kent to-day approved the company plan of reducing its capitalization by decreasing its preferred stock from $5,000,000 to $2,000,000 and its no par common from 100,000 to 70,000 shares. The decrease is made as a means of reducing taxes. Production at the Thomart plant at Kent is averaging one speed truck a day.

August Promising for Hupp

DETROIT, July 31—That July orders now are equal to June, which was the company's largest month, is the statement made by Vice-President Von Schlegel of the Hupp Motor Car Corp. August prospects also are bright, there being on hand more orders than ever have been received in any previous August.

STRIKES MAY HAMPER PRODUCTION OF CARS

Detroit Fears Shutting Off of Power Because of Coal Shortage

DETROIT, July 31—Increasing delay in the receipt of coal, steel and other materials because of the strike situation will lead to a severe curtailment of automobile production in this district unless prompt steps are taken to relieve conditions. The Detroit Edison Co., unless it can be assured of a coal supply, will in all likelihood be compelled to cut off its power from all but essential industries. This curtailment of service will not be necessary for another 10 days, but it is practically certain to come by that time as the company now is operating with not more than 45 days' coal supply.

All of the smaller Detroit automobile and truck manufacturing companies and parts and material makers buy their power from the Detroit Edison Co. Factories like Ford, Dodge, Packard, Maxwell, Cadillac, Continental Motors and Timken Axle produce their own power and will be able to run beyond this point. The absence of small but essential parts made by the smaller companies will hamper the operation of the larger concerns, however.

All companies have been delayed in getting deliveries of steel, manufactured or raw, for the past sixty days, but this situation has only now become acute. The former three day service from Pittsburgh and other steel producing points has been extended to ten days and more. The time required for the switching and placing of cars for unloading has been quadrupled.

Trucks for Transport

Embargoes on all but perishable goods in some parts of Ohio have required the use of trucks to transport materials and parts to lake ports from whence they are brought to Detroit by boat and then delivered by truck. The boat service between Detroit, Cleveland and Buffalo has been reduced to only night sailings owing to the coal shortage and there is a possibility of this being suspended entirely. In this event, factories are preparing to ship their materials the full distance by truck. Boat service to points north and west of Detroit is being maintained.

Driveaways of finished cars and trucks have not materially increased owing to the availability of freight cars for shipping and the continuance of some service by the boats.

Practically every factory in Detroit still is operating at capacity. There has been no laying off of help because of falling demand and indications are that there will be none unless it becomes impossible to operate owing to lack of materials. There are fair quantities of most supplies in stock. There is no factory, however, in position to continue manufacturing for more than thirty days should supplies cease.

FEDERAL GAS PROBE MAY REDUCE PRICES

Senate Committee Investigating Protest of National Automobile Dealers Association

WASHINGTON, July 31—The price which motorists will have to pay for gasoline, as a result of the investigation of the alleged gasoline "trust" by the United States Senate Committee on Manufacturers, will be lower when the committee shall have finished its investigation. This is the assertion by one of the committee members, based on reports from more than 200 big oil companies which already have complied with the committee's summons to submit sworn statements of their business.

As evidence of the assertion the committee, which is now busy compiling data on hundreds of companies, cite the fact that gasoline in more than 40 cities has declined in price, whereas, in former years the natural tendency of refiners has been to increase their prices at this time of the year. Actual taking of testimony has been postponed by the committee pending final returns from oil companies throughout the nation.

Getting Data on Prices

In addition to detailed information from the oil companies, the committee is securing data from various cities showing the current price of gasoline with comparative figures of last year. These figures show that within the past six weeks, or about the time the committee began to function, the upward trend, always apparent at this time of the year, had stopped and that prices were falling in a great many locations.

A strong protest has been laid before the committee by the National Automobile Dealers Association against what they declare is wholesale "juggling" of gasoline prices. A third set of data on gasoline consumption and prices is being furnished by the Federal Trade Commission.

According to figures submitted the committee by the National Automobile Dealers, and which they declare will be substantiated by personal representatives before the committee when the open hearings start, the price of gasoline at the service stations has risen a minimum of two to a maximum of seven cents during the past year. The figures show that some cities show a sharp decrease in one month and an equally sharp increase the following month. In only one city, Dallas, Tex., the figures show, gasoline prices indicate a price based on competition.

In Dallas gasoline dropped as low as 14 cents in September, 1920, while other cities were paying from 18 to 28 cents. The competition suddenly ceased in June, 1921, gasoline went to 25 cents and now remains at that price.

Some of the most important cities in which marked increases are cited to the committee are Kansas City, from 17.7 cents a gallon in July, 1921, to 24.5 in July, 1922; Detroit, 20.9 in July, 1921, to 26.4 in July, 1922; St. Louis, from 19.7 to 25.5; New Orleans, 20.5 to 27.5; Jacksonville, 20 to 26 cents for the same period. New Orleans, in the heart of the oil country, is paying 27.5 a gallon for her gasoline, while Boston, several thousand miles away, is paying only one-half a cent more.

The "juggling of prices" is protested by the association in the "name of twelve million motorists, who consume an average of about 400 gallons a year each."

"We feel perfectly safe in promising the automotive industry that when our investigation shall have been completed the upward trend of gasoline will not only be stopped but that a considerable measure of relief will be afforded the motor vehicle using public," Senator La Follette, chairman of the special investigation committee, said.

STUDEBAKER COMMON BRINGS BIG PROFITS

DETROIT, July 31—Profits of $8,110,926 for the three months ended June 30, 1922, as against $4,575,836 in the first quarter are reported by the Studebaker Corp. After allowing for reserves, net profits were $7,086,552, against $4,059,848 in the March quarter.

This means a profit equal to $11.50 a share earned on the $60,000,000 common capital stock outstanding, after allowing for the regular preferred dividends, as against an earning equal to $6.49 a share in the first three months of this year. As the company is paying dividends at the rate of $7 a share on the common, the earnings for the six months were equal to more than two and one-half times the annual dividend requirements.

A meeting of the directors will be held next Monday and it is expected they will either increase the regular dividend on the common or declare an extra payment for the quarter.

Receiver for Acason

DETROIT, July 31—Acason Motor Co., Inc., has been placed in the hands of Val. H. Kendall as receiver pending adjudication in bankruptcy proceedings instituted by merchandise and bank creditors in Federal Court here. An appraisement of the assets of the company is now being made by the receiver. The company is declared to have a considerable number of orders on hand and accounts receivable on its books of $58,000.

Ford's Irish Plant Busy

NEW YORK, July 31—Announcement is made that the Ford Motor Co. is expanding its Cork, Ireland, plant, so as to be able to ship parts to Manchester, Bordeaux, Antwerp, Cadiz and Copenhagen branches which heretofore have been shipped from Detroit.

Durant Stopping Stock Sale

NEW YORK, July 31—Representatives of the Durant corporation have been informed that no more stock of Durant Motors, Inc., will be sold after August 5 to anyone at any price.

LAFAYETTE FACTORY GOING TO MILWAUKEE

New Plant to Be Built Near Other Nash Interests in Wisconsin Metropolis

INDIANAPOLIS, July 31—The Lafayette Motors Corp., of Indianapolis, will transfer its operations to Milwaukee, Wis., the latter part of this year, according to an announcement by Charles W. Nash, president of the company, thereby benefiting by a closer association with the Nash group of industries of Kenosha and Milwaukee, of which it is financially a unit.

Land has been acquired adjacent to the Milwaukee Nash factory and work will start immediately on a model plant for the exclusive manufacture of Lafayette cars. Mr. Nash predicts that the company will be housed and operating in the new factory by the first of the year.

"The Lafayette has been greatly handicapped for space in its present plant at Mars Hill, Ind.," says Mr. Nash, "and this handicap will become much more serious as the company's production increases, thus making necessary an increased capacity either here or elsewhere. In view of these conditions and the desirability of a closer geographical coordination of all Nash activities, it seemed logical to the directors of our company to establish the Lafayette in a new plant in Milwaukee, near the main line of the Chicago & Northwestern Railway, even at the sacrifice of the many advantages which have been found in Indianapolis.

Capacity Will Be Tripled

"The new Milwaukee plant will triple the present manufacturing capacity of the company. In its new location the Lafayette Motors Corp. will preserve its independent operating integrity and the management will remain the same. It is naturally the intention to retain the entire organization as thoroughly intact as possible.

"We are committed definitely to the policy of producing in the Lafayette a car of the highest quality, and the new plant has been laid out with the manufacturing requirements of such a car carefully in mind. While the new plant will take care of all anticipated expansion for the next few years, it will not be too large, with a consequent burden of expense."

It is rumored that tentative negotiations are already under way for the sale of the present Lafayette property at Mars Hill, a suburb of Indianapolis.

Delaware Charter for Star

WILMINGTON, DEL., July 31—A charter has been issued to Star Motors, Inc., with a capital of $100,000,000, which will be a holding company and an acceptance corporation for the various Star enterprises fathered by W. C. Durant. Star Motors will have branches in every state in the Union. The incorporators are W. C. Durant, C. P. Daly and Carroll Downes.

HUPMOBILE ADDING TO ITS DETROIT PLANT

Additions of 500,000 Square Feet Will Be Used for Finishing Work

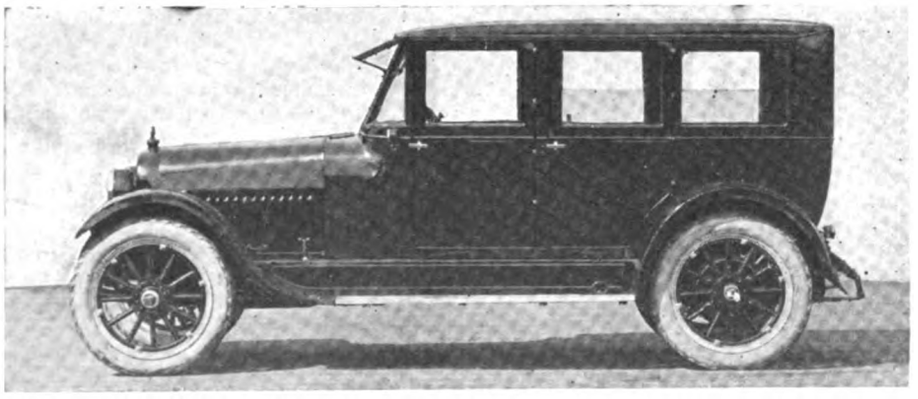
DETROIT, July 31—The Hupp Motor Car Corp. has undertaken new construction work which will add more than 500,000 square feet of floor space to its big plant in this city. When the new buildings are completed the main plant will have a floor space of approximately 1,575,000 sq. ft.

The five subsidiary plants of the Hupp company, which are the gear and machine works at Jackson, body building plant at Racine, Canadian plant at Windsor, Detroit Auto Specialties Co. and the Auto Body Co. at Springfield, Mass., have a combined floor space of approximately 1,180,000 sq. ft.

The new building in Detroit will include two four-story wings added to the principal unit of the present plant, a large four-story building adjacent to this unit and enlarged space for cold storage. Both the new wings will be used for finishing work exclusively.

Lee Speaking in West

PORTLAND, ORE., July 31 — Gordon Lee, head of the automotive division of the United States Department of Commerce, is on a tour of the Pacific coast visiting automobile dealers and speaking before the automobile associations, telling of the work and plans of the automotive division for the aid of the industry.



In his address before the automobile men at Olympia, Wash., Lee outlined some of the work performed by his division and by the department of commerce to aid automobile manufacturers in expanding foreign markets. While the department has not yet taken up study of problems of the industry at home, it is the hope of Hoover and others in charge, to develop the department until it will become a real aid to those engaged in the industry in this country, Lee declared.

STUDEBAKER NET SALES AMOUNT TO $73,422,862

SOUTH BEND, IND., July 31 — At their meeting to-day directors of the Studebaker Corp. declared the regular 1¾ per cent quarterly dividend on preferred stock and 4 per cent on common, payable Sept. 1 to stockholders of record at the close of business Aug. 10, 1922. The directors decided to put the common stock on a regular 10 per cent basis and to pay extra dividends as conditions permit, hence the 4 per cent declared today covers the 2½ per cent regular quarterly dividend and a 1½ per cent extra.

The total net sales of the Studebaker Corp. and subsidiary companies for the past six months ended June 30, amounted to $73,422,862.25, and the net profits derived therefrom, with other net income, after reserves for increased depreciation but before income tax reserves, amounted to $12,686,763.07.

New Hudson Sedan, $2,295

A new seven-passenger sedan with practically an all-aluminum body has been added to the line of the Hudson Motor Car Co. This new body replaces the previous sedan and incorporates a number of changes. It is 3 in. lower and of lighter weight with wider front and rear seats. The body is of Biddle & Smart manufacture. Better ventilation than on previous models is provided for by a larger cowl ventilator equipped with a deflector. The rear window glass is larger and the triangular panes of glass which form part of the windshield give the body a longer appearing effect, as well as affording the driver a greater range of vision. The upholstery on the new sedan and the floor rugs are of deep blue. The interior accessories include rear quarter shades, dome light with switch so located that it may be reached equally well from the front or rear compartment, smoking set, rear vision mirror and other similar improvements. All the doors have four hinge supports and entrance to the body has been facilitated by increasing the width of the doors. Drum type side parking lamps at the base of the windshield are also standard equipment on this body. The body panels are finished in valentine blue and the chassis parts are black. This car is priced at $2,295 f.o.b. Detroit.

ALABAMA TRADESMEN IN BUSINESS CONFAB

Discuss Contracts, Discounts and License Fees at Semi-Annual Meeting

BIRMINGHAM, ALA., July 31—At the semi-annual meeting of the Alabama Automobile Dealers' Association there were more than 100 visiting and local dealers in attendance.

The business session was held in the forenoon at the Tutwiler Hotel, when a number of short addresses were delivered by local men and visiting delegates. During the afternoon the dealers enjoyed a barbecue on Little Cahaba river, tendered by Birmingham members of the association to their out-of-town guests.

Freight rates were discussed by O. L. Bunn, manager of the Birmingham Chamber of Commerce, who declared that thousands of dollars in freight have been saved to the automobile dealers of Birmingham by the Chamber of Commerce.

Walter Brower, in an address before the meeting, advocated a standard form of sales contract for automobiles and suggested that abstracts be required for automobiles the same as for real estate. Stricter laws for the protection of automobile owners were urged by Mr. Brower.

A strong plea for a committee to investigate the present dealers' license fees, which he declared excessive, was made by Sterling Edwards, local dealer. Louis Adams of Mobile maintained that factory discounts should be given only to legitimate agents, while Joe Lyons, also of Mobile, spoke in behalf of closer unity among the dealers of the State.

The association accepted an invitation extended by the Montgomery Chamber of Commerce to hold its next convention in the capital. The next meeting will be held in January, when new officers will be named.

Thermoid Opens K. C. Branch

KANSAS CITY, MO., July 31—A branch of the Thermoid Rubber Co. has been opened in the Lathrop Building, Tenth and Grand Avenues, with H. J. Campbell in charge. Mr. Campbell formerly was the Thermoid representative in the middle west. He now assumes the title of district manager, and his branch will care for the sales in Missouri, Kansas, Nebraska, North Dakota, South Dakota, Montana, Wyoming, Colorado, Oklahoma, Arkansas, Texas and the northern portion of Louisiana. These states formerly were handled out of the Chicago office.

Parenti Sale Postponed

BUFFALO, July 29 — Judge Hazel postponed the hearing on the petition to have the sale of the Parenti plant to the Hanover company declared void until Aug. 4 at 10 a.m. The judge was starting on his vacation and did not know whether he would be back in time for the hearing or not.

THREE G. M. LINES REDUCED IN PRICE

Buick, Oakland and Chevrolet All Feature in Latest Price Slash

DETROIT, Aug. 1—The Buick Motor Co. announces new price reductions which range from $30 to $210 on all models. The four-cylinder phaeton has been dropped from $935 to $885, while the six-cylinder phaeton list is lowered from $1,395 to $1,195.

There are two new models in the line; the four-cylinder touring sedan at $1,325 and the six-cylinder touring sedan at $1,935. The price changes are as follows:

FOUR CYLINDER

No.		Old Price	New Price
34	Roadster	$895	$865
35	Phaeton	935	885
36	Coupe	1,295	1,175
37	Sedan	....	1,395
38	Touring Sedan	(new)	1,325

SIX CYLINDER

No.		Old Price	New Price
44	Roadster	$1,365	$1,175
45	Phaeton (5 pass.)	1,395	1,195
49	Phaeton (7 pass.)	1,585	1,435
54	Sport Roadster	1,785	1,625
55	Sport Phaeton	1,785	1,675
41	Touring Sedan	(new)	1,935
47	Sedan (5 pass.)	2,165	1,985
48	Coupe	2,075	1,895
50	Sedan (7 pass.)	2,375	2,195

Chevrolet

FLINT, MICH., Aug. 1—Chevrolet Motor Co. has announced price reductions on its line of passenger and commercial models effective to-day. The following is the schedule:

PASSENGER MODELS

	Old Price	New Price
Model Superior Roadster	$525	$510
Model Superior Phaeton	525	525
Model Superior Utility Coupe	720	680
Model Superior 4-passenger Coupe	850	840
Model Superior Sedan	875	860
Model F. B. Roadster	975	865
Model F. B. Phaeton	975	885
Model F. B. Coupe	1,575	1,325
Model F. B. Sedan	1,575	1,395

COMMERCIAL MODELS

	Old Price	New Price
Model Superior Chassis	$525	$425
Model Superior Light Delivery	525	510
Model G. Truck Chassis	745	650
Model T. Truck Chassis	1,125	1,095

DETROIT, Aug. 1—The Oakland Motor Car Co. is the second of the General Motors line to announce price reductions. Cuts on all models, ranging from $100 to $2,400 are effective to-day. The company has brought its roadster and touring car to $975 and $995, respectively, thereby giving General Motors a six-cylinder car in the less than $1,000 class.

President George E. Hannum declared the new prices are predicated upon the ability of the company to sell a fixed or a given number of cars during the fiscal year. The 15,000-mile written engine guarantee will be continued.

The old and new prices follow:

Model	Old Price	New Price
Chassis	$895	$795
Roadster	1,120	975
5-pas. touring	1,145	995
4-pas. touring	1,265	1,165
2-pas. coupe	1,285	1,185
4-pas. coupe	1,685	1,445
Sedan	1,785	1,545

COLE RAISES PRICE ON TOURING MODEL

INDIANAPOLIS, July 27—Shipments are being made of the new series Cole 890, which while not radically different from the former models has many refinements and is now furnished with extra equipment that hitherto has been optional at an increased price. An improved frame with large springs and modified suspension, together with an envelope manifold and a new carburetor, are among the mechanical refinements of the car. Six wheels, with side mountings for the extras, are now standard, the buyer being allowed choice of wood, wire or disteel types. A new type Gemmer steering with wood wheel without quadrants is another detail that will engage the attention.

The body style has been refined and the external details of the job show many new ideas from the windshield to the rear curtain window that is 8 in. wider than the one on the former models. The price of the seven passenger job of the new series 890 has been increased from $2,485 to $2,685. Other prices remain as before.

Sayers Reduces Line

CINCINNATI, OHIO, July 31—A price reduction affecting the whole line of Sayers cars has been announced by the Sayers & Scoville Co. The changes are as follows:

	Old Price	New Price
Roadster	$1,695	$1,645
Phaeton	1,695	1,645
Coupe	2,795	2,645
Sedan	2,795	2,645

Gramm Changes Truck Prices

LIMA, OHIO, July 31—A complete revision of prices has been announced by the Gramm-Bernstein Motor Truck Co. affecting the whole line of Gramm-Pioneer trucks with the exception of one model. The price changes are as follows:

Model	Capacity	Old Price	New Price
10	1-ton	$1,365	$1,245
15	1½-ton	1,900	1,750
65	1½-ton	2,500	2,250
20	2-ton	2,925	2,475
30	3-ton	3,275	3,300
40	4-ton	3,995	3,850
50	5-6-ton	4,895	4,450

The model 75-P, 3½-ton, remains unchanged at $4,225.

Old Reliable Reduces

CHICAGO, July 31—The Old Reliable Motor Truck Co. has reduced the price of its model D 5-ton truck from $5,250 to $5,000.

FISK MAKES PRICE SLASH ON CASINGS

Fabrics and Cords Reduced Alike—Excise Tax Now Included in List

NEW YORK, July 31—The Fisk Tire Co., Inc., has announced a price cut. Excise tax is now included in the list price. The new prices are as follows:

	Old Price	New Price
30 x 3½ Premier Cl. Fabric	$10.85	$10.65
30 x 3½ Non-Skid Cl. Fabric	14.85	12.85
30 x 3½ Red-Top, Extra Ply Cl. Fabric	17.85	15.85
30 x 3½ Non-Skid Cl. Cord	18.85	15.85
31 x 4 S. S. Non-Skid Cord		26.45
32 x 4 S. S. Non-Skid Cord	32.75	29.15
32 x 4½ S. S. Non-Skid Cord	42.50	37.70
34 x 4½ S. S. Non-Skid Cord	44.50	39.50
33 x 5 S. S. Non-Skid Cord	52.50	46.95
35 x 5 S. S. Non-Skid Cord	55.50	49.30

MOTORCYCLE CONCERNS MAKE BIG REDUCTIONS

NEW YORK, July 31—Heavy price cuts have been announced by three leading motorcycle companies on their 1923 models which have just been introduced. The Excelsior Motor & Manufacturing Co. of Chicago have reduced prices on the Excelsior Twin and on the Henderson Deluxe, as follows:

	Old Price	New Price
Excelsior	$365	$310
Henderson	475	398

Ace and Nearacar Drop

The Ace, another four-cylinder machine, has been cut from $435 to $335. It is made by the Ace Motor Corp. of Philadelphia.

The price of the Nearacar has been brought down from $225 to $185, making this machine now equal in price to the Cleveland.

Other motorcycle price cuts are expected within the next two weeks. The other leading twin-cylinder jobs will probably be priced somewhere in the neighborhood of the Excelsior, when new models are announced.

Harley-Davidson Lowered

NEW YORK, Aug. 1—Harley-Davidson Motor Co. has announced a price cut on its 1923 models. Prices are as follows:

Model	Old Price	New Price
23-F	$335	$285
23-J	365	305
23-FD	360	310
23-JD	390	330

OREGON BIG FACTOR IN MOTOR INDUSTRY

Statistics Show Capital Investment of $56,882,678 and $85,000,000 Payroll

PORTLAND, ORE., July 31 — The automobile industry of Oregon, exclusive of the large companies distributing gasoline and oil, represents a capital investment of $56,882,678, while the annual business is in excess of $85,000,000. The total annual payroll is over $1,000,000 and the number of men employed throughout the year on the average is greater than the number employed by the railroad companies in Oregon.

Such are some of the salient facts contained in a report issued by Ralph J. Staehli, secretary of the Automobile Dealers Association of Portland, to the association. Mr. Staehli sent a questionnaire to every automobile dealer, accessory man, garage man, tire man, service man and equipment man, both wholesale and retail, in the state.

Portland Center of Industry

Of the total investment in the industry in Oregon of over $50,000,000, over three-fourths, or $39,344,308.50 is in land and buildings used by the industry. Value of equipment totals $4,079,774.57, and stocks aggregate $13,458,595.83. The weekly payroll is given as $118,615.50, while the annual payroll amounts to $11,490,239.50. Business per year is figured at $85,600,000, and the number of employees as 5858. The city of Portland alone represents about two-thirds of the industry, taking the above figures all the way through, according to the report, which gives separate figures for this city.

The above figures, it is stated, do not include oil and service stations, automobile stage and bus lines, for-hire cars, private garages and fleet service stations, or dealer and garage owned service and utility cars and trucks. or does it include value of highways, highway employees of road work of any kind.

The significant feature of Mr. Staehli's report is the fact that when a man in Oregon spends $1,000 for a new automobile he has that purchase backed up by a $1,000 share in the service and maintenance end of the automobile business. In other words, for every dollar's worth of automobile in the state there is another dollar invested to keep that machine in operation.

In comparing the automobile with the railroad it would be perfectly proper to figure in the cost of the highway system, which has been built and is being paid for from the automobile license and gasoline tax money, and if this were added there would be another $100,000,000 in capital investment and many thousands in yearly expenditures, while the number of employees would be greatly increased.

While it was impossible to get accurate figures on the number of people carried per year by the automobile in Oregon or the number of tons of freight moved by motor trucks, it has been estimated from careful data, the report says, that 4,500,000 tons of freight are moved by trucks, while from six to ten times as many people are carried throughout the year by automobile as by the railroads, including interurban lines.

No factor of recent years has contributed more to the welfare and advancement of Oregon, the report states, and the increase in value of real estate and other property as well as the economy made possible in all lines of activity by the automobile and truck over previous methods would represent an item of many more millions of dollars to be traced directly and solely to the motor vehicle.

RETAIL PRICE FIXING COMPLAINT DISMISSED

WASHINGTON, July 29—Formal complaint against seven automobile accessory and tire manufacturing companies was dismissed to-day by the Federal Trade Commission, all of them charged with violations in respect to the resale price maintenance laws. The cases were dismissed by the Government, without prejudice to its case, pending the final decision of the Beechnut Packing Case, which was selected and advanced by the Federal Trade Commission as a test case.

The cases involve the right of a manufacturer to fix the resale price of manufactured goods. Pending the final adjudication by the United States Supreme Court the commission has announced that no further complaints against manufacturers who manufacture a commodity and fix the retail prices will be made.

The seven companies against which the Government dropped its prosecution are as follows:

Kryptok Sales Co., New York City, lens manufacturer; Curtis & Co. Manufacturing Co. and Curtis Pneumatic Machinery Co., St. Louis, Mo., accessories; Goodyear Tire & Rubber Co., Akron, Ohio; Klaxon Co., Newark, N. J., automobile horns; J. H. Haney & Co., Hastings, Neb., tire pumps; Marshall Oil Co., trading as Tungsten Mfg. Co., Marshalltown, Iowa, spark plugs, and The Denver and J. E. Hunt & Co., Baltimore, automobile belt manufacturers.

Improved Streets Help Sales

NEW ORLEANS, LA., July 31—Dealers in automobiles and trucks in New Orleans are again segregating their lists of prospects for a drive on citizens who live or do business on streets included in the paving programme, which starts in the immediate future with $1,353,380 raised by the sale of municipal paving certificates. This sum represents what the city government will spend on intersections and drainage pipes, which is a fraction of the actual expenditure. Working mainly through the local newspaper that carries the greater share of the motor car advertising, the dealers hammered for months to get the paving program started. Practically all the expenditure will be for asphalt streets.

ENGINEERS STUDYING TRUCK SAFETY PLANS

Would Give States Formula to Be Used in Examining Commercial Vehicles

DETROIT, July 31—Members of the truck division of the Standards Committee of the Society of Automotive Engineers are examining the possibilities of a safety formula for trucks. Discussion at its last meeting developed the opinion that in order to meet the requirements of the motor vehicle departments of the various states it would be necessary to include in the formula suitable static factors of safety on the axles and steering gear as well as a retardation test.

This activity is a result of a letter to B. B. Bachman, president of the S. A. E., from A. L. McMurtry, of the Motor Vehicle Department of Connecticut, asking for immediate help on a formula which would enable the state authorities to use definite requirements as a basis on passing on the safety of trucks seeking licenses. The measure is particularly necessary in view of trucks assembled from units of doubtful or ancient origin.

A sub-committee has been appointed with instructions to take the matter under immediate advisement.

Some discussion also has been had regarding the new small wheel and large diameter tire size, which brought to light the fact that truck manufacturers are somewhat dubious as to the matter of clearance under the brake drum and overhung bearings with these wheels.

BIG TRUCK MERGER DECLARED OPERATIVE

NEW YORK, July 28—The merger of the Selden Truck Corp. and the Atlas Truck Corp. has been declared operative, and the Industrial Motors Corp., which is to take over the two companies, has been organized under the laws of the State of Delaware with an authorized capital stock of 1,000,000 shares of no par value.

John J. Watson, Jr., president of the new company, said that no new financing would be necessary. The balance sheet of the combined company will show assets of $2 to each dollar of liabilities, Watson said, adding that the Atlas company had virtually no liabilities and the Selden company only about $1,000,000.

Numerous companies have made application to be included in the combination, but these will not receive consideration until the organization of the parent company has been completed.

Illinois Enforcing Tag Law

CHICAGO, July 31 — A warning to garage owners to comply with the Illinois State law requiring registration of serial and license numbers of all automobiles left in their charge was issued by Judge Prindiville who assessed a fine of $100 and costs against a Chicago garage proprietor who had neglected to comply with the regulation.

SOUTH AFRICA BUYS MORE MOTOR TRUCKS

Cities Convinced That Modern Methods Pay—Farmers Cling to Wagons

JOHANNESBURG, June 21 (*By Mail*)—All truck agents are endeavoring to push motor transport which in the past has had a hard battle to fight. Farmers are still sold to their wagons, but the users of transport in the towns have at last realized that modern methods will pay them.

It has been proved that a motor truck costs less to operate than two or three six-mule wagons in spite of the fact that gasoline is about $1 a gallon and oil $2.50 a gallon. Renewed interest in motor trucks has been aroused, although steam has by no means lost its following. The electric is not in favor at present. It lost ground in Johannesburg when the Post Office gave up its fleet of electric collecting vans and purchased Chevrolet and Ford commercials.

Cape Town still has a large number of electrics in operation, but the motor and steam trucks are gaining fast. The latest development in the truck field in South Africa is the arrival of the representative of Thornycroft, Ltd., an English company. The representative came from India, where he had been engaged in putting Thornycroft trucks on the market, with marked success, according to all reports.

British Models Coming

Up to the present no Thornycroft models have arrived here, but it is understood that a comprehensive range is now on the water. The Leyland Co., British builders of motor and steam trucks and motor buses, are directly represented in Cape Town, but have only an agent in Johannesburg. However, a number of its steam and gasoline trucks have been placed in service on the Rand and in the country districts of the Transvaal.

The latest car arrival is the Hudson coach. The first of these models was sent direct to Johannesburg, where it is now on view. A few days ago the 1922 Cadillac arrived and was the recipient of a great deal of praise from the trade and motorists. Two arrived and one was sold the next day. The other has also been sold and more are now on their way.

The market for cars is slowly improving in spite of the severe setbacks experienced earlier in the year. New cars are to be seen on the streets of Johannesburg and, according to all reports, there has been a resumption of buying in the country districts. Natal has the reputation of being the best for car sales per population just at present. Transvaal is second, the Cape Colony third, and the Orange Free State last. In Bloemfontein, the capital of the Orange Free State, the motor dealers have combined to advertise cars in the local newspapers, and are unitedly pointing out to townspeople and farmers the advantage of "Buying a car."

Tire prices have been considerably revised of late. Michelin price cuts have been followed by Goodrich, Goodyear, United States, Fisk and Dunlop. The tire companies have now linked up with the South African Motor Traders Association, a merger that has long been the aim of this society.

NIGHT SALES SCHOOL FOR ATLANTA CONCERN

ATLANTA, GA., Aug. 1—The Atlanta branch of the Willys-Overland Co. is preparing to inaugurate a night school for an intensive training course in automobile salesmanship. This training is to be given without cost or obligation to young men who pass certain tests, the school to be conducted at the company's branch here under capable instructors who are themselves automobile salesmen of some years' success. Those completing the course successfully are to be offered positions with the company's sales force.

NEW R. & L. TAXICABS NOW IN PRODUCTION

CHICOPEE FALLS, MASS., July 31—A gasoline-engined taxicab to be known as the R & L cab is now being produced by Rauch & Lang, Inc., well-known as manufacturers of electric vehicles. At the present time 12 of these cabs are going through the factory and plans have been made to manufacture 250 of these vehicles at the rate of 50 a month beginning in September. Two body styles are offered—one a limousine at $2,350 and the other a limousine-landaulet at $2,475. The bodies are built by Rauch & Lang and are ruggedly constructed, as they have been specially designed for taxicab service.

The new cab is assembled of standard parts. The engine is a four-cylinder Buda with cylinder dimensions of 3¾ x 5⅛ in. Other standard units used are Brown-Lipe clutch and gearset, Standard Parts axles, Robert Bosch magneto, and Gray & Davis lighting generator. The wheelbase is 112 in. Disk wheels and 32 x 4 in. non-skid cord tires are standard equipment.

The cabs will be sold through selling agents, which are being appointed in half a dozen of the larger cities. These agents will act entirely independently of the sales organizations handling the electric vehicles manufactured by this company.

Liberty Announces Coupe Price

DETROIT, MICH., July 31—The Liberty Motor Car Co. has announced the price of its new business man's coupe at $1,695. This car was described in our issue of July 19, 1922.

CONTINENTAL EXPECTS BIG AUGUST OUTPUT

Will Increase Production of Passenger Car Engines 20 Per Cent Over July

DETROIT, July 31—Continental Motors Corp. will increase its production of passenger car engines in August by 20 per cent over the total in July. This increase, while more marked in its light six model than in others, nevertheless represents an increase in production in all passenger car models. Business in the truck field is fluctuating, the company reports.

Many of its passenger car companies are making commitments on a ninety-day basis at this time, whereas the truck buyers are holding their orders to a much closer schedule owing to the uncertainties in this field. By reason of the longer commitments the company is enabled to make more prompt deliveries in the car field than in the truck.

Production of the engine for Durant's Star car is steadily mounting and will reach 1000 daily in the near future.

GOLF TITLE WON BY NEW YORK DEALERS

NEW YORK, July 31—Dealers representing New York, Brooklyn, Washington, Baltimore, Newark and Philadelphia have just completed play in the Intercity Automobile Trade Golf League for the 1922 championship. New York was returned the winner with 159½ points; Washington was second with 141½, Newark third with 123, Baltimore fourth with 99, Philadelphia fifth with 85½ and Brooklyn sixth with 79½. It was a team competition, with eight men to a team, the play being on five different courses throughout the season.

The windup was at the Wykagyl Country Club, New Rochelle, and the luck of the draw brought the two leaders, New York and Washington, together. Before the final play started, Washington led by three and one-half points and it was not until the afternoon round that New York gained the lead, which it held to the finish.

Wills Reports Record Sales

DETROIT, July 31—Sales of Wills Ste Claire cars in the first six months of 1922 exceeded the sales for all of 1921, according to a statement by C. H. Wills, president of the producing company. A larger production than ever is being planned for August, September and the fall months, Wills says. Plants recently acquired by the Wills company are being equipped for production and will employ about 400 additional men. The company is now doing its own painting of phaetons and roadsters. To provide additional facilities for this work a building with 104,000 feet of floor space will be erected at the south end of the present plant.

DELIVERIES WORRY DEALERS IN BOSTON

Strike Possibilities Cause Them to Plan for Drive-aways This Summer

BOSTON, July 31—Some of the Boston dealers are beginning to worry about shipments due to the strike and also to the possible curtailment of orders because factories may not get fuel and materials to continue at the high production peak.

Those who represent cars made at Detroit are now checking up on the drive-away plans which they had perfected a few years ago and which managed to bring cars here when they were wanted and the railroads were not taking them. They figure that for the present the boats to Buffalo will be a big help landing cars at that city, and with smooth roads to Boston this time of the year the job will not be so difficult. One of the big distributors has been bringing cars here that way for some time.

Mississippi River Route Considered

Another distributor is figuring on getting his cars to the Mississippi river, then shipping to New Orleans and from there to Boston by water. The steamers which make the run between southern ports and the Atlantic seaboard cannot navigate the Mississippi river very far. The possibility of getting the Shipping Board to put on a steamer to carry cars from New Orleans north has been discussed.

Other dealers are figuring on getting cars through Canada on the Grand Trunk runs via Chicago and Detroit through to Portland, Me., which is an easy run to Boston. Many cars came that way in the past and some come now through Canada. Also they can be switched at Montreal via Boston and Maine direct to Boston. The Canadian Pacific, too, can take shipments for New England points. By routing them in carload lots if they come through Canada, those for subdealers could be dropped off in various parts of New England.

Wilmot Will Manage Show

MINNEAPOLIS, July 31—The Minnesota State Fair annual automobile show, Sept. 2-9, will be larger than ever, due to extensions and changes in the grandstand building, which always houses the annual exhibit of passenger cars and accessories, costing $40,000. Walter Wilmot, assistant secretary of the Minneapolis Automobile Trade Association, will be manager again.

Gain in A. E. S. A. Membership

DETROIT, July 31—Backed by the efforts of the manufacturers of starting, lighting and ignition equipment, who have pointed out to their service representatives the value of membership in the Automotive Electric Service Association, the membership in that organization has grown from 62 at the annual meeting Jan. 31 to approximately 230 on July 1. The midsummer meeting of the governors of the association will be held in Detroit Aug. 11 at which time recommendations will be made for the consideration of the manufacturers at their summer meeting at Old Orchard, Me., Aug. 31.

MINNESOTA TO TRY ROTATING GARAGE

ROCHESTER, MINN., July 31—A novelty in garage construction is to be tried out here, one of the rotating type, which is being constructed in this city by Rupert Swinnerton of Minneapolis. It will care for 200 cars and will consist of three rows of stalls, built in a circle, with the inner and outer rows stationary. The middle section rotates and is used to move the cars so they can be placed in their respective stalls in the stationary sections. Swinnerton claims that this style of construction will permit of faster and easier handling of cars than anything else heretofore tried.

WARNS OLD LOCOMOBILE CO. SHARES VALUELESS

NEW YORK, July 31.—The present Locomobile Co. of America will be superseded by a new corporation to be known as the Locomobile Co., which has been incorporated at Albany with a capital of 600,000 shares of no par value. This company will be headed by W. C. Durant. In view of this step, warning has been given by Durant that the shares of the old Locomobile Co. which are being traded in on the curb market are valueless. Practically all stock of the new corporation will be owned by Durant Motors, Inc.

Details of the terms under which Durant has taken over the assets of Locomobile have not been disclosed, but it is understood he reached an agreement with approximately 90 per cent of both the bank and merchandise creditors under which they accepted a certain percentage of their claims in cash in full settlement. Practically nothing will be left for the stockholders of the old company. The Durant proposition was accepted by the Federal Court, by the receivers and by the creditors.

Old Officers Retained

Colonel E. D. Havens has been elected vice-president and general manager. Havens was one of the receivers of the old Locomobile company and guided its affairs through the recent financial difficulties. Durant has appointed D. G. Roos as production manager, and E. A. Travis, who has been in charge of the Locomobile New York branch, has been appointed general sales manager of the new organization.

CONTROL OF STUTZ RESTS ON AUCTION

Director's Report Shows Company in Flourishing Condition on June 30

NEW YORK, July 29—Despite the assertion of Francis G. Caffey, receiver for Allan A. Ryan, that he will appeal to the Federal Court to enjoin the sale at auction of the Stutz stock owned by the bankrupt financier, it is figured on Wall Street that the auction will take place according to schedule next Wednesday.

This belief is strengthened by the action of other banking institutions which have joined with the Guaranty Trust Co. in announcing their intention to auction off their Stutz collateral next week. The Chase Security Corp. with 1600 shares, the Chase National Bank with 7800 and the Lawyers Title and Trust Co. with 4500 all say that they will put this stock into the auction along with the 111,614 shares held by the Guaranty Trust Co., which it holds for its own account and for account as trustee. In all this totals 125,514 shares, which more than constitutes control of the Stutz company. Put on the block by the same auctioneer, it is figured that there will be a combination effected to gain control of this thriving Indianapolis concern. Who it will be is only conjecture at the present time. One rumor is that Thomas Fortune Ryan, father of Allan, will seek to gain this control in an effort to aid his son in a sensational comeback.

Directors of the Stutz company, who met in New York Thursday, say that they are not taking any steps to form a syndicate to take over this control. They state that they are satisfied to continue their work at the factory and leave it to others to fight for control.

Financial Statement Issued

As proving their contention as to the stability of the Stutz company, they have issued a financial statement as of June 30, 1922, which shows total fixed assets of $4,400,089 as compared with $4,387,-114 on Dec. 31, 1921, and total assets of $6,455,809 as against $6,553,809 on the first of the year. On the liability side of the ledger the figures read $25,530 as against $302,482 on Dec. 31, with a surplus of $4,473,351 and a reserve of $555,-927 for depreciation. On Dec. 31 this surplus was $4,777,704, and the reserve $473,623. Cash on hand June 30 amounted to $148,468 as against $63,163 on Dec. 31. Accounts receivable totaled $256,148 as against $175,222, and the inventory was $1,507,450 as against $1,890,608.

In the way of liabilities $1,000,000 is charged against the capital stock; notes payable, $150,000; accounts payable, $243,062; accrued accounts, $33,467; reserve for depreciation, $555,927; surplus, $4,473,351.

Following the directors' meeting W. M. Thompson was re-elected president and George F. Lewis, secretary, while Alvin Untermyer and W. H. Coverdale resigned as directors.

POWER SCHOOL FOR FARMERS IN OREGON

Ford, Standard Oil and Others Send Out Caravan to Tour State

PORTLAND, ORE., July 31 — Thousands of farmers of Oregon are being taught the benefits and economies of power farming as the result of the industrial and farming caravan which is now touring the state under the general leadership of the Oregon branch of the Ford Motor Co. and the Standard Oil Co.

A dozen firms have joined in the big caravan, which will be on the road all summer and will visit every section of the state, and power farming equipment, including tractors, trucks and all kinds of equipment for them is being demonstrated.

The caravan was planned under the direction of W. H. Goodwin, manager of the Oregon branch of the Ford Motor Co. and is similar to the caravan run in Washington last summer, only on a larger scale.

The caravan is traveling entirely on its own power, 40 trucks, trailers and tractors being required to carry the men and equipment. Arrangements for carrying the men and the large amount of machinery and farm equipment being demonstrated are as complete as those which govern a circus and the way in which the caravan is traveling from one place to another reminds one of the circuses of old. In the present parade through Oregon, however, everything is motor driven and the prancing steeds are noticeable by their absence.

Associated in the enterprise are the Ford Motor Co., featuring Ford trucks and tractors; the Standard Oil Co. of California; the Oliver Chilled Plow Works and allied manufacturers with a complete line of farm implements distributed by the Oliver concern in the Northwest; the Ersted Machinery Manufacturing Co., showing the Ersted tractor hoist; the Lee line of contractor's dump bodies, distributed by the Parsons-Gordan Co. of Portland; Hercules commercial truck bodies, distributed by the Francis Motor Car Co. of Portland; Talbor & Casey of Portland, with a line of Trailmobiles and a number of tractor equipment specialties; the Delco lighting equipment and other products of the Modern Appliance Co.

Disteel Starts Patent Suit

DETROIT, July 31 — The Detroit Pressed Steel Co., which manufactures Disteel wheels, has brought suit in Federal District Court at Chicago against the Forsythe Bros. Co. of Henry, Ill., alleging infringement of patents Nos. 1,255,928 and 1,208,927, issued to Alden L. Putnam. The plaintiff states that the suit has been begun without malice and with no intention whatever of hampering the wheel industry in general. The Detroit Pressed Steel Co. contends that its patents are basic in the field of single disk steel wheels.

TO GIVE LIFE STORY OF GALLON OF GAS

SPOKANE, WASH., July 31—Spokane's largest automobile show of the year will be held during the week of the Spokane Interstate Fair, Sept. 4 to 9. Arrangements completed recently by Art Shea, in charge of the fair grounds automobile building, provide for the display of twenty-three of the latest models of motor cars. More than 15,000 square feet of floor space will be used in addition to the special tent to be erected near the automobile building.

A special feature in the automobile building will be the model Standard Oil miniature city. This city will show the handling of a gallon of gasoline from the time it leaves the refinery until it is placed in the consumer's car at a filling station.

STRIKE MENACE STIRS UP BOSTON PROSPECTS

BOSTON, July 31—Boston car and truck distributors have noticed in the past few days that the strike has started people making inquiries about the possibilities of getting motor vehicles quickly if necessary.

Business men have been inquiring about trucks. Some of the newspaper people want to be prepared to send out their own deliveries in case the railroad situation necessitates. Other firms, which in war times used trucks exclusively, but later went back to the railroads with their shipments, are again turning their eyes to trucks. Truck salesmen are taking advantage of this and sending out letters to business firms advising them what they should do to be prepared for emergencies.

Coats Denies Stewart Rumor

CHICAGO, July 31—George A. Coats, head of the Coats Steam Car Co., denies a report from Columbus, Ohio, that this corporation has been taken over by the Stewart Motor Car Co. The Coats Steam Car Co. is a selling organization controlled by Coats to market steam passenger cars, trucks, buses and a special light delivery wagon. The Stewart company is a manufacturing concern which has been licensed to produce, under the Coats design, a car which will sell at $1085. It is one of a group of manufacturing companies which are expected to make the various Coats products.

Cathcart Leaves Packard

DETROIT, July 29—Thomas Cathcart has resigned as head of the advertising staff at the Packard Motor Car Co. to become manager of the Promotional Department of the Crowell Publishing Co., New York. No successor to Cathcart has been named by Packard officials.

JULY IN MILWAUKEE SATISFIES DEALERS

Gains Are from 25 to 300 Per Cent Over Same Month Last Year

MILWAUKEE, WIS., July 31—Retail sales of passenger cars in July, so far as records obtainable to-day tell the story, make a remarkably good showing in comparison with figures for the same month in previous years. There are few dealers who cannot show a gain ranging from 25 to 300 per cent over the sales in July last year, and for more than 50 per cent of the dealers in Milwaukee in business five years or longer the month ending to-day represents the best and most active sales period in their existence.

Generally speaking, July business was only slightly below June or May, when as a matter of fact most dealers had expected a rather sharp drop, especially in comparison with May, for the reason that the experience of dealers here almost invariably indicated a sudden rush beginning about the middle of April and extending into early June, which could hardly be hoped to sustain itself for an indefinite period. Therefore, the July showing is considered highly favorable.

August prospects are regarded as good, especially in view of the stimulation that wholesale as well as retail trade usually receives from the annual Wisconsin State Fair, at Milwaukee, Aug. 28 to Sept. 2. This event this year is looked upon to furnish the index of rural passenger car buying. So far this has been relatively much slower than the average, although better than in 1920 or 1921.

Motor truck demand is increasing slowly. Undoubtedly, it has been helped by the railroad strike, not perhaps so much from immediate effect, but the methods and means being employed in anticipation of more serious developments. This refers more to the movement of freight than of passengers, although with respect to the latter truck orders are now being booked in steadily increasing numbers.

Pence Plans Dealers' Trip

MINNEAPOLIS, July 31—To enable the automobile dealers to take in the last day of the roundup at Bozeman, Mont., the Buick special train of the Pence Automobile Co. is to leave over the Northern Pacific road earlier than announced heretofore. The train will leave Minneapolis with dealers from Wisconsin, South Dakota and Minnesota at 11.45 p.m., Aug. 3, picking up the North Dakota members of the tour at Fargo. The train will reach Bozeman the morning of Aug. 5, which is the last day of the rodeo and the entire day will be spent there. One of the events will be the award by the Pence company of the finest saddle that can be bought to the winner of the broncho busting contest on that day.

ASSOCIATION ACTIVITIES

Portland Lays Foundations

PORTLAND, ORE., July 28—Formation of the Multnomah County Trades Association was completed in Portland by the election of directors for the association by the Portland Automotive Trades Association and the Automobile Dealers Association of Portland.

Under the plan each of the two bodies will be independent and self-governing units in the larger association. A constitution was recently drawn up and adopted.

Other separate associations will be eligible to join on the same basis. The purpose of the body will be to work for the good of the automobile industry as a whole, with each of the separate units being left full jurisdiction over their particular fields..

The association is to be the foundation of a state-wide body to be known as the Oregon Automotive Trades Association, which will be launched within a few weeks, it is stated. This body is to be patterned after the California and Washington state associations.

Directors who were elected to the Multnomah County association by the dealer and the trades bodies of Portland are as follows: For the Automobile Dealers Association—Jack Crittenden, A. B. Manley and C. L. Boss; for the Automotive Trades Association—Fred Dundee, C. H. McGirr, A. E. Foss, R. D. O'Brien and Edward Burke.

Idaho Holds Convention

HAILEY, IDAHO, July 29—Indorsement of a state law requiring bonding of garages and repair shops and maintenance stations, and the licensing of motor vehicle mechanics, was indorsed by the fifth annual convention of the Idaho Automotive Trade Association. Lynn M. Shaw, assistant general manager of the National Automobile Dealers Association, made the principal address. Uniform dealer licenses, on a flat rate; a state law permitting garages to sell denatured alcohol (now prevented by the state drug statute); a mechanics lien law; placing of commercial trucking and passenger carrying under the public utilities commission, with private licenses, funds to go to highway maintenance; enforcement of the Idaho law requiring dealers from other states to take out an Idaho license; encouragement of automobile racing were subjects reported on by various committees and indorsed by the convention as part of its legislative program. Bills covering these subjects will be introduced in the legislature this year.

Officers were elected as follows: President, Edw. S. Johnson, Twin Falls; vice-presidents, Dad Clay, Pocatello, and W. E. Ash, Boise; secretary - treasurer - manager, Guy Flenner; Assistant, Ed. Bliss, Boise.

Picnic Proves Big Success

TERRE HAUTE, July 28—Members of the Terre Haute Automotive Trade Association held a picnic and barbecue at which visiting dealers from six adjacent counties were the guests of the local dealers. Five hundred dealers, salesmen and executives of the Terre Haute association and their guests held a motor parade which had 100 cars in line.

At the picnic grounds there were sports of all sorts The barbecue was served free to all present, the association footing the bill. D. C. Burnette, secretary of the state association, said that the next board of directors' meeting would probably consider the holding of the convention at Terre Haute. The Terre Haute automotive organization has about one hundred members and for several months has had a paid secretary in the person of J. H. Garrity. This organization enlists all the automotive establishments of the city. There are group meetings, and a large number of the members are also members of the Indiana Automotive Trade Association.

Chicago Summer Meetings

CHICAGO, July 29—The monthly meetings of the Chicago Automobile Trade Association this summer are being held at golf clubs. The first one was at the Ridgemoor club with Thomas J. Hay, president of the association, as host. The business meeting was held during luncheon, following which golf was played until dinner time.

Dallas Battery Men Organize

DALLAS, TEXAS, July 31—The Dallas Battery Men's Association has just been organized. The purpose of the organization is for developing a closer co-operation between the battery dealers and service stations in the city and a uniform service at all stations. J. H. Meyers, general manager of the Ray Battery Sales Co., is the president, and William Tobian, manager of the Gould Battery Co., is secretary-treasurer. Rodger Tennant of Tennant Bros. is vice-president. With the organization of the battery men the automotive lines in Dallas are all organized. The new association will shortly start a campaign to educate the automobile owners in the necessity of caring for batteries and show why automobile batteries should not be tampered with by inexperienced workmen.

Cincinnati Holds Picnic

CINCINNATI, July 27—The Cincinnati Automotive Trades Association held its second annual basket picnic at Silverton, a suburb of Cincinnati. A procession of automobiles containing the dealers and preceded by a band, paraded through the city to the resort, where a dinner was served and various amusement features were staged. The committee on arrangements consisted of William Pister, H. C. Heisey, H. P. Kelly, Tom Shugrue, Fred Schlichtie, J. W. Harris, H. M. Sines and A. S. Herbert.

Syracuse Has Outing

SYRACUSE, July 29—Automotive salesmen of Syracuse were guests of the Automotive Service Association in the third annual outing at South Bay. The guests trounced their hosts in the feature event, baseball, but were "cut short" in the beefsteak dinner which followed.

Sports enjoyed in the outing included: Novelty pie eating contest, team broad jump, hurdle races, three-legged races, tub races, swimming and running obstacle races and the baseball game.

Promoters of the field day were: C. Fred West, president; C. G. Hanna, F. R. Bailey, H. W. McClellan, E. W. Lawton, Munro Gere, F. J. O'Neil, Charles Abel, Ross L. King, Wallace M. Williams, B. S. Arnold, A. R. Kren, Harvey H. Bebb and Philip Morse.

Georgia Dealers Will Advertise

ATLANTA, GA., July 31—Since the announcement recently that the Georgia Automotive Dealers' Association would conduct a State-wide advertising campaign in the newspapers throughout Georgia, approximately half of the dealer members have subscribed to the campaign with the result that the project is now an assured fact, according to Percy Megahee, secretary.

The first advertisement is in preparation and will occupy almost a full page in space in nearly all of the Sunday newspapers throughout Georgia the early part of August. In this first ad the association will set forth its creed, and its keynote will be "An affiliation of better dealers, the public's guarantee of reliable dealing." The creed of the association embraces the three important points: "To be true to our industry; To be true to our customers; To be true to ourselves."

It is probable that before the first advertisement is published another meeting of the members will be held in Atlanta to lay final plans for the carrying on of the campaign throughout the whole year.

Battery Dealers Organize

CINCINNATI, July 29 — Battery dealers and distributors of Cincinnati, meeting to discuss conditions in their branch of the industry, formed a temporary organization with **Peter L. Duffey** as chairman and **Fred L. Gage**, secretary.

REEKE, OF MILWAUKEE, TO GO TO CLEVELAND

MILWAUKEE, WIS., July 31—Alfred Reeke, president of the Reeke-Nash Co. and Reeke-Lafayette Co., Milwaukee, and for twenty years identified with the wholesale and retail distribution of the Rambler, Jeffery and Nash cars in succession, has been awarded a direct Nash distributing franchise with territory covering a large part of Ohio and with headquarters in Cleveland, effective Sept. 1.

As already reported, the Reeke-Nash Co. of Milwaukee has relinquished the retail selling territory of Milwaukee county to the Nash Sales Co., Wisconsin Division, which heretofore has handled distributing business exclusively for the past five years out of Milwaukee.

Mr. Reeke is a native of Milwaukee and went into the automotive trade through the bicycle school. He was agent for the Yale bicycle in 1898-1902, when he joined with Orlando F. Weber in handling the Pope-Toledo and the Pope-Hartford. Then he became associated with the Milwaukee branch of the Thomas B. Jeffery Co., Kenosha, manufacturing the Rambler, later becoming general manager. When the Rambler was renamed the Jeffery, Mr. Reeke remained Wisconsin distributor and Milwaukee dealer, and after Charles W. Nash took over the Jeffery interests, formed the Reeke-Nash Co., so that he has a record of more than eighteen years as distributor and dealer in one factory's products.

Wilson Adds to Body Plant

DETROIT, July 31—C. R. Wilson Body Co. will complete by Sept. 1 a six-story addition to its present plant which will give it about 300,000 more feet of manufacturing space. The building will be a complete unit in itself, the three lower floors being devoted to body building and the three upper floors to the painting, upholstery and finishing departments.

CHANGES IN THE TRADE

Motor Car Co., Baltimore, has been appointed sole distributor for the Stearns.

Earl-Nattan Co., Baltimore, has been made the Baltimore distributor of the Earl line.

Charles H. Yetman is manager of a new service station in Baltimore for International trucks.

Brant & Hurst, Oak Park, Ill., have been appointed Wills Sainte Claire dealers in that territory.

C. A. Bence, New Britain, Conn., has taken on the Lexington in that territory. He formerly had the Buick.

Franklin Motor Car Co., Baltimore, will build an addition to the present service station at a cost of about $30,000.

Broadway Motor Service Co., Chicago, has taken the Chicago agency for the Itala car. **M. De Tullio** is manager of the company.

A. S. Austin Motor Co., Kansas City, announced recently that it had taken over the agency here for the Ruggles motor truck.

Bert L. Gilbert, well known in Cincinnati automobile circles, is now sales manager of **Hartig & Co.**, local Marmon distributor.

W. G. Harris, manager of the Hartford, Conn., branch of the **York Motors Corp.**, has resigned. The branch is now in charge of **P. C. Nelson.**

Wabash Motor Sales Co., St. Paul, has been named distributor for the Moon factory in southern Minnesota, western Wisconsin and the Twin Cities.

Percy Ford, racing driver, is back on the Chicago automobile row as a salesman for the **Marmon Chicago Co.**, of which **C. E. Gambill** is president.

B. F. Goodrich Rubber Co., Cincinnati branch is now located in its new building. **Wilson C. Dold**, manager of the district, has offices in the new building.

Harry W. Anderson has resigned as general sales manager of the **Duesenberg Automobile & Motors Co., Inc.**, of Indianapolis. He has made no plans for the future.

Robert J. Haas, formerly with the used car department of the Citizens' Motor Car Co., Cincinnati, is now with the **E. S. Gahagan Co.**, Cincinnati Studebaker dealers.

J. E. Carter, well known in the Chicago automotive industry, has been appointed general manager of the **Roamer Motor Car Co.** of Illinois. He succeeds **Robert H. Lanzing.**

Wm. M. Maxwell Co., Milwaukee, has been appointed Wisconsin distributer of the Stutz. Offices have been opened at 306 First Wisconsin National Bank Building, Milwaukee.

George Hunt, formerly sales manager of the **Detroit Steel Products Co.**, has been appointed district manager for **Rayfield** carbureters in Detroit. Offices have been opened in the David Whitney Building.

Templar Motor Car Co. of Cleveland has made the Boston agency a regular factory branch, and it has been placed in charge of **Frank H. Walley.** From now on all New England activities will be directed from Boston.

Petersen Motors Co., Baltimore, Jordan and Locomobile distributor, has announced the appointment of the Jordan Sales Co. as branch dealers in Jordan cars. **G. A. Forstburg** of Chester, Pa., recently formed the **new company.**

Piedmont Motor Co. of Lynchburg, Va., has selected Walla Walla, Wash., as the distributing center for the states of Washington, Oregon and Idaho. **J. A. Carson**, formerly with the Tierney Toner Co., will be the distributing agent.

H. C. Trent, recently assistant manager of the New York branch of Willys-Overland, Inc., has been appointed secretary-treasurer of the **Colt-Stewart Co.**, distributors of the Maxwell-Chalmers line in New York City and surrounding territory.

Nebraska Moon Motor Co. has been organized at Lincoln, Neb., for state distribution of the Moon. The members of the new company are: J. L. Kennard, G. C. King of University Place, Neb., and W. C. Schaus, formerly a Utah distributor of the Chandler and Cleveland.

Robt. A. Cook, former head of the **Cook Automobile Co.**, has formed the Capital Automobile Co. and will distribute Studebaker cars in Arkansas. The company is being operated by **O. A. Cook** and **Elwood Young** and distributes the Chalmers and Maxwell cars.

Congress Garage Co., Minneapolis, incorporated at $50,000 to distribute Case cars in Minnesota, has opened a new garage for sales and service. **Oscar M. Nelson** is president and **Steve Hanson** is service manager. **L. O. Simensen**, from the factory, will be representative.

F. E. Truax of Chicago has been appointed sales manager of the Milwaukee branch of the Buick Motor Co., to fill the vacancy caused by the resignation of M. W. Libhart, who has joined the Nash Sales Co., Milwaukee, as manager of retail service and sales. The Milwaukee branch handles the Wisconsin and Upper Michigan territory.

Overseas Traders, Inc., Minneapolis, has opened offices to carry on an import and export trade. The secretary and manager is **F. Gunnerson**, who has been in a similar business in Scandinavia for ten years. Among other things the company will export automobiles, trucks, tractors and concrete mixers. **H. E. Almquist** is president and **J. Richard Olson** treasurer.

Oakland Motor Co., has established a factory branch at Kansas City to replace the dealer organization. **A. P. Ten Brook** remains general branch manager. **H. A. Brewer**, associated with the company four years, is manager of the service department. **E. G. O'Reilly**, with the organization five years, is superintendent of the shops. **M. H. Schandler**, has been promoted to shop foreman.

Nash Sales Co., Milwaukee unit, wholesale distributer of the Nash in all of Wisconsin and upper Michigan, has taken over retail distribution in Milwaukee territory from Reeke-Nash Co. **Alfred Reeke** and his associates have withdrawn to distribute the LaFayette, which they have bene representing as the Reeke-LaFayette Co. **Rudolph Hokanson** is general manager of the Nash Sales Co.

Glen Harkrader, formerly sales manager of the No-Leak-O Piston Ring Co., has been appointed territorial representative for the **Indiana Piston Ring Co.** of Hagerstown, Ind., in the territory west of the Mississippi and in Minnesota, Wisconsin and Illinois. Harkrader will be assisted by his brother, **Wallace Harkrader**, formerly territorial representative of the No-Leak-O Piston Ring Co., in Illinois and Indiana.

M. W. Libhart, for five years manager of sales of the Milwaukee branch of the Buick Motor Co., has resigned to become manager of retail sales and service of the Nash Sales Co., Wisconsin Division, Milwaukee, which takes over the retail Nash business in Milwaukee county in addition to continuing to handle the wholesale business in Wisconsin and upper Michigan. Mr. Libhart has been associated with Buick for about nine years.

Chippewa Valley Auto Co., Chippewa Falls, Wis., one of the earliest automotive concerns in northwestern Wisconsin, having been opened in 1908, is starting work on the construction of one of the largest and finest garages and service buildings in the state, to be located at Grane Avenue and Bay street. It is to be ready Jan. 1. The investment in buildings and equipment will be about $75,000. Frederick A. Bigler is president and general manager.

David Grody, president of the Syracuse Automobile Dealers Association, has sold his interest in the Syracuse Motor Car Co. to his partner, **Simon J. Silverman**, and will take over the control of the **Berkshire Motor Car Co.** of Albany. Silverman has been elected president to succeed Grody. **Jesse Silverman**, formerly general manager of the company, has been named secretary and treasurer. The company will continue to handle the Maxwell and Chalmers.

Republic Motor Truck Co., Kansas City factory branch has been established. **J. A. Keating**, formerly vice-president of the P. J. Downs Motor Co., is branch manager. **Lester Morgan**, recently with the local distributing company is retail sales manager. The entire sales department is in charge of **John Smith**, who has been associated with the Master Truck Co. of Wichita, Kan. **R. C. Marshall** is manager of the used-car department. Marshall was with Hocker & Elberg for a number of years and more recently with the Simons-Wiles Buick Co.

Ralph R. Curl, formerly manager of the automotive department of the Johns-Manville Co. and **D. E. Holmes** of the D. E. Holmes Distributing Co. have formed a new organization to operate in Cincinnati, known as the **Holmes & Curl Co.** Besides local distribution, sale and servicing of the Johns-Manville speedometer, the new company will distribute various other accessories. Curl served as secretary of the Cincinnati Automotive Trades Association for three years, and was elected president for 1922. Holmes is a member of the board of directors of the association, this being his third year as a member of the finance committee.

Receiver for Ohio Concern

COLUMBUS, OHIO, July 31—Upon the application of W. A. Breisacher, president and treasurer of the United Auto Stores Co., Judge Kinkead has named Oliver H. Perry as receiver. The company has been conducting retail stores in Zanesville, Cambridge, Delaware and Sidney. Stocks on hand are appraised at $20,000.

Organize Piston Ring Company

DETROIT, July 28—Pelton Piston Ring Co. has been formed in Detroit by E. H. Belknap, Carl H. Pelton, former secretary of the Maxwell-Chalmers companies, and Charles E. Pelton, whose former connections include Timken-Detroit Axle Co. and other plants. The organization is to produce a ring designed to stop oil pumping and hold full compression.

Chicago .....Jan. 27-Feb. 3
Annual Automobile Salon, National Automobile Chamber of Commerce.

SELF HELP GARAGE COMES TO KENOSHA

KENOSHA, WIS., July 28—"The Help Yourself Garage" is coming to Kenosha. It will be 64 x 126 feet in size and have a storage capacity for 60 automobiles. The building will be of all-steel construction and fireproof.

"This is going to be a unique garage," declared Dr. George L. Ross, the prospective owner. "It will have no repairshop, but it will be open at all times as a repairshop. The owner of an automobile will be invited to bring his car to the garage and do his own tinkering. We will provide for his free use tools and other accessories, but we will not employ any workmen. We are going to sell lubricating oil. Under our plan a man can drive into this garage, drain his own oil and put new oil in the car at the wholesale price."

Buffalo Chosen for Convention

NEW YORK, July 28—The annual fall convention of the Motor and Accessory Manufacturers Association, at which credit and other conditions will be discussed, will be held at the Lafayette Hotel, Buffalo, Sept. 13, 14 and 15.

PIERCE-ARROW PRICE SLASH GAINS ORDERS

BUFFALO, July 29—Orders resulting from the price reduction announced on July 15 by the Pierce-Arrow Motor Car Co. have put the entire plant upon a full-time basis.

"Immediately after our prices were reduced our distributors throughout the United States began sending us telegrams informing us that it would result in a pronounced increase in volume of business," said Myron E. Forbes, vice-president and general manager of the company.

AUTOMOTIVE
ASBESTOS PRODUCTS

Jobbers, dealers, service men find in this reliable line, asbestos products of *proven* merit and *known* quality. Being the *largest* makers of asbestos textiles in America, we are naturally in position to exercise the skill, experience and knowledge so necessary to the design and manufacture of asbestos products for automotive use.

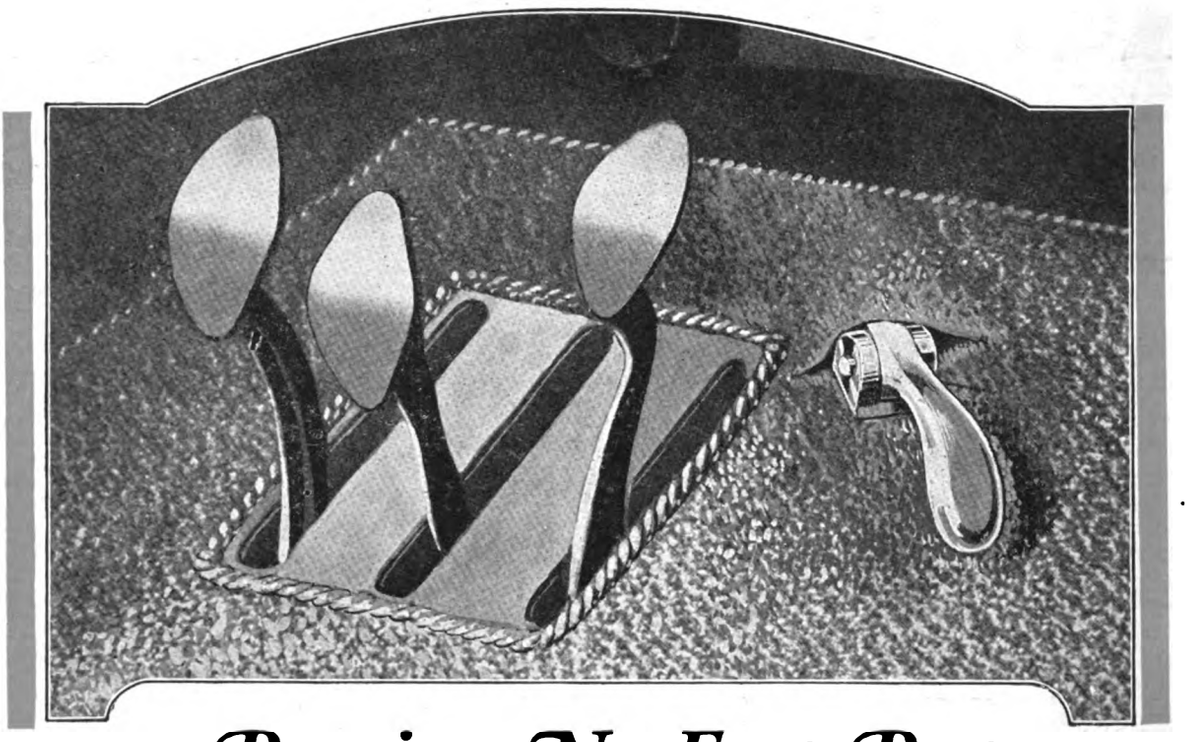
GARCO
ASBESTOS
BRAKE LINING

is recognized throughout the industry for its enduring strength, additional asbestos and close weave.

Our Automotive Line Includes

Brake Lining,
Transmission Lining for Fords,
Cone Clutch and Disc Clutch Facings,
"RINGPAK" for Ford Piston Rings,
Asbestos Spark Plug Yarn,
Garco Gasket Roll,
Valbestine Valve Stem Packing,
Sheet Packings for Gaskets,
Asbestos Wick and Rope.

GENERAL ASBESTOS & RUBBER COMPANY



Main Offices and Factories: CHARLESTON, S. C.

BRANCHES:

New York, 296 Broadway — Pittsburgh, 311 Water St. — Chicago, 14 North Franklin St.

Requires No Foot Rest

The above view of the Williams Accelerator appeared in this publication during the early part of this year, and showed the comfortable operation of the pedal. The Williams Accelerator requires no foot rest or other attachments in order to give perfect acceleration.

The exclusive feature of the Williams Accelerator, which eliminates the need of a foot rest, is a control running from the accelerator pedal to the carburetor. By sliding through a flexible brass cable, this control provides a uniform friction which allows the gas to be fed smoothly and evenly. The pedal is of pure aluminum—now being adopted by the best car manufacturers because of its strength, lightness and neat appearance.

When you sell the Williams Accelerator you do not have to explain the necessity for a great many extra attachments. When you install it, you have only three easy connections to make. These are only two of the reasons why it will pay you to show your customers the Williams Accelerator.

DEALERS: Order through your jobber. Ask him for the new Williams Accelerator display card, or get your cards from us.

NO-LEAK-O Piston Rings

THE ONLY GROOVE THAT CANNOT CLOG

Make Satisfied Customers

Today thousands of car owners are insisting upon the piston ring with the specially cut groove—the "oilSEALing" groove—found only in No-Leak-O because they have learned that this groove absolutely prevents oil "pumping" gives perfect *oil control and compression in each individual ring*, and stops "unburnt" gas or kerosene from working down into the crank case to weaken lubrication.

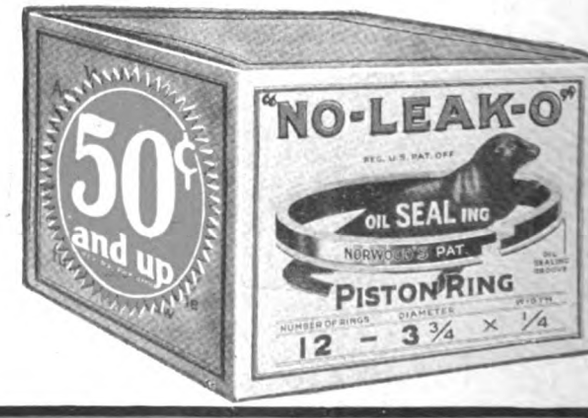
No-Leak-O Piston Rings are made in one piece—easy to install—quick seating—of finest material—fully guaranteed and individually tested for accuracy.

For replacement jobs you need a dependable ring designed and made especially to give satisfaction on replacement jobs. No-Leak-O started as a replacement ring; they are still the *leading* replacement ring; they make good on every job.

Over 200 reliable jobbers now carry No-Leak-O Piston Rings in all standard sizes and *over* sizes. Prompt service *always*.

Write for free booklet, "Know the Facts About Grooved Piston Rings." Also let us tell you about our liberal dealer proposition. It will pay you to act quickly.

NO-LEAK-O PISTON RING COMPANY



Dept. T-41

BALTIMORE, MD.

One price during eight years of continued success

One design—for all cars—50c and up

Important—In buying piston rings insist on the genuine No-Leak-O with the original "oilSEALing" groove, packed in this standard package bearing the famous ring and seal, our registered trade mark. Beware of imitations.

WON'T LEAK
because they're sealed with Oil

This Counter Display
Will "Ask 'Em To Buy"

Write for it now. But better still—ask for two—one for your counter and one for your window. You can't run around and show customers everything that you sell—but this display will tell every one of your customers that you sell Shaler 5 Minute Vulcanizers, and Shaler Patch-&-Heat Units. It's the best "Sales Stimulator" that you ever saw—a "Magnet" that will draw new customers into your store if you will merely put it in your window. It brings 'em in to buy.

SHALER

5 Minute Vulcanizer Is Nationally Advertised

The Counter Display will connect your store with our advertising, and remind your customers of Shaler advertisements which they have read in their favorite publications, at home. There is a big demand for Shaler Vulcanizers and Shaler Patches. Over 20,000,000 Shaler Patches were sold last year, and the demand is steadily increasing.

It's FREE—On Request

This counter Display is but one of many Shaler Helps which we send to Shaler Dealers on request. The Shaler 5 Minute Vulcanizer is one of the most profitable items that you sell, because every sale is but the first of a chain of sales of Shaler Patch-&-Heat Units for use with the Vulcanizer. Have you received our new Posters and Window Displays? If not—just ask us for them.

In Brooklyn—

"We are very optimistic over the outlook for business this year and now that the public trend is growing more and more toward the Oldsmobile, both in the 4 and the 8 cylinder models, we feel that we will steadily forge ahead of our competitors in our respective class. We know we are above competition when it comes to real actual performance and cost of upkeep and we wish to say that we are sure that this will be one of the best years that we have ever had."

OLDSMOBILE COMPANY OF BROOKLYN, INC.
F. C. STOWERS,
General Manager

Brooklyn, you know, is where a great part of New York City *lives!*

Competition among motor car dealers there is unusually keen.

Here, too—the Brooklyn Oldsmobile dealer reports a decided trend upon the part of New York's *super-critical* motor car buyers toward the Oldsmobile!

Like all Oldsmobile dealers—the Oldsmobile Company of Brooklyn is making money; it is growing; it is thoroughly satisfied with its franchise.

If Oldsmobiles are in big demand in Brooklyn—they will be even more sought in communities where competition is less keen.

Your territory may still be open. Naturally, however, the better territories are rapidly being taken by alert dealers.

The Oldsmobile franchise is eminently worth-while! Prompt action may get it for you. Wire or phone us, or write by special delivery, for an appointment and complete information concerning your territory.

Real Smart Dressers Are Getting Into These Outfits Now

Digitized by Google

An especially dressed salesroom helps present the closed car in an early fall exhibit. It's a good time to plan a special presentation now

It's Time to Plan Promotion to Boost Fall Sales

The Small Town Dealer as Well as the Big City Man Can Stir Up Autumn Interest in His Product Whether It's a Car, Truck or Tractor

How the Car Dealer Can Stimulate Fall Sales

Exhibit at the county or state fair. Even a tent exhibit will attract prospects.

Hold a Harvest Week, or Fall Festival, in his salesroom, with special advertising and decorations.

Join with other dealers in holding a Closed Car Show.

Join with other dealers in holding a Closed Car Week.

How the Truck Dealer Can Stimulate Fall Sales

Exhibit at the county or state fair. Demonstrating hauling uses of special equipment, such as hoists, power machines, etc., can be made a feature of the exhibit.

Join with other dealers in a tour of towns and farming country. The tour should have educational and demonstration features.

How the Tractor Dealer Can Stimulate Fall Sales

Exhibit at the county or state fair. This is a big bet for the tractor and power farming equipment dealer. He can show, and if there is sufficient space, demonstrate drawbar and belt uses of the tractor, and he will have a selected audience of logical prospects.

Stage a demonstration tour of the territory, with tractors mounted on trucks for exhibit purposes and with stops to show them in operation.

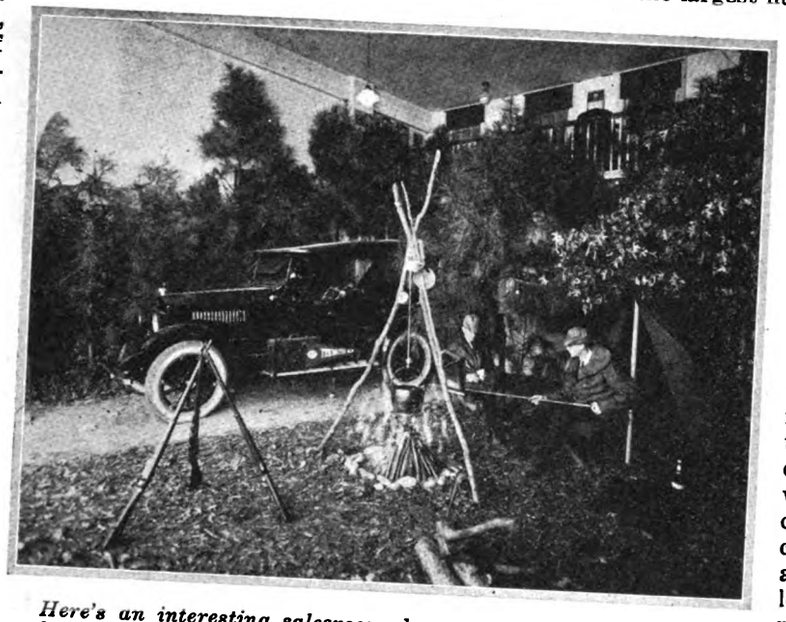
Join other dealers in a fall power farming demonstration.

IT'S time to get ready for the big fall selling effort.

Almost before we realize it Labor Day will have passed, the vacation period will have ended and fall and winter business will be gathering momentum. Whether the automotive dealer will cash in fully on the opportunities of fall merchandising will depend, to a large extent, on how well he plans NOW to get the business in the next few months.

The race well begun is half won. And, today is not one moment too soon to begin to plan for next fall's business.

For the motor car dealer who is prepared the fall brings many opportunities. For the city dealer these opportunities lie in the effectiveness with which he reaches the public through his newspaper advertising, sales letters and salesroom display. For the dealer in the rural districts the county and state fairs offer particular opportunities for attracting the attention and interest of prospective purchasers.



The important thing for the dealer who has decided now to prepare for a fall selling campaign is that it be laid out with due consideration for local conditions and the possibilities of success that are to result from his efforts.

Digitized by Google

How the Car Dealer Can Stimulate Fall Sales

IN the planning of all selling campaigns it is good business to anticipate the amount of sales that are to be expected and budget expenses month by month in appropriating the money for the effort. Obviously it is going to cost something to go after business and the dealer wants to be sure that the results to be obtained are going to yield a fair profit.

The next step is a meeting of the salesmen at which a thorough organization is effected for the fall campaign. The third consideration is the appearance of the salesroom. Perhaps this means repainting, new decorations, new furniture—but something should be done to freshen up the place and make it more attractive. Then, there is the laying out of the direct mail campaign, the preparation of the mailing lists, the drafting of special fall advertising copy and the provision of a means of intensifying the follow up system which may have been allowed to lag during the summer months. These are things that the dealer may profitably consider now whether he is located in a city or rural selling territory.

Here's an interesting salesroom decorative scheme that might be used during a "Fall Festival." This was used during a special effort by the Perry Motor Co., Velie, of Norfolk, Va. The figures are floor salesmen

A good fall activity for the city motor car dealer is a special week early in the fall which may be known as "Harvest Week," "Fall Festival," "Fall Style Show," or some similar affair. In any of these special weeks the value of the activity lies in the effectiveness with which it secures favorable publicity for the dealer and his product. The week should be planned far enough ahead to give time for proper advertising in the newspapers and the issuance of invitations to owners and prospects, etc. Appropriate decorations may be used to get the salesroom and the display windows in harmony with the idea. Facilities should be provided for the registration of all guests and the recording for future attention of those who are likely to develop into prospects at some later time.

Closed car shows and closed car weeks have proved effective in stimulating fall business in the past. They were particularly successful in many cities last fall. The closed car week or show idea in cities where there are no active dealer associations usually develops as follows:

1—A prominent dealer, with the aid of a few others, invites the dealers to a luncheon at which idea is suggested.

2—An appropriation is decided upon which is secured by levying on the dealers for $50 to $100 apiece according to the cost of the function planned.

3—The date for the week or show is set, usually running from Saturday to Saturday.

4—Forms of promotion are decided. Those that have been found most successful include: Co-operative advertising in local newspapers; a parade of the latest closed models; signs in windows announcing closed car week; general price lists giving prices of all cars for distribution during the event; individual advertising in which the firm's participation in the closed car event is stressed.

Another form of sales stimulation that has worked out finely for an individual dealer is the owner contest. The idea behind this is to enlist the assistance of owners in getting prospects. Such a campaign is usually opened with an announcement in the newspapers that owners of a certain make of cars will learn something of interest by communicating with the dealer. This is to establish contact with owners not in the dealers' files. To those who respond, as well as all other owners known, letters are sent offering prizes for the largest number of prospects handed in that result in sales.

In addition to these awards a check for $10 was sent immediately to the person who sent in a prospect that was closed. This plan was responsible for 700 new prospects that found their way into the files of this Seattle dealer in the first month of the contest.

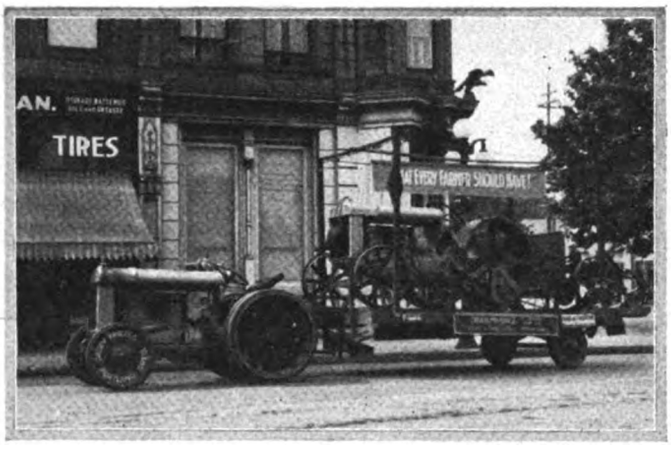
County and state fairs offer particularly fine opportunities for the automotive dealer, especially for those who serve the rural communities. In most county and state fairs a special space is allotted to automotive merchants, but a display at the fair, even if under a canvas top, is good publicity and usually pays for itself many times over. There are instances, also, where dealers were able to sell used cars at fairs.

Russel P. Taber, Inc., Hartford dealer, used the state fair to good advantage to sell used cars last year. An interesting phase of his promotion work in connection with his exhibit at the fair was the issuance of "summons" which were sent through the mails and handed to motorists and others on the highways and at the fair. The "summons" had all the outside appearance of a legal paper. Inside it read: "You are hereby summoned to appear at any time this week at Taber's great used car sale now being held at the Connecticut Fair at Charter Oak Park. We are disposing of our entire stock of used cars at prices far below the market. We will trade your present car. Come before the best ones are gone."

How the Truck Dealer Can Stimulate Fall Sales

THIS fall promises particularly bright prospects for the motor truck dealer. In the farming areas particularly, with the liquidation of crops, there is going to be purchasing power that has been at a low ebb for many months. The railroad situation at present promises a widening of the use of motor trucks in freight and

Digitized by Google



crop transportation and, in addition to these developments, there are the continually increasing demands for motor truck transportation in the contracting field. Another factor that is expected to contribute to the upward trend of truck sales is the improvement of general business and the loosening of the purse strings of large corporations for appropriations to replace much of the present rundown motor truck equipment.

With the farmer back in the market for trucks this fall there is promise of considerable success in the properly conducted motor truck tour. However, to be successful the tour should be strong in educational and demonstration features. In some localities motor truck dealers already are planning to spend several weeks this fall in the farming districts demonstrating trucks in hauling crops and in performing other services on the farm. An important thing to be considered in connection with a motor truck tour is the securing of proper advance publicity. This usually can be done most effectively through the co-operation of sub-dealers in the smaller communities.

Exhibits at county and state fairs should also prove profitable this fall. However, in arranging such exhibits the motor truck dealer will want to do more than show trucks. He will want to demonstrate them in practical haulage jobs.

The alert truck dealer is planning now to make a vocational selling effort this fall, concentrating particularly on businesses that will need motor truck transportation during the fall and winter months. While concentration on such businesses as coal, department store, etc., is important, it is also worth while to give attention to businesses that will develop heavier demands for truck transportation as a result of the upward trend of those particular businesses in the rehabilitation of general business. It will pay the motor truck dealer to watch closely the trend of business in his particular territory and bear down particularly on those that are prosperous.

One source of business that the motor truck dealer will do well to cultivate this fall is the county and municipal bodies charged with the duty of keeping the highways open for traffic this winter. The snow removal idea is growing rapidly in all parts of the country and many thousands of dollars are going to be spent early this fall for equipment. Early September is not too soon to begin the selling effort in this direction. The dealer also will want to prepare early in the fall to keep his service station busy by soliciting winter overhaul, winter cab installation and similar jobs.

Demonstrations and educational efforts are going to sell more tractors this fall, and the enterprising dealers are planning their fall appeal now

How the Tractor Dealer Can Stimulate Fall Sales

THE late summer and fall present some opportunities for selling tractors and power farming machinery. The farmer needs power during this period to harvest his crops, to do his fall plowing, to do his threshing and ensilage cutting, and, during the winter months he'll find the belt power of the tractor useful. Sales during the fall will, of course, not be as great as during the spring months, but the opportunities for selling tractors during the next few months are sufficiently plentiful to warrant the dealer's going after them.

Demonstrations are one means that the dealer can adopt to tell large numbers of people in his territory about the tractor and machinery he sells. The county fair or the state exposition attracts large numbers of farmers. They come to see the exhibits. Dealers should have displays at these fairs so that their products will receive attention. If the fair rules permit, the display should show the tractor doing both drawbar and belt work. Demonstration tours will also secure favorable attention provided they are properly advertised. Tractors and machinery can be loaded on trucks and carried from one demonstration ground to another. Farmers in the territory surrounding the demonstration point should receive notice of it through newspaper and mail advertising. Co-operative demonstrations put on by groups of dealers are well worth while.

Satisfied owners are often able to provide names of likely tractor buyers. Dealers should call on their owners to get this information. At the same time they can inspect their tractors to see that they are in proper condition for fall and winter work, and also solicit winter overhaul business for their shops.

At the present time everything indicates that this year's crop will be most satisfactory and that the market for it will be favorable. As a result the finances of the farmers are likely to be much improved. He is almost certain to be in much better position to buy than he has for some time past.

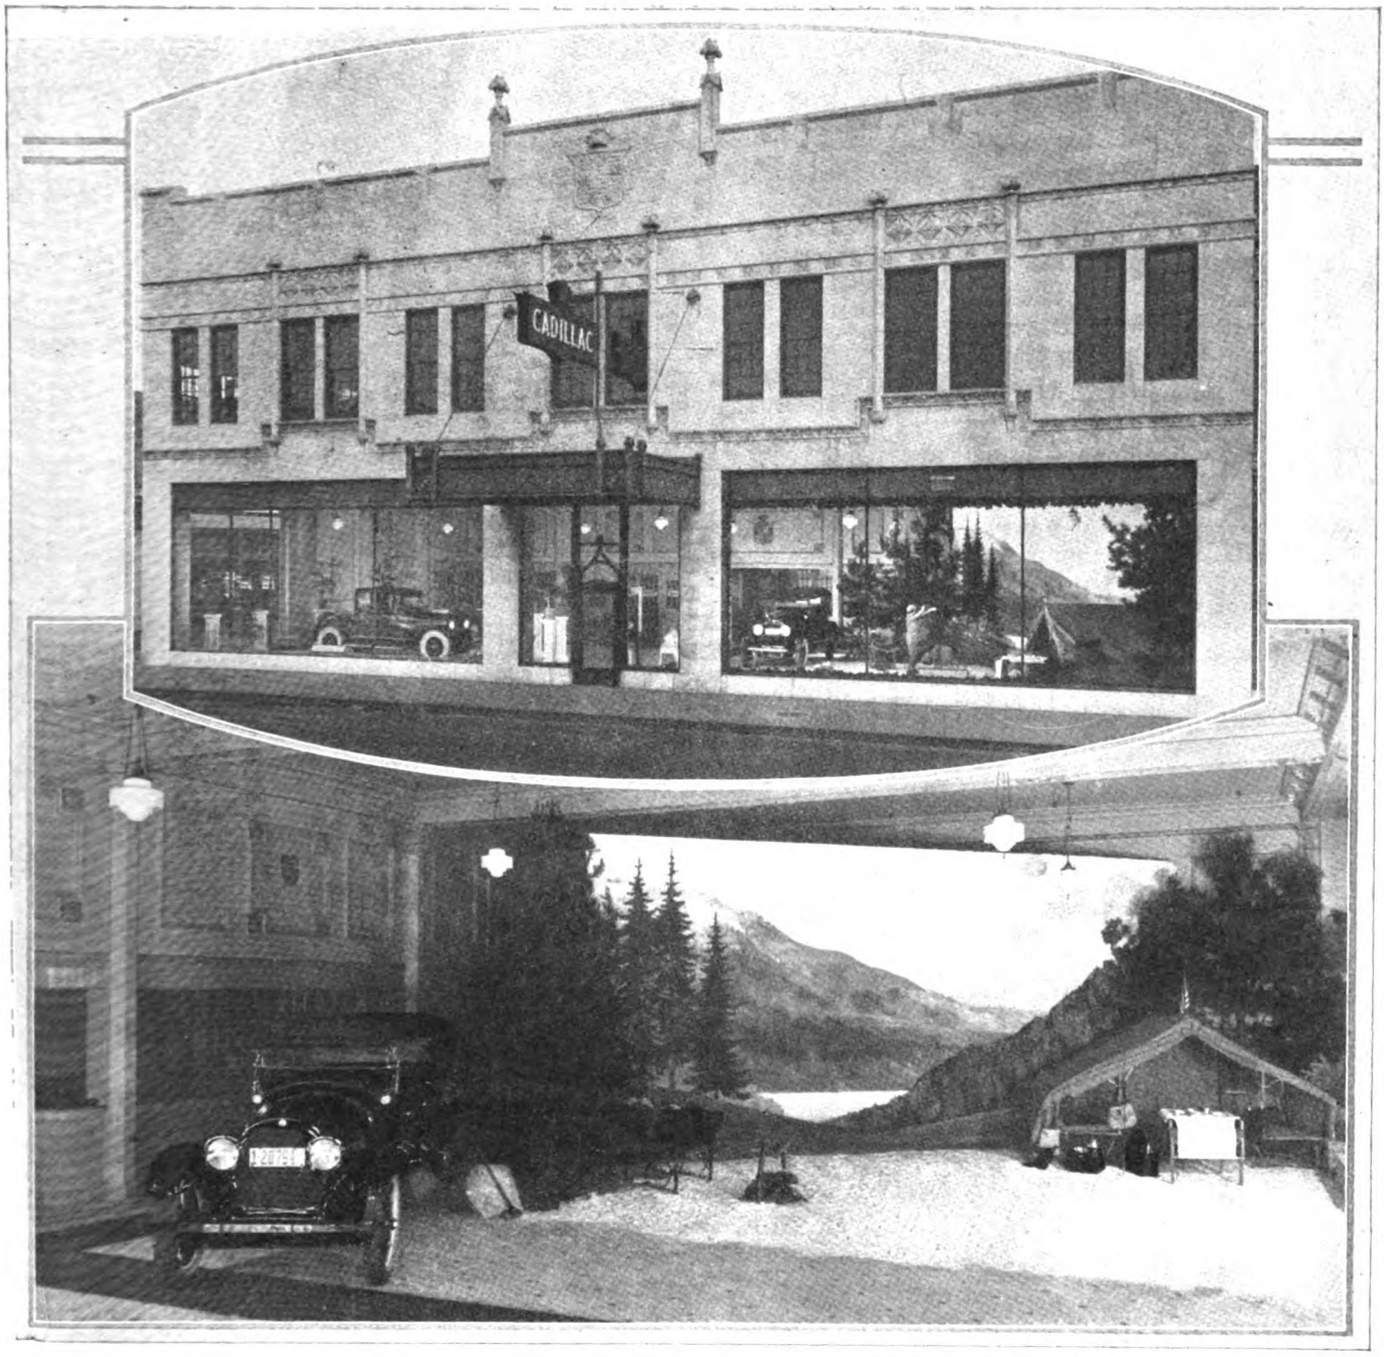
Service Dealer Idea Growing in Truck Selling Field

THE Republic Truck Sales Corp. is meeting with considerable success in the application of the service dealer idea.

Several months ago the company sold the idea to its dealer organization. It consisted of a closely woven dealer representation through the appointment of Republic service dealers in every town embraced within the respective territories of the Republic's distributors and factory branches. In putting the idea into effect, it was found easy to locate in practically every city and town at least one garage proprietor of the desirable type and sell this man the Republic service dealer franchise. In selling it to the garagemen it was pointed out that it contained the following advantages:

1—Cash commissions on prospects developed by the service dealer.

2—Extra profits accruing through being exclusive service representative in his vicinity.



3—Opportunity to buy parts from his distributor at prices that afforded a satisfactory profit.

4—The valuable asset of being connected with a reputable and widely known organization.

Numerous sales have been made by these service dealers to prospects who otherwise would never have come to life. They have proved a valuable outlet, not only for new trucks but for the traded-in vehicles.

Making Display a Thing of Beauty

AN elaborate and attractive piece of automobile window and floor decorating was shown in Des Moines recently by the Kruidenier-Cadillac Co.

The entire salesroom was given over to the display, made by a national decorator. One side of the room represented a Florida veranda scene, while the other was a camp scene in the Rocky Mountains. It was the latter part of the picture on which the stress was laid and which attracted the most attention. However, the catch line, "One step from the Florida veranda to a camp in the Rockies," was a good one.

A large painting of the Rockies with a full length pine tree at each end formed the background, in front of which was a large expanse of white sand. Here was set up a complete camping outfit, and it was complete. During the night hours employees, appropriately dressed, represented campers and a boy scout fried eggs and pancakes.

To bring out the local atmosphere four fans were placed behind the pine trees to make the branches move and pine incense was burned.

At night a series of reflectors, covered with red celluloid, were trained on the scene, and a number of people who had camped in the Rockies remarked that it gave a striking resemblance to a sunset in the Rockies.

Previous to the opening of the display 1000 printed invitations were mailed and newspaper advertising invited the public. The rooms were kept open until 10 each night.

Small Daily Ads Build Business for Kansas City Tire Dealer

With Others Selling Just as Good Product and Service This Dealer Made His Name Well Known—and It Produced a New Customer a Day

HOW would you like to add one new customer a day? And keep up that addition, day after day, week after week?

You'd pay real money to do that.

Then suppose that while you were adding these new customers, you were finding that your old customers were a lot more friendly, that they seemed more firmly attached to you, and that they were taking the trouble to refer their friends to you? Either of these results would be worth considerable effort, and considerable money, too.

VAUGHN & SEESTED, owners of The Tire Shop, 3117 Main Street, Kansas City, are getting both of these results by the one method, the method of newspaper advertising. And they are not spending a lot of money or effort in the procedure, either.

These young fellows have a tire shop in a good location, on one of the best thoroughfares for motor traffic. They had built up a nice business, giving real service. They had tried advertising a little, now and then; and they had decided that advertising was not the way to increase business. It didn't pay. They couldn't see the results. People flitted from one tire shop to another without good reason, or for personal reasons, or because the shop selected was most convenient.

Advertising wouldn't pay, they believed, because of this condition. Practically every tire shop handling the tire this firm handled was giving real service, could be depended upon. They couldn't get business by offering better service because their service was no better than that rendered by many other tire companies. They knew they could give perfect satisfaction—but they were equally sure that a lot of other tire companies could give and were giving perfect satisfaction also.

They *might* advertise cut prices—but it was a cinch they weren't going to try to build business that way!

No use to advertise, therefore. Better save the money and spend some time making more personal acquaintances and finding business.

Then a new thought came to them.

They analyzed all the above elements of the situation and discovered this idea:

People were, it was true, pretty sure to get good service from almost any shop handling these tires.

Therefore—

1.—*People would be as ready to patronize them as any other company handling these tires.*

2—*People were not definitely settled, as a rule, on any tire company, even if settled as to tires.*

3—*People would go to the shop whose name was most firmly fixed in their minds, since other elements were fairly equal—that is, all those people who were not tied to one company by personal reasons, or from unusual appreciation of service.*

Evidently, therefore, there was a chance to secure a nice list of new customers. The problem was merely to make the firm's name well known to many people—to fix this name in their minds.

The Service Car an Advertisement

Everything bends toward making the name of The Tire Shop, Kansas City, well known to the public. The service car, painted white and lettered in black helps put across the name with the implication that good service can be relied upon

The *name* was the thing they had to put over. They didn't have to sell "service," because that had already been sold by the careful policy of the tire company in the selection of tire representatives and co-operation with them. They didn't have to sell the *tire*, for that was well fixed in the minds of a large part of the tire-using public, by the manufacturer's advertising. Incidentally, Vaughn & Seested were absolutely sold on the tire themselves—they were without any hint of doubt themselves that the tire was right; advertising probably having aided them in the attainment of this confidence, as well as experience.

Starting with the new-found conclusion that there was an open opportunity to build business by making their firm name widely known, they began to figure on advertising again.

Remember, they had found advertising unprofitable before. They had tried it, with occasional advertisements. Since that, advertising had failed, and since their new study of the subject indicated that advertising could pay, evidently the error was in their advertising and not in the idea.

The problem then was not "Shall we advertise?" but "How shall we advertise?"

The process of their study is worth following. It shows constructive thought on the subject of advertising.

Sporadic advertising, as they had done it, was not the thing for them. An advertisement once or twice a week, even if large space were used, would merely remind the people of their name; it would not hammer the name home. Sporadic or intermittent advertising paid for some people—but it was noted that those advertisers were not "selling" a name, they were selling a specific product, usually they were offering a particular thing in that one advertisement which would not be offered in later advertisements.

This firm wanted to keep offering the same thing, acquainting with this one thing, the only thing the firm was aiming to sell them—*its name*

Therefore, persistent, constant, daily advertising was decided upon. And they had to be sensible about it. They

Digitized by Google

were not going to splurge, they were going to aim at keeping up this advertising indefinitely. It was to be a regular expense, just like rent. So it had to bear its proportion to their volume, counting as volume a fair expectancy of its returns.

Two inches single column was the space decided upon for the trial period of three months. They were sure to advertise that long, to give the plan a fair trial. And this space would tell their story—get their name across.

Here's an inside tip on the advantage of small space regularly used, for their purpose:

It gets good position.

Two inches, on a regular contract, is a mighty handy piece of advertising for the makeup man in the newspaper office. It can be slipped into many a nook in the front part of the paper. The occasional advertisement has to go wherever there is room, any place. The regular advertisement is held constantly in mind, as that which will fit into a space in good position. Being contract, it always gets in fairly good position, and in fact has almost always been on the second page of the newspaper.

The copy is all prepared from the assumption that a large clientele is already sold on the tire itself and on service on that tire, wherever secured. The tire name is therefore conspicuous; the play is to people who want to locate a shop giving good service on that tire. The tire name, both in straight type and in the tire company's well-known emblem, was the prominent feature of each display.

Copy was changed occasionally; but there was no effort to get up novel, or striking, or "interesting" reading matter. The firm is just hammering its name and address and telephone number. Sometimes the telephone number is stressed somewhat; sometimes the location is put in larger type.

Results:

"We didn't notice any result whatever for ten days or two weeks," said F. A. Seested. "But we were trying hard to find out from every customer why he came. And finally the new customers began to answer our guarded questions, by saying that they saw our advertisements.

"Now, we know definitely that at least half a dozen new customers a week are coming to us directly as a result of that newspaper advertising. There may be many more. Then, too, many of these new customers might have come to us anyway, because of our location and the reference of friends. Maybe it is easier for them to give credit to the advertisement than to mention the friend.

"Anyway, it shows that the advertisement has been read.

"And regular customers are mentioning the advertising, too. They seem to think more of us, because we are advertisers. It undoubtedly adds to our prestige, to be represented in the advertising columns of the paper *every* day. Perhaps we could fairly credit the advertisement with holding some of our regular trade, which after all has no very special reason for staying with us.

"We have kept an absolutely open mind as to this advertising for the first three months. Now we are making up our minds as to whether it pays or not. There is no question about it. *The advertising pays.*"

These Ads Produce a New Tire Customer a Day

Here are a few samples of the daily small ads that have successfully built tire business for The Tire Shop, Kansas City. They are the actual size used by this firm. With other dealers successfully competing in the product and in service The Tire Shop decided to drive home its name through small daily ads—and it is paying handsomely in building new business and holding old friends.

How Cadillac Dealer Preserves Owner Contact

EDWARD LEWIS, INC., Cadillac dealer in Great Neck, L. I., through some member of its organization, makes personal contact with every owner in its territory at least once every three weeks. Usually the contact is made in the service department. But if a car does not make its appearance within the three week period and no salesman has talked to the owner during that period, a salesman makes a friendly call on the owner.

Every three weeks the service department furnishes a complete list of all repair orders made out during the period. This list goes to the sales department, which checks it against the owner list. Any owners whose names do not appear on the list are turned over to the salesman for follow-up.

The object of maintaining this contact is two-fold. The first object is to keep in touch with owners so that any dissatisfaction they may feel can be eliminated. The second object is to obtain from owners the names of any of their acquaintances who might possibly be interested in the purchase of a car.

Seventy-five per cent of the names in the prospect files of this dealer are obtained in this way. On the average, 10 such follow-up visits produce three live prospects. Furthermore the close contact maintained with owners by this dealer assists him in providing a steady volume of work for his shop throughout the year.

Sales Promotion Bus Line Pays This Dealer Double Profits

How an Enterprising Truck Dealer Filled Two Southern Cities with the Truck He Is Selling by Making It a Public Utility

A RECENT census gave the number of buses operating out of Norfolk, Va., as 243. These are divided unevenly among 150 owners. But the most interesting thing is that many of the buses seen on the streets in and around Norfolk are of one make—the Reo. Leads from independent bus operators point to the local Reo dealer, trading as R. G. Edgerton Co., and covering the Norfolk, Suffolk and Roanoke territory, as *the source from which the district is being flooded with Reos.*

Edgerton has been selling Reos since 1907. Last November, after having attended a big sales meeting in New York, at which some good bus sales plans were discussed, Edgerton launched as a *sales promotion plan* the first bus line in Norfolk and Suffolk to run on schedule. It "took" well with the public from the start, although some of the vehicles were converted standard express bodies with opposed seats placed lengthwise, and a few touring cars also were used at the outset. Gradually, as the line prospered, these vehicles were withdrawn and Reo chassis with special McKay bodies were substituted.

To-day, Edgerton has six buses in operation, two of these being classed as reserve buses.

EDGERTON'S bus line, which is incorporated and run as a separate business from the dealership is known as the Edgerton-Reo Bus Line, *the name Reo, of course, being retained for sales promotion purposes.* As Norfolk is the main center of trade, there is a great influx of traffic from Suffolk, which is the servicing and management point for the fleet, and also from the other stations on the line, to Norfolk.

As a public utility corporation the Edgerton-Reo Bus Line is a decided success, is self-supporting and making money. As a sales promotion factor it is of no less value, *as it has filled Norfolk, Suffolk and surrounding territory with Reo buses and has greatly promoted Reo truck sales generally, according to statements of the company.*

For instance: Six other bus lines since last November have purchased their entire equipment from the Reo dealer. Immediate competitors in the bus transportation business are purchasing Reos increasingly, one line having bought three Reos at a comparatively recent date and another, owning two, having just ordered a third. The Reo dealer has seventeen and one-half per cent of all commercial vehicles, including buses, registered with the police department in Norfolk and the city government owns no less than twenty-three Reo jobs. It is indisputable that Norfolk is a "bus town" and the impression the observer gets is that it is a Reo "bus town."

"We regard it as an especially good advertisement," said Lacy L. Redd, sales manager in Norfolk for R. G. Edgerton & Co., "that this sort of bus service puts the vehicles to the very severest kind of a test."

As a further publicity stunt, Edgerton has had made brass plates, three inches wide and twenty-four inches long, with large black lettering announcing the vehicle's mileage after it has run 20,000 miles. One of these plates is placed in the back of the bus on the inside for passengers to note and another is placed on the outside rear of the vehicle for those in the street and in other vehicles to read. A sign will say, for instance, "This Reo Has Run 100,000 Miles."

"Close watch is kept on the speedometer of each vehicle and every time it registers more than 20,000 miles, the brass plate is changed. Incidentally, we keep the owner's speedometer in repair as long as the vehicle is in commission."

This dealer goes after the bus prospect by personal call and follow-up letter. An expert salesman is detailed to concentrate on bus business. He makes a practice of talking with all the independent bus owners at the end of their routes, at least once a week. The bus men congregate at small stores that abound at the various terminals of bus routes and these are especially good places at which to interview them on their needs.

Vocational solicitation is done by personal call and follow-up with carefully written letters, which are multigraphed, the name and address being typed in.

Following personal calls, the first letter sent out is usually one telling the prospect that the company appreciates fully the courtesy shown in granting the salesman the interview. This is intended to cement good will. Every prospect receives some kind

Building Business with Buses

IN Norfolk, Va., a bus line is being successfully used as a sales promotion factor by a Reo dealer.

The bus line, in itself, is a profitable venture because it is efficiently managed and maintained by a dealer's service department. But, its big contribution to the success of the dealer operating it is in its demonstration of his product and its advertising of his business.

The bus line is called the Edgerton-Reo Bus Line. Edgerton is the name of the dealer and Reo the automobile he sells. In addition to this publicity the dealer impresses people by the efficiency of his bus service, and by signs on the buses which tell how many miles it has traveled.

A street railway strike provided the impetus which sent this dealer into the bus business — but the value of the bus business as a sales promotion factor continues it as a successful venture.

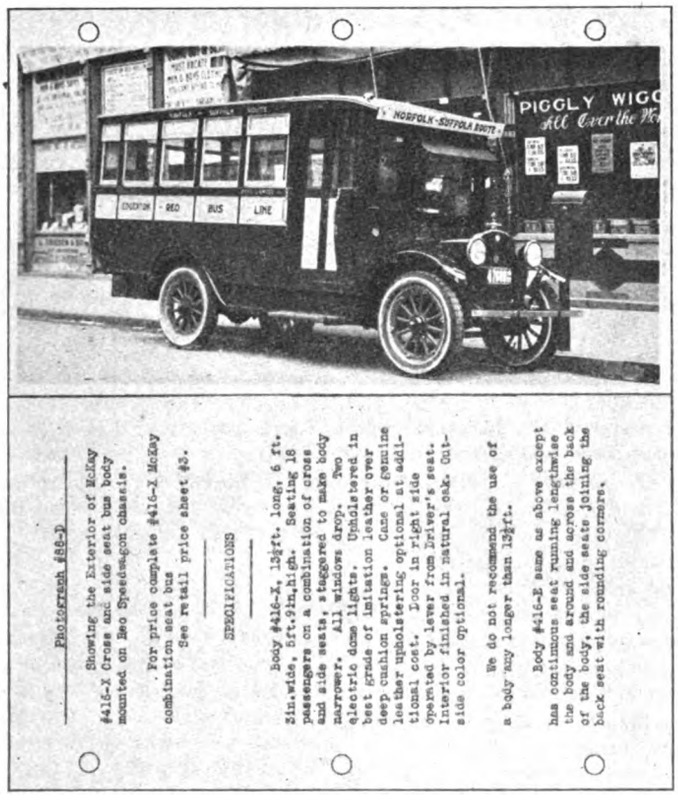
Digitized by Google

of a communication, if it is only an envelope insert, at least once a month. Every salesman detailed to bus work must see his prospect at least every two weeks, in order to retain his "rights" to that particular prospect. If the salesman defaults, the prospect is placed on the list of the next salesman in order.

Each salesman carries a pad upon which to make reports on all new prospects. When handed in, these slips are placed with reports of "follow backs" in the file. This information is also drawn off and placed on a special "yellow list" for the sales manager to review. The duplicates placed in the file tell when the prospect is to be seen again.

The prospect cards are made out in quadruplicate and a different color is used for each card in the set. The original, which is white, goes in the alphabetical file; the duplicate, which is yellow, goes in the date file; the triplicate, which is blue, is filed separately for the sales manager and the quadruplicate, which is pink, goes to the salesman, who makes out an extra white sheet to go back eventually with his pink slips for filing. The drawers in which the original and the duplicate—or white and yellow cards—are filed, are kept intact, but the file drawers for the blue and pink cards are, of course, changed from time to time as prospects are sold, or considered "dead."

An additional form is the Monthly Recapitulation of salesmen's report cards, for comparison. From this the sales manager is able to tell whether the salesman is progressing, or falling back and just whether he has been calling punctually on all his prospects. There is also a price book, fitting the pocket, bound in leather and of loose leaf type, which is sold to dealers, dealer's salesmen and everyone interested in the sales department. For retail dealers, the sheets in this book are numbered. The book supplied to the officers of the company and those holding executive positions contains net costs. The book, generally, contains much information pertaining to Reo trucks and cars; photographs of the different types of bodies; rated capacity, specifications, etc., taken from Motor World data.



On the back of each photograph, numbered in series, are typed the designation of the bus style, reference to retail price sheet by number and the specifications, with remarks. The book also contains order blanks.

Accommodation in the way of parts and service is a strong point with Edgerton. In Norfolk the stock of parts, carefully arranged in order in labeled and numbered bins, tying up with a Rand visible system and a special book, is kept at a value of about $28,000, with $20,000 worth in Suffolk and $25,000 worth in Portsmouth. There is a special arrangement with regard to supplying parts in Roanoke. The Norfolk parts department includes two frames, always in readiness; thirteen assembled cylinder blocks; and plenty of available "rush" service parts and mechanisms, among which are so-called "drop service" motors, which are installed for a flat rental charge of $15 to serve till the supplanted motor is repaired and installed.

The Norfolk end also has a used bus parts department, where these items are sold at half-price. This is kept distinct from the new bus parts section.

The main service station in Suffolk is equipped with all the necessary heavy and light machinery and tools for bus repair and adjustment. Every bus is oiled, greased, tightened and generally inspected daily before it starts out. Only careful and courteous drivers are employed. With all these precautions and the benefit to the dealer from sales promotion the bus line may be considered a model of its kind in that section as a public utility.

Using the Bus Line for Sales Promotion

This is one of the ways in which the R. G. Edgerton Co., Norfolk Reo dealer, uses his bus line in sales promotion. Pictures of buses in actual service with complete specifications typewritten on the back are provided salesmen for use in selling bus operators and in other vocational selling efforts

The company advertises its schedule in the daily papers in its operating territory and small card schedules are placed for distribution in each bus, in a receptacle especially made for them. These schedules provide an opportunity for advertising the Reo commercial vehicles on the back which might be used advantageously if the company decides to do so. Although small, they provide sufficient space to print a short, striking notice calling attention to the fact that the dependable schedule maintained is due to the dependability of the product and the service station which operates the buses, and which is prepared to extend its service to businesses of all kinds needing transportation of this type.

The operation of the bus line offers many other opportunities to demonstrate and advertise Reo commercial cars and trucks which may be advantageously used. The very fact that Reos are delivering satisfactory service under the rigorous demands of bus work would supply a theme upon which very effective advertising copy with a distinctly local appeal might be written.

While the occurrence of a trolley strike in Norfolk provided the impetus for the beginning of this bus line and contributed considerably to the favorable circumstances under which it was started—there are many communities which present opportunities for a profitable bus line if properly managed and the idea should contain particularly good possibilities for dealers.

Although actual entrance into the bus business is not to be regarded as practicable by a large number of dealers, this story contains ideas that might be worked out satisfactorily for both bus owner and dealer where a combination is effected in which the dealer gives special service on the buses in payment for the privilege of using the bus line to advertise and sell his product.

Low Prices Are Big Factor in Tractor Sales

They Are in Line With Farm Crop Prices Now and the Door Is Open for Dealers to Talk Better Farming

By E. A. WHITE

TRACTOR prices are down! In many instances lower than they have ever been, which brings them in line with the general price level of farm products. The same goes for the equipment necessary to make the tractor useful on the farm. These facts have a most important bearing on the sale of tractors and other power farming equipment, for the farmer is a shrewd price buyer and low prices always interest him. In this connection it can be pointed out that there are thorough students of power farming development who believe that the prices prevailing two years ago, while entirely in line with the price level of all commodities and lower than those for many commodities, furnished the largest single sales resistance to the moving of a large volume of tractors.

If this diagnosis is correct the dealer should be able to move tractors to-day, for in some cases, especially the 2- and 3-plow sizes which are the most popular with the farm trade, prices have been reduced by half during the past 18 months. A study of the tractor prices of 17 well-known machines shows that the prices of July 1, 1922, are just two-thirds of what these machines sold for on Jan. 1, 1921. This group included sizes ranging from the 2-plow up to the 30-60. Taking the twelve 2- and 3-plow machines from this list it was found that the prices on these two popular sizes averaged only 60 per cent of the prices quoted 18 months ago. The important point is that tractor prices are down. This opens the sales door as nothing else can.

From the standpoint of farm sales especially this reduction in the prices of tractors has a far-reaching effect. The farmer is interested in keeping his investment in machinery and power equipment as low as is consistent with efficient operation and he finds it necessary to reduce operating costs wherever possible. In most cases the purchase of a tractor and other power farming equipment will mean that the farmers' investment for operating equipment will be increased, not a large amount but somewhat. It is the problem of the dealer to convince his prospect that this increase in working capital will be a sound investment. Far too often the farmer looks at the total sum as an expense when in reality it is an investment and should be so considered.

WHILE the American farmer uses more machinery per man than any other farmer in the world, his investment in operating equipment has been relatively small. According to the 1920 census reports, the average value of implements and machinery was $557 per farm, or $3.76 per acre. As would be expected there was considerable variation in this item for various sections of the country. In Iowa it is $1,449 per farm, or $9.25 per acre, and in Texas $354 per farm, or $1.50 per acre. Undoubtedly the farmer gives the census taker a low valuation on this equipment but in this connection it must be remembered that the 1920 census was taken when prices were near if not at the peak. Perhaps it would require an investment of $7 per acre to replace the equipment on farms with new equipment at the present prices.

In addition to machinery, the farmer requires power generators, which are now chiefly horses and mules. The average farm value of horses and mules for Jan. 1, 1920 was $400 per farm, or $2.70 per acre, and there has been little change in this price level since that time. For Iowa these figures are $645 per farm, or $4.10 per acre, and for Texas $446, or $1.70 per acre. Thus the average farm investment in machinery and power equipment, according to census values, ranges from $13.35 in Iowa to $3.20 in Texas. To purchase entirely new equipment would of course increase these figures and individual farms will vary from these values.

NOW the dealer's problem is to show the farmer how he can sell part of the present equipment, increase his investment slightly and farm to better advantage. True, the farmer does not always look at the problem in just this way but it suggests to the dealer a constructive method of attack. In this respect the reductions in the prices of power farming equipment furnish the basis for a telling appeal. As an example of what this price reduction means, consider the case of a 200-acre farm where a power farming outfit costing $1,000 at present price levels is purchased. If three horses are sold for $400 the increase in investment is $600, or $3 per acre. Before recent price reduction this same equipment would have cost approximately $1,600. The horses would have sold for no more, leaving an increase in investment of $1,200, or $6 per acre. On this basis it is evident that these price reductions have removed stubborn sales resistance.

This change in the price situation has also made a deep inroad on another important phase of the tractor problem, cost of operation. One of the largest items in the expense of operation has been the combined charge for interest and depreciation. Taking the charges for depreciation, interest, repairs, fuel and oil into consideration, various reports place the charges for depreciation and interest at from 30 to 60 per cent of the total. The following figures compiled from reports issued by the United States Department of Agriculture and Iowa State College are typical and show the percentage of the total to be charged to each item listed:

Item	Dept of Agriculture	Iowa State College
Depreciation	34.4	43.2
Interest	10.7	9.96
Repairs	15.7	9.9
Fuel	29.8	26.3
Oil	9.4	11.0

According to the government figures the charges for

Digitized by Google

depreciation and interest constitute 45.1 per cent of the costs listed above, while the Iowa figures for these items are 52.8 per cent of the total. Thus it can be found that a reduction of 40 per cent in the cost of tractors means a reduction in the neighborhood of 20 per cent in the operating costs, exclusive of man labor. Explaining this point is talking in language which the prospect will understand, for he is interested in keeping the cost of operation at as low a figure as possible.

There is also a psychological advantage which price reduction places at the command of the dealer. Tractor prices did not rise to relatively as high a level as the prices of farm products, therefore the reductions have brought the present price levels entirely in line with the average of farm products. The tractor dealer can go to the farmer and say that the price of what he has to sell is down on a level with the price of what the farmer has to sell. This removes mental reservations and places the prospect in a frame of mind where he is willing to consider the tractor on its merits. Certainly he can no longer hide behind the claim that tractor prices are out of line.

That the fundamental advantage of the present level of tractor prices is being realized by dealers and farmers is shown in the gain which tractor sales have shown during the past five months. Present prices are moving tractors and the extent of this movement seems to be in direct proportion to the efforts put forth by dealers to uncover the prospects in their territories. The situation affords an opportunity for the dealer to put the tractor over in a big way.

How One Salesman Handled a Prospect Who "Knew It All"

A Story of the Taming of a Tough Prospect and the Sale of a Car

ALTHOUGH the sale that sticks in my memory as by far the hardest I ever made happened several years ago, perhaps the way I finally landed this toughest prospect will give somebody an idea.

This incident was in Louisville, Ky., where I had tried for several weeks to sell one of that city's aristocracy a Thomas Flier car. It took fifteen calls to come to any definite understanding. The first fourteen he had the bulge on me, as he did practically all the talking and immediately downed any suggestion I ventured to make.

The thing he always did was to ridicule our car, the company's methods of doing business and the institution that represented it there. He made it a point to impress upon me that the entire future of the automobile business depended upon whether or not he bought a car, and particularly a Thomas.

The afternoon that I did what landed the order, I broke into the midst of his conversation with, "You have done more talking than any man I have ever called on, and you have said less than anyone I ever talked to in my life. Now, I'm going to do the talking for the next fifteen minutes."

Here is a small part of what I then said:

"Regardless of what you think of the Thomas car, the organization that makes it, and the salesman to whom you are now talking, I want to tell you, sir, that you make the best paint in the world. No house is complete without your paint on it. Anybody is a fool to use any other kind of paint. You are the fairest business man in the world. You never made a mistake in your life. In fact, if there is any such thing now or to ever be as a 100 per cent perfect man, and a 100 per cent perfect business, you are that man and your business is that business.

"At the coming municipal election I am going to put your name on the ticket for mayor, and at the next state election I am going to see that you are made governor of Kentucky. I am also going to request that the engineers at the Thomas factory and the members of the S. A. E. have you preside at their next meeting as chairman of the board of directors. Then when I go out to sell the Thomas car I will not have any obstacles to overcome, because this car will be 100 per cent perfect. But there is one thing that still puzzles me. How in the world did you ever get into the paint business when you are such a mechanical genius? Now I am going to tell you good-by, and I wish you all the luck in the world, for you have certainly made a man out of me, and you have done more for the future of the automobile industry than any one thing that can ever happen."

He phoned in, and I was fired. But while I was in the office next day settling up accounts, he walked in, talked about the weather and other topics about ten minutes, and then said he was ready to buy a Thomas car. He declared that he had intended to buy the first time I called on him, but that he didn't because I did not have enough nerve to stop him when he tried to tell me all about something he didn't know anything about.

Since that time, whenever a man knocks the business with which I am associated I make it a point to turn around and boost his business 100 per cent more than he has knocked mine. If the fellow has a drop of red blood in him, he will realize his mistake in condemning something he doesn't know anything about, and this method will make him realize his mistake quicker than any other way I have discovered.—T. R. Miller, sales manager, H. H. Heiser Co., Denver, distributor Peerless and Velie cars and Oneida trucks.

There's Selling Power in the Properly Displayed Parts Board

EXPERIENCE in use of board displaying parts of motor cars is already revealing useful suggestions.

Parts boards for promotion of car sales are usually exhibited in street windows to attract attention and enlist interest in the particular car. After a few weeks or months of such exhibit (length of period depending on number of persons likely to see) the board is moved inside, usually on the sales floor. Here prospects have opportunity to see it, and here salesmen show the board to the prospects in process of their selling.

Parts boards in garages, used for promotion of parts sales, cannot always be exhibited in windows, since many garages have inadequate street window space. Where choice must be made between display of parts or display of accessories, the accessories have the advantage; though sometimes a parts board may be displayed in windows occasionally, for short periods. In garages the parts board has its greatest value in the parts room, or in the office, where customers may easily have access to it.

When parts boards are to be used by garages or service departments as stimulants to service business, their place is in the office or service departments rather than in windows. But even when used for such specific purpose, they are often displayed in windows for short periods as attention-attractors, and as means of arousing interest in service. Boards showing worn and new parts should be given street window display frequently; an especially satisfactory disposition being the exhibition in a window accessible by customers, so that the board at the same time serves as general publicity as a working board for the help of customers of service.

Newly built garages nowadays usually have ample window space for display. Quite as usually these windows are not used for display. There are, therefore, broad opportunities for increasing publicity by diversity of display of accessories in the many windows. The tire window, the accessory window and the parts window may be prepared simultaneously, or these subjects may alternate.

Editorial Notes

The Price Reductions

THE industry is viewing with much interest the price flurry of the past week in popular makes of medium priced cars.

When the downward revision began with Buick, Chevrolet and Oakland in the General Motors group and spread to Studebaker, Nash and Chandler and Cleveland, people asked: "Is it another price war—will it create uncertainty and retard sales as it did nearly two years ago?"

Most of the cars figuring in the present price reductions were among the leaders in production for the first half of 1922. It is known that the large production attained has afforded these makers the opportunity to increase production efficiency, and some of the companies have found means of materially lowering production costs.

To give the public the benefit of the increase in operating efficiency is sound merchandising, and no dire results should be expected if the dealers SELL THE PRICE REDUCTIONS AS THE PASSING ON TO THE CONSUMER OF THE BENEFITS OF PRODUCTION ECONOMY.

This gives the price reductions a very different aspect from the one in the fall of 1920 when the public got the impression, and not without some justification, perhaps, that prices were being forced down by public clamor and that the downward trend could be expected to continue so long as buyers held off.

Prior to the recent reductions there was every reason to believe that the public was satisfied with present price levels. And so, if the public is taken into confidence to the extent of telling it why voluntary reductions can be made at this time there should be nothing in the situation to shake public confidence.

So long as price reductions are the result of lowered production costs there can be nothing to fear.

The great danger would be in a price war—in the slashing of prices to force sales at the expense of a competitor—without a sound, economic basis for such reductions.

10,608,127

THERE is something awesome in the contemplation of that figure.

It is the midyear registration of motor vehicles in the United States on July 1, 1922. It represents an increase in one year of 1,350,552 in the motor vehicles in active use. It means that there is approximately one motor vehicle for each 10 persons in the country.

To the man who participates in the distribution of a commodity that has so thoroughly established itself in the social fabric of his time there must be an appreciation of the importance of the rôle for which he has been chosen. But the realization of his importance cannot come healthfully without a kindred realization of responsibility.

In contemplating the remarkable absorption of motor vehicles, may not the dealer ask himself if he is doing everything that he can do to help the product he sells to continue to deserve popular confidence?

May he not ask himself: Have I grasped the significance of this amazing growth of personal transportation, and has it brought home to me a realization of the fact that to fit the motor car even more firmly and universally into the commercial and social life of my time is the soundest and best merchandising that I can practice?

And, may he not profitably ask himself: Am I doing all that I can, profitably, to insure through service the satisfactory performance of this commodity?

The motor vehicle has made wonderful strides in the past few years in meshing itself into the progress of mankind. The future of the motor vehicle industry lies in the widening of the motor vehicle's sphere of usefulness.

Who can observe the entrance of the motor vehicle into the railroad scheme of transportation, into the highway transport business, on the road loaded with merchandise—taking the store to the customer—and think about saturation point and kindred bugaboos?

The future is rich in opportunity, as the present is fruitful, and 10,608,127 is only a milestone at which we may profitably pause a moment, get a fresh vision of the fair road ahead, and then push on to greater achievements.

THE Washington Automotive Trade Association, at its recent State convention, urged the Legislature to make 35 instead of 30 miles the speed limit on rural highways. This is a perfectly legitimate dealer association activity—a move in the direction of removing unnecessary restrictions from highway traffic—and the fact that it was inaugurated at a meeting attended by the Governor and other State officials as well wishers of the automotive trade gives it an auspicious start. Dealer associations everywhere ought to be urging constructive legislative action, not merely protesting against destructive legislation after it is introduced or passed.

IT seems pretty much agreed that the harvest is going to bring the farmer back into the market. Past observances indicate that he may be in the market but "Gol darned if he'll buy until he knows what he's buying and who he's buying of." All of which suggests that now's a good time to get him acquainted with yourself and your products.

THE dealer who thought he drowned his used car problem in lake of new car demand will probably hear it meowing at his door again just when the new car demand begins to weaken.

Garageman, Not Owner, Liable for Negligence

Pennsylvania Court Rules in Case Where Employee Delivered Car to Owner

THE Supreme Court of Pennsylvania in a recent case held that the owner of a motor car is not responsible for the negligence of an employee of a garage where he stores his car, but the garageman is liable for injuries caused by the negligence of the employee when there is an agreement between the owner and garageman that the car is to be delivered to the owner's home and called for and taken back to the garage.—Griesmer vs. Netter, 117 A. pg. 205.

Offer to Return Is Important in Suit on Misrepresentation

The Supreme Court of Michigan recently pointed out in a case which came before it on appeal that in an action by the buyer of an automobile to recover the amount he had paid, on the ground that the car was not a new one, as it was represented to be, it was incumbent upon the buyer to prove that he had offered to return the automobile to the seller within a reasonable time in substantially as good condition as when it was delivered to him, before he could recover.

The buyer, a real estate dealer in Detroit, visited the automobile show in that city in January, 1918. He there saw an Abbott touring car, specially painted, in the exhibit of the dealer, who was distributor of that make of car, then manufactured in Cleveland. Buyer concluded to purchase the car, if he could turn in an old Studebaker car he had as a part of the purchase price. He claimed his attention was called to some spots of mud on the bottom of the car and that he said to Mr. Stuber, with whom he was negotiating, "That is not a second hand car, is it?" and Mr. Stuber answered:

"Why, no; don't think for a minute that we should put in a second hand car when we could sell one that is new." "It is dirty on account of it having been driven from Cleveland to Detroit, and we were late and didn't have time to wash it up good. That is the way the mud is under there now."

Buyer testified that he "relied upon his statement that it was a new car." The deal was consummated, the dealer accepting plaintiff's car at a valuation of $650, buyer making an additional down payment of $100 and executing ten notes, payable monthly, for the balance of the purchase price of $1,695. These notes were turned over to the Metropolitan Security Company of Cleveland, with the chattel mortgage on the car securing them. The buyer paid four of them, when he discovered, as he claims, that the car he had got had been theretofore used. After satisfying himself of this fact, he went to Mr. Stuber's office and told him:

"I have an old car, and I don't want your old car. I paid the price for a new car, and I would rather have my money back. I don't want to pay that money for an old car. Stuber said: 'What are you talking about? I sold you a new car, and this is a new car.' I said, 'You stand on what you said?' and he said, 'Absolutely.'"

Leo N. Orton, who accompanied buyer, testified as to what was then said:

"Mr. Kawecki said: 'You sold me a second hand car. I did not pay you money for a second hand car. I don't want that car. I want the money back, and the car is in my garage and you can get it.' And Mr. Stuber wanted to laugh, and he said: 'I sold you a new car and not a second hand one. I know nothing about it, about the foolish talk you are talking about.' And Mr. Kawecki was excited and walked out, and we were there only about five or six minutes."

Mr. Stuber testified as to this conversation:

"I don't recollect in detail the conversation had with him on that occasion. My recollection is that he came into the office and claimed that he had discovered he had a car that had been used. I don't remember, and I don't believe he ever made a demand. He just made a statement or claim and walked right out again. I don't think he was in more than a minute or so."

And further:

"Q. Do you deny that he said that he did not want the car—he wanted you to take the car back and you could have the car? A. No.

"Q. And he wanted his money back? A. No, I will not deny it."

The buyer soon after began suit to recover the amount paid by him and the value of his old car, and had verdict and judgment for $1,401.88. After suit was begun, the car in question was taken and disposed of by the security company under its chattel mortgage. The dealer insisted that the car sold to buyer was a new car. This issue was fairly presented to the jury, who found with buyer.

The Court said, speaking of the buyer:

"If he would rescind the contract, he must return or tender back the goods to the seller at the place of delivery, unless on making the offer so to do he is relieved of the obligation by refusal to receive them if tendered. An offer to return, where it is refused, answers the same purpose as an actual return, provided the property is retained for the benefit of the seller whenever he may choose to receive it."—Kawecki vs. Stuber-Stone Co., 187 Northwestern Reporter, 272.

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Jury Must Decide in This Case

WHETHER a chauffeur was acting under the scope of his authority in driving an automobile out of work hours to test it as directed by his employer, who was absent, if at the same time he took some of his friends on a visit at their request, was decided by the Supreme Court of Wisconsin to be a question which a jury should decide, in a case recently brought against an employer for damages for personal injuries claimed to have been sustained because of the negligence of the chauffeur.

The jury having found in favor of the injured party against the employer, the finding was therefore sustained on appeal.—Parker vs. Forcier, 188 N. W. pg. 193.

Cannot Repossess Under Pennsylvania Lien

Editor Motor World: As a matter of information we wish to know whether the garageman has any hold on a car for a repair bill after the car has left the garage.

Thanking you in advance for this information, we are—A Reader, Phoenixville, Pa.

Answer.—No, not in your state. His so-called common law lien depends on keeping possession of the property, and he loses it when he lets the car go.

A Flat Rate Schedule for Oakland Cars

Factory Develops Forty-Three Operations Based on Time Studies, Together with List of Material Needed for Each Operation

A SCHEDULE containing forty-three flat rate operations has been developed by the Oakland Motor Car Co. for the models 34 B, C and D, and furnished to its dealers. The schedule gives the time in which the operations should be performed, and in addition gives the detailed mechanical procedure necessary in order to complete the work in the limits given. In addition to this there is a list of the materials and parts needed for each operation.

The time specified in each operation is based on actual time studies of the work as performed by a mechanic of average ability, and with the ordinary socket wrenches and tools found in most all repair shops. Most mechanics will perform the work in less time than noted, while some may take longer. To get the charge to the customer, multiply the time given by the hourly rate for labor. Add to this the total amount for parts and materials to get the total charge to the customer.

1—Tighten engine anchor bolts and install new ones where needed 0.8

1—Raise hood.
2—Remove left rear engine anchor bolt.
3—Replace left rear engine anchor bolt.
4—Remove right rear engine anchor bolt.
5—Replace right rear engine anchor bolt.
6—Remove front engine anchor bolts (2).
7—Replace front engine anchor bolts (2).
Material—Rear engine anchor bolts and nuts; front engine anchor bolts and nuts.

2—Replace old cylinder block with new 48.0

1—Drain radiator.
2—Drain oil from crankcase.
3—Remove hood.
4—Remove radiator splash guard by removing two front spring shackle bolts and two center splash guard screws.
5—Remove radiator support nuts.
6—Remove cylinder head cover.
7—Disconnect cylinder head water outlet.
8—Disconnect water inlet hose.
9—Remove radiator.
10—Disconnect spark and throttle control rods from rocker shaft
11—Remove spark control rocker shaft bracket.
12—Remove two engine anchor bolts front.
13—Remove head lamp tie rod.
14—Remove fan belt.
15—Remove water pump body and fan.
16—Disconnect spark plug cables and remove spark plugs.
17—Disconnect high and low tension wires from distributor, coil and starting motor.
18—Remove distributor set screw and remove distributor.
19—Disconnect gasoline pipe from carburetor.
20—Disconnect intake manifold to vacuum tank pipe from manifold.
21—Disconnect carburetor heat tube elbow from exhaust manifold.
22—Disconnect carburetor spring from manifold.
23—Disconnect foot accelerator rod.
24—Disconnect hand throttle control rod.
25—Remove carburetor stove from manifold.
26—Take off two carburetor to manifold stud nuts and remove carburetor.
27—Unscrew manifold to exhaust pipe screw.
28—Remove engine side pans, right and left.
29—Remove floor boards.
30—Disconnect clutch release bearing lubricator tube from toe board.
31—Remove toe board.
32—Disconnect universal joint front.
33—Remove hand brake lever.
34—Disconnect speedometer cable.
35—Disconnect clutch pedal come back spring from transmission case and remove pedals.
36—Take out four transmission to bell housing screws and take off gearset.
37—Remove clutch release bearing lubricator tube from clutch release bearing.
38—Remove three mud pan to bell housing screws.
39—Remove five bell housing to crankcase screws and remove bell housing.
40—Remove two engine anchor bolts rear.
41—Lift engine out of frame and place on bench or engine stand.
42—Remove front and rear rocker arm brackets and shaft assembly, six bolts.
43—Remove ten cylinder head to cylinder block screws and take off cylinder head.
44—Remove valve lifter brackets, front and rear—nine bolts.

This is the tenth flat rate schedule published in Motor World. The previous schedules covered Paige, Overland Four, Studebaker, Dodge, Dort, Buick, Chandler, Hupmobile and Marmon.

45—Take out two generator bolts and remove generator.
46—Remove starting motor lock bolt and remove starting motor.
47—Remove camshaft front bearing lock screw.
48—Remove fan drive pulley.
49—Remove 13 front gear cover cap screws and take off gear cover.
50—Remove camshaft.
51—Turn motor bottom side up.
52—Remove 22 oil pan to crank case screws and oil pan.
53—Remove oil pump and oil feed pipe assembly from main bearings.
54—Remove six connecting rod bearing caps, pull pistons from cylinder and replace bearing caps.
55—Remove four motor support to motor frame support bolts and take off motor support.
56—Remove main bearing caps.
57—Lift crank shaft and flywheel from crankcase.
58—Replace main bearing caps.
59—Clean crank shaft and flywheel, starting motor, generator, front gear cover, valve lifter bracket, rocker arm brackets, water pump, fan pulley, oil pump distributor, engine rear support, engine side pans, bell housing, gearcase and small parts.
60—Inspect clutch, if necessary disassemble from flywheel and renew any parts needed.
61—Clean new cylinder block.
62—Fit new pistons to cylinder bores and mark with number for assembly.
63—Remove connecting rod clamp bolt, nut and cotter pin.
64—Remove piston pin and connecting rod from pistons.
65—Measure each piston pin with micrometer.
66—Adjust reamer to piston pin measurement.
67—Ream piston.
68—Fit piston pin to piston.
69—Assemble connecting rod to piston, taking care to have rod and piston numbers correspond.
70—Assemble connecting rod clamp bolts, nuts and cotter pins.
71—Align pistons and connecting rods with lining bar or an aligning gage.
72—Assemble two-piece piston rings in center and lower ring groove of six pistons.
73—Assemble one plain piston ring in upper ring groove.
74—Oil piston and compress piston rings with sleeve.
75—Assemble camshaft in motor.
76—Replace camshaft front bearing lock screw.
77—Scrape and fit main bearings and caps.
78—Adjust main bearings and tighten caps.
79—Adjust connecting rod bearings.
80—Replace pistons in cylinders and assemble connecting rod bearings to crank shaft.
81—Assemble motor support to motor.
82—Assemble oil feed pipe assembly to main bearing and replace oil pump.
83—Assemble oil relief pipe.
84—Assemble oil regulator ball spring adjusting screw.
85—Assemble oil pan and 22 oil pan to crankcase screws.
86—Turn motor right side up.
87—Replace generator and 2 generator bolts.
88—Assemble front gear cover with 13 cap screws.
89—Assemble fan pulley to end of camshaft.
90—Assemble starting motor and starting motor lock bolt.
91—Assemble valve lifter brackets, front and rear.
92—Remove 12 "U" washers, valve spring cup and valve springs from cylinder head.
93—Remove cotter pins from valve stems.
94—Clean carbon from valves and cylinder head.
95—Grind 12 valves. Wipe clean after grinding and replace.
96—Replace valve stem cotter pins.
97—Replace valve springs, valve spring cups and U washers.
98—Replace cylinder block to cylinder, head dowel pins and cylinder head gasket.
99—Replace cylinder head and fasten down 10 cylinder head to cylinder block screws.
100—Replace front and rear rocker arm shafts and brackets.
101—Stamp number on crankcase.
102—Replace motor in chassis.
103—Start two front engine anchor bolts.
104—Start two rear engine anchor bolts.
105—Tighten all engine anchor bolts.
106—Assemble clutch release bearing lubricator tube to clutch release bearing.
107—Assemble bell housing and start five bell housing to crankcase screws, line bell housing with dowel

Digitized by Google

pins and tighten five cap screws.
108—Replace gearset and tighten gearset to bell housing screws.
109—Assemble pedals and pedal auxiliary bracket.
110—Assemble adjusting link and come back spring.
111—Assemble universal joint.
112—Connect speedometer cable.
113—Connect lubricator tube to toe board.
114—Assemble toe board.
115—Assemble hand brake lever.
116—Replace mud pan and three mud pan to bell housing screws.
117—Replace floor board.
118—Replace distributor and fasten with distributor locking screw.
119—Pour small amount of lubricating oil in each cylinder.
120—Replace spark plugs.
121—Connect up low and high tension wires to coil, distributor spark plugs and starting motor.
122—Tighten manifold to exhaust pipe screws.
123—Replace carburetor and tighten two stud nuts carburetor to manifold.
124—Connect gas feed pipe from vacuum tank to carburetor and oil pressure tube to crankcase.
125—Connect carburetor stove to manifold.
126—Connect foot accelerator rod.
127—Connect hand throttle control rod.
128—Connect carburetor spring to manifold.
129—Connect heat tube elbow, carburetor to manifold.
130—Connect carburetor choker rod.
131—Replace three water pump studs and assemble water pump.
132—Replace and fasten engine side pan.
133—Replace fan belt and adjust if necessary.
134—Assemble spark rocker shaft bracket.
135—Connect spark throttle control rods to rocker shaft.
136—Replace radiator and fasten two radiator support bolts.
137—Assemble radiator splash guard to frame with two splash guard screws.
138—Assemble two front spring shackle bolt nuts and cotter pins.
139—Replace cylinder head water outlet.
140—Connect water inlet hose connection.
141—Assemble head lamp tie rod.
142—Fill radiator.
143—Put oil in crankcase to level.
144—Put one quart of oil to every five gallons of gasoline in gas tank while limbering engine up.
145—Start engine by towing.
146—Allow engine to wear in, running without a load.
147—Make any adjustment needed to valve clearance, or carburetor.
148—Give road test.
Material: Cylinder and bearing cap assembly, gear cover gasket, oil pan gasket.

5—Install new crankshaft gear after gearcase is off 0.5

1—Remove starting crank nut.
2—Remove crankshaft gear using gear puller.
3—Assemble new crankshaft gear.
4—Assemble starting crank nut.
Material: Crankshaft gear.

6—Install new crankshaft gear 3.0

1—Drain radiator.
2—Remove hood.
3—Remove radiator splash guard by removing two front spring shackle bolt nuts, 2 center splash guard screws.
4—Remove radiator support nuts.
5—Remove cylinder head cover.
6—Disconnect cylinder head water outlet.
7—Disconnect water inlet hose.
8—Remove radiator.
9—Disconnect spark and throttle control rods from rocker shaft.
10—Remove spark control rocker shaft and bracket.
11—Remove two front end side pan nuts and front end side pan stove bolts.
12—Remove starting crank bracket, bolts and nuts.
13—Remove fan belt and fan pulley.
14—Place support under front end of motor.
15—Remove front gear cover, 13 bolts.
16—Remove starting crank nut.
17—Remove crankshaft gear with gear puller.
18—Assemble new crankshaft gear.
19—Assemble starting crank nut.
20—Assemble front gear cover, 13 cap screws.
21—Remove support from under front end of motor.
22—Bolt on starting crank bracket with two bolts.
23—Fasten side pans by two front end side pan nuts and two front end side pan stove bolts.
24—Assemble fan pulley to end of camshaft with Woodruff Key, nut and nut retainer.
25—Assemble fan belt and adjust if necessary.
26—Assemble spark rocker shaft bracket.
27—Connect spark throttle control rods to rocker shaft.
28—Replace radiator and fasten two radiator support bolts.
29—Assemble radiator splash guard to frame with two guard screws.
30—Assemble two front spring shackle bolt nuts and cotter pins.
31—Replace cylinder head water outlet.
32—Fasten water inlet hose connection.
33—Fill radiator.
34—Replace hood.
35—Start engine.
Material: Crankshaft gear.

7—Replace all timing gears and camshaft bearing front 5.0

1—Drain radiator.
2—Remove hood.
3—Remove radiator splash guard by removing two front spring shackle bolts and two center splash guard screws.
4—Remove radiator support nuts.
5—Remove cylinder head cover.
6—Disconnect cylinder head water outlet.
7—Disconnect water inlet hose.
8—Remove radiator.
9—Disconnect spark and throttle control rods from rocker shaft.
10—Remove spark control rocker shaft bracket.
11—Remove two front end side pan nuts and front end side pan stove bolts.
12—Remove starting crank bracket nuts and bolts.
13—Remove fan belt and fan pulley.
14—Disconnect spark plug wires.
15—Remove distributor lock screw and remove distributor.
16—Disconnect high and low tension wires from coil.
17—Disconnect low tension wires from coil and circuit breaker.
18—Remove two generator bolts and generator.
19—Remove rocker arm brackets, front and rear.
20—Remove valve lifter brackets, front and rear, nine bolts.
21—Remove camshaft front bearing lockscrew.
22—Place support under front end of motor.
23—Remove front gear cover 13 cap screws.
24—Remove camshaft.
25—Remove camshaft gear in arbor press.
26—Remove Woodruff Key and cam bearing.
27—Assemble new camshaft bearing.
28—Assemble camshaft gear, press on in arbor press.
Note. The camshaft bearing should be a free turning fit after gear is pressed on to shaft.
29—Change oil retainer from oil to new gear.
30—Remove starting crank nut.
31—Remove crankshaft gear with gear puller.
32—Assemble new crankshaft gear.
33—Assemble starting crank nut.
34—Install camshaft and align same in position.
35—Drill camshaft front bearing lock screw hold, using hand drill.
36—Install lock screw.
37—Assemble front and rear valve lifter brackets to motor.
38—Remove generator, using gear puller.
39—Assemble new generator gear.
40—Assemble generator and two generator bolts to motor.
41—Assemble front gear cover 13 cap screws.
42—Remove support from under front end of motor.
43—Bolt on starting crank bracket with two bolts, two nuts.
44—Fasten engine side pan by two front end pan nuts and two front end side pan stove bolts.
45—Assemble fan pulley to end of camshaft with Woodruff Key, nut and nut retainer.
46—Assemble fan belt, adjust if necessary.
47—Assemble spark rocker shaft bracket.
48—Connect spark and throttle control rods to rocker shaft levers.
49—Assemble distributor to motor and lock with lock screw.
50—Connect distributor control rod to rocker shaft lever.
51—Connect ignition wires and new tension wires to breaker, coil and circuit breaker.
52—Replace radiator and fasten with two radiator support nuts.
53—Assemble radiator splash guard to frame with two splash screws.
54—Assemble front spring shackle bolt nuts and cotter pins.
55—Replace rocker arm brackets and shaft assemblies.
56—Replace cylinder head water outlet.
57—Connect water inlet hose.
58—Time ignition and replace distributor head.
59—Fill radiator.
60—Replace hood.
61—Start engine.
Material: Camshaft gear, crankshaft gear, generator gear, front cam shaft bearing, gear cover gasket.

8—Install new generator gear 1.0

1—Raise hood.
2—Disconnect ignition coil from generator.
3—Disconnect generator wires.
4—Remove two generator bolts and generator.
5—Remove cotter pin, nut and generator gear, using gear puller.
6—Assemble new generator gear.
7—Assemble generator to motor, two bolts.
8—Replace ignition coil and connect generator wiring.
9—Start motor.
Material: Generator gear.

9—Replace camshaft and camshaft bearing front and camshaft gear 4.0

1—Drain radiator.
2—Remove hood.
3—Remove radiator splash guard by removing two front spring shackle bolts and two center splash guard screws.
4—Remove radiator support nuts.
5—Remove cylinder head cover.
6—Disconnect cylinder head water outlet.
7—Disconnect water inlet hose.
8—Remove radiator.
9—Disconnect spark and throttle control rods from spark control rocker shaft, and disconnect control rod from distributor.
10—Remove spark control rocker shaft bracket.
11—Remove two front end side pan nuts and front end side pan stove bolts.
12—Remove starting crank bracket, two bolts.
13—Remove fan drive pulley.
14—Disconnect spark plug wires.
15—Disconnect high and low tension wires from coil.
16—Remove distributor set screw and remove distributor.
17—Disconnect low tension combination switch wires from coil and circuit breaker.
18—Remove two generator bolts and generator.
19—Remove rocker arm brackets, front and rear.
20—Remove valve lifter brackets, front and rear, nine bolts.
21—Remove camshaft front bearing lock screw.
22—Place support under front end of motor.
23—Remove timing gear cover, 13 bolts
24—Remove camshaft.
25—Remove cam gear from camshaft with arbor press.
26—Remove Woodruff Key and cam bearing.
27—Fit and assemble new cam bearing.
28—Assemble cam shaft gear to camshaft.
Note: The camshaft bearing should be a free turning fit after gear is pressed on the shaft.
29—Change oil retainer from old to new gear.
30—Install camshaft and align same in position.
31—Drill camshaft bearing lock screw hole, under hand drill.
32—Install lock screw.
33—Replace valve lifter brackets.

Digitized by Google

34—Assemble generator and two generator bolts to motor.
35—Assemble gear cover, 13 cap screws.
36—Remove support from under front end of motor.
37—Bolt on starting crank bracket with two bolts.
38—Fasten engine side pans by two front end side pan nuts and two front end side pan stove bolts.
39—Assemble fan pulley to end of camshaft with Woodruff Key, nut and lockwasher.
40—Assemble fan belt and adjust if necessary.
41—Assemble spark rocker shaft bracket.
42—Connect spark and throttle control rods to rocker shaft levers.
43—Assemble distributor to motor and lock with lock screw.
44—Connect distributor control rods to distributor.
45—Connect ignition wires and low tension wires to breaker, coil and generator circuit breaker.
46—Replace radiator and fasten with two radiator support nuts.
47—Fasten radiator splash guard to frame with two splash guard screws.
48—Replace front spring shackle bolt nuts.
49—Replace rocker arm bracket and shaft assemblies.
50—Replace cylinder block water outlet.
51—Replace water inlet hose.
52—Time ignition and replace distributor head.
53—Fill radiator.
54—Adjust valve clearance.
55—Start engine.
56—Replace Hood.
Material: Camshaft, camshaft bearing front, oil, gear cover gasket, camshaft gear.

10—Adjust all main and connecting rod bearings 6.0

1—Drain oil from motor.
2—Raise hood and remove 5 engine side pan stud nuts.
3—Remove 22 oil pan to crankcase screws and oil pan.
4—Remove oil pump and oil pipe assembly from main bearings.
5—Remove six connecting rod bearings.
6—Adjust center main bearings.
7—Adjust rear main bearings.
8—Adjust front main bearings.
9—Adjust six connecting rod bearings.
10—Assemble oil pump and oil pipe assembly to motor.
11—Wash out oil pan and oil pump screen.
12—Inspect oil pan gasket and renew if necessary.
13—Assemble five engine side pan stud nuts.
14—Replace oil pan and 22 oil pan to crankcase screws.
15—Fill out reservoir to level.
16—Start engine and adjust valves if needed.
17—Adjust carburetor if needed.
18—Lower hood.
Material: Oil, oil pan gasket.

11—Replace one connecting rod 2.0

1—Drain oil from motor.
2—Raise hood and remove five engine side pan stud nuts.
3—Remove 22 oil pan to crank case screws and oil pan.
4—Remove oil pump and oil pipe assembly from main bearings.
5—Remove connecting rod bearing cap.
6—Remove piston and connecting rod from piston.
7—Remove piston pin clamping bolt and nut.
8—Remove piston pin and connecting rod from piston.
9—Assemble new connecting rod to piston and tighten clamp bolt and nut and pin with cotter key.
10—Oil piston and compress rings with sleeve.
11—Insert piston in cylinder and remove sleeve.
12—Remove connecting rod cap.
13—Draw rod to crankshaft and assembly cap.
14—Adjust bearing.
15—Tighten bearing cap holding nuts and secure with cotter keys.
16—Wash out oil pan and oil pump screen.
17—Assemble oil pan and secure by 22 oil pan to crank case screws.
18—Lower car to floor.
19—Assemble engine side pan holding nuts.
20—Fill oil reservoir to level.
21—Start engine.
For each additional rod replaced add.....0.3
Material: Connecting rod, oil, oil pan gasket.

14—Install complete set new pistons, new piston pins and new piston rings, and adjust all main bearings 9.0

1—Drain oil from motor.
2—Raise hood and remove five engine side pan stud nuts.
3—Remove 22 oil pan to crankcase screws and oil pan.
4—Remove oil pump and oil pipe assembly from main bearings.
5—Remove six pistons from cylinder, replace connecting rod bearing caps, mark connecting rod if not marked for replacement to cylinders from which taken.
6—Adjust center main bearing.
7—Adjust rear main bearing.
8—Adjust front main bearing.
9—Remove piston pin clamping bolt and nut.
10—Remove piston pin and connecting rod from piston.
11—Fit six new pistons in cylinders and mark same for each cylinder, fit to .003 clearance using feeler ribbon of .0025 in thickness.
12—Fit piston pins in new pistons.
13—Assemble connecting rod and piston pin to piston, taking care that both piston and rod have right cylinder number.
14—Clean piston and ring groove.
15—Measure depths of center and lower ring grooves. If not within the limits 9/64 to 5/32 turn to these dimensions.
16—Assemble two two-piece piston rings in center and lower ring grooves.
17—Assemble plain ring in upper groove, 6 pistons.
18—Oil piston and compress rings with sleeve.
19—Put pistons in cylinder and remove sleeve.
20—Adjust connecting rod bearing.
21—Assemble oil pump and oil pipe assembly to engine.
22—Wash out oil pan and oil pump screen.
23—Inspect oil pan gasket and renew if necessary.
24—Replace oil pan and 22 oil pan to crankcase screws.
25—Assemble five engine side pan stud nuts.
26—Fill oil reservoirs to level.
27—Start engine and adjust valves.
28—Adjust carburetor.
29—Lower hood.
Material: Pistons, plain rings, two piece rings, oil pan gasket, piston pin, oil.

15—Install new two piece piston rings 4.2

1—Drain oil from motor.
2—Raise hood and remove five engine side pan stud nuts.
3—Remove 22 oil pan to crankcase screws and oil pan.
4—Remove connecting rod bearing cap.
5—Remove piston from cylinder.
6—Replace bearing caps, mark rod if not marked for replacement into the cylinder from which removed.
7—Remove three piston rings from piston.
8—Clean piston and ring grooves.
9—Measure depths of center and lower ring grooves. If not within the limits 9/64 to 5/32 turn to these dimensions.
10—Assemble two two-piece piston rings in center and lower ring grooves.
11—Assemble one plain piston ring in upper ring groove.
12—Oil piston and compress piston rings with sleeve.
13—Place piston in cylinder and remove sleeve.
14—Adjust connecting rod bearing (duplicate operations 4 to 15 for installing new rings on each of the other pistons).
15—Wash oil pan and oil pump screen.
16—Inspect oil pan gasket and renew if necessary.
17—Assemble oil pan and 22 oil pan to crankcase screws to motor.
18—Replace five engine side pan stud nuts.
19—Fill oil reservoir to level.
20—Lower hood.
For removing oil pan, replacing new rings on one piston and replacing oil pan allow....1.8
and for each additional piston to be equipped with new rings allow 0.5
Material: Piston rings (standard), two piece piston rings, oil pan gasket, oil.

16—Install six new pistons with new rings and new piston pins... 7.0

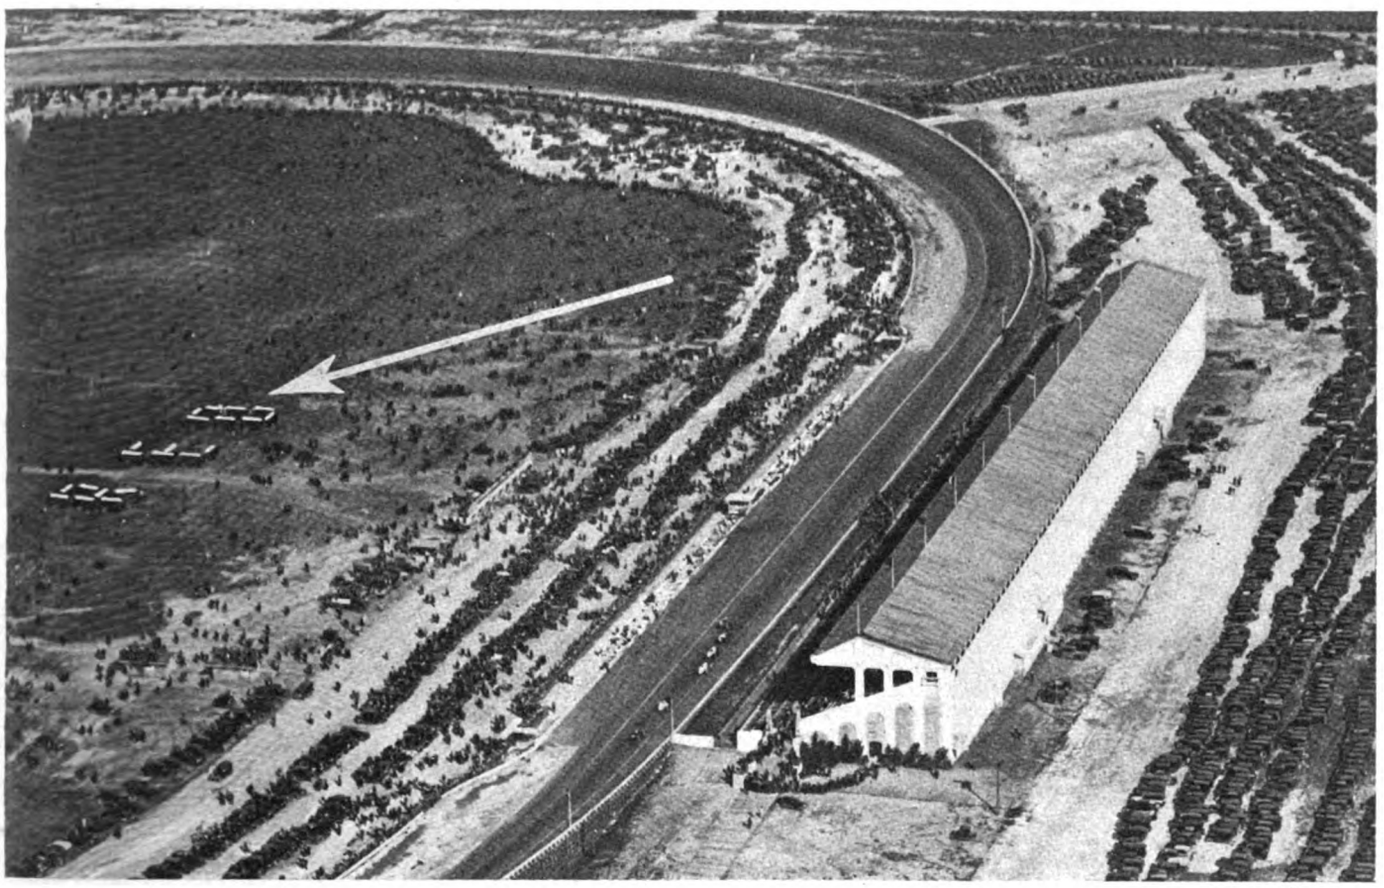
1—Drain oil from motor.
2—Raise hood and remove five engine side pan stud nuts.
3—Remove 22 oil pan to crankcase screws and oil pan.
4—Remove connecting rod bearing cap.
5—Remove connecting rod and piston ring from cylinder.
6—Replace connecting rod caps, mark rod if not marked for replacement in cylinder from which taken.
7—Remove piston pin clamping bolt and nut.
8—Remove piston pin and connecting rod from piston.
9—Fit new piston in cylinder, with .003 clearance, using feeler ribbon of .0025 in.
10—Fit piston pin in piston.
11—Assemble connecting rod and piston pin to piston.
12—Assemble piston pin clamping bolt, nut and cotter pin to connecting rod.
13—Clean piston and ring grooves.
14—Measure depths of center and lower ring grooves. If not within the limits 9/64 to 5/32 turn to these dimensions.
15—Assemble two two-piece rings in center and lower ring grooves.
16—Assemble one plain piston ring in upper ring groove.
17—Oil piston and compress rings with sleeve.
18—Put piston in cylinder and remove sleeve.
19—Assemble connecting rod bearing cap to crankshaft with nuts and cotter pins. Adjust same. Duplicate operations 4 to 20 in removing and replacing the other pistons with rings.
20—Wash oil and oil pump screen.
21—Inspect oil pan gasket and renew if necessary.
22—Assemble oil pan and 22 oil pan to crankcase screws.
23—Replace five engine side pan stud nuts.
24—Fill oil reservoir to level.
25—Lower hood.
For removing oil pan, replacing one new piston with rings and replacing oil pan, allow.....2.0
and for each additional piston with rings necessary to replace allow 1.0
which will make a total, for complete set of pistons—with new rings, of.....7.0
Material: Pistons, piston rings, two piece rings, oil pan gasket, piston pins, oil.

17—Fit six new pistons with pins separate from motor..... 1.0

1—Measure piston pin with Micrometer.
2—Adjust reamer.
3—Ream piston.
4—Fit piston pin.
Repeat operations 1-4 inclusive for each of six pistons.
Material: Pistons standard 2.810-2.811. piston pins.

(To be continued)

Big Overland Half Year



TOLEDO, Aug. 7—Total shipments of Overland and Willys-Knight cars for the first six months of 1922 lacked only 113 cars of being equal to the entire shipments for the entire year of 1921.

Production for this same period reached a total of 1,137,000 cars, an increase of 75 per cent over the first six months of 1921, and of this total June produced 288,000, 61 per cent more than June, 1921.

Overland has now reached a production of 700 cars a day.

Dealer Publicity That Gave Folks Something to Talk About

Reos in Novel Advertising Stunt at Los Angeles Speedway

A novel and effective advertising stunt was staged by the Reo Motor Car Co. of Los Angeles at a race meet at the speedway. Speedway rules prohibit any form of advertising, but this was so unique that it got by without objection. Twenty-one Reo speed wagons with tops painted white were parked in the center of the enclosure in such formation that they spelled the word REO. Approximately 50,000 persons were impressed by this advertising

Introducing a New Model

WHEN F. A. Williams Motor Sales Co., Dodge Bros. dealer in Springfield, Mass., received his first new business coupe, recently brought out by that company, the event was fittingly celebrated by a parade, which was led by a coach nearly 100 years old. The coach which, at the time it was made, was an important unit of transportation for both business and pleasure, was presented to F. A. Williams, Jr., president of the company, by The Abbott Downing Co., of Concord, with which Mr. Williams' uncle has been connected for more than 50 years. The picture shows the Springfield dealer's parade, headed by the old coach

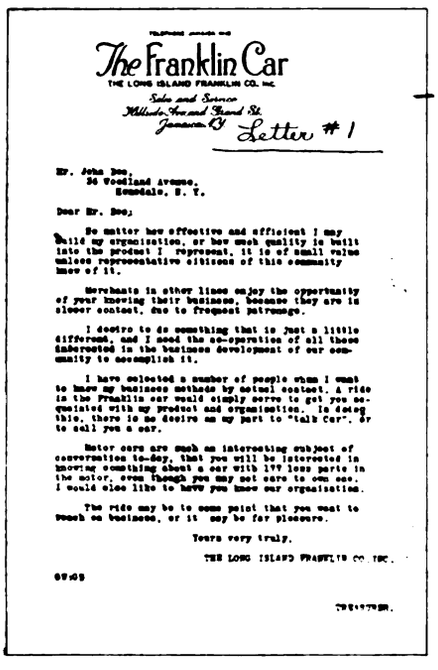
Franklin Dealer Gives 56 Mile Demonstrations

Long Route Trip Proves an Exceptionally Fine Advertising Activity—Letters Sell the Demonstration

THE "long" demonstration, which is being pushed so vigorously by the Franklin factory has been adopted by the Long Island Franklin Co., Jamaica, L. I., as a means of advertising this make of car. This company has laid out a standard demonstration route 56 miles long. The route embraces good and bad roads, level stretches and steep hills. It is selected with the idea of providing a thorough demonstration of the capabilities of the Franklin car under all sorts of conditions.



This is a diagram of the fifty-six mile demonstration course used by the Long Island Franklin Co., Franklin dealer in Jamaica, L. I. The course combines every road condition that the ordinary motorist would be expected to encounter. The long demonstration, in addition to impressing the prospect, usually enthuses him to such an extent that he tells others, thus extending the influence of the demonstration

A person does not have to be a prospect for the immediate purchase of a car in order to take this demonstration trip. The company regards these trips as educational and is glad of the opportunity to make these demonstrations. Many people are not at all familiar with the performance of an air-cooled car. This company wants this class of people to have first hand information on what the Franklin can do so that if the air cooled cars come up for discussion they will be able to tell about the enjoyable trip they had in it.

A series of three letters is used to get people to take this demonstration. Each of these letters is individually typed, the stenographer doing the work in her spare time.

During the demonstration the salesman does no selling. He is there to answer questions, and he limits himself to that one job. If anybody wants to travel another route than the one laid out by the company, the change is of course made.

This company does not find this method of advertising expensive, as the salesmen usually arrange to do it when they will not be busy doing other work. It has proved to be an unusually effective method of advertising, as it has placed first-hand information regarding air cooled cars in the hands of many owners of water cooled cars, and in many cases has undoubtedly eliminated unfounded prejudice.

The Franklin Car
THE LONG ISLAND FRANKLIN CO. INC.
Sales and Service
Hillside Ave and Grand St.
Jamaica, L.I.
Letter #1

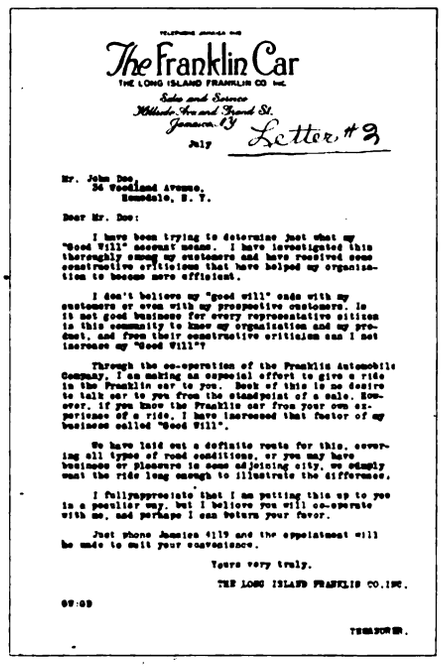
Mr. John Doe,
56 Woodland Avenue,
Rosedale, N. Y.

Dear Mr. Doe;

No matter how effective and efficient I may build my organization, or how much quality is built into the product I represent, it is of small value unless representative citizens of this community know of it.

Merchants in other lines enjoy the opportunity of your knowing their business, because they are in closer contact, due to frequent patronage.

I desire to do something that is just a little different, and I need the co-operation of all those interested in the business development of our community to accomplish it.



I have selected a number of people whom I want to know my business methods by actual contact. A ride in the Franklin car would simply serve to get you acquainted with my product and organization. In doing this, there is no desire on my part to "talk Car", or to sell you a car.

Motor cars are much an interesting subject of conversation to-day, that you will be interested in knowing something about a car with 179 less parts in the motor, even though you may not care to own one. I would also like to have you know our organization.

The ride may be to some point that you want to reach on business, or it may be for pleasure.

Yours very truly,

THE LONG ISLAND FRANKLIN CO. INC.

The Franklin Car
THE LONG ISLAND FRANKLIN CO. INC.
Sales and Service

Jamaica, L.I.
July
Letter #2

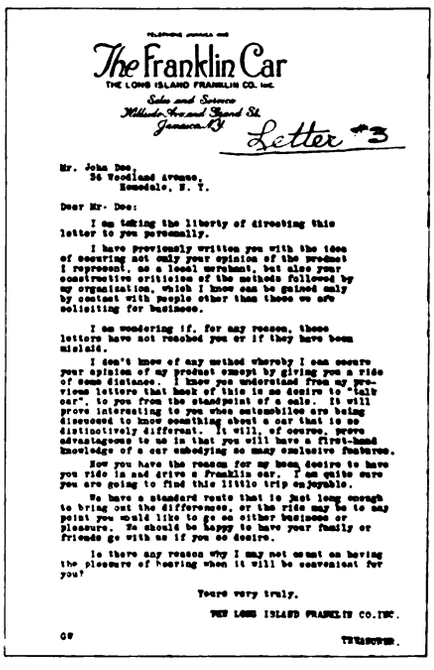
Mr. John Doe,
56 Woodland Avenue,
Rosedale, N. Y.

Dear Mr. Doe:

I have been trying to determine just what my "Good Will" amount means. I have investigated this thoroughly among my customers and have received some constructive criticisms that have helped my organization to become more efficient.

I don't believe my "good will" ends with my customers or even with my prospective customers. Is it not good business for every representative citizen in this community to know my organization and my product, and from their constructive criticism can I not increase my "Good Will"?

Through the co-operation of the Franklin Automobile Company, I am making an especial effort to give a ride in the Franklin car to you. Back of this is no desire to talk car to you from the standpoint of a sale. However, if you know the Franklin car from your own experience of a ride, I have increased that factor of my business called "Good Will".



We have laid out a definite route for this, covering all types of road conditions, or you may have business or pleasure in some adjoining city, we simply want the ride long enough to illustrate the difference.

I fully appreciate that I am putting this up to you in a peculiar way, but I believe you will co-operate with me, and perhaps I can return your favor.

Just phone Jamaica 4119 and the appointment will be made to suit your convenience.

Yours very truly,

THE LONG ISLAND FRANKLIN CO. INC.

Letter #3

Mr. John Doe,
56 Woodland Avenue,
Rosedale, N. Y.

Dear Mr. Doe:

I am taking the liberty of directing this letter to you personally.

I have previously written you with the idea of securing not only your opinion of the product I represent, as a local merchant, but also your constructive criticism of the methods followed by my organization, which I know can be gained only by contact with people other than those we are soliciting for business.

I am wondering if, for any reason, these letters have not reached you or if they have been mislaid.

I don't know of any method whereby I can secure your opinion of my product except by giving you a ride of some distance. I know you understand from my previous letters that back of this is no desire to "talk car", to you from the standpoint of a sale. It will prove interesting to you when automobiles are being discussed to know something about a car that is so distinctively different. It will, of course, prove advantageous to me in that you will have a first-hand knowledge of a car embodying so many exclusive features.

Now you have the reason for my keen desire to have you ride in and drive a Franklin car. I am quite sure you are going to find this little trip enjoyable.

We have a standard route that is just long enough to bring out the differences, or the ride may be to any point you would like to go on either business or pleasure. We should be happy to have your family or friends go with us if you so desire.

Is there any reason why I may not count on having the pleasure of hearing when it will be convenient for you?

Yours very truly,

THE LONG ISLAND FRANKLIN CO. INC.

A series of three letters is used in "selling" people the fifty-six mile demonstration given by the Long Island Franklin Co.

Writing Ads for the Small Town Paper

How a Garageman Built a $5,000 a Month Accessory Business with Weekly "Talks to the Public"

IF you were a garageman selling accessories in a town of less than 1000 population, *would five thousand dollars a month in sales be about the figure to aim at?*

Careless about ciphers, you'll probably say.

But Buck & Griggs, operating the Sperry Garage & Supply Co. at Sperry, Okla., consider this figure just a starter.

"Oh, the only garage and accessory store in the town," you may say.

Not at all.

There are two other accessory establishments, a third filling station and a hardware store handling accessories—making four competitors for the Buck & Griggs place, and in this town of 800 people, not in a congested or thickly settled farming country, and distant from any large towns.

There's one very positive reason for the steady increase of profitable business—yea two, which may be mentioned. *The company advertises with original, spicy, appealing copy; and it has the goods to deliver.*

"We keep our place as clean as we can, give the best service possible and keep everlastingly 'Askin' 'Em to Buy'," says A. L. Buck, one of the proprietors.

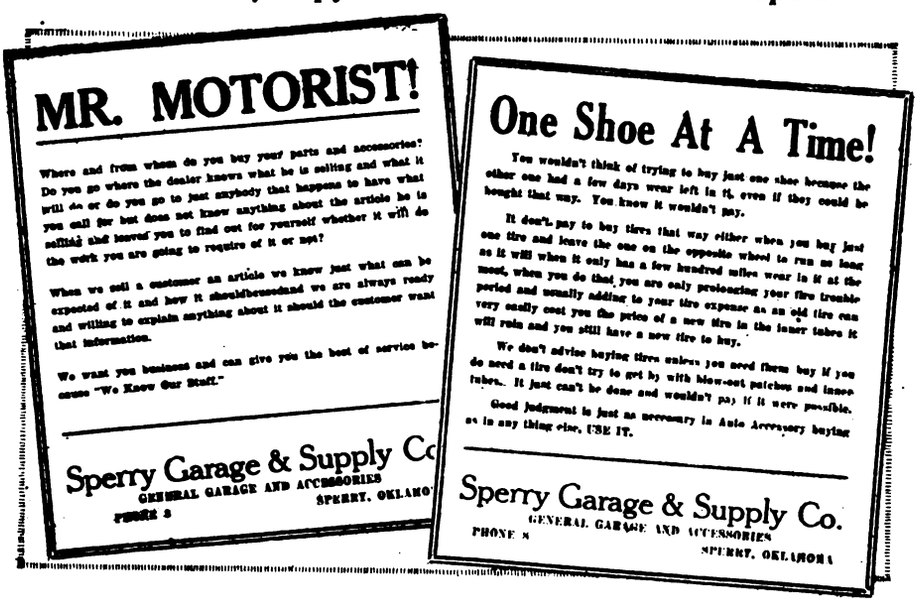
The advertisements in that town's little newspaper give the key, however, to their success. Every week the people of that community get a fresh, interesting message on motor car accessories and parts that makes 'em want to buy them from the Sperry Garage.

The advertising is a key to their success for two reasons. First, it shows what kind of fellows they are who run the place, the kind anybody would like to do business with. And, second, it puts across the atmosphere of the place, so that the readers are pretty sure to feel inclined to go there.

And here's a bit of psychology for the benefit of garagemen and accessory dealers in small towns, where newspapers haven't an oversupply of interesting reading matter: *The advertisements tell a story.* Obviously most of the readers of the newspaper are going to read the entire advertisement; they will sit back in their chairs and let the message sink in. Maybe the same kind of copy would not answer for a big metropolitan paper. But for the small town paper it seems exactly the type that will educate the public.

A. L. Buck, who writes the copy for the Sperry garage space, may have a little more facility in using language than a good many other garagemen. But let them take this tip:

The straightforward suggestions of the practical garageman, exactly the language he would use to a customer, are the suggestions that will do fine in an advertisement.



The language that will *not* get sympathetic attention in the small-town paper is the language of the factory, the language of the national publication, of the big-city dealer.

The local public likes to hear the garageman talk in his advertising just as he talks on the floor of the garage. That's the sort of talk that makes sales, and it fits into the local newspaper display space.

Writing of advertising is the telling of a story in language that the public will understand and appreciate. The small-town public appreciates the personal touch, and the garageman can get big value out of his space if he talks to his people in type just as he does by word of mouth.

That kind of advertising has paid Buck & Griggs. They take the time every week to prepare fresh copy. And the cost is almost negligible compared with the returns.

This Kind of Copy Sells Well in Small Town Papers

MR. MOTORIST!

Where and from whom do you buy your parts and accessories? Do you go where the dealer knows what he is selling and what it will do or do you go to just anybody that happens to have what you call for but does not know anything about the article he is selling and leaves you to find out for yourself whether it will do the work you are going to require of it or not?

When we sell a customer an article we know just what can be expected of it and how it should be used and we are always ready and willing to explain anything about it should the customer want that information.

We want you business and can give you the best of service because "We Know Our Stuff."

Sperry Garage & Supply Co

GENERAL GARAGE AND ACCESSORIES

SPERRY, OKLAHO

One Shoe At A Time!

You wouldn't think of trying to buy just one shoe because the other one had a few days wear left in it, even if they could be bought that way. You know it wouldn't pay.

It don't pay to buy tires that way either when you buy just one tire and leave the one on the opposite wheel to run as long as it will when it only has a few hundred miles wear in it at the most, when you do that you are only prolonging your tire trouble period and usually adding to your tire expense as an old tire can very easily cost you the price of a new tire in the inner tubes it will ruin and you still have a new tire to buy.

We don't advise buying tires unless you need them but if you do need a tire don't try to get by with blow-out patches and inner tubes. It just can't be done and wouldn't pay if it were possible.

Good judgment is just as necessary in Auto Accessory buying as in any thing else, USE IT.

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer
Equipment and Tire Dealer
Tractor Dealer Repairman

Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?

Paint Tour Map on Window

A STRIKING way to do something different on your show windows which will attract a lot of attention and focus comment on your garage is by drawing an outline map of a week-end tour in white paint on your show window. Above the map paint these words: "Take This Week-End Tour in Your Whizzer Car." Beneath the map the complete mileage should be noted and on the map the mileage between points should be noted. A stunt of this kind would be so unique that you could easily get the local newspapers to run a story of it and you could have a photo of your window taken with a lot of people standing in front looking at it and run the photo in your advertising for the purpose of showing how alert and progressive you are.

Removing the Carbon and Grinding the Valves

Various Methods Used in Repairshops—Causes of Carbon and Some Hints for Removing These Causes

REMOVING carbon and grinding valves is one of the most frequent operations performed by the repairshop and is usually done in connection with a tune up of the engine. The step by step operations in removing the carbon and grinding the valves vary considerably on different engines and it is not possible to attempt covering all makes with one schedule.

There are three possible ways of removing carbon. The usual method is to scrape it out. The oxygen process is being largely used also. Other methods consist of using preparations which are said to soften or dissolve the carbon.

Whichever method of removing the carbon is adopted, it is essential that it be entirely removed because small quantities of carbon remaining will serve to more quickly accumulate more carbon. A smooth metal surface resists to a certain extent the formation of carbon and it has only recently been found that polishing the metal will still further retard the formation of carbon. Several manufacturers of 1922 cars are regularly polishing piston heads and the surfaces of the combustion chamber.

Carbon forms more quickly and in greater quantities on cooler surfaces than on the hotter surfaces. The inlet valves are usually heavily incrusted while the exhaust valves are comparatively free from carbon. The reason for this is that the inlet valves are kept cool by the incoming mixture while the exhaust valves get no chance to cool off excepting by their contact with the water or air cooled seat. Engines that run cool collect carbon faster than those which consistently run at a higher temperature.

Indications of carbon in any car are loss in power and a sharp knocking when climbing hills on high gear. While it is not possible to translate engine knocks into the English language, this particular knock, which is known as a carbon knock, can be more clearly described as a "clink," in its earlier stages, getting heavier as the accumulations get heavier.

Carbon has very much the same constituency as brick. It is composed of road dirt with petroleum products as a binder, the whole being baked into a solid mass just like the process used in making bricks. The road dirt comes from the dust of the roads which is drawn in through the carbureter and not burned when the mixture explodes. Subsequently it is picked up by the oil on the cylinders and in the combustion chamber and baked onto the walls, piston head, etc. When using the oxygen method of carbon removal, practically all this road dirt will be found left in the cylinder after the burning is completed. Of course, some of it is blown out by the force of the gas and flame but some powder will remain. If it were not for the oil on the surfaces and the presence of some liquid gasoline at times it is possible that this road dirt would be blown out through the exhaust valve.

Better Mechanics

ARTICLE No. 252

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

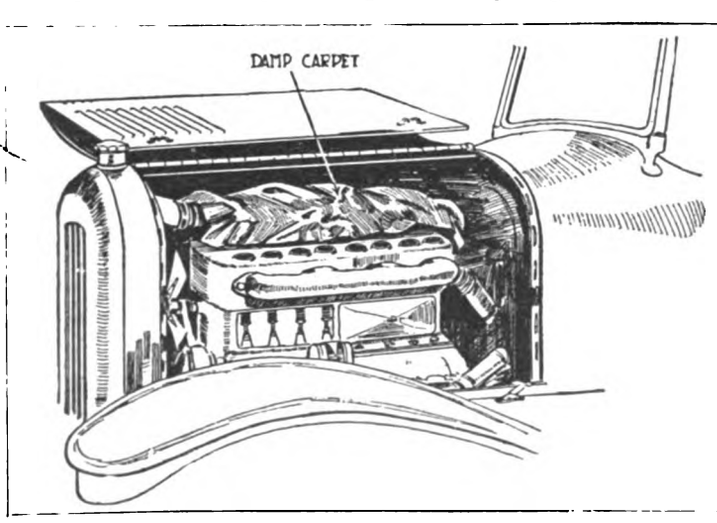

Fig. 1 — A piece of damp carpet is placed over the top of the engine to protect the wiring

The Oxygen Method

Some manufacturers and service men do not recommend the use of oxygen for removing carbon on account of the high heat developed and the possibility of warping valves, burning cylinder walls, etc. On the other hand, the process is used with success by many shops and with apparently no ill effects. It probably does no more harm to parts of the engine than the disassembling of the parts that are necessary for scraping the carbon out. The following method has been found to be satisfactory:

1. Turn off the gasoline at the tank.
2. Drain out the carbureter. Try to operate the engine. If there is fuel enough to start it, let the engine run until it stops from lack of gasoline. The turning off of the gas and running the carbureter are very important because many fires are started from neglect of these points. During the burning process there is a shower of white hot sparks which will ignite gasoline. For this reason it is also well to see that there is no gasoline, kerosene or other inflammable material in the engine pan.
3. Remove the spark plugs for cleaning and to prevent injury due to the heat.
4. Remove the valve caps if there are any.
5. Crank the engine over by hand until cylinder No. 1 comes to top dead center with both valves closed. It is necessary to have the intake valve closed to prevent the flame getting into the intake manifold and it is also necessary to have the piston at top dead center in order to cover up the mirror-like surface of the cylinder wall. It is best practice to have both valves closed.
6. The shower of sparks that comes out of the spark plug hole while the carbon is burning is liable to damage the insulation on the ignition wires. It is therefore advisable to put a damp piece of carpet over the wiring and anything else that might be damaged. The carpet should not be wet enough to drip water on the wires. Just damp enough so that it will not take fire.
7. Drop a lighted match in cylinder No. 1.
8. Turn on the oxygen at the tank and insert the tip of the torch into the cylinder. The gas pressure on the gage should register from 15 to 20 lb. when the torch is in operation.
9. The carbon will start to burn immediately. Follow the burning carbon with the point of the torch working it all over

Digitized by Google

the inside of the combustion chamber. Practically all the carbon can be removed in this way. When no more carbon will burn, turn off the gas and remove the torch.

10. Use a flexible scraping tool as shown in Fig. 2 to scrape and roughen up any remaining carbon.

11. Again drop a lighted match in the cylinder and burn the remainder of the carbon out in the same way.

This scraping and secondary burning is not ordinarily done, but it takes very little additional time and assures the removal of all the carbon.

It has been said that it is impossible to obtain a clean job by oxygen burning, but this is generally due to improper methods of operation. There is a tendency for the flame to burn away the carbon in spots with the result that after a while there are a number of islands of carbon in an otherwise clean cylinder and the flame will not jump from one to the other. This condition can be remedied by wetting the inside of the cylinder with kerosene or lubricating oil so that there will be a film of fuel to connect the different spots or islands of carbon. In some cases it may be necessary to repeat this operation.

12. Repeat the process in each of the other cylinders, bringing each piston to the top of its stroke before burning the carbon.

13. Before starting the engine put a little lubricating oil in each cylinder around the cylinder wall to prevent scoring of the cylinders before the circulation of oil gets into action. The heat of the burning carbon dries up the original oil.

Scraping Methods

When carbon is to be removed by the scraping method, the ease with which the operation is performed depends on the design of the engine. On the removable head type it is only necessary to remove the cylinder head bolts and such other apparatus as is in the way and everything is exposed. The carbon is removed with any one of a number of different shaped carbon scrapers. A putty knife will be found very convenient.

Before starting any scraping be sure that all bolt holes, water passage holes and other places that should be kept clean are filled with little wads of waste or rag. Carbon getting into the holes on cars like the Ford make it highly probable that the bolt will bottom against the carbon and twist off before the head is drawn down.

Some shops have endeavored to shortcut the carbon scraping process with machines, and a useful device is a wire brush for use with a portable electric drill. This will work all right for soft or average carbon but there will be some places that it will not touch. This is also true of the ordinary scraper and often it is necessary to get a sharp edge tool like a cold chisel to loosen obstinate pieces.

If the valves are to be ground, it is customary to remove them before beginning the scraping of carbon and in this case wads of waste should be tucked in the valve openings. Otherwise small pieces will drop into the intake passages and later when the engine is started. they will lodge on the valve seat, holding the valve open. In some cases it has been necessary to take the head off again to clean off the seats. The exhaust passages do not make so much difference as the particles are blown out anyway, but they may lodge in some of the small holes in the muffler plates if the muffler is of the perforated sheet type. So it is best to protect both sets of passages.

Where the engine is of the solid head type the removal of carbon offers more difficulty. To do a really good job the cylinder block must be taken off and the scraping done from the inside. The pistons and connecting rods need not be

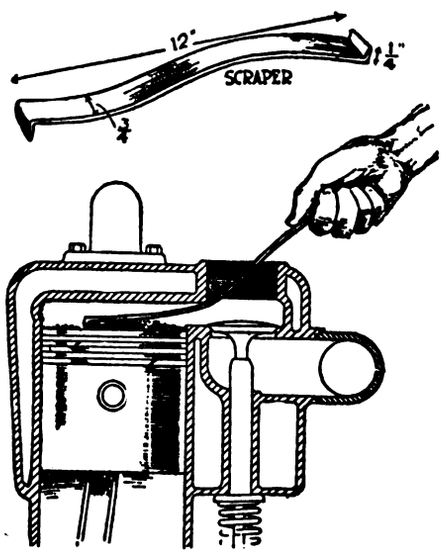

Fig 2—Using a scraper to loosen the remainder of the carbon. This enables the torch to burn off the rest of the carbon on the second application

disturbed as the carbon can be cleaned from the piston tops without any difficulty. It is practically impossible to scrape carbon through a valve plug hole even with flexible scrapers. A small patch of carbon remaining will give almost as much trouble as if the rest had not been touched.

The Causes of Carbon

Every engine in its normal running accumulates carbon in the combustion chamber. It is absolutely impossible under present designs and operations to do away with the formation of carbon. However, with all conditions as nearly perfect as possible an engine should go through an entire season without any necessity for carbon removal or valve grinding. Careless adjustment and improper care are usually responsible for the rapid carbon forming engines that we run into sometimes. Here are some of the causes and suggested remedies.

Mixture too rich.—Improper carbureter adjustment. If the carbureter is of the adjustable needle valve type, the needle can be closed until the correct mixture is obtained. If of the fixed jet type a smaller jet should be installed. Other carbureters have an adjustment on the air valve which affects the quantity of fuel used. Indications of too rich a mixture are a black smoky exhaust, poor pulling power and a tendency to overheat.

Too much oil.—Too much oil on the cylinder walls is the most usual cause of a quick carbonizing engine. This may be caused by leaky rings, rings that do not fit the ring grooves properly, scored cylinder walls, worn cylinders, carrying the oil level too high or loose bearing fits on engines with pressure lubrication systems.

Leaky rings can be remedied by fitting new ones provided the cylinders are in fair shape and the piston ring grooves are true. Sometimes it is possible to true up the ring grooves and install oversize piston rings.

Scored cylinder walls cannot be fixed without regrinding or reboring or filling the score in with a special solder. Where the cylinders are reground or rebored it is also necessary to fit new pistons and rings of a larger diameter to take up for the metal that was removed from the cylinder walls. It is hardly possible to lap out a score unless it is a very slight one. Scores are most often caused by piston pins getting loose in the pistons and working out endways. This condition should, of course, be fixed in reassembling. Another cause of scoring is the too frequent use of the choke which brings a lot of liquid gasoline into the cylinders, cutting the lubricating oil and cutting either the rings, pistons or cylinder walls.

The end clearance of connecting rod and main bearings on pressure fed oil engines has considerable to do with the amount of oil that gets to the combustion chamber. This is something that is more or less new and has not been given very much thought before. Where the end clearance of the bearings is excessive the pressure on the oil gage drops and in the effort to keep it higher, the adjustment on the pump is changed with the result that a great quantity of oil escapes through the end clearance and this is thrown to the cylinder walls.

One or two new model cars are coming through with oil troughs partly shielded so that too much oil will not be thrown by the rods when the dippers go into the troughs. Some of the older models that are oil pumpers can be made to work better by affixing some device of this kind. In other cars the trouble can sometimes be overcome by drilling holes in the sides of the trough to keep the level of the oil down.

Grinding the Valves

Valve grinding is such a frequent operation in the repairshop that any directions would seem to be almost superfluous. However, there are some fundamental methods that must be adhered to, and recently service men have found ways of shortening the operations.

In the first place the valves must be marked with the number of the cylinder they go in, or they must be marked in rotation. It is easy enough to tell

Digitized by Google

the exhaust valve from the inlet valve by inspection, because the inlet valve will have the most carbon and will be gummy, whereas the exhaust valve will be comparatively free from carbon and will often have a rusty appearance. What carbon appears on the valve will be a dusty soot rather than a gummy substance.

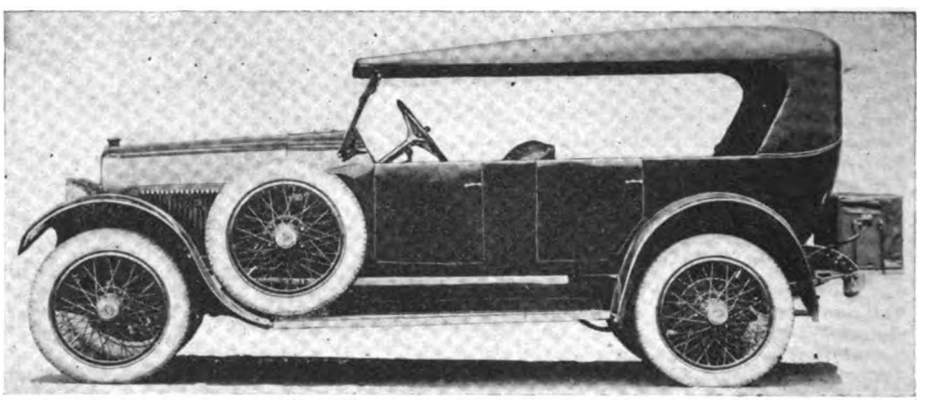
The valves are removed by inserting a valve lifter under the valve cup or washer and lifting the cup until the valve pin appears. The head of the valve must be held down at the same time or the whole valve will lift. The pin is pulled out with a small pair of pliers and the valve lifter released. Some valve lifters are so made that they will hold the spring compress until it is desired to replace the valve, but in grinding all the valves this would require a lifter for each valve. The spring and cup need not be pulled out, but simply allowed to rest on the valve tappet.

Each valve should be scraped and cleaned, removing all carbon, rust, etc. If the stem does not clean up well, use strips of fine emery cloth to polish them. After the cleaning the valves should be tried to see if the stem is loose in the valve stem hole. If there is looseness, try a new valve. If this does not take up the looseness, the valve stem guide will have to be replaced. The method of doing this varies with the make of engine, and some engines not provided with valve stem guides will have to have the hole reamed out and an oversize valve inserted. There is no use grinding valves if the stem is loose in the guide, because there is no control over the valve seat position. The valve would move around in it, and every time it came down it would come in a different position.

If the valve seat in the cylinder is in bad shape, much time can be saved by using a valve reseater, which is simply a reamer of the correct size and angle to cut the metal down to a new seat. A valve reseater has a stem which goes into the valve stem hole for a guide. Care is to be used not to cut any more metal than necessary to get a seat all around. The seat should be as narrow as possible. If it is necessary to cut deep and the seat is thereby widened, the opening should be bored or reamed out to narrow the seat.

Where the valve is in bad shape much time can be saved by using a "valve lathe," which is a bench device to true the face of the valve. A still quicker operation is a valve refacing grinder.

After both valve and seat are in good shape, the valve is ground, as the reseating and refacing do not do away with the necessity of grinding each valve to its own seat. A coarse compound can be used at first, this being wiped off and the finishing grinding done with fine compound. Ready prepared valve grinding compounds will be found more convenient to use than those prepared in the shop.



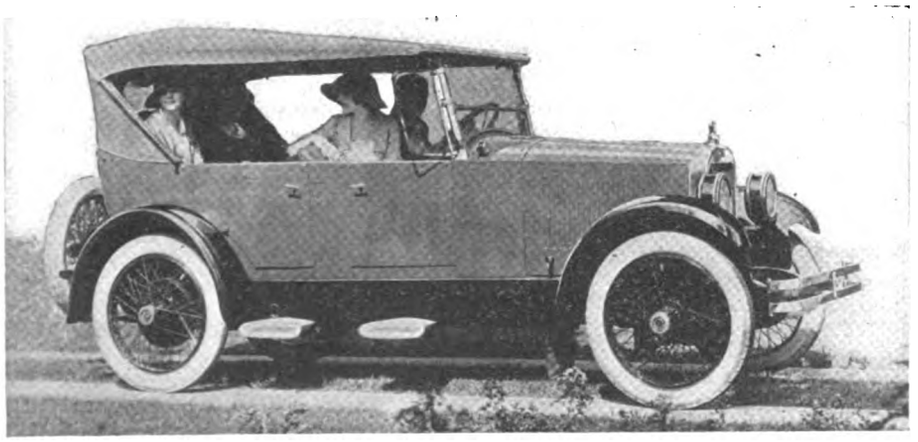
Before replacing the valves, all traces of grinding compound must be thoroughly removed as even a very small amount will do a great deal of damage.

After replacing the valves, lifting the springs and inserting the pins, the tappet clearance will have to be adjusted. The clearance on the intake should be from .003 to .004 in., and on the exhaust from .004 to .006 in. Various manufacturers recommend different clearances, depending on the construction and materials, and these instructions should be adhered to in preference to others. Valves which have just been ground should be given slightly more clearance as the valve will settle down when it gets into its seat. A readjustment after a few hundred miles is preferable.

The use of electric, pneumatic or hand oscillating valve grinders will save time in grinding, and there are one or two makes of multiple valve grinders for grinding more than one valve at a time.

New Westcott Phaeton Has California Top

A NEW seven-passenger phaeton has been brought out by the Westcott Motor Car Co. This car is distinguished by the fact that it is the first touring car with a permanent type of top as standard equipment. The price will be $1,990, or $100 more than the seven-passenger C-48. The top is of California type with a rigid frame. It is braced with angle iron and the rear quarters are steel sheathed. The car is known as the Larger Six. It is mounted on a 125 in. wheelbase. The equipment of the car is particularly complete, including storm curtains which are designed to fit with the Westcott permanent top. There is a cowl ventilator controlled by a rod on the instrument board. For $100 additional, a rigid frame plate glass window enclosure is provided, which is designed to give practically a closed car appearance and weather protection. One of the features claimed for the new model is the particularly complete finish, seventeen coats hand rubbed with a semi-baked finish being employed.



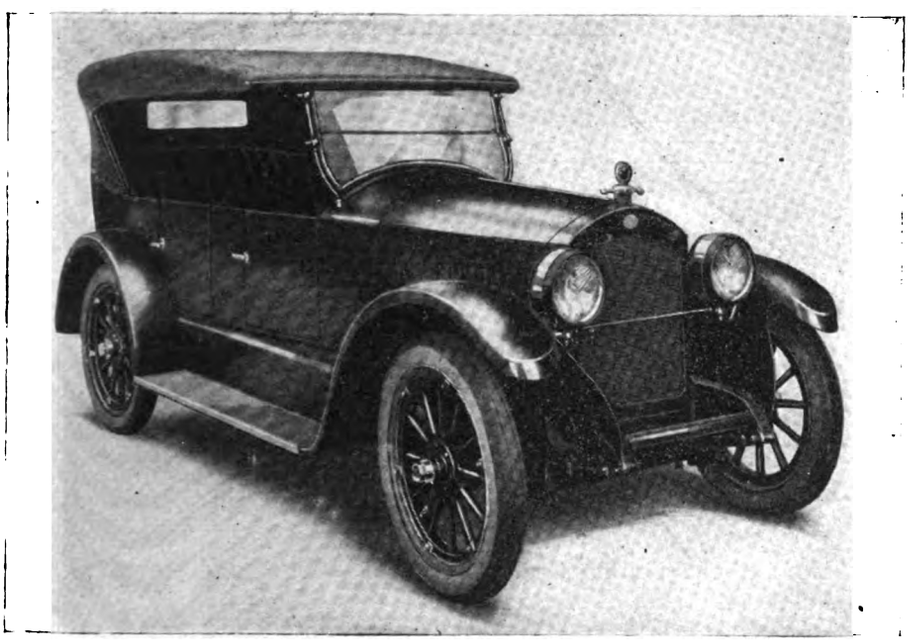
The Westcott Larger Six with Permanent Top, $1990

Units in New Westcott

The units employed in the Westcott Larger Six chassis include the Continental type 12-X six-cylinder engine; 3½ by 5¼ in. bore and stroke. The radiator is Fedders; ignition and other electrical equipment, Delco; battery, Willard, 120 amp. hr. capacity; carbureter, Rayfield; axles, Timken, steering gear, Gemmer, and the chassis is provided with the pressure gun system.

Cleveland Chesterfield Special, $1260

This new body model is finished in biege brown and upholstered in Spanish leather to match. The rear of the body is fitted with aluminum trunk guards, an aluminum trunk rack and behind this an extra wheel. Other equipment includes spring bumper in front, windshield wings, cowl ventilator, rear vision mirror and set of five wire wheels. The price is $1260



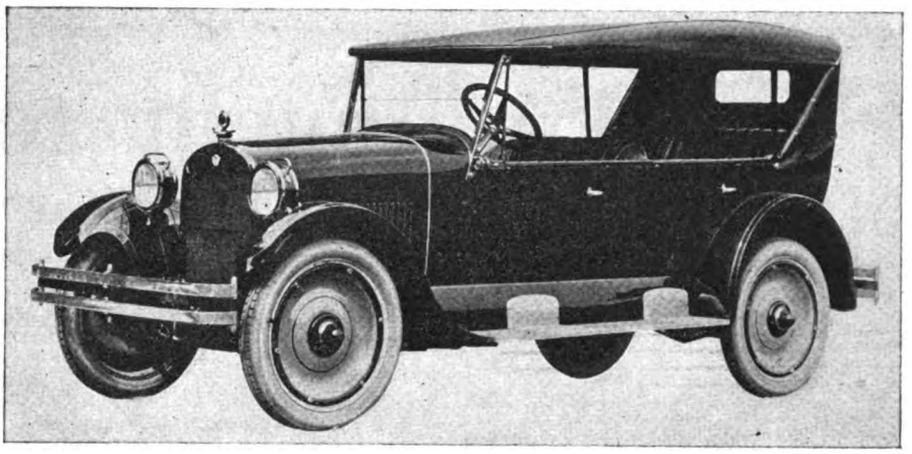
Digitized by Google

Anderson Producing Light Aluminum Six

THE Anderson Motor Co. is bringing out a new Light Aluminum Six, the 5-passenger phaeton model of which is to sell at $1.195. The price on the Series 90 phaeton model is $1,650. A closed model will be put out later at a price that will be very little in advance of the phaeton model. The new model is shorter than the old one, having a 114 in. wheelbase. The engine is Continental, Model 6-Y. Other standard parts are Borg & Beck clutch, Salisbury front and rear axles and Westinghouse starting, lighting and ignition.

The springs are semi-elliptic and are 37 in. in front and 57 in. in rear with tapered leaves. The tires are 32 x 4 cord and the weight of the phaeton model fully equipped is 2,450 lb. The construction of the cowl and hood brings the body forward four inches, which really gives the equivalent of a 118 in. wheelbase in actual body length. The top is clear vision with gipsy side curtains, upholstered in genuine leather. The headlights are drum type and a Moto-Meter and Alemite system are part of the standard equipment.

The car takes its name from the fact that the body is covered with aluminum on a framework of ash. The previous line of Anderson models, known as the Series 40, are to be continued along with the Light Aluminum Six.

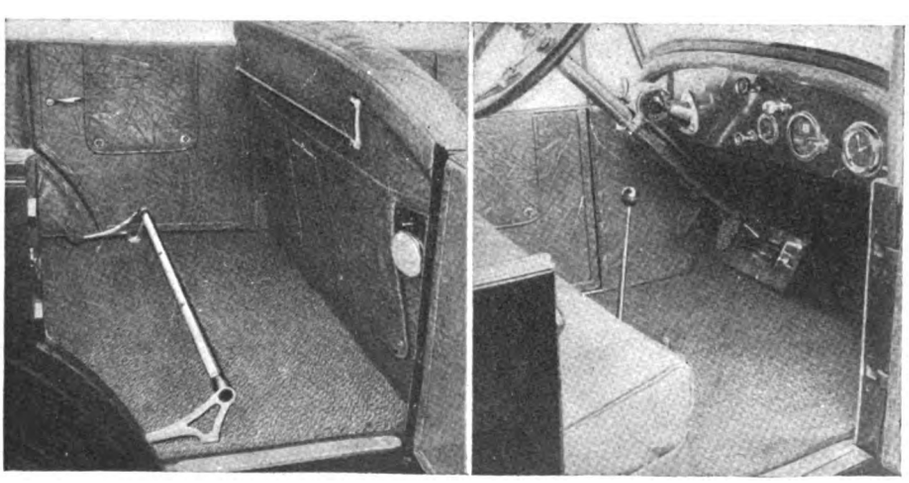


The Anderson Light Aluminum Six, $1650

New Reo Phaeton Is $1,745

A NEW 5-passenger phaeton has been added to the Reo line. The chassis is the standard T-6, but the regular furnishings and equipment are considerably augmented. The price is $1,745.

The car is equipped with 32 x 4 in. steel disk wheels, and the body itself is of the semi-sport type. The body is somewhat narrower than the standard 7-passenger body, and will comfortably carry four or five passengers. The finish is in dark blue, striped with ivory, and the trimming is Spanish gray, hand buffed leather. The seats are so arranged that passengers sit low in the body in a comfortable position.



The new Reo phaeton, $1745

The top is of new design, with gray interior trimming, and the windshield has the lower half stationary. The upper half is arranged to swing in either direction. The windshield is fitted with side wings, as standard, these being in the form of heavy nickeled braces, supporting the entire shield and making a more convenient means of attaching the side curtains. A cowl ventilator is standard equipment, and aluminum moulding is fitted at the back of the hood, where it joins the cowl at the body. There are seven polished aluminum guard bars on the rear seat back panel.

The headlights are of a new design with a nickel bail or handle and fitted with dimming lenses. There is a combination parking light and automatic stop signal on the rear.

Other standard equipment includes Moto-Meter, radiator cap with ball handles, eight day keyless clock, cigar lighter, ladies' vanity case, front and rear bumpers, aluminum step plates on the running boards, nickeled foot rail with aluminum covering, windshield cleaner and radiator core finished in nickel with polished front.

Tonneau and driver's compartment of the new Reo phaeton

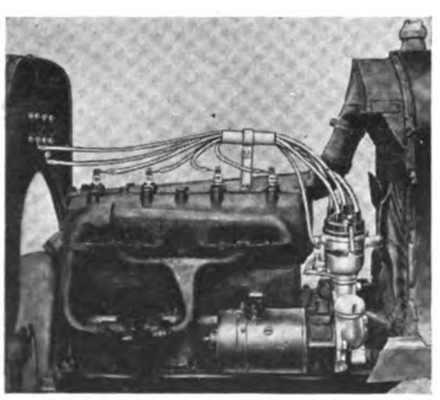
Equipment to Sell

New Devices for the Car and Truck

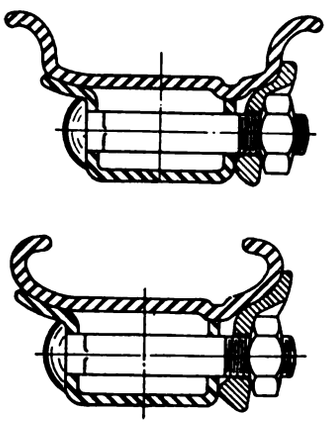
Beacon Combination Parking and Stop Light



Beacon Motor Lamp Mfg. Co.,
515-517 Huron Road, Cleveland, Ohio

The stop light portion of the device is of drum design and flashes red stop signal when the brake is depressed by means of a switch carried underneath the car. The parking light shows red to the rear and white to the front and is fitted with a 2 cp. bulb effecting a considerable saving in storage battery capacity over the lighting of head and tail lamps.

Bosch Ignition System for Fords



American Bosch Magneto Corp.,
Springfield, Mass.
Price $19.

This system is made up by adopting the previous $26 system by using one Ford coil instead of the Bosch coil. If the Bosch coil is desired it can be purchased later and made a part of the system, which is then virtually the same as the $26 system. When the $19 outfit is used the Bosch starting amplifier is furnished. This is mounted on the dash and operates in connection with one of the Ford coils. It has a button which the driver pushes when about to start the car, supplying a hotter spark for starting. The system uses a Bosch compensating governor and standard timer-distributor.

Stanweld Model 80 Steel Felloe

Standard Welding Co., Cleveland.

This is a new steel felloe intended for use in place of the usual type of wood felloe. The felloe is channel section, but in exterior appearance resembles the conventional wood felloe. It is light in weight and gives full circumferential contact on both sides between the detachable rim and the felloe to eliminate squeaks and prevent the entrance of dirt and water. It is adaptable to clincher and straight side rims. The clamps conform to the contour of the rim.

Hoof Silent Timing Gear

John C. Hoof & Co., 157-159 West Illinois Street, Chicago.
Price, Ford size, $7.50; other sizes, $4.80 to $40.

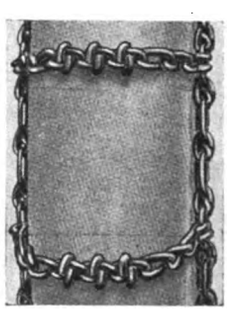
The gears are made from laminations of heavy duck, treated and impregnated with a gum and then heated and held under great pressure, forming a dense material resisting oil and water. One of these gears is intended to work between metal gears to dampen noise, ringing, etc. Some cars require only one gear, others more than one to get an alternation of metal and composition gears.

Brown Headlamp Reflector

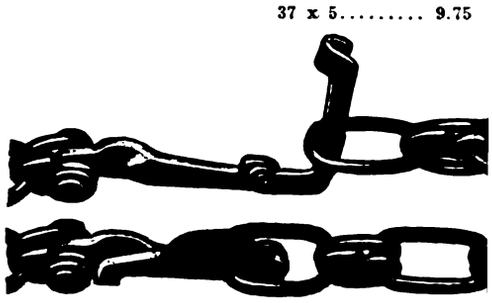
Brown Reflector Sales Co.,
25 Jersey Street, Boston.

The control of the headlamp light is entirely taken care of in the reflector without the use of lenses. The character of the beam is one of extreme width and with no glare above the legal limit.

All-in-One Folding Beds for Fords



Outers Equipments Co., 812 Mayer Building, Milwaukee, Wis.
Price $14.50



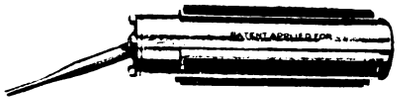
The bed rolls into a package 4½-in. in diameter by 4 ft. long and weighs 14 lbs. It can be used in a Ford sedan or touring car. The back of the driver's seat is removed and by the installation of the stringer the cushion can be shifted to a new position in the front of the car.

Weed De Luxe Tire Chains

American Chain Co., Inc., Bridgeport, Conn.
Price Per Pair

30 x 3½	$5.00
32 x 3½	5.50
31 x 4	6.00
32 x 4	6.00
33 x 4	6.50
34 x 4	7.00
35 x 4	7.50
32 x 4½	7.00
33 x 4½	7.25
34 x 4½	7.50
35 x 4½	8.00
33 x 5	8.50
34 x 5	8.50
35 x 5	9.00
36 x 5	9.00
37 x 5	9.75

The new De Luxe chains have three improvements which increase the mileage and make the attaching and locking of the chain easier. The reinforcing links which are superimposed on the main cross chains prevent breaking from excessive strains, increase the traction and increase the mileage. The twin-lok side chain link is smooth on both sides to withstand excessive strains from any angle. The lever locking connecting hook draws the side chains together with little effort and is locked with pressure of the thumb.

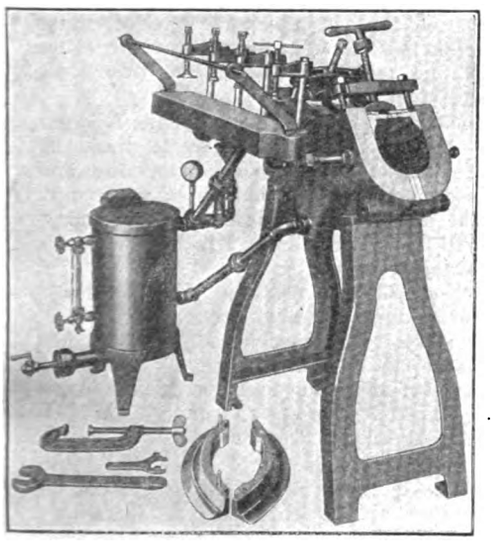


Digitized by Google

Equipment for the Shop

New Machinery and Tools

Cylinder Auto Hone

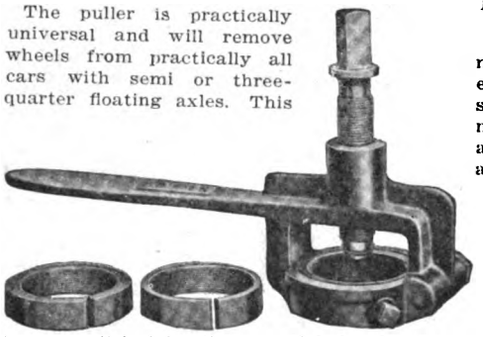


The Auto Hone Co., 1587 Main Street, Buffalo, N. Y.
Price Model A $85; Model B $95.

The device is for honing cylinder walls either after they are reground or rebored, or without the use of regrinding or reboring. The tool consists of a center arbor of cast aluminum with honing stones mounted on its circumference. These stones are held in trays and their position is adjustable to fit cylinder sizes between maximum and minimum. The steel driving handle is demountable and pressure on the stone is regulated from the driving end of the tool. As the stones are forced out radially the device centers itself. In revolving, the stones tend to keep the cylinder cylindrical. Model A for cylinders from 2⅛ to 3⅜. Model B for cylinder 3½ to 4½. Extra stones $1. each. The tool is operated by a portable electric drill.

Western Single Cavity Adjustable Tire Mold

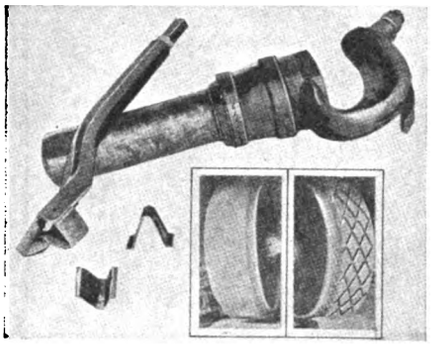
Western Rubber Mold Co.,
321 North Crawford Avenue, Chicago



The single cavity adjustable passenger car tire mold can be adjusted to fit all sizes of passenger car tires. This is accomplished by having the cavity in separate halves, and held together by quickly adjustable bolts. The cavity can be widened or narrowed to any size by the use of spacers between the molds to form the larger sizes and reducing shells for the smaller sizes. By being adjustable laterally, as well as perpendicularly, the insertion and removal of tires from the molds is a very simple and easily accomplished operation.

Thomason Universal Wheel Puller

Shepard, Thomason Co., 506 West Pico Street, Los Angeles, Cal.

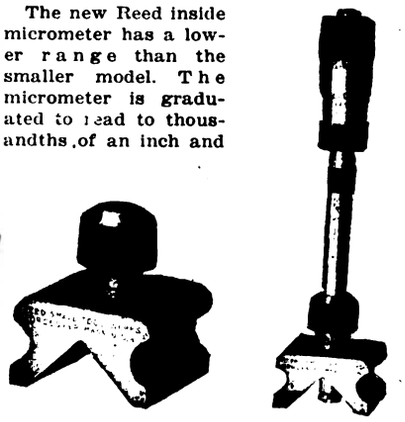


The puller is practically universal and will remove wheels from practically all cars with semi or three-quarter floating axles. This

is accomplished by the use of hub adapters which are tapered on their outer circumference to fit the receiving bore and exert great clamping power on the hub. The taper allows quick insertion of adapters. A blank adapter allows threading for special hub caps. A steel ball imbedded on the point of the wheel prevents the dragging up of metal on the axle when the pressure is applied.

Boyer Chipping Hammer for Grooving Solid Tires

Chicago Pneumatic Tool Co.,
6 East Forty-fourth Street, New York City



Solid tires can be regrooved in less than an hour with a pneumatic hammer fitted with a special tool holder and cutting knife. The tool holder limits the depth of the cut and the blade is driven through the rubber, completing a groove at each operation. The tool can be operated by any air power that will properly inflate pneumatic truck tires. The illustrations show the tool and a tire before and after grooving.

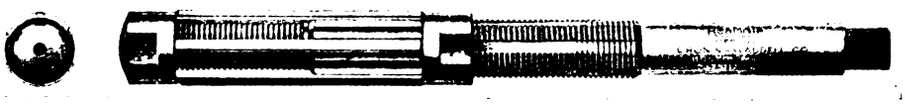
Reed Height and Alinement Attachment for Inside Micrometer

Reed Small Tool Works, Worcester, Mass.

The new Reed inside micrometer has a lower range than the smaller model. The micrometer is graduated to read to thousandths of an inch and

and has ½ in. run of spindle with a measuring range from 2 in. to 32 in. A detachable handle allows the micrometer to be used for right or left handed work. The height gage attachment consists of a hardened steel brace for obtaining the height of projection from plane surfaces. The V groove at the bottom of the base allows for measuring distances between shafts.

Little Giant Pipe Wrench



Greenfield Tap & Die Corp.,
Greenfield, Mass.

The wrench has the end opening feature familiar to users of machinists' wrenches. The advantages claimed for the wrench are ease of handling pipes in corners, close to walls and similar confined places. It is possible to get in close places to turn body bolts, etc., and if the wrench will not take hold in one direction, the jaws can be reversed. It has no springs, rivets, frame or pins. It is made in 8, 10, 14, 18 and 24-in. sizes of which the three smaller are already on the market.

Reamrite Reamers

Cronin-Waddell Co., 104-106 Portland Street, Boston.
Price $4.50 to $24.

The reamers are of the expansion type and are so designed that each reamer will expand to overlap the smallest size of the next reamer. It is possible to sharpen the blades on a cylindrical grinder or a lathe with an electric tool post grinder.

Repairshop Shortcuts

Look at It from the Outside

AFTER seeing shortcut No. 3349 in action we asked another shop manager whether his taps and reamers ever got rusty. He said that he did not believe they did but did not know. We went over to the rack and, while the much used sizes were free from rust, there were some of the seldom used sizes that were getting in bad shape.

Look at your own shop this way. Read these ideas and see if they won't apply in your organization and save you money or time.

Don't assume that things are as good as they can be. Then if you have some other good ideas, send them to Motor World. We pay $1 each for those accepted. The ideas must be practical and must not have been previously used in this department.

No. 3349—Keeping Oil on Fine Tools—The rack containing reamers, taps, dies, etc., is in shelves, each slanting toward the front and made oil tight. A gutter runs along the bottom of each to catch the oil and return it to a can.—Don Hastings, Williams & Hastings, Detroit.

No. 3350—Insulating a Screw Driver Handle—A screw driver handle is insulated for high tension work around spark plugs by melting up an old talking machine record, first breaking it into small pieces, placing them in tin can which is placed on a hot stove. When the record melts, the handle of the tool is dipped in and allowed to cool. Several coats of material can be put on.—Myron Baker, Logan, Utah.

No. 3351—Three Point Support Machine Tools—Where the floor is uneven, a machine tool can be mounted on three points to insure accuracy of alignment. Two heavy wooden blocks are mounted to the legs of the tool, one of these being bolted at two points and the other at one point.—J. M. Alden, Aberdeen, Scotland.

No. 3352—Piston Ring Groove Scraper—A piston groove scraper is made by breaking off a piece of piston ring and inserting it in the hole in a wrist pin. The end of the pin is filed or ground.—Will Saffer, Saffer & Kirkham Garage, Corydon, Ind.

No. 3353—An Auxiliary Vise Holder—For holding long work vertically in a vise, two pieces of hard wood or steel are placed between the jaws and a packing block of the same diameter as the work is placed at the opposite end.—J. W. Alden, Aberdeen, Scotland.

No. 3354—Cutting Connecting Rod Shims—Connecting rod shims are cut by drilling a hole through the shim and clamping it between the rod and the cap. A cold chisel or shears can be used to trim the shim.—T. F. White, Foreman-King Motor Co., Columbia, S. C.

No. 3355—Ford Transmission Stand—A stand for the Ford transmission makes it easy to hold the unit for replacing the magnets. The stand is made from an old Ford universal joint cap which is bolted through the work bench or on a separate stand.—Frank A. Valenta, Proprietor, Schwertner Garage, Schwertner, Texas.

Price Cuts Follow Large Output

MANUFACTURERS ABLE TO LOWER OVERHEAD

Industry Again Passes Resulting Benefits on to Consuming Public

NEW YORK, Aug. 8—Price cuts naturally are the chief topic of conversation in the industry at this time, but it is difficult to find anything especially alarming in the changes made. None of them is sensational, and most of them have been made by highly competitive companies.

Revisions have been based on the reasonable expectation of a continuance of heavy production. They have been made possible by large output and a consequent lowering of overhead and manufacturing costs. The industry is again passing on to the consuming public the benefit of reduced production expense. This policy has had much to do with bringing the phenomenal business which the industry has enjoyed this year.

Will Affect Farm Market

This will be one of the factors which will encourage a strong farm market. Farmers have felt for two years that they were having to pay extortionate prices for the goods they needed, while not getting fair prices for their own products. They have been convinced that automobile makers are playing fair with them and for that reason are in a mood to buy when they get enough cash to go into the market for something they don't actually have to get.

The price cuts may slow up sales for August, but they will not have a really demoralizing effect unless they are followed by a second series of cuts. Such a move is highly improbable, however. Manufacturers now have their prices down to such a level that they can't go on indefinitely making them lower if they expect to operate at a profit. There are no companies in the field which expect to operate at a loss.

Many Unfilled Orders

The industry went into August with a large number of unfilled orders on hand in the plants making the more popular lines. How many of these orders will stand in the face of price reductions is problematical, but it is not likely there will be a heavy shrinkage. July business probably was about 25 per cent less than June, and it is not probable August will fall more than 25 per cent under the July level. Indications now are that business will be shaken down to a solid foundation by Sept. 1 and that the industry will go into the fall season with excellent prospects for a large sale, especially in the closed car field.

FORD TOTAL OUTPUT PERCENTAGE LOWERED

NEW YORK, Aug. 5—Analysis of passenger car production figures for the first half of 1922 shows that Ford produced only about 40 per cent of the total as compared with about 65 per cent in the same period last year. His output for the six months was about 375,000.

It is interesting to note that in the same period the Chevrolet Motor Co. produced approximately 100,000 cars. It now appears practically certain that Chevrolet will establish a record this year for the biggest production in history next to Ford. The best previous mark was established by the Willys-Overland company in 1916 with a total of 140,000.

The seasonal decline thus far has been less than normal, and conditions are entirely satisfactory for this period of the year. Factories are not forcing production as they did in the second quarter, but they are doing exceedingly well. This applies also to parts manufacturers.

The market for light trucks promises to be very satisfactory the last half of the year, and sales of heavy vehicles are running about as they have for several months past.

ROLLS-ROYCE REPORTS GAIN OF 233 PER CENT

SPRINGFIELD, MASS., Aug. 7—Sales for the second quarter increased 233 per cent over the first quarter, Rolls-Royce, Inc., reports. These sales were widely distributed as a result of the company's sales plan, establishing representatives in the principal cities.

In the factory the output also showed a satisfactory increase, as additions were made to the works force at intervals during May and June. In July, when the force was complemented throughout the different departments, an increase was reached in finished cars of more than double the average monthly shipments of any previous quarter in the history of the company. A night force in some of the departments is being considered.

Oldsmobile Dealers Optimistic

DENVER, Aug. 4—Colorado Oldsmobile dealers in convention here under the auspices of W. W. Barnett, Oldsmobile distributor, report marked improvement in business conditions and with new prices announced look for an active fall business. All anticipate an exceptional demand for closed cars at the new prices.

REDUCTIONS GREATEST IN CLOSED CAR FIELD

No Unhealthy Period of Competition Expected as Result of Revision

NEW YORK, Aug. 4—Financial interests appear to be much perturbed over August price cuts already announced. They seem to feel that these reductions will inaugurate a period of such competition that the companies may have difficulty in making a satisfactory profit.

There seems to be small basis for undue alarm on this score. Competition is not likely to be any more keen in the next six months than it has been in the past six and the price changes which have been made by the lines in closest competition do not change their relative position materially. All these reductions have been based upon expectations of quantity production and, unless all signs fail, these expectations will be realized, although it is improbable sales for the remainder of the year will be as large as in the first half. It is significant that the largest cuts have been made in the closed car field and that reductions on open models are comparatively small.

While competition will continue to be exceedingly sharp, there is small likelihood of anything resembling a price war. There seems to be enough business to go around and none of the companies proposes to operate at a loss. By increasing volume of production, they are cutting down their overhead and manufacturing cost sufficiently to offset any stiffening in material prices, except that which is of a temporary nature resulting from the mine and rail strikes.

R. & V. WILL INCREASE PRODUCTION PROGRAM

EAST MOLINE, ILL., Aug. 8—Operations at the R. & V. Motor Co., resumed after a two weeks' inventory taking, are rapidly picking up momentum and A. A. Gustafson, superintendent, says forces will be increased as fast as the arrival of materials warrants. Indications are that full schedule production will be maintained throughout the winter.

The production program outlined the first of the year intended to run the plants until Oct. 1 was run through before mid-June due to record breaking sales of April, May and June and now new materials are needed. Directors have authorized a production program on a scale larger than ever before in the company's history and anticipate material expansion in 1923.

Makers Plan Big August Programs

KEEP EYE ON EFFECT OF LOWERED PRICES

Ready to Curtail Schedules If Public Shows Hesitancy in Buying

DETROIT, Aug. 3—With production in July running just seasonably under the three record-breaking spring months, factories in the Detroit district are entering the month of August with considerable anxiety as to the effect of price reductions on the automobile market. In the opinion of many, the reductions at this time will have the effect of causing a general holding off of buying which may continue into September.

Going into August, practically every factory had a large number of orders ahead and were assured of operation on a nearly capacity scale. There is little hesitation in saying, however, that these orders are subject to heavy reduction under the influence of a price raid, and officials are keeping in very close touch with the situation so that schedules may be quickly altered to meet the rapidly changed conditions.

Holding Off on Reductions

There is a seeming tendency on the part of a majority of factories to hold off on price reductions until the effect of the early ones has been considered. Many factories would undoubtedly prefer to maintain their present price positions if it is possible to do it without the sacrifice of their production positions. This situation will not clear itself before the first 10 days of the month.

Ford, in July, came through with another record month, the production exceeding the 151,000 figure fixed, and August schedules have been placed at approximately the same level. Ford domestic sales ran at approximately 135,000 cars and trucks and 10,000 tractors The tractors showed a slight falling off. With the foreign sales it was said the total would exceed the 151,000 schedule fixed for the month.

Schedules at Factories

Dodge Brothers opperated at close to its 600 a day schedule for the month, piling up orders on its new utility coupe several months in advance of production facilities.

Maxwell operation was at about 50 per cent of its June total owing to manufacturing changes at the plant, which are rapidly being perfected and will permit the company to resume on a schedule of about 300 daily.

The Durant Lansing factory bettered its production of 100 daily on the Durant fours and will begin manufacture this month of the Star, the low-priced car, in addition to the usual total of Durants.

Dort continues on a schedule of 50 to 70 daily.

Buick with its completely revised line has set a schedule of 185,000 for the year, a monthly total of about 15,500. This total can easily be reached with additional facilities afforded by the former Scripps-Booth plant, which is to

(*Continued on page* 42)

MOTOR VEHICLES BOON IN CHICAGO STRIKE

CHICAGO, Aug. 5—Motor vehicles provided Chicago's chief means of local transportation to-day following the strike of service lines and elevated trainmen which caused complete suspension of street cars and elevated railroad service.

Large downtown department stores and other business houses used trucks and privately owned automobiles to bring their employees to work. Persons who drove their own cars usually arrived down town with all seats filled. Motor clubs have urged that all persons driving their own cars accommodate as many passengers as possible.

The first day passed with surprisingly little confusion and showed the possibility of the second largest city in the United States getting along with motor car transportation as a substitute for street railway systems.

NEW YORK PEERLESS MANAGEMENT CHANGES

NEW YORK, Aug. 7—Distribution of Peerless motor cars in New York and the Metropolitan district, which includes Connecticut as far as Hartford and to New Brunswick, N. J., hereafter will be under the active direction of J. A. Clark, formerly sales manager of the Van Cortlandt Vehicle Corp. of New York, who took over the Peerless distribution from C. T. Silver in 1916 under the management of W. A. Woods as vice-president and general manager.

R. H. Collins, president of the Peerless Motor Car Co., announces the election of Clark as vice-president and general manager of the Van Cortlandt Vehicle Corp. and that the company will continue as a direct factory branch.

D. A. Burke, general sales manager at the factory, has been elected president of the Van Cortlandt Vehicle Corp., and Clark succeeds W. A. Woods, who has resigned.

JULY BIGGEST MONTH IN OUTPUT OF TIRES

For First Seven Months of This Year Akron's Output Exceeded 11,000,000

AKRON, Aug. 3—July was the biggest month for production in the entire history of the rubber tire industry of America.

The Akron district alone during July turned out tires on a basis of 33,000,000 a year, July production here being in excess of 2,750,000 casings. On this basis of production and upon the basis of present tire requirements, these figures mean that at their present pace of production Akron district tire companies can meet practically the entire needs of the world.

With July's astounding production figure, tire output in the Akron area for the first seven months of the current year is estimated to have exceeded 11,000,000. Tire output was considerably less during the first three months of the year than during the following three months but from Jan. 1 steadily climbed, making conservative the 11,000,000 production estimate.

107,000 Tires Daily

Daily production continues at about 107,000 tires a day here. This is a climb up from 85,000 a day six weeks ago, the increase in demand for tires which necessitated the heavier output coming at a time when practically all tire producing companies were "sitting tight" and were prepared for a seasonal slump in sales. But the falling off of sales failed to materialize when, according to all the laws of the industry based upon a study of every year's ebb and flow of production, there should have been a diminution of sales.

Whether this slump will come in August manufacturers now are not prepared to say. They were outguessed by developments to such an extent in July that they were reluctant to venture a prediction for August and are content to accept conditions as they arise.

Mitchell Executives with Kardex

TONAWANDA, N. Y., Aug. 7—A. G. McMillan, formerly director of sales for the Mitchell Motors Co., Inc., has become director of sales of the American Kardex Corp. With McMillan in his new undertaking are Paul C. Lott, previously sales promotion manager for Mitchell, and Fred T. Yeager, who was western sales manager. Lott will act as sales promotion manager and Yeager will manage the newly created automotive sales division.

DURANT TAKES OVER MASON "ROAD KING"

Will Be Built at Flint and Bridgeport—Production, 60 Daily

NEW YORK, Aug. 7—A truck line has joined the Durant family, it being announced to-day that the Mason Road King hereafter will be manufactured under the direction of W. C. Durant. This gives him a line consisting of the Locomobile, the Durant Four and Durant Six, the Flint and the low priced Star.

The truck, which is of 1 ton capacity, will be made both at Flint and at Bridgeport and each factory will turn out thirty a day. A. C. Mason is president of the truck company.

The Mason Road King chassis will be furnished with all of the standard types of bodies, including stake, delivery and bus, and the price will be $1,200. It carries a four cylinder motor of 35.40 hp. and the gear reduction is 4.9 to 1, which makes 40 miles an hour with full capacity load a possibility. The wheelbase is 131 inches and the weight of the chassis with hood and fenders is 2,950 lbs. Rear springs are 2½ in. wide and 38¼ long, and the front springs are 28½ in. in length. Cord tires, 34 x 5, are standard equipment as also are electric starter, electric lights and electric horn.

30,000 Durants Built

NEW YORK, Aug. 7—The anniversary of the first Durant year was celebrated last Friday. A year ago that day the first Durant car was placed on public exhibition in New York City. Since that time 30,000 Durants have been produced, of which number 14,755 came through the second quarter of 1922.

FORD'S COAL SUPPLY WILL LAST 14 DAYS

DETROIT, Aug. 5—Ford Motor Co. has but fourteen days supply of coal, according to an application for priority shipments filed with the Michigan State fuel administration offices in Lansing this week. If supplies are not available within that time its plants at River Rouge and Highland Park, and the Lincoln plant will be compelled either to close or go on such limited production as may be possible through the use of Detroit Edison power or auxiliary power generated with other fuel than coal.

Up to the issuance of the priority regulations by the Interstate Commerce Commission the company had been hauling daily supplies over its Detroit, Toledo & Ironton railroad, but this supply is now cut off. Without coal it will be compelled to cut off its supply of coke which it has been selling to other large car manufacturing companies in the district, and will likewise be unable to furnish gas by-product of its coke plant to the city.

USED "SPLIT" PLATES; PENALIZED BY STATE

BOSTON, Aug. 2—A Roxbury dealer was bringing over from New York six new cars. But it operates only three or four dealer number plates.

So three sets of plates were taken, and the real numbers issued by the state authorities were placed on the front of each vehicle. On the rear were cardboard numbers.

One of the motor registrar's deputies saw the cars coming through Hudson and stopped them. After making an investigation the facts were reported to Motor Vehicle Registrar Goodwin. His assistant went over the facts and then suspended the dealer's registration for ten days, and also the licenses of the men driving the cars.

Under the law substitute plates are not allowed to be used except where one has been lost, and application made to the motor registrar for a new one. Pending its arrival a substitute may be used. Many owners and dealers never apply for a new one, but make their own substitute, so a crusade will be opened against this, and also against the split plates, because it deprives the state of revenue for full sets.

HORACE E. RICE DIES WHEN TRAIN HITS CAR

SPRINGFIELD, MASS., Aug. 4—Horace E. Rice, assistant to the president of the American Bosch Magneto Corp., was killed to-day when his automobile was wrecked by a Pennsylvania railroad train at a grade crossing in Oxford, Pa. He was on a trip that was to have comprised the principal cities of the middle west. Rice was an ignition expert and came to Bosch from the Atwater Kent Manufacturing Co. of Philadelphia last September.

Bid for Allen Rejected

COLUMBUS, Aug. 8—Only one bid was received July 31 by W. C. Willard and George A. Archer, receivers for the Allen Motor Co., for the plant located on Dublin Avenue. This property is on the tax duplicate for something over $303,000 and the bid was so low that it was not considered. Bids will again be received by the receivers August 14.

Apco Wins Injunction

PROVIDENCE, R. I., Aug. 5—A temporary injunction restraining the Hudson Motor Specialties Co. of Philadelphia from alleged unfair advertising and false representations concerning the Apco Manufacturing Co. of Providence, has been granted by Federal Judge Arthur Brown, following the hearing of arguments.

TRUCK WEIGHTS NOW CALIFORNIA ISSUE

County Supervisors in State Want Maximum Fixed at 22,000 Pounds

LOS ANGELES, Aug. 8—The county supervisors of California undoubtedly sounded a battle-cry when, in convention at Eureka, their legislative committee reported in favor of 22,000 pounds as the gross maximum weight on State highways and the committee's report was adopted unanimously by the convention.

The county supervisors have absolutely no jurisdiction over the State highways, but in going on record for 22,000 pounds they threw down the gauntlet to truck owners and dealers, who are advocating a gross maximum limit of not less than 26,000 pounds. Undoubtedly this means a fight will be waged at next winter's session of the legislature.

The supervisors, by their action, publicly revealed the political line-up in the State. The California Highway Commission has jurisdiction over State roads and the supervisors control weight limits on county roads. The present law permits 30,000 pounds on State roads and, by going on record as favoring a decrease in this to 22,000 lbs., it becomes apparent the commission has lined up the supervisors to help to bring about a reduction in the State through the legislature. There are 58 counties in the State and 5 supervisors in each. There are but 120 members of the legislature, so the preponderance of political influence that can be exerted upon members of the legislature through the supervisors is what the commission believes will prove a trump card.

Supervisors of some counties have gone on record as favoring the prevention of the use of motor vehicles equipped with other than pneumatic tires.

DODGE SOON TO HAVE FACTORY AT WINDSOR

DETROIT, Aug. 7—Plans for the erection of a Dodge Brothers factory in Windsor have not yet reached a point where the company will make an announcement of its plans, or the extent to which it will go in a Canadian investment, but it is definitely determined that the company will build soon. The property obtained is at the west end of Windsor, an option having been taken on it about a year ago. The former owner was M. G. Campbell, manager of the Windsor branch of the Kelsey Wheel Co.

The system of incorporating certain Canadian made parts into the Dodge Brothers cars exported into that country will be continued for the present, the lease the company holds on the Canadian Pacific dock remaining, though subject to cancellation. The new factory will provide for an all Canadian built car, it is understood, and will not be assembled from parts made in the Detroit plant.

STUDEBAKER REDUCES LISTS ON FULL LINE

Largest Reductions, $175 to $300, Are Made on Special Sixes

SOUTH BEND, IND., Aug. 5—Substantial price reductions have been announced by the Studebaker Corp. of America on all its models effective Aug. 1. The reductions range from $70 to $200 on the light sixes and $175 to $300 on the special sixes, and $135 to $225 on the big sixes. The new schedule is as follows:

	Old Price	New Price
Light Sixes:		
Chassis	$875	$785
2-passenger roadster	1,045	975
Touring car	1,045	975
Coupe	1,375	1,225
Sedan	1,750	1,550
Special Sixes:		
Chassis	1,200	1,000
2-passenger roadster	1,425	1,250
Touring	1,475	1,275
4-passenger roadster	1,475	1,275
Coupe	2,150	1,785
Sedan	2,350	2,050
Big Sixes:		
Chassis	1,500	1,300
Touring	1,785	1,650
Speedster	1,985	1,785
Coupe	2,500	2,275
Sedan	2,700	2,475

CHANDLER, CLEVELAND LOWER THEIR PRICES

CLEVELAND, Aug. 5—Price changes in both the Chandler and Cleveland lines have been announced. With the Cleveland the drops ranged from $20 to $100 and with the Chandler from $50 to $300. The new lists are as follows:

CHANDLER

	Old Price	New Price
5-pass. Phaeton	$1,595	$1,495
4-pass. Chummy Roadster	1,595	1,495
2-pass. Roadster	1,595	1,495
7-pass. Phaeton	1,695	1,645
Dispatch (open)	1,695	1,645
Royal Dispatch	1,795	1,745
Coupe	2,295	1,995
5-pass. Sedan	2,395	2,295
7-pass. Sedan	2,395	2,375
Limousine	2,995	2,895

CLEVELAND

	Old Price	New Price
5-pass. Phaeton	$1,195	1,095
Chesterfield	1,295	1,260
2-pass. Roadster	1,175	1,085
Sedan	1,595	1,585
Coupe	1,550	1,495

New Miller Lists

AKRON, Aug. 7—Price reductions averaging 10 per cent on cords and 12½ per cent on fabrics is announced by the Miller Rubber Co. The 30 x 3½ cord, which formerly sold at $24.75 and more recently at $18, is priced at $15.95 on the new list. There is another 30 x 3½ Miller cord at $13.95 and still another—the new Wedge tread—at $12.50. The 32 x 4 cord has been dropped from $32.40 to $29.15, and the 35 x 5 cord to $49.30. Fabric prices begin at $9.

U. S. Tire Reduced

NEW YORK, Aug. 8—United States Tire Co. has announced price reductions of 10 per cent on cords and 15 per cent on fabrics, with the exception of Ford sizes, which remain unchanged.

HUPP'S QUOTATIONS DROP $100 TO $200

DETROIT, Aug. 7—Reductions in the Hupmobile line range from $100 to $200. In addition a price of $1,025 is quoted on the chassis. The new list is as follows:

	Old Price	New Price
2-pass. roadster	$1,250	$1,150
5-pass. phaeton	1,250	1,150
Coupe	1,835	1,635
Sedan	1,935	1,785
Roadster coupe	1,485	1,335
Chassis	—	1,025

DORT LARGE SEDAN QUOTED $60 LOWER

FLINT, MICH., Aug. 7—A revised list is offered by Dort, which has raised prices on three of its models, dropped on one and stood pat on the two open jobs. The only reduction is on the large sedan, which now is $60 cheaper than before. The new list is as follows:

	Old Price	New Price
2-pass. roadster	$885	$885
5-pass. phaeton	885	885
Large coupe	1,315	1,350
Small coupe	1,065	1,120
Small sedan	1,115	1,150
Large sedan	1,445	1,385

JEWETT OPEN MODELS TAKE DROP IN PRICE

DETROIT, Aug. 7—Price changes on the Jewett announced by the Paige Detroit Motor Car Co., effective Aug. 6, lowers the price on the open models $70, while on the sedan it is advanced $70 and the coupe $50. The revised list is as follows:

	Old Price	New Price
5-pass. phaeton	$1,065	$995
3-pass. roadster	1,065	995
5-pass. sedan	1,395	1,465
4-pass. coupe	1,395	1,445

CHALMERS REDUCTIONS GO FROM $160 TO $400

DETROIT, Aug. 7—Price reductions ranging from $160 to $400 are announced by the Chalmers Motor Corp. as follows:

	Old Price	New Price
2-pass. roadster	$1,345	$1,185
5-pass. phaeton	1,395	1,185
7-pass. phaeton	1,495	1,345
Coupe	1,995	1,595

President Hardy on Vacation

DETROIT, Aug. 5—A. B. C. Hardy, president and general manager of the Olds Motor Works, is taking his fourth vacation in 30 years. He left for Pittsburgh Monday where he will speak to a meeting of Olds Pennsylvania dealers.

NASH CUTS PRICES FROM $50 TO $200

Biggest Reductions Are on Closed Models of 6-Cylinder Line

KENOSHA, WIS., Aug. 5—Price reductions ranging from $50 to $200, effective Aug. 2, have been made by the Nash Motors Co. The biggest cuts are on the two closed jobs in the six cylinder line and the smallest on the two open types in the four cylinder field. The new list is as follows:

SIX CYLINDER

	Old Price	New Price
5-pass. phaeton	$1,390	$1,240
7-pass. phaeton	1,540	1,390
Sedan	2,390	2,190
Coupe	2,090	1,890
Roadster	1,360	1,210
4-pass. sport	1,545	1,395

FOUR CYLINDER

	Old Price	New Price
5-pass. phaeton	$985	$935
Roadster	965	915
Coupe	1,485	1,385
Sedan	1,645	1,545
Cab	1,295	1,195
Carriole	1,350	1,275

HAYNES CUTS PRICES ON ITS MODEL NO. 50

KOKOMO, IND., Aug. 7—A new price list, showing reductions of $100 on the open 55 models and $200 on the closed 55 models is announced by the Haynes Automobile Co. The revised prices became effective Aug. 2. The list follows:

	Old Price	New Price
Phaeton	$1,595	$1,495
Roadster	1,645	1,545
Coupelet	2,295	2,095
Sedan	2,595	2,395

SIGNAL TRUCK CUT $500 ON ALL MODELS

DETROIT, Aug. 4—The Signal Motor Truck Co. has cut $500 from the prices throughout its entire line. The changes are as follows:

	Old Price	New Price
Model N-F, 1 ton	$1,950	$1,450
Model H, 1½ ton	2,450	1,950
Model I, 2½ ton	2,875	2,375
Model M, 3½ ton	3,675	3,175
Model R, 5 ton	4,400	3,900

These prices are in effect as of Aug. 1.

Pierce-Arrow Reports

NEW YORK, Aug. 5—Pierce-Arrow Motor Car Co. for the three months ended June 30, 1922, reports a deficit, after interest and Federal taxes, of $11,766, against $1,400,550 for the same quarter in the previous year. The deficit for the first quarter of this year was $25,226. Operating income for the period, after allowing for maintenance and depreciation, was $348,855, against an operating loss of $828,866 last year.

MORE GASOLINE DATA ASKED OF N. A. D. A.

Counsel for Senate Committee Seeks to Check Prices for Two Years

WASHINGTON, Aug. 5—Joint congressional investigation of rising gasoline prices will be begun the early part of next week, Counsel Gilbert E. Roe of the committee has announced. The first witness will be C. H. Welsh of the Petroleum Institute.

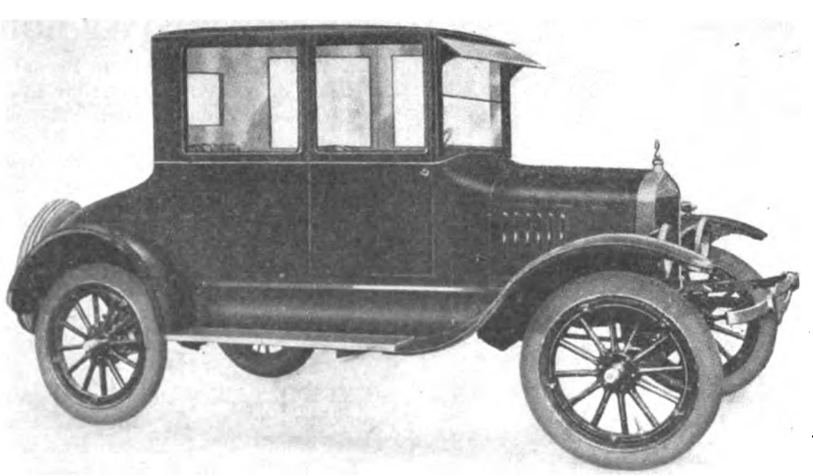
One of the benefits of the investigation, it has been learned, will be the establishment of a uniform gasoline price all over the country, which it is hoped can be arranged on some voluntary plan between the government and the gasoline producers.

Appeals to Association

ST. LOUIS, Aug. 5—Further assistance has been asked from the National Automobile Dealers Association by the United States Senate Committee investigating the gasoline price situation in a letter from Gilbert A. Roe, attorney for the Senate Committee on Manufactures to C. A. Vane, general manager of the association. Recently the dealer association laid before the committee data showing average prices for twelve months in twenty-eight cities selected at random throughout the country and in which a wide discrepancy existed as to retail gasoline prices.

Roe has now asked the dealer association to provide him with similar information for the same cities for the year 1920 and the first half of 1921 which, with the information already supplied by the N. A. D. A., will give a check on prices for virtually the last three years.

Since charges were made by the N. A. D. A. to the Senate Committee and to the Federal Trade Committee that gasoline prices had been "juggled" there has been a general reduction in gasoline prices of about two cents a gallon for practically the whole country. Considering this as a country-wide influence this means that a saving has been effected for motorists amounting to substantially $75,000,000. Motor clubs throughout the country have quite liberally credited the saving to the N. A. D. A. campaign.



Vane has offered the entire facilities of the dealer organization to the committee investigating the gas price situation and has advised Roe that when hearings are begun the N. A. D. A. will have witnesses present that will offer additional evidence on the gasoline situation.

OFFICIALS NAMED FOR STAR COMPANY

NEW YORK, Aug. 7—Carroll Downes, vice-president of Durant Motors, Inc., and president and general manager of the Durant Motor Co. of Michigan, has been named by W. C. Durant as president and general manager of Star Motors, Inc., the personnel of which has just been announced. C. F. Daly, who also is assistant to the president of Durant Motors, has been selected as vice-president of Star. W. W. Murphy, treasurer of Durant Motors, will serve in the same capacity with the Star company, while Secretary H. F. Herbermann of Durant Motors will have the same title with Star.

Star common will be placed on the market for the first time on Aug. 10. It will be listed at $15 a share and sold in lots of from 5 to 50.

Lawrence Coupe Body for Fords

A new victoria four-passenger coupe body for Ford cars has been put on the market by the J. C. Lawrence Body Co., 3032 Locust Street, St. Louis, Mo. The new body is designed for any standard Ford chassis. It is light and strong, and is finished in low, graceful lines of higher priced cars. There is a dome light, auxiliary package compartment, full size disappearing auxiliary seat and winding window ratchets which permit the windows to be opened to any extent desired. The body melts into a rounded cowl and has a sun and rain visor

CHICAGO SHOWS CARS AT PAGEANT DISPLAY

All Makes Exhibited at City's Exposition Held on Municipal Pier

CHICAGO, Aug. 4—An elaborate automobile show which Chicago dealers and distributors are counting upon to greatly stimulate sales throughout this territory during the late summer and early fall is a part of Chicago's Pageant of Progress exposition at the Municipal Pier which opened Saturday. The automobile show is under the direction of the Chicago Automobile Trade Association.

A car having its first showing at this exposition is the American Steamer, manufactured by the American Steam Truck Co. of Chicago, at its factory at 5008 Bloomingdale Avenue. A chassis of this car with engine exposed is on display. The car is in production on the 5-passenger phaeton model, priced at $1,650.

Included in the Ford Motor Co.'s extensive exhibit of what is said to be the oldest Ford in existence, a roadster made in 1903. The car still runs. The company also shows a miniature model of its Detroit plant. The Lincoln exhibit is included with that of the Ford.

An industrial tractor exhibition similar to those which have been shown in other cities by the Ford Company occupies a large area near the entrance to the Municipal Pier.

BANK BUYS STUTZ STOCK AT AUCTION

NEW YORK, Aug. 8—Efforts on the part of Receiver Caffey to force the banks to offer Allan A. Ryan's Stutz stock at private sale having failed, the original plan of selling the securities at auction was followed out. The holdings of the bankrupt financier were put on the block and were bought in at $20 a share by the Guaranty Trust Co., which purchased all but 1,500 of the 134,414 and one-third shares that were offered, the sale of the Stutz property bringing a total of $2,686,286.06. The odd block of 1,500 shares went to the Empire Trust Co. for $30,000.

The Guaranty Trust Co., prior to the bankruptcy proceedings, held the big majority of Stutz stock which had been put up as collateral by Ryan. After the failure the bank announced it would protect itself by means of the auction block, an action that was participated in also by several other banks which held smaller blocks of Stutz stock. Inasmuch as this stock carried with it control of the Stutz company and the last financial report of the company showed it to be a going concern and prospering, interest in the sale was keen indeed.

As yet the Guaranty Trust Co. has not decided what the next step will be. It is felt that the bankers will retain control and take steps immediately to increase production and sales.

HIDDEN FUNDS BUY CARS THROUGH WEST

Survey Made Shows Percentage of First Time Purchases— Many Cash Sales

ST. LOUIS, MO., Aug. 8—Print of the bed springs on greenbacks, rust from old tin cans, and mould on money that has been used in the purchase of motor vehicles in Boise, Idaho, indicate the source from which have come the funds for the unusually high percentage of cash motor vehicle sales since Jan. 1. One car was sold in Boise for gold. Banking chaos which hit Idaho some months ago evidently sent the workers to their stockings, and other hoarding places.

The stories of this kind of money come from all parts of the Rocky Mountains and the northwest and the Pacific coast. They come in response to that question which was asked two months ago in the Gulf States, the Atlantic States and the Blue Ridge States:

Inquiry Since May 25

How many first time buyers?

The information that was checkable in the territory through which this question has been repeated since May 25 is quite interesting. In western Texas the first time buyers were about five per cent. In Phoenix, Ariz., it ran as high as 20 per cent in all lines, but in one particular line went beyond 40 per cent. In San Diego, Los Angeles, San Francisco and inland counties of California the percentage was low. It would average less than five per cent for the whole State. In San Francisco, one dealer handling a product selling above $1,500 had made only one clean sale this year. It was not to a "first timer."

California dealers say their conditions are different, that almost everyone who comes into the State has been or is an owner of a motor vehicle. This condition seemed to be reflected in northern California.

In Oregon the percentages began increasing. In Eugene it would average 10 per cent. In Astoria, Salem, Albany, Medford it would average about 15 per cent.

Washington Shows Gain

Washington also showed an increase. In one Washington city the sales record for a $1,000 car was checked carefully. Seven weeks were picked at random, beginning with March 4. It showed that 35 of 62 sales were made to first time buyers. The dealers in this city developed intensive methods of prospect hunting.

Seattle figures indicated about 27 per cent were first time buyers. Running down through Pocatello, Twin Falls, and Boise in Idaho the percentages ran from 20 to 30 and even 45 per cent. In Idaho and Washington the percentage of cash sales was asserted to be about 50 per cent of all sales.

The coast dealers say they have had no depression and very little experience of the tough months that have hardened the dealers in the central and eastern States.

Lack of cars for delivery is still prominent in the West and Northwest. It is as bad here as it was in the South and Southeast and central States.

Break up of dealer organizations has been noted in Washington, Oregon and Idaho thus far. Banking accommodations again are found to be one of the reasons for the small proportions of the dealer organizations. Mortality has not been so high in percentage among the dealers as it has in numbers. And to reestablish some of the dealer organizations will be a task in the eastern Rocky Mountains and northern districts of that range because of bank conditions. Finance companies are also making things difficult for some of the work of building dealer organizations. Some have indicated that unless various States enact laws requiring compulsory recording of title notes and sales contracts they will withdraw from those States. This the dealers claim would be a sales resistance but see not how to avoid it.

Despite all of these things there is an apparent cheerful attitude in general and a feeling of hopefulness that the automobile industry is settling down to a healthy condition. What the future will bring in keen competition is not creating any great worry, but there seems to be a spirit of desire to get down to a rock bottom basis of sane operating practices.

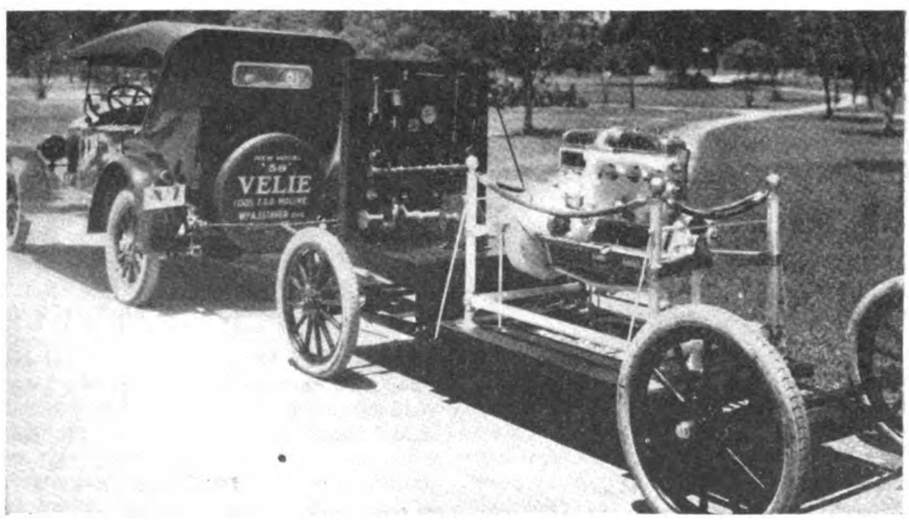
Blakiston Promoted

BALTIMORE, Aug. 7—Thomas B. Blakiston, who was formerly assistant general sales manager, has been appointed general sales manager of the American Hammered Piston Ring Co. of Baltimore.

WILLYS AND OVERLAND SETTLE LITIGATION

Latter Will Pay Corporation's Receivers $750,000 in Three Notes

TOLEDO, Aug. 8—Litigation between the receivers for the Willys Corp. and the Willys-Overland Co. in relation to claims and counter claims has been settled in the Federal court when all sides agreed to an order by which the Willys-Overland Co. paid to the receivers $750,000 in three notes. The Willys-Overland Co. also will pay counsel fees.



The intercompany accounts which are limited to a balance of $167,197 owing to the Willys Corp. by the Overland and to a balance of $189,554 owing to the Willys-Overland on its own account and for the Willys Morrow Co. also, by the Willys Corp. will be ironed out by special master Curtis T. Johnson.

"The court believes that it has been profitable to both sides of the dispute to avoid litigation," declared Judge Killits from the bench. "The court has had a desire to go into the merits of the case but great delay probably would have resulted with no better results."

The claims of the Willys Corp. against the Overland company grew out of the sale of the common stock to the corporation in 1919, and a contract dealing with the development of the Chrysler six car.

The Willys-Overland claims, totalling nearly $5,000,000, were based upon the expenditure made on the Chrysler Six, which it designed and developed. The Willys Corp. was to manufacture the car in its plant at Elizabeth, N. J., built at a cost of more than $13,000,000.

Demonstrating Engine and Parts

A trailer, upon which is mounted an engine, and a parts board, which displays several important parts of the new model 58 Velie, is being used effectively by William A. Estaver, Velie distributor in Jacksonville. The display is carried on the trailer, as shown in the accompanying picture. When Estaver wishes to demonstrate, he backs the car up to the trailer, jacks up the rear end, and connects a pulley on the left rear wheel to one on the engine with a belt. His demonstrations always attract large crowds and secure for him a lot of good publicity

PRODUCTION IN JULY MAY EXCEED 215,000

Incomplete Returns Show Good Output Record for Usually Slow Month

NEW YORK, Aug. 7—Complete returns are not in on July production, but it is safe to predict that the report of the National Automobile Chamber of Commerce will show that the seventh month of the year saw a production of at least 215,000 passenger cars and trucks. A year ago in July the official production figures were 177,643.

When this approximate total for July is compared with June, 1922, the industry cannot help but feel gratified, for June, 1922, stands as a record in production. A falling off of from 20 to 25 per cent in July in this total, therefore, is certain evidence that the automobile business is more than holding up.

In the first place, the continued buying demand is being maintained, while there are at least two other conclusive reasons why conditions look good for a strong demand throughout the fall. The farmer is coming into the market right now and is buying freely, while the other factor is the heavy sales in closed cars. Whereas the buying public usually waited until at least October before ordering closed jobs, it now is placing orders.

KEEP EYE ON EFFECT OF LOWERED PRICES

(*Continued from page* 37)

be the closed car unit of the company. Under pressure, the company can build about 800 cars a day in its Detroit and Flint factories.

Studebaker is continuing at its capacity of 440 daily, having maintained this rate since early in February.

Hudson-Essex operated at the rate of 285 daily in July and plans to continue this figure in August. Hudson reports that its sedan is practically sold out for the balance of the year. The demand for its coach models continues to be a feature of its business.

Paige came through July with an output in both Paige and Jewett models of about 140 daily.

Hupp totals for the month maintained its 140 daily rate.

Columbia has increased its August total to 2000 after building about 1650 in July.

Oldsmobile maintained a schedule of about 100 daily through July and a similar total was reached at the Oakland plant.

Chevrolet totals kept close to the 1000 daily mark reached by the company in the earlier months.

Reo resumed operation in July after a two weeks' general vacation period at a daily rate of about 100 cars and speed wagons.

Liberty continued on its schedule of 30 to 35 daily, and Rickenbacker continued its 25 daily total.

The companies producing cars in the higher priced field are continuing heavy production. Cadillac, with about 100 daily, is working at capacity, as is Lincoln with a daily output of 30 to 35.

Packard total production continues on the 2000 monthly schedule, the light six being sold through to early fall.

Wills Sainte Claire is planning to add to its schedule of 25 daily.

BANK AND WAREHOUSE PLANNED FOR CHICAGO

CHICAGO, Aug. 7—A $500,000 automobile bank and warehouse, an institution unique in Chicago motor circles, will be the first of the big building project predicted last week for the South Central District. If an injunction against the property, brought for alleged violation of the Volstead act, can be dissolved, work will start within a month by Joseph Glazer, automobile dealer and investment broker.

Glazer plans to erect a sixteen story building, the ground floor to be used for his automobile banking business, the upper floors for the storage of new automobiles by firms along automobile row. Dealers and manufacturers can store their cars here and borrow money from Glazer on warehouse certificates.

MAY BUY FACTORY FOR NEW STEAM CAR

ELGIN, ILL., Aug. 4—It was announced the American Steam Truck Co. of Chicago, manufacturer of the American steam passenger car, has signed a contract for the purchase of the plant of the Duty Motor Corp. here. The Duty company was established a year and a half ago to manufacture trucks here but encountered financial difficulties and only a few trucks were made.

The plant has more than 22,000 sq. ft. of space and is said to be well adapted for motor car manufacture. R. R. Howard, president of the American company said that although the contract has been signed it is subject to ratification by the stockholders of the Duty company and the Chamber of Commerce of Elgin and that it could not be announced definitely that the deal would be closed.

NEW EARL ROADSTER IS PRICED AT $1,485

JACKSON, MICH., Aug. 7—Earl Motors, Inc., has brought out a new custom roadster priced at $1,485. The new body model, which is mounted on the standard chassis, is offered in three choices of paint and upholstery. The luggage space in the rear deck gives ample room for golf bag and week-end kit. Radiator, lamps, funnel ventilators and windshield frame and standards are all nickeled. Ignition and dimmer switch are located on the left side to facilitate driving at night. Wire or disk wheels with cord tires are regular equipment.

AMERICAN VEHICLES TO STAY IN GERMANY

Department of Agriculture Decides Not to Seek Recovery of Sold Trucks

WASHINGTON, Aug. 7—The sale of approximately 1800 trucks, recently made by General Henry C. Allen, in charge of the Army of Occupation in Germany, will not be contested by the Department of Agriculture which, through its representative abroad, has agreed to waive the department's claim to the trucks.

All of the automotive equipment sold by the Army of Occupation when it withdrew from Germany had previously been offered to the Department of Agriculture, which in turn was to proportion it out among the states to be used in highway building.

Without authority, it was charged by the Department of Agriculture, the War Department sold the 1800 trucks to the highest bidders in the occupied area. A representative of the bureau of roads went immediately to Germany and reported that the sale of the trucks has been so nearly consummated that for the agricultural department to insist on its right to the trucks would embarrass this government with a foreign country. Consequently the agricultural department has announced that it will not re-import to this country the expected trucks.

It is not thought likely, however, that even if the trucks had not already been sold, the full number would have been re-imported, as the bureau of road's representative reports that a large percentage of the trucks, including some passenger cars, would not be worth re-importing to America.

HUDSON, ESSEX MADE $1,264,071 IN JUNE

DETROIT, Aug. 7.—The June earnings of the consolidated Hudson and Essex companies were $1,264,071, or more than $1 per share, according to the report issued by President Roy D. Chapin of the Hudson Motor Car Co.

This report is for the seven months' period ending June 30, 1922, and shows the net income of the Hudson Motor Car Co. to have been $3,041,774, after provision for Federal taxes.

This includes only one month's earnings of Essex Motors, as the shares of stock of that company were not acquired by the Hudson Motor Car Co. until the end of May.

The consolidated balance sheet of the two companies as of June 30, 1922, shows: Cash in banks and on hand, $4,050,195; sight drafts for car shipments, $1,963,882, and accounts receivable, net of reserves, $576,493.

Accounts payable, for invoices not due, covering materials and current expenses, are $4,060,314, and accrued accounts and distributors' deposits, $1,050,763.

WASHINGTON DEALERS CHOOSE TITUS HEAD

Governor and Representatives of Industry Speak at Olympia Convention

OLYMPIA, WASH., Aug. 4—L. E. Titus of Centralia, Wash., was reelected president of the Washington Automotive Trade Association at the close of the most successful State meeting in the history of the trade association work which was begun in this State eight years ago.

Among many features were the addresses by State officials, pledging cooperation and service to the motor trades. Chief of these was the assertion by Gov. L. F. Hart, at the close of his address this morning.

Gov. Hart Speaks

"Never in my administration will I permit a gasoline tax that is excessive," said Gov. Hart, and he followed with the announcement that he has called a conference of governors of California, Oregon and Washington, for the purpose of discussing a uniform gasoline tax for Pacific coast States.

Reduction of the number of automobile dealers in Washington and in increase in the sales of new motor vehicles in the last year, was an announcement of Fred J. Dibble, head of the license department.

From September of 1921 to July 1 of 1922 the registration of new motor vehicles was 12,365 greater than the registration of new motor vehicles from September, 1920, to September 1921.

To Seek Change in Taxation

Increase of the speed limit on State highways from 30 to 35 miles an hour will be recommended to the State legislature. The convention adopted a resolution asking the change.

Readjustment of the automobile taxes will be sought in the next session of the legislature. Reports presented to the convention were that automobiles have an assessed valuation of 4 per cent of the total of personal property in the State and that the automobile is paying 21 per cent of the total of taxes collected on assessed valuations.

The uniform gasoline tax conference of Pacific State governors will be asked to consider the proposal of eliminating all other forms of taxation on the automobile and levying a gasoline tax, the revenues from which will be applied exclusively to road work.

The convention took no action on this subject but there was considerable favorable sentiment. The proposal will provide that the license shall be continued but registration shall be made for only a nominal fee to cover cost and not to produce revenue. The dealers will ask that their licenses be considered only a basis equal to that of the fundamental purpose of licenses and registration and not from a revenue standpoint and that dealers be permitted to use their licenses for all purposes in connection with their business.

"Public confidence" in the motor vehicle dealer is the first essential to be considered by the prospective purchaser of a motor vehicle," said L. M. Shaw, assistant general manager of the National Automobile Dealers Association, in his address on "The Automobile Merchant of 1925." His address covered the campaign that is being conducted by the N. A. D. A. to bring into its membership the really high grade automobile merchants of the nation. Shaw also addressed the national convention on Association work in general.

P. E. Chamberlain addressed several divisions of the convention on "The Flat Rate." Wayne Hearne, A. V. Comings and others spoke to the various crafts group meetings.

The secretaries of the various counties and two conferences under the chairmanship of W. A. Simonds, secretary-manager of the Washington association. Shaw presented the outline of the Secretaries' Service Bureau, established this year by the N. A. D. A., and explained its uses and values to the secretaries. All of the secretaries signed to subscribe for the service which will be handled from the N. A. D. A. office through the State office of Simonds.

The financial report of Secretary Simonds showed that the State association was operated at a cost of $4,058 in the last year. Part of this low cost was due to the fact that the Seattle Dealers Club carried part of the expense and paid part of the salaries. The year was closed with a balance of $800 over expenses of operation.

Officers were elected as follows: President, L. E. Titus, Centralia; vice-presidents, Kenneth McAlpine, Seattle, and Edward Anderson, Ellensburg; executive committee, L. W. Harkins, Tacoma; P. E. Sands, A. S. Eldridge and J. J. Graveley, Seattle; Sig Follestad, Everett; W. E. Bronson, Olympia; L. W. Thaller, Tacoma; Ted Jungmeyer, Sedro-Wooley; M. Kulp, Spokane; Harry Andrews, Yakima; G. A. Campbell, Chehalis, and Fred Sherman, Auburn.

NEW TRUCK COMPANY PLANS TWO MODELS

GRAND RAPIDS, MICH., Aug. 8—United Motor Products has been incorporated in Grand Rapids to build two truck models, one under 1 ton, the other from 1 to 2 tons.

The officers of the company are: F. T. Hulswit, president; Harry Green, vice-president in charge of finances, and G. R. Wilbur, vice-president and general manager. Hulswit is president of the United Light & Railway Co. of Grand Rapids. Wilbur has been for the last eight years with the Republic and Ruggles companies. A. G. Boone, formerly chief engineer of the Ruggles company, will be in charge of manufacturing and engineering production.

INCREASED EARNINGS REPORTED BY G. M. C.

Total Profits for First Six Months, 1922, Were $27,403,428

NEW YORK, Aug. 5—The financial statement of the General Motors Corp. for the first six months of 1922, ending June 30, has followed the preliminary statement issued two weeks ago. The formal statement does not vary much in essential details, except that the auditors have discovered more net earnings on the common stock than was reported in the preliminary statement. Whereas the company's earnings for the first six months were first reported at $26,839,391, the formal statement gives these profits at $27,403,428.30.

The balance sheet shows total current and working assets as of June 30 to be $162,957,714.44 as against $179,214,317.05 as of Dec. 31, 1921. Total current liabilities on June 30 reached $40,232,450.98 as compared with $81,553,967.17 on Dec. 31.

DURANT INCORPORATES NEW FLINT MOTOR CO.

DETROIT, Aug. 4—Articles of incorporation of the Flint Motor Co., the formation of which was announced by W. C. Durant, were filed at Lansing last week. The company, according to its statement, is to make a six-cylinder car at Flint, the price of which will be $1,180, in the touring car model.

The company will have 500,000 shares of no-par value stock to sell for not less than $10 a share. Preferred stock will total $10,000. The articles state that $10,000 has been subscribed and $1,500 paid in.

The incorporators are listed as W. C. Durant, C. F. Daly, Carroll Downes, H. F. Herberman and W. W. Murphy, all of New York. Each of them has twenty shares of preferred stock and ten shares of common.

STEPHENS COMPLETES ORGANIZATION PLANS

FREEPORT, ILL., Aug. 7—Establishment of the Stephens Motor Car Co., Inc., as a separate organization, although subsidiary to the reorganized Moline Plow Co., has been completed.

All production activities, including accounting, service and similar features, will continue in Freeport under direction of H. J. Leonard, for many years general manager of the company, who has been made vice-president in the new corporation. O. P. Robb, another vice-president, and active many years in the sales and territory problems of the company, will be sales manager with offices in Moline, Ill., under direction of R. W. Lea, second vice-president.

Robb succeeds C. Roy Clough, many years director of sales for the Stephens.

Digitized by Google

CHANGES IN THE TRADE

Roeske Motor Co., Davenport, Iowa, will devote its sales attention solely to the Oakland car.

Snyder Automotive, Inc., Ford dealer, will also distribute Transport trucks in the Minneapolis territory.

C. P. Beechinor, Turners Falls, Mass., has taken the agency for the Rickenbacker for Franklin County.

San Antonio Cadillac Co., San Antonio, has taken over the distribution of the Durant for southwest Texas.

Gaines Oakland Co. has established an agency and service station for Oakland cars at Augusta, Ga., acting as distributor in adjacent counties.

J. B. Lykke, proprietor of the Jefferson Garage, Springfield, Mass., has been appointed distributor for the Republic truck in that territory.

Austin Abbott of Atlanta, who has distributed the Stutz in the Atlanta territory for some time, has also taken over the distribution of the new Rickenbacker.

Torgler Motor Sales Co. has been organized to handle Stearns-Knight and Elcar cars and International trucks in Toledo territory. **Carl V. Torgler** heads the new firm.

Wills Sainte Claire Co., of Minneapolis, has been incorporated by W. H. Schmelzel, the present representative of the car; E. E. Rockhill and Paul W. Feist, all of St. Paul.

Ideal Auto & Garage Co. of San Antonio has been appointed distributor in the southwest Texas territory for the Columbia. Dealers will be established throughout the territory.

Russell Wilson, for over nine years with the **Legare Automobile Supply Co., Ltd.**, has resigned and will be associated with the new Franklin dealership to be opened in Montreal shortly.

F. Franklin, Seattle, has resigned as manager and buyer for the automobile accessory department of the Seattle Hardware Co., to become manufacturer's agent in Washington and Oregon.

L. L. Parish has taken control of the **Central Garage** in Minneapolis, one of the largest in the Northwest. He will restore a service system he abandoned a year ago when he gave up the garage.

T. Harris Smith, recently general manager of the Packard factory branch at Kansas City, has joined the factory organization of the Mitchell Motors Co., Inc., as manager of advertising and sales promotion.

Cecil L. Rood, for six years county engineer at Toledo, has been elected general manager of the **Wills Sainte Claire Co. of Toledo**, to succeed **Edward C. Gernhardt.** Rood is one of the four owners of the company.

J. H. Hansen, distributor of the Cadillac car for Omaha, Lincoln and Sioux City, has left on a seven weeks' trip abroad. Hansen will visit with his parents in Copenhagen, and will travel in Norway, Sweden, Germany, Belgium, Holland and England before his return.

Platto Co., Minneapolis, has obtained the distribution of the Stephens car in the Northwest. Taking over the plant on Tenth Street is part of the campaign by the new company. Bert A. Platto is president. He traveled four years in the Northwest for the Reilly-Herz Co., and more recently has been with the Dort.

Townsend & Varner Nash Co. has been organized for the distribution of the Nash in the Houston territory. Both Townsend and Varner have been in the motor business for a long time in Houston.

Leon G. Myers, formerly with Wright-Nash Sales Co., Huntingdon, Pa., has taken over the agency for Hupmobile and Marmon for Huntingdon and Bedford counties with selling rights in part of Blair and Center counties.

J. H. Whittington, Jr., for five years head salesman for T. K. Hays, Buick distributor at Bloomington, Ill., has resigned and has formed a partnership with **Frank Dalton**, to distribute the Rickenbacker car in central Illinois.

Witherbee Storage Battery Co., Inc., has moved its general offices and the metropolitan district sales and service station to 234 West 55th Street, New York. The manufacturing plant was recently located at Belleville, N. J.

B. F. Powers Motor Co., Inc., selling the Gardner car in the Northwest, has sold a fleet of cars to the White Bear Auto Transit Co., successor to Fuller's Auto Line, operating bus service from St. Paul to lake points and Minneapolis.

W. H. Hoyt, formerly manager of the Trenton, N. J., branch for the Packard company, and prior to that Packard distributor at Charlotte, N. C., has joined the **Packard Enterprises of Georgia, Inc.**, distributor in the Atlanta territory.

H. G. Blakeslee has been appointed by the Splitdorf Electrical Co., of Newark, N. J., as sales and service engineer for the southern territory, with headquarters with the Automotive Sales & Service Co., Splitdorf distributor in Atlanta.

W. R. Dunn has been put in charge of retail sales of the Mitchell car by the **McNulty-Dafoe Co.**, which has taken distribution of the Mitchell in the Minneapolis district. He has been fifteen years in the mechanical end of the automobile business.

Burlington Battery & Electric Co., Burlington, Iowa, has been established as a branch of the Friday Battery & Electric Corp., of Ottumwa and Sigourney. Twenty-seven systems are handled by these distributors in both the wholesale and retail fields.

C. H. Spencer, formerly with the Gilbert & Barker Manufacturing Co., has become a member of the **Clark & Breck Co.**, Winton and Velie distributors, Springfield, Mass. **R. G. Breck** and **Harry W. Stacy** have retired from the concern. The maintenance department has been put under the charge of **Charles Pettis.**

Arthur P. Hawes, formerly of the H. C. S. car organization in Philadelphia, has joined the E. W. Motor Corp., Philadelphia, distributor of Durant cars, in the capacity of salesmanager. Prior to joining the Stutz concern Hawes was general manager of the Locomobile Co. of America, having charge of the Philadelphia, Baltimore and Washington territory.

Enos Ashley, head of the **Ashley Motor Co.**, Franklin distributor in Minneapolis, has taken over the **Town & Country Motor Co.** establishment where he will have Earl sales and service and a general garage and service business. **Samuel Nelson**, many years with the Ashley company as manager of the service department, is to manage sales and service at the Town & Country, as a member of the company.

Stanley E. Stady has been appointed sales promotion and advertising manager for **Harper & Harper**, Philadelphia, in connection with the Hupmobile agency. Stady formerly was in charge of the advertising of the International Harvester Co. for the eastern district. He was an instructor in advertising and salesmanship at Temple University.

Mason Tire & Rubber Co. has opened a new branch office and warehouse at 6305 Penn Avenue, Pittsburgh, with R. W. Mason as manager and Harry P. Hahn, cashier. The territory assigned consists of practically the western half of Pennsylvania and the northern half of West Virginia, a district formerly covered by the Cleveland branch.

Dr. O. R. Kloehn, formerly of Brillion, Wis., has taken the agency for Chevrolet cars for Outagamie and part of Calumet counties, transacting business under the name of the **Fox River Motor Co.**, of Appleton, Wis. Dr. Kloehn was the president of the Calumet Auto Co., of Brillion, and sold the Buick and Chevrolet cars, Samson tractors and Delco Light and is a pioneer in the automobile business.

Charles W. Tway has been appointed sales manager of the Haynes Automobile Co. for the states of Georgia, Alabama, Florida, South Carolina, Mississippi, Louisiana, Tennessee, and a portion of North Carolina, Kentucky, Arkansas, Indiana and Texas. He was formerly Haynes distributor for the twelve southern states he will now travel. Headquarters will be maintained at Atlanta. Several additional district sales managers will be selected and new dealers will be added.

James O. Harris, formerly a sales representative for the Cadillac Motor Car Co., and **Ralph A. Parker**, formerly manager of the Toledo Cadillac Co., have formed the **Cadillac Company** at Atlanta, Ga. **Eugene Dautell** of the Toledo organization has been selected as general manager of the Toledo Cadillac Co. Harris has been with the Cadillac organization since 1914. The connection of Ralph Parker with the Toledo Cadillac company started five years ago. Dautell has also been with the Toledo company that length of time.

Campbell Wood, who formerly represented the wholesale division of the Klaxon Co. in the states of Missouri, Kansas, Oklahoma, Texas, Colorado and New Mexico, has become a sales representative of the motor equipment division of that company with headquarters in Detroit. **T. B. McBride**, recently connected with the Peden Iron & Steel Co. at Fort Worth, Tex., succeeds Wood. **E. V. Scotford**, formerly of the advertising and sales promotion department of the United States Tire Co., is now acting advertising and sales promotion manager of the Klaxon company.

New Accessory Maker

NEW YORK, Aug. 4—Paul M. Farmer, who was formerly connected with the Klaxon Co. wholesale division, and later chief engineer of its industrial division, has organized the Farco Manufacturing Co., 30 Church Street, New York City. The company is producing and will market through the trade channels, a line of automotive accessories, among them a foot accelerator for Fords.

Gilchrist Tours East

SPRINGFIELD, OHIO, Aug. 8—E. H. Gilchrist, general sales manager for the Westcott Motor Car Co., is making a trip through the East, visiting district managers and distributors in New York, Boston and other points.

ASSOCIATION ACTIVITIES

Jobbers and Boosters Outing

BOSTON, Aug. 5—The combined annual outing of the New England Automotive Jobbers Club, made up of jobbers in automotive equipment, and the Boosters Club, New England, consisting of manufacturers' representatives calling on the automotive trade in New England, was held at the "Hummocks," a resort about twenty miles from Providence, R. I.

Approximately one hundred men attended the outing, which was by far the most successful ever held by the organization. Jobbers were present from Boston, Worcester, Portland, Springfield, Hartford, New Haven and Providence, while the Boosters came from Chicago, Washington, Philadelphia, Cleveland, New York and Boston.

The Boosters Club was organized about a year and a half ago, and now with its eighty members, it is rapidly taking national scope with a club already formed in Kansas City and others forming in New York, Atlanta, Minneapolis and Philadelphia.

The object of the club is covered by the pledge which each Booster is required to sign. In this pledge he agrees to raise the level of the automotive industry by boosting the other fellow, keeping his promises, being truthful, inspiring confidence, playing clean, having a real policy, being ethical, rendering service, not misrepresenting and serving the service that serves by giving both manufacturers and jobbers a square deal.

Regular meetings of the Boosters Club are held on the third Friday of each month. The next one is to be held in Portland with the Maine jobbers as the guests of the club.

The officers of the club are T. F. Wilson, Apco Manufacturing Co., president; D. G. Caywood, Black & Decker Manufacturing Co., treasurer, and C. M. S. Foster, manufacturer's representative, secretary. The directors are the above officers and W. C. Scott, Biflex Products Co.; George S. Fable, Thermoid Rubber Co.; Daniel Tannen, L. Sonneborn Sons, Inc.; D. G. Head, Pinkerton Elec. Equipment Co., and Ralph Green, Edw. C. Cassidy Co.

Outing for St. Louis

ST. LOUIS, Aug. 5—An attendance of more than 3500 persons marked the second annual picnic of the automobile industry of St. Louis, held July 20 under the auspices of the St. Louis Automobile Dealers Association at Lake Hill, an amusement resort near Valley Park, reached by two lines of railroad and by good motor roads. The attendance included all persons connected with the industry in any capacity. It reached its maximum during the afternoon, when the premises of the dealers throughout the city were closed.

A large platform surrounded by ropes attached to corner stakes had been erected and a number of short talks opened the exercises. Mayor Henry W. Kiel was the principal speaker, being introduced by H. F. Fahrenkrog, president of the dealers association, who was introduced by G. W. D. Donnelly, chairman of the entertainment committee, which planned the picnic. Mayor Kiel congratulated the dealers on the spirit of co-operation which the picnic indicated.

Athletic events, most of them held on a cinder track improvised on the road leading through the resort, formed the chief amusement. At the first picnic held at the same resort last summer little scrutiny was given to the persons who entered and won the athletic events and it was reported that several athletic men with no connection whatever with the automobile industry carried off the bulk of the prizes.

This year the entries were limited to persons connected with the industry and each winner was required to establish his eligibility to compete, the prizes being delivered at the end of the program. Each dealer was required to provide the committee managing the event with the list of the persons in his employ who, with the members of families, were eligible to take part.

Barbecue for Buffalo

BUFFALO, Aug. 4—The Buffalo Automobile Dealers Association held its annual outing and barbecue at Dold's Wheatfield farm. All automobile dealers of the city were there. Mayor Schwab and Gus Miller of the State license bureau also attended. In the afternoon there was a baseball game, fat men's races and thin men's races, which were followed in the evening by a campfire and clambake.

Takes Movie at Outing

LOUISVILLE, KY., Aug. 5—The first attempt at an outing by the Louisville Automobile Dealers Association was made at a summer cafe about eight miles outside of the city. It was voted to be an unqualified success by the ninety-three dealers and their salesmen who attended.

The festivities included a baseball game between the dealers located on Third Street and Broadway, two of the thoroughfares claiming the designation "Automobile Row." The game resulted in a victory for Third Street. It was played on a grassy lawn near the cafe with indoor style ball and bat.

A chicken dinner followed by an interesting talk by Richard Bean, president of the Louisville National Bank, concluded the outing. Pictures were made, including a movie of the game.

Fall Show for Los Angeles

LOS ANGELES, Aug. 5—An automobile show will be held in Los Angeles this fall. The Motor Car Dealers Association has decided on this and a committee has been appointed. There was a very pronounced demand among some of the dealers that a show be held last spring, but they lacked sufficient strength to influence enough others to put it across.

Business has been remarkably good and the show that more recently was proposed for one of the summer months will not materialize. It will be two years next winter since Los Angeles had a show, and feeling that the stimulating effect undoubtedly will be needed this fall, all of the forces will unite in favor of it.

Chicago Dealers Hold Outing

CHICAGO, Aug. 8.—The second annual field day outing and barbecue of the Chicago Automobile Trade Association was held at Deer Grove, Ill., thirty miles from Chicago, and was largely attended by dealers and their employees. The affair was in charge of an entertainment committee composed of the following: Harry Branstetter, chairman; C. E. Gregory, Arthur Jones, O. G. Temme, H. N. Fowler, Elmer Rich, H. W. Cooper, M. J. Moriarty and John Quinlan.

Atlanta A. E. A. Elects

ATLANTA, Aug. 5—Fred G. Tegder, head of the E. M. Thomas Auto Top & Manufacturing Co., was elected president of the Atlanta Automotive Equipment Association at the annual meeting here. Lon Credelle was elected vice-president, E. H. Elleby was re-elected secretary, and C. V. Hohenstein will continue as executive secretary. The membership now includes forty-eight firms in the equipment field in Atlanta.

New England Jobbers' and Boosters' Club at Outing

The New England Jobbers Club and the Boosters Club, consisting of manufacturers' representatives calling on the New England trade, joined in their annual outing recently at the "Hummocks," near Providence, R. I. About a hundred attended

Minneapolis ..... Feb. 3-10
Annual Automobile Show under Auspices of Minneapolis Automobile Trade Association, W. R. Wilmot, manager.

Leaves Security Company

NEW YORK, Aug. 7—Fred A. Weber, Jr., has resigned as assistant treasurer of the Bankers Commercial Security Co. of New York, one of the largest national automobile financing companies. He will leave Aug. 15 and will take a much needed rest before accepting one of several offers he has under consideration.

Weber was one of the organizers and the second president of the Automobile Financing Credit Men's Association of New York. He now is president of the National Association of Automobile Financing Companies. He went with the Bankers Commercial four years ago as credit man after serving for some time in the credit department of the Liberty bank which is now the New York Trust Co.

M. A. M. A. Sales Increase

NEW YORK, Aug. 5—Sales by members of the Motor and Accessory Manufacturers Association for the first half of 1922 aggregated $187,500,000 as compared with $113,000,000 for the same period in 1921. Sales for June of this year were nearly double those of June, 1921. Business was almost on the same level as in May.

FALL CLOSED CARS

for Immediate Delivery

Lexington

MINUTE MAN SIX

Series 22 Coupe, $2345

Here is a wonderful closed car value at only six hundred dollars more than the five-passenger Touring!

It seats four adults comfortably, with plenty of luggage space.

Lexington Motor Cars have long been recognized as ideal for women to drive, and this Coupe is no exception.

Wheel, levers, and pedals are most conveniently located.

But there is nothing effeminate about the Coupe. A man will find it a man's car, with power flowing smoothly from the famous Ansted Engine to meet all needs.

Series 22 Sedan, $2545

An ideal family car of unusually generous proportions!

Five adults may ride in utmost comfort, but for those occasional extra needs two taxi seats are provided.

Never before has such value been offered at such a price!

Cool in summer and warm in winter, the closed car has arrived as the utmost in year-around transportation.

Ample provision has been made for ventilation in all seasons.

Best of all, the Sedan is a never-failing servant—its beauty matched by service.

Harmonious Colors — Luxurious Upholstery — Elegant Hardware — Ample Ventilation — Excess Roominess — Unusual Driving Vision — Exceptional Riding Ease

Get all the details of our wonderful plan whereby we help to finance new dealers. Write or wire—today

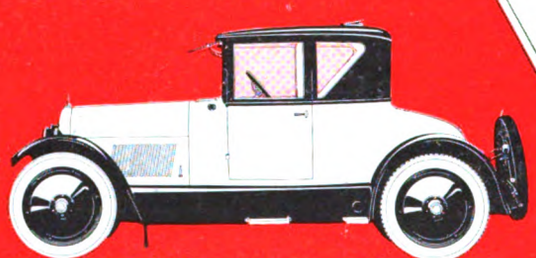
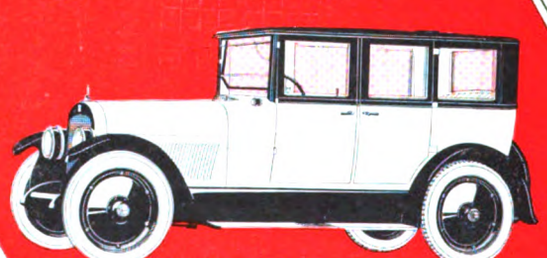
Outstanding among the greatest motor car values of the year—

The HAYNES 55



The lasting success of the new, improved Haynes 55 rests upon its proved, established worth as "the value of values" in automobiles. The illustrations show how these cars meet the wishes of the motorist in either open or closed types. With the sturdy, Haynes-built, light six engine, its power plant leaves nothing to be desired. In design and finish the Haynes 55 models respond to the exacting wishes of those who insist upon beauty, attractiveness and service. Inspect these cars, and your judgment will confirm that of every owner of these unusual productions of the great Haynes factories at Kokomo.



THE NEW, IMPROVED HAYNES 55 TOURING CAR, 5 PASSENGER, $1495

THE NEW, IMPROVED HAYNES 55 ROADSTER, 2 PASSENGER, $1545

THE NEW, IMPROVED HAYNES 55 COUPELET, 3 PASSENGER, $2095

THE NEW, IMPROVED HAYNES 55 SEDAN, 5 PASSENGER, $2395

$1495 *to* $2395

F. O. B. FACTORY

With its 121-inch wheel base, its strong chassis, its unrivalled mechanical equipment, its thoroughly modern accessories, and its sweeping body lines in every type, the Haynes 55 instantly responds to the ideas of the buyer who demands the utmost in value for a truly economical price. The 32x4½ cord tire equipment, the leather upholstery, the Haynes electric button starting system—all these up-to-date touches—make it even more desirable. Its record, ever since it was introduced, is one of steadily increasing favor. If you are a dealer with a successful record, and are interested in finding a car and territory which give you still greater opportunity, we suggest that you get in touch with us. Write, wire or telephone. Interviews will be arranged in confidence if desired. In writing or wiring, address Dept. 852.

THE HAYNES AUTOMOBILE COMPANY
Factories and Offices: Kokomo, Ind., U. S. A.
EXPORT OFFICE: 1715 Broadway, New York City, U. S. A.

Disc wheels are optional equipment on all the new, improved Haynes 55 and 75 models, at no extra charge.

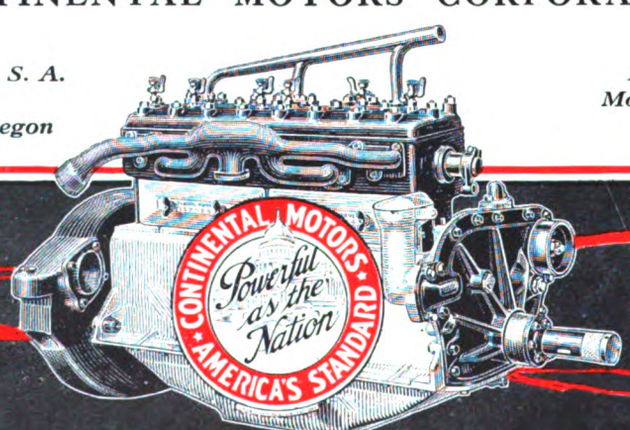
Back of the SPECIALIZED vehicle

Tests that no one organization could afford to conduct

The car market today is peculiarly a buyer's market. Not only is the buyer in a position to be most exacting but *he knows how to be,* to a greater degree than ever before.

This explains the preference for the SPECIALIZED car whose major units—motor, clutch, transmission, universal joints, axles—are *proven in production* by tests more detailed and exacting than any one manufacturer could afford to conduct.



Before the Continental Motor, for example, is delivered to the car builder it is run for hours under the scrutiny of experts; it is taken down and minutely examined; is reassembled and tested again. Careful production tests also insure the service of the genuine replacement parts that are sent to parts-distributing stations throughout the world.

Dealers who would be in a position to meet and profit by the requirements of today's exacting market are lining up with the SPECIALIZED car, whose steady gain in favor follows the dependable performance of such proven units as the widely-known power unit—the Continental Red Seal.

Here's the
FAN BELT to sell

Millions of car owners will welcome the GOODRICH DE LUXE Fabric Cord Fan Belt because it will not slip or stretch. It keeps the fan working as it should work, and thus stops engine heating. The combination of strong rubber impregnated cords and fabric layers give it great tensile strength and gripping power.

More Economical

You can impress on your trade that GOODRICH DE LUXE Fan Belts are the most economical. They last longer. They conserve the life and energies of the engine—keep the driver cool.

Stock Them NOW

Car owners now having their automobiles overhauled, will find it to their advantage to put on a GOODRICH Fan Belt. This is the ideal time. We supply you with an accurate chart showing size to apply on all cars, trucks and tractors. See our nearest branch for details.

BUILDING THE FRAME FOR

ROLLS-ROYCE

Each frame is built up, at the Rolls-Royce Works

in Springfield, from the individual members of nickel-steel, and is proportioned as exactly as is humanly possible, to take care of all stresses without undue weight in any part. This frame is very stiff for the length of the car, with underbracing and tubular cross-members of weldless nickel-steel tube, with drop-forged ends, pegged and brazed in place, contributing to its strength.

No rivets are used, but instead tapered bolts are employed, fitting in taper-reamed holes in the frame. Thus, all slacks are eliminated and the frame remains rigid after years of usage. Because of its design and careful building, the Rolls-Royce car in campaigns in France, Messopotamia and the Soudan, during the Great War, proved immune from loosening-up of frames.

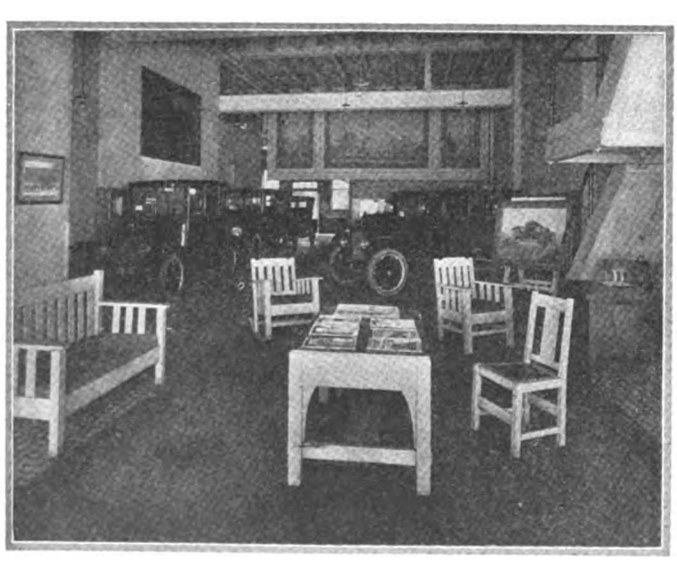
Meeting the Used Car Prospect With a Special Selling Plan

A Discussion of the Kind of Merchandising That Attracts Attention and Wins Confidence for the Dealer

THE typical used-car prospect approaches the job of buying from vastly different angles than the new-car buyer, and appreciation of this fact is helping some dealers to more successfully move their traded-in vehicles.

Analysis of a number of more or less successful used-car selling plans reveals a set of merchandising factors that are very much different from those which enter into new-car sales. And, where the factors may be classified under similar names, such as reputation of the car, price, dependability of the dealer, service facilities, etc., they often present themselves in different proportions of importance in the used and new car purchases.



An important thing to be considered in selling the used vehicle is the fact that the prospect's attention is concentrated on a single unit, and while he may be interested in some particular make, the purchase often hinges, in the case of a used-car sale, on the particular car under consideration.

THEREFORE, the used cars must be presented in a much more intimate manner, car by car, than a line of new cars. The prospect's mind must be directed to the car as an individual unit—to its individual virtues, such as price, condition of units, etc.

For instance. Price is a dominant factor in the sale of both new and used cars, but it is usually of greater importance in the sale of the used car because the prospect almost invariably is a price buyer and price must be one of the first things to attract his attention and interest.

Any good used car selling plan should provide for bringing the price factor strongly to the front at the very beginning of the effort and hammering it home strongly throughout the merchandising effort.

Another strong factor in selling used cars is the establishment in the mind of the prospect of confidence — CONFIDENCE IN THE DEALER AND IN THE PARTICULAR CAR THAT IS BEING SOLD. The building of this confidence is somewhat different from the same procedure in selling a new car. In the new car sale the reputation of the car, its maker, the dealer and his service may be built up in the prospect's mind, but in the case of the used car sale, the confidence of the prospect must be centered in a particular unit, first, and then in the dealer who is selling it. So the merchandising effort can very properly be concentrated on the condition of the particular car, then the reputation of the dealer and the maker.

Attractive surroundings greet the used car buyer entering the Bemb-Robinson salesroom in Detroit

The following used car selling plan of the Bemb-Robinson Co., Hudson and Essex distributor in Detroit is interesting because it contains, in the proportion that has been proved successful, some of the most important used car selling factors.

The attention of the reader is directed to the presentation of price as the first big appeal to the prospect. Then, the presence of a mechanic in the used car salesroom to assist in building up in the prospect's mind his confidence in the particular car he is considering. And finally, the placing of the cars in dignified surroundings in a separate, well appointed salesroom and standing behind them when the sale is effected.

A BLACKBOARD, about four by six feet in size, mounted on an easel in the display window of the Bemb-Robinson Co., Hudson and Essex distributor, Detroit, has sold at least forty-five exchanged cars in the thirty days it has been in use, according to Edward J. Quirk, manager of the exchanged car department.

The board is just the usual composition blackboard and was formerly used in the service station for checking drivers out and in. The headings have been changed so that they now indicate job number, year, make and price of exchanged cars. There are lines for ten cars.

"The first day we put up that board," said Mr. Quirk, "a man came along here carrying a bundle. When he saw the board, he stopped and looked at it for a few moments then came in and bought a touring car.

Digitized by Google

When he started to go, after making the purchase he remarked: 'Well, I'm a h— of a guy! I came down town to buy a straw hat and bought an automobile before I got home.' The price appeal sold that car.

"People have now got into the habit of watching the board for bargains, just as they watch the ads in the paper for bargains in the department stores. I see the same people who pass here day after day stop for a moment each time to see what we are offering. There is a high school boy who passes here—just a little fellow—and I noticed that he was stopping every day to look at the board. Then one day we had a coupe for $450 and the moment he saw it listed on the board he came right in and bought it.

"I think one of the secrets of the success of the scheme is having the board near the entrance. People don't like to walk a step out of their way. When they stop to look at the board, they find themselves almost in front of the door, and it is easy to step in and see the car, or else to make inquiries. If they had to walk back a few steps to the door, they probably wouldn't come in.

"The board also serves as a directory for the new car salesmen who relieve me at noon and in the evening. They used to keep my telephone ringing at night, asking me about exchanged cars; what they could sell them for, who turned them in and all kinds of questions. Now they can look at the board and see for themselves."

Specials Presented Daily

At one side of this board is a smaller, ornamental board, also mounted on an easel, on which are featured "Today's Bargains." One or two specials are painted on strips of composition board, about one inch wide and eight or ten inches long, which are tacked across the face of this board, which is also of composition board. A small electric light, with a shade, mounted at the top of the board renders the specials conspicuous all night.

Exchanged cars are never placed in the window or in the front part of the display room, but occupy the rear of the room. This leaves ample space for the salesmanager's desk and for a rug, table and seating arrangements in the front of the room. This, it is thought, is more attractive and dignified than is placing the cars in front. It also enables the salesman on duty to meet prospects at the door as they enter.

A plan that has been very highly successful in this exchanged car department is that of letting a mechanic do much of the selling. One man is detailed from the service station to come up and examine the exchanged cars and get them in running order when they come in, and he is frequently instrumental in making sales that the regular salesman would probably fail on. The mechanic—"Eddie" he is called—is typical of his trade and is dressed accordingly.

"As a salesman," Quirk explains, "he is not an expert by any means, but he knows how to answer technical questions about the cars, and the very fact that he is a mechanic inspires confidence in the customer.

"He seldom approaches a customer himself, but he is busying himself around nearby, and the customer approaches him with some confidential questions about the car he is thinking of buying. Eddie is just as confidential, of course, and gives the prospect several little pointers that greatly strengthen his confidence. Sometimes, too, Eddie will approach a prospect who is looking around and give him a tip that such and such a car over here is a mighty good buy. He has inspected the car himself, he tells the prospect, which is very true, and he knows what he is talking about.

"Eddie sells a lot of cars for us, some of which I probably would not be able to sell myself."

This man is a genuine mechanic, employed as such and receives no commission on sales other than what the regular salesman may see fit to give him.

In his own selling Quirk believes in letting the prospect sell himself. It doesn't do to try too hard to sell an exchanged car, he says, else the prospect will suspect that one is trying to get rid of a piece of junk—that one is too anxious to make the sale. Dignity is just as important in the used car salesroom as in the new car.

Handling the Prospect

"I meet them at the door and conduct them back to the car that they ask to see," he says, "then when they get to examining it closely and looking thoughtful, I excuse myself for a moment and go on away, leaving them to decide for themselves. When I think they have had sufficient time to reach a decision, I simply go back and say: 'Well, how do you like it?' If he then asks questions, I, of course, answer them, but I make little effort to sell the car.

"When it comes to talking about price, I take him over to my desk and get him in front of the pen and paper. All of our exchanged cars are bargains, because we buy them at prices that enable us to sell them as such, and there is no use arguing about the matter of price. If the prospect likes the car, he is ready to sign a contract, and the sooner he does it, the better. I don't try to rush him, but I take the attitude of being fully persuaded that he is going to buy the car and that is all there is to it. 'Just sign here.'"

Everyone a Used Car Prospect

Quirk thinks that every person nowadays is a prospect for a car, either new or used, and believes in letting people know he sells them. He always has his business cards handy, and he hands them out on the least provocation. Your grocery boy or the elevator boy or the usher at the theater may be in the market for a car, he says, so let him know that you sell cars. He, of course, doesn't force his cards on strangers, but he takes advantage of every opportunity to hand them out, and he tells of many sales made as a result.

New car prospects are frequently led to buy exchanged cars when they complain of having to wait for deliveries. They are sold new cars preferably, of course, but in case they show signs of not being content to wait for delivery, they are invited to buy an exchanged car and save the difference.

Blackboard in Window Attracts Used Car Prospects

A blackboard in the window of this Detroit dealer's used car store presents daily special offers in used cars to attract public attention. Many sales are directly traceable to this method of presenting the cars

Connecticut Control Plan Wins Good Will of Motorists

State System Strives to Facilitate Travel and Prevent Accidents —Warnings Instead of Speed Laws and Speed Traps —Law Against Jaywalking

By LEON F. BANIGAN

WHAT can be done to reduce congestion, accelerate traffic and at the same time make the rural highways safer for motorists and pedestrians?

This is the big problem before state motor vehicle authorities to-day—and it is of equal importance to the automotive industry because upon its successful solution rests the minimizing of a definite factor of sales resistance that is being caused by existing traffic conditions.

There are indications, in some sections at least, that state departments NEED the advice and co-operation of the automobile industry, and particularly the local dealers, in establishing the kind of traffic control that will be most beneficial to all.

There are instances where discriminatory and often freak laws and regulations have actually hindered rather than helped motor vehicle traffic. There are instances where good systems have not had the opportunity of proving their merit because of the antagonism of the automotive dealers of the state or section. Such antagonism, in some cases, asked not whether the plans were good or bad but marshalled political force to beat the regulations because they were regulations.

Then, too, there are systems that indicate a desire on the part of state authorities to serve intelligently the best interests of all. Such systems invariably show the guiding hand of a man who has practical knowledge of motor cars and the motor car industry.

A GOOD example of the more desirable handling of traffic regulations on rural highways is found in Connecticut. Perhaps it is significant to observe at the outset that this State's motor vehicle department has as consulting engineer an automotive engineer with wide experience in the industry in both manufacturing and sales. *And this State is trying to intelligently apply practical knowledge of automobiles and the automobile business in regulating motor vehicle traffic.*

The need for intensive study of traffic regulations is perhaps stronger in Connecticut than in some other States, because Connecticut is the gateway to New England, and Connecticut's highways are the principal routes of travel for passenger and commercial vehicles between New York and Boston and other New England cities.

It probably accommodates more "foreign" traffic than any other State. And this condition, in itself, presents for Connecticut the problem of facilitating traffic, relieving congestion and at the same time safeguarding the lives of its people and the people who use its highways. Connecticut realizes that the impressions that are going to be carried away by "foreign" motorists depend to an appreciable extent upon their contact with the State as users of its highways.

Connecticut must maintain good highways, facilitate travel over them, prevent accidents and at the same time cultivate the good will of the thousands of motorists who daily use its roads.

And so to do all these things Connecticut has built up a system of rural traffic control, the outstanding aim of which is to ACCELERATE TRAVEL AND AT THE SAME TIME PREVENT ACCIDENTS.

One of the most effective things that Connecticut has done to accelerate traffic and reduce congestion is the elimination of speed limits and speed traps. Motorists are expected to drive at a speed that is "reasonable and proper." The Connecticut law puts it: "Reasonable and proper, having regard to the width, traffic and use of the highway, the intersection of streets and weather conditions."

So, under favorable conditions, a motorist may drive 40 miles an hour

There's a Law Against Reckless Pedestrians in Connecticut

SOME legislatures appear to be working overtime grinding out laws to curb the reckless driver. Undoubtedly he deserves all he gets but what is to be done about the reckless pedestrian?

It's time there were more stringent laws to "spank" the jaywalker.

Connecticut is showing the way with a law that carries the penalty of a fine for reckless pedestrians.

The Connecticut law reads:

"Any pedestrians who shall use any street or highway negligently or recklessly; or who shall willfully refuse or neglect to obey the signal of any traffic officer, or who shall recklessly disregard his own safety or the safety of any person by the manner of his use of any street or highway, shall be fined not less than two nor more than twenty-five dollars for each offense."

Digitized by Google

on rural highways and not violate the law, yet he may violate the law at a speed of 15 miles an hour where conditions are unfavorable. However, when motorists drive at more than 30 miles an hour on rural highways, and 20 miles an hour in thickly populated sections where conditions are unfavorable for such speeds, it is considered *prima facie* evidence of reckless driving. And the convicted reckless driver gets all he deserves.

After all, it is but the application of common sense to the problem of traffic control, for what any really efficient traffic control system must do is accelerate—not retard and congest traffic—and at the same time provide proper insurance against accidents.

Reckless Driving Defined

It is the opinion of Alden L. McMurtry, Connecticut's consulting engineer in the department of motor vehicles, that an automobile in motion is being recklessly driven when its brakes are being outdriven. That is, when it is operated at a speed which would prevent the brakes being effective in the distance that the surrounding conditions indicate the car should be able to stop. For instance, a car traveling at a speed that could not be stopped in two or three feet in a street where children were playing would be considered recklessly driven. McMurtry also points to the danger of outdriving the headlights and the brakes at night and its indication of reckless driving.

Timely Warning Helped

STATE OF CONNECTICUT
Motor Vehicle Department
Hartford

OFFICIAL WARNING!

On Saturday, November 30th, the automobile traffic on the roads leading to and from New Haven will be very heavy

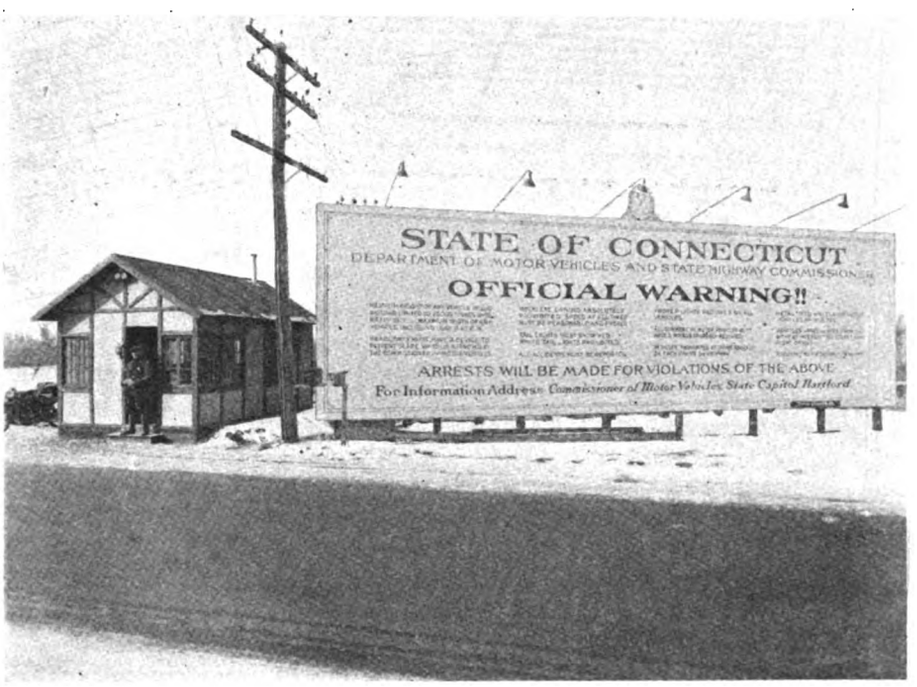
In order that this heavy traffic may be moved without delay or congestion operators are warned that the following directions must be observed

1 OVERTAKING or driving to the left of the highway on congested traffic, on a curve or the crest of a hill is absolutely prohibited.

2 CUTTING IN in front of a car which is maintaining a reasonable distance in back of the car ahead will be prosecuted

3 KEEP IN LINE Officers will keep the line of vehicles moving as fast as safety will permit

4 DO NOT STOP ON THE HIGHWAY Tire troubles or repairs can be made with greater safety to yourself and others by stopping on a side road



5 DON'T TAKE CHANCES Reckless driving may be prosecuted for ANY SPEED NOT REASONABLE AND PROPER

6 SAFETY FIRST If another car passes you at a high rate of speed DO NOT FOLLOW HIM The inspectors will take care of him

7 Drivers are requested to cooperate with the Department of Motor Vehicles in moving this heavy traffic without accident or delay

Before an important football game Connecticut distributed these cards to motorists. Inspectors inforced the rules and violators were given the choice of delaying half an hour at the side of the road or accepting a summons. Although thousands of cars entered the State that day there was not an accident

Acquainting the Motorists with the Laws

Connecticut acquaints the motorist with its motor laws on entering the State with these signs. Inspectors, at the State line, render a distinct service to motorists while inspecting trucks and other vehicles to see that they conform to highway regulations. The signs are the tourist's first introduction to the State's system of warnings

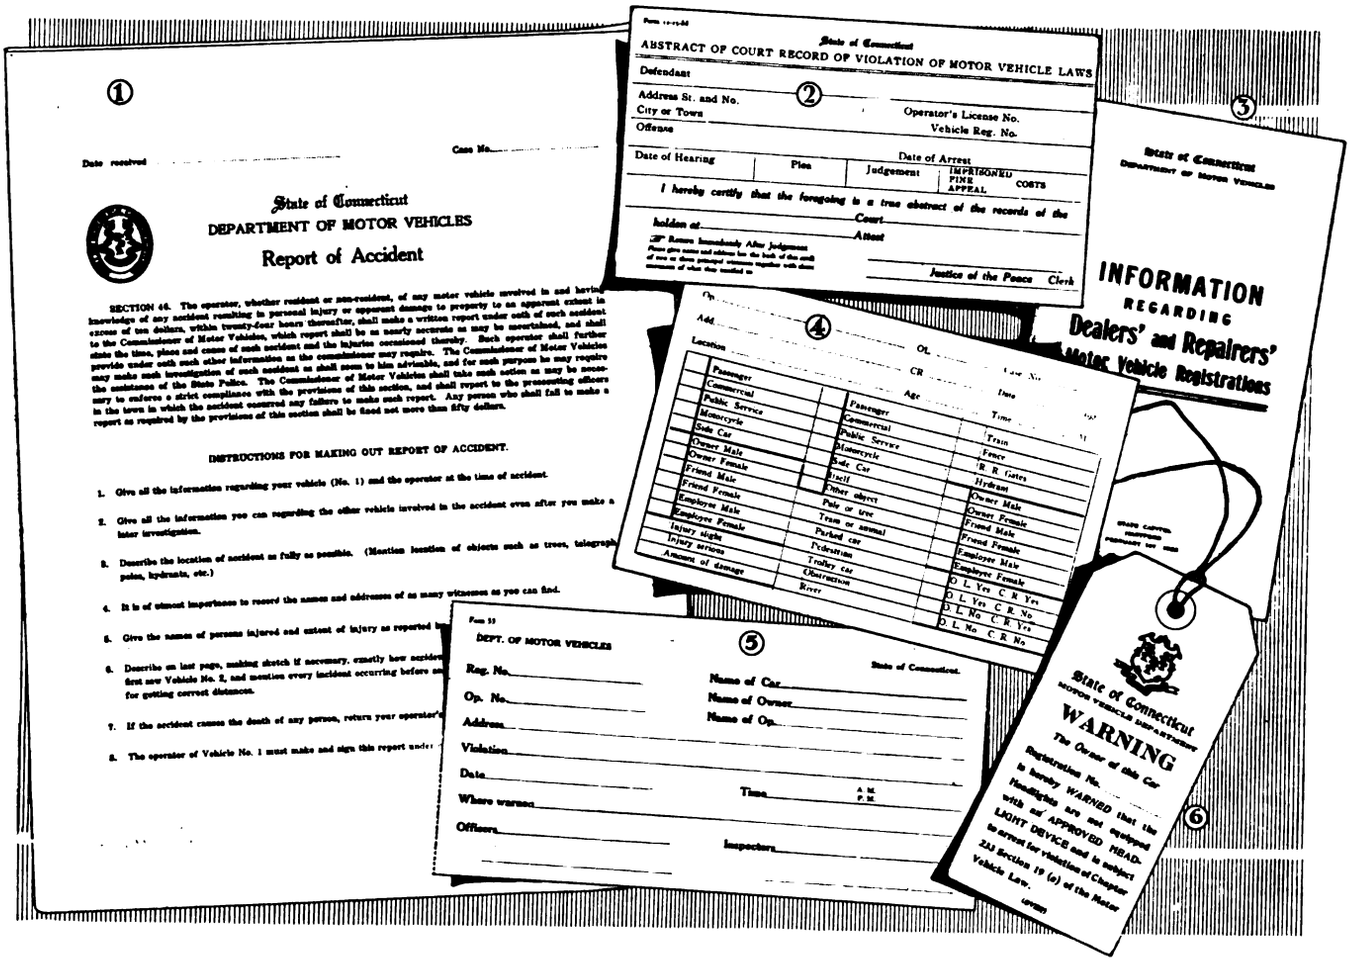
In its accident prevention activities the Connecticut Motor Vehicle Department again demonstrates its desire to apply common sense in its regulator methods. The seriousness of accidents is not determined by the number of people killed or injured but by the *cause* of the accidents. And Connecticut has an elaborate accident analysis system.

Carelessness of drivers causes 37 per cent of the accidents in Connecticut, and reckless driving causes 19 per cent, but sometimes the analysis shows that the State itself, or some individual other than the driver, is responsible through the existence of contributory causes in poor highways, imperfect markings, etc. Once it was found that a telegraph pole that was too close to the highway, and caused motorists to swerve to the center of the road, was responsible for numerous collisions. Very often an analysis of a number of accidents at certain points shows that something other than carelessness of drivers is responsible. And in such cases the motorists are not punished because they happened to have an accident. *The CAUSE is removed.*

Connecticut strives for the *friendly assistance of the motorist* in accelerating traffic and preventing accidents. It does not arrest and inconvenience motorists for small violations of the rules—but it WARNS those who transgress, and it keeps accurate account of warnings. When a motorist doesn't heed these warnings he is severely dealt with. *The big effort, however, is toward the prevention of violations rather than the trapping and punishing of violators.*

Some of the things that Connecticut does to HELP the motorist do the things that prevent congestion and accident are:

1—*Painting white lines in the center of dangerous curves and over the brow of hills.*



2—*Erecting warning signs showing the approach to railroad crossings, steep grades, sharp curves, etc.*

3—*Placing illuminated and reflector danger signs at danger points.*

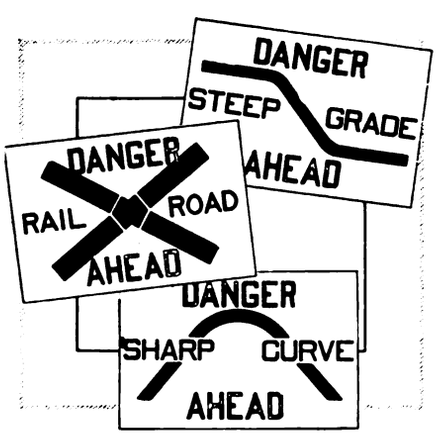
4—*Erecting "official warning" signs* at the State lines on the principal highways entering the State which give important traffic laws for the information of strangers entering the State.

5—*Safety propaganda including "No Accident Week," Films: "Where are your children?" and "Here are*

Digitized by Google

Connecticut's entire system of traffic control on the State highways is built upon co-operation with the motorists and the municipal authorities. Among the forms that help keep the State in close touch with these are the following shown above: 1—Report furnished motorists for reporting accidents. 2—Report of traffic conviction which court clerks forward to State Department, the forms being furnished by the State. 3—Digest of laws affecting dealers and garagemen furnished by the State. 4—Accident analysis card used in statistical department. 5—Warning notice given motorists for minor violations. 6—Warning tag attached to cars not properly equipped with headlights

your children;" published reports of accident statistics showing causes, etc.



Local Police Co-operate

All markings on the highways, removal of obstructions to sight on curves, painting of pavements and fences at curves, and many other activities to aid the motorist are under the jurisdiction of the highway department of the State, which co-operates closely with the motor vehicle department in its aim to accelerate traffic and prevent accidents.

The Connecticut Motor Vehicle Department also has the close co-operation of the law enforcement machinery of the municipalities. All police departments are required by law to report all violations and convictions under the motor vehicle law.

More than 9000 automobiles entered the State in one day, carrying people to a football game at New Haven, and got out of the State again without a single accident. The State's system of warning motorists was principally responsible. An interesting phase of the work in connection with this record was the issuance by the motor vehicle department of warning cards which were distributed to motorists.

An interesting phase of Connecticut's warning system, which is also used by Massachusetts and some other states, is the tag that is attached to the steering wheels of cars not equipped with approved headlight devices.

Connecticut protects motorists with warning signs at dangerous places. Here are three samples of the signs along the State highways telling of places where motorists should drive with extra caution

When motorists are stopped and warned by inspectors for any violation of the traffic laws, a report of the warning is sent to the department of motor vehicles on a blank, a carbon of which is given to the motorist. A close check is kept on these warnings and they form a permanent record against the motorist, and may be the basis of a complaint and prosecution where certain violations become particularly noticeable.

"OUR city thoroughfares—shall they be highways or garages?" asks a traffic expert who has prepared a story for Motor World on the parking problem, with definite suggestions for solving it. The story will appear in an early issue. Other stories on traffic, written to interest and assist dealers, will appear from time to time, among them the comments of an automobile trade association secretary on police and public hysteria over traffic, with methods the trade can employ to fight such conditions.

DENVER HOLDS MIDSUMMER OUTDOOR AUTOMOBILE SHOW

Exhibition in Far Famed Civic Center Draws 35,000 Interested Spectators—Event a Yearly Feature in Western City

DENVER, Aug. 11.

DENVER'S second annual outdoor automotive show was held at the city's widely famed Civic Center, with seventy-seven passenger cars, seven motorcycles, six automobile camp equipment exhibits and one special transportation bus, and with an attendance running well into the thousands. There was no registering of visitors or any other method provided for an accurate count, and people kept coming and going throughout the evening's program, thus making the attendance rather difficult to judge; but careful observers gave estimates ranging from 25,000 to 35,000. That the crowd included a substantial number of motorists was shown by the fact that all the available parking space within several blocks of the Civic Center was filled with cars throughout the evening, and also by the remarks of many of the visitors asking salesmen about the cars on exhibit.

While the crowd kept almost constantly on the move, surging from one end of the block-long exhibition to the other, the exhibiting dealers were well pleased with the percentage of visitors that stopped to ask questions indicating genuine interest of the prospective buying kind. "If I don't make a single sale as a direct result of the show, I'll still figure the event well worth while from an advertising standpoint," one dealer declared. "People can come here and feel free to ask all sorts of questions, make quick comparisons of cars in a certain price class and go away well satisfied with getting practical information in far shorter time than they could visit all the salesrooms handling the cars they happen to be interested in."

This "Midsummer Automobile Festival," as it is officially called, is conducted on less formal lines than a regulation motor car show, and some of the exhibitors believe that this free-and-easy spirit of the affair, combined with the open-air setting, displays their cars in a natural "atmosphere" and tends to do away with any restraint liable to be felt by visitors under ordinary show conditions. In fact, a few exhibitors are experimenting with the idea of a salesman standing by the side of his car or on the running-board and asking passersby to tarry long enough to take a good look at his car and remember its name.

Admission was free to the public, and the only cost to the exhibitors is the expense of arranging and maintaining their displays, all entertainment expenses and similar costs being borne by the Denver *Post*, which promoted the event.

Outdoor displays of automobiles in the summer and early fall offer opportunities for exceptionally fine merchandising effort along the advertising and publicity line, particularly for dealers in medium and small towns. Not all cities, of course, present the wonderful setting that Denver does in its Civic Center. However, the co-operation of the local trade bureau or some newspaper often can be had if the dealers combine in presenting the idea, and can show how the plan is carried out in Denver.

The expense of an outdoor show is not large. The site for the show may be a vacant lot, a city park or even a square near the center of the city where the space is large enough to rope off a section in the center. The publicity should consist, first of all of news stories in the local and country papers and some advertising in these papers by the dealer association or co-operative ads by the dealers. A small amount is usually appropriated for musical talent to provide entertainment. At the Denver and other similar shows no attempt was made by dealers to show their full lines. Each dealer showed two cars.

Denver's Midsummer Outdoor Show

DENVER'S second outdoor automotive show in the widely famed Civic Center drew an attendance of 35,000 *people recently. Each dealer exhibited two models. The event proved an exceptionally fine advertising stunt. The idea was promoted by the Denver Post, which also furnished entertainment features.*

"Well Bought Is Half Sold"

An Interesting Discussion of the Relationship and Need for Co-operation Between the Sales and Purchasing Departments of a Jobber Business

By VICTOR ALLEN
Purchasing Department, Auto Equipment Co., Denver

THERE closed recently, in a large western city, a highly successful conference in the sales organization of a large jobbing house devoted exclusively to the automotive trade. Sales campaigns were planned, territories realloted for a finer combing, problems discussed, new lines introduced—experts gave advice which if carried out would reduce sales resistance to a minimum. "Ask 'em to buy," the slogan of the moment, was heard on every side, and the enthusiasm of the members in the organization seemed to grow rather than diminish as the time drew near for a return to their territories.

In a part of his speech closing the conference, the head of this organization spoke for the first time of the buying staff. "Boys, our purchasing department is putting forth its best efforts to help lessen the resistance we will find in selling these lines. You know 'well bought is half sold.'" So with a few more words of no further consequence he dismissed this department from his speech as well as his thoughts.

And why not; for had he not gathered a wonderful selling organization together, men with pep, punch and personality, at the same time ridding himself of the order takers, the dead timber who fall always when normalcy is back.

Slight praise for a department on whom lies the responsibility of obtaining all of the material that the sales department must put over. Yet does this mean that the buying staff is of no importance? From this it would seem so.

Whether you are the largest or the smallest merchandiser of automotive products in your locality, the buying end of your business presents angles and difficulties that must be met in a way far different from the post-war methods of a year or two ago.

The period of a so-called "buyers market" is harder to operate on than the period of a "sellers market." The problems of your salesmen instantly become most vital to you and this naturally brings to attention the fundamental principal underlying any selling organization: A HELPING CO-OPERATION BETWEEN THE SALES AND PURCHASING DEPARTMENTS OF THE BUSINESS.

ARE you the kind of a buyer who looks at his stock inventory records and finding an item that is not moving mutters audibly, "The darn sales end of this business is not on the job—here I've made a *real* buy and they've passed it up."

If you are that kind of a buyer you no doubt will send a note to the sales manager and call his attention to the fact that "Those jacks we bought four months ago are not moving." This note will probably stimulate a sales bulletin or two out of the sales manager but does it really enthuse him and sell him on the particular line? If he comes back with one good reason for the slow sale of the jacks you will quickly realize that you have not gone far enough into the thing to warrant a note of this kind.

Before any buyer has a right to demand of a sales manager why some one line or item is not turning over properly he should satisfy himself of these essentials:

1—Is this a quality item?
2—Is the price right?
3—Has it been properly advertised?
4—Is it representative of your house and its policy?
5—Has a competitive item more merit than this?
6—The salesman that introduced the line sold it to you thoroughly; have you in turn made a great effort to sell it to your sales department?

Last January a Western firm purchased a complete line of camp stoves and ovens, priced right, meritorious, profitable; with all the qualifications of a leader in this class of material. Shipment reached the warehouse shelves about the middle of February, all ready for the tourist season.

During the second week of May the purchasing agent referring to his stock records was astonished to find that his stock of camp stoves was intact with the exception of one he had purchased for his own personal use. Upon inquiry there was not even a future order at hand for any stoves. This with the season started.

According to the best traditions he should have torn his hair with one hand, ripped off a sharp note to the sales manager with the other, at the time saying things out of the corner of his mouth.

Instead, a request for a few minutes of the sales manager's time, and taking one of the stoves out of stock he brought into play the very arguments that had sold him on the line. At the same time giving a display of the merits of the stove.

Past seasons had shown only grief in the handling of this type of merchandise. The sales manager was surprised beyond measure to be shown from his own stock a stove that had overcome the difficulties previously met with. Selling him on the line was a matter of minutes.

The first week of June saw a shipment en route to this firm just four times the size of the first order. The turnover has been a revelation to both sales manager and buyer.

Your house has a policy and this policy should be so installed in your mind that it is before you in every purchase or contract you make.

A wholesaler cannot do business on a brokerage or mail order drop shipment plan; likewise a retailer with

Digitized by Google

limited capital and lacking a widespread sales organization is fooling no one but himself when he attempts entering the jobbing field of prices with the hope of a larger margin of profit.

There are at the present time a number of factory representative selling agencies, who send their missionaries to the retail dealers and garages in the smaller towns with a varied line of Ford accessories. Their proposition briefly is: — for purchasing from ten to twenty dollars of material they are granted exclusive rights to sell in their town or locality, also a catchy jobbers discount of fifty per cent off of a trick list price that apparently changes with the weather.

These products have no merit or real quality but many sane dealers have entered into the proposition. Seems a case of greener grass over in the jobbers field.

By the same token a half dozen manufacturers who last year consigned stocks in jobbers warehouses found a lack of volume that was deplorable and the sad experience will not be repeated again this year if they can help it.

Your policy in buying means as much to the welfare and reputation of your house as does its selling policy. Bargaining with "gyp" houses whom you know are not selling legitimately is not advantageous and in the end will only mean grief to you.

Of the details in the buying end of the business, there are two essentials important. The stock inventory. The keeping and regulating of costs. Regardless of the size of your organization this work should be under the immediate supervision of the buyer.

This is a period when everyone is demanding (rightfully too) service in the Nth degree. Stocks are not now carried on shelves in great quantities. Specialized lines are coming into vogue with the advent of replacement axles, pistons, piston rings and gears. This means one thing—the buyer must have a complete knowledge of the movement of the stock either by means of a perpetual inventory (if the stock is small), or a careful periodical check on inventory cards by a competent checker, if the stock is large. A competent man in a checker's position is a man thoroughly versed in this work for he is one of the pivots on which the purchasing department will operate. Specialized lines, for example piston rings and ignition parts, should be checked three or four times as many times as the general line in the same length of time. This will go far in eliminating back orders also the delays of drop shipments. Certainly both of these are enemies of service.

One of the pleasant features of the rising markets two years ago (though it doesn't seem that long) was the ease with which costs and selling prices were marked up. With margins made broader and wider of course any system of costs was not difficult to keep. The question seemed not so much—what will it cost—but rather—when can we get it?

The pendulum has swung back. Now the all important question of "What will it cost?" has caused the buyer to move the cost clerk over next to his desk and the cost records have become dog eared and heavily finger printed, from constant use.

Quotations never came so thick and fast in the mails as now. If you are to show wide awake, live competition to others in your locality or territory these quotations are not to be ignored or filed in the waste basket. On the contrary they are examined carefully if of interest, and filed for instant reference.

Transportation charges, freight allowances, cash discounts are the little things that count for much when yearly profits are figured. The buyer who constantly keeps an eye on this imporant feature of the business is not likely to be asked "Why" at the close of the fiscal year.

Truly—"Well bought is more than half sold" but buying must be done with eyes wide open, both feet on the ground and in an active, aggressive manner.

Nothing Like Knowing Where You're At, Says Ford Dealer

TERRITORIAL analysis is the basis of Ernest Burwell's success in making Spartanburg County, South Carolina, leader of all counties in the state in the sale of Ford cars.

Ernest Burwell is but 27 years old. He came to Spartanburg, S. C., from Charlotte, N. C., about three and a half months ago. System is written on the threshold of the main entrance to his handsome place of business on West Main Street.

Entering the sanctorum of the youthful, smiling, blue-eyed manager, one notices two large maps above his desk on the wall—one of the city and the other the county. These maps are dotted like a new polka-dot dress with tacks of varicolored heads. The colors index a card system. Each tack represents a Ford car, the color tells what filing case to get the record card of that car. And this card system record is so complete that Ernest Burwell and his live-wire lieutenants can find out almost anything about the machine or the man who drives it.

When Ernest Burwell looks at the map of Spartanburg County and sees any portion of it undotted or thinly dotted with tack-heads he investigates personally to find the reason. The reason located, he calls a conference of his "sharp shooters" and discusses the situation. The best man is put in that area, and in a few weeks it begins to look as though someone had sprinkled it with a broadside of tacks.

A glance at Burwell's sales card shows whether the owner of the car is having his garage work done at the Ford home or elsewhere. If he is not another man is sent after him, and the chances are dollars to doughnuts he will be driving his machine into Burwell's for garage work or to get parts.

This is Burwell's creed:

You may talk about this
And you may talk about that,
But there ain't no fun
Like knowin' where you're at.

Practical Farmer as Field Man Keeps Owners Satisfied

Ohio Tractor Dealer Follows Up Every Sale With Service That Insures Proper Use and Maintenance

By DONALD D. BLANCHARD

SOMEONE has said that the function of the service department is to make good on the promises of the sales department.

Charles M. Cole, Ford and Fordson dealer in Ada, Ohio, employs a man in his service department whose duty it is to make good on the promises of the tractor salesmen. This employee spends his entire time in the field calling on tractor owners.

The field man is an ex-farmer and a successful one too. Previously Cole had sold him a Fordson with which he had unusual success. Furthermore he had become an exceptionally skillful operator. In addition to these qualifications, his personality is especially well adapted to this work.

THE duties of the field man may be grouped under four headings:

Delivery
Demonstration
Inspection
Instruction

When he delivers a new tractor to a farmer, he shows him how to drive it. During the first week of ownership he sometimes makes four or five calls to make sure that the farmer gets started along the right lines. During the balance of the season he makes at least one call each week.

His practical farming experience is especially useful in making demonstrations. He knows how to operate the tractor so that its important selling points will be brought out strongly. He knows what things the farmers are most interested in seeing done and he is capable of demonstrating these operations in an expert manner.

The field man visits every Fordson owner as often as possible regardless of the length of time they have been owners. A report of each visit is made. Cole goes over these reports each morning. If three successive reports show that a farmer is abusing or neglecting his tractor, Cole pays him a personal visit. He explains the dangers of abuse and neglect and how mistreatment affects power, reliability and economy. Owners appreciate his interest in their tractors. In some instances Cole found that the tractor was being abused by hired help and that the owner had no knowledge that the tractor was not being properly used.

The field man has eyes open for sales tips. On every visit, he makes it a point to ask the owner if he knows of anyone who might be interested in buying a tractor. If he secures any names, they are placed on the inspection report form.

Repairs are not handled by the field man. He inspects and makes minor adjustments. If extensive repairs are necessary, a skilled mechanic is sent from the shop. Cole sells tractor service on the flat rate basis. The charge for work done in the field is the flat rate for the operations performed plus 10 cents for each mile traveled by the mechanic.

A small stock of such necessities as spark plugs, fan belts, ignition parts and lubricants is carried by the field man. This merchandise is carried as a convenience only. The field man makes no effort to push its sale nor is he judged by the amount he sells. However, he does dispose of a considerable amount of these commodities and the profits on these sales help, in a small way, to pay his expenses.

The field man makes an average of six calls a day. There are about 120 Fordson owners in Cole's territory and the field man is in active touch with about 75 of these.

In addition to the educational work done by the field man, Cole sends out frequent service messages by mail. These are short and cover but one feature of tractor operation.

Cole endeavors to get farmers to bring their tractors in for overhaul during the winter months when work, both on the farm and in the shop, is slack. As an inducement he made a special offer last winter of a free coat of paint for all tractors brought in for overhaul before March 1. He obtained eight jobs on this basis at an average price of $85.

Cole shows this unusual interest in his tractor owners because he knows that, without it, they will not get the

Field Man's Report

REPORT OF TRACTOR FIELD MAN.

DATE 5/23/22

Called on W. L. Roberts

Oil Level in Motor O.K.

What kind of oil is he using? Standard

What was the condition of oil in Motor? Fair

Was it thin or worn out? No

Was it diluted with fuel? No

If so, did you explain to the operator how to operate his tractor so as to avoid getting fuel into oil sump?

Was carburetor properly adjusted? Yes

Was air washer float working all right? No

Does tractor smoke at exhaust? No

When had operator changed oil in Motor? Every 4 or 5 days

When had operator changed oil in transmission? Once

Did you find rear wheels loose or tight? Tight

What kind of work was tractor doing today? Plowing

Examine timer in each case and state whether you found it dry or properly lubricated. Well oiled

Does driver operate tractor at proper speed? Yes

Is owner satisfied with his tractor? Yes
If not report full particulars.

Does he know anyone who is interested in a tractor or who is talking of buying?

If so give names Send circular to Wm Roberts.
He has a couple of tractor prospects.

How much oil has he on hand? 5 gals.

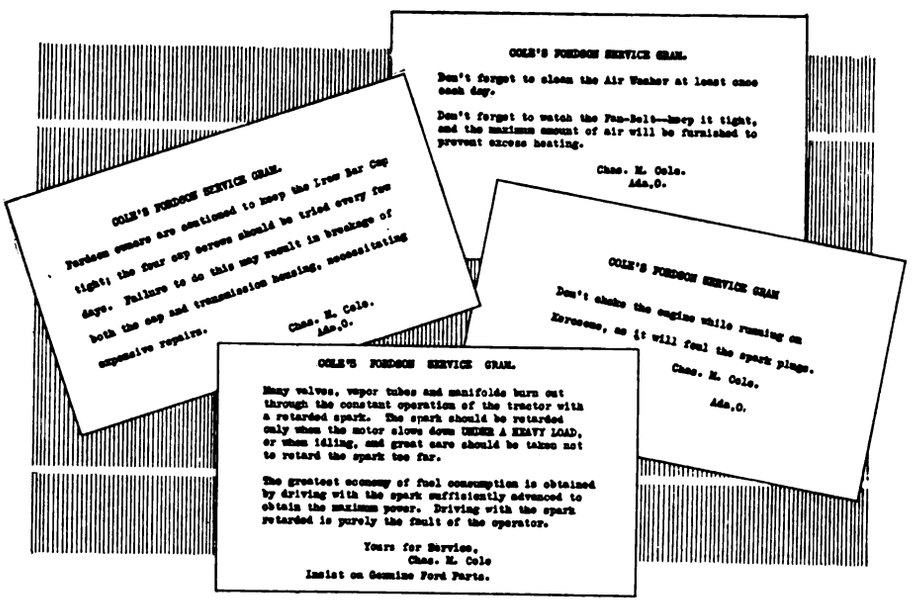
FIELD MAN John Lloyd

When necessary use back of this card for reporting details.

The field man makes a record of each visit on this form. Cole goes through the reports of the previous day the first thing in the morning. Owners that habitually neglect their tractors receive his personal attention.

Digitized by Google

satisfactory performance that they expect. The salesman gets the order by convincing the farmer of the reliability and economy of the tractor he buys with these promises of performance in his mind. In making these promises, however, the salesman has assumed that the tractor will be properly used and maintained. Proper use and care are essential to the fulfillment of these promises. If the farmer abuses or neglects his tractor, he is not likely to get the reliability and economy that he has been promised.



There are many farmers that need the guidance that Cole's field man gives them. There are, of course, some farmers who are naturally disposed to handle machinery intelligently, but on the whole, the average farmer is quite likely to be careless in this respect. If left to his own devices such a farmer would not get from his tractor what the salesman had promised him. And the failure of the tractor to live up to his expectations would create a feeling of dissatisfaction with it.

Cole anticipates such dissatisfaction by having his field man keep careful watch of the use and care that the tractor is given. He is on the job constantly showing owners how to use their tractors properly and how to take care of them. He reaches the farmer who is plowing too fast before he has done any serious damage to the tractor. He warns the farmer whose oil is too thin before his bearings are damaged. His reports show Cole whether a tractor is being handled correctly. If the field man cannot bring about the desired change in methods, Cole makes it his personal business to tell the farmer of the dangers he is courting.

The instruction book that goes with every tractor tells the farmer how to use it and how to care for it. But the average farmer pays no more attention to this book than the automobile owner does to the one he gets with his car. If the farmer would read and follow these instructions, much of the work of the field man would be unnecessary.

In providing this service, Cole shows his appreciation of the fact that he is selling an agricultural utility—not merely a machine. He sells a tractor and the farmer buys it because it will perform certain farming operations more profitably than they can be done in any other way. Cole, through his field man, makes it his business to see that the tractor does perform these operations satisfactorily.

Service Grams That Help Sell Fordsons

Cole's Fordson Service Grams are typical of the effort he makes to have his customers get the best of service from their tractors. A mimeograph is used to print this message on postcards.

Bagging the Tourist Trade

THROUGH the spring days of 1922 the proprietors of the Central Tire Shop, Walla Walla, Wash., stood in the doorway of their establishment and watched hundreds of dollars worth of potential business whirl past them. The business lay in the worn, shredded tires on the wheels of the tourists' automobiles. These tires, the tire men knew, would have to be repaired or replaced soon. They decided that if ordinary signboard advertising was not effective in bringing travelers to their doors other methods must be found.

They have found the method, one that operates effectively at very little expense and adds a volume of business that, to the average small tire shop, is very welcome.

A representative of the shop, a tire expert, visits the Walla Walla public tourist camp early every morning. His first duty is to make a general inspection of the tires on the large number of transient cars encamped there, discovering cuts, sand blisters, side wall weaknesses and any of a hundred defects readily noticeable to the practiced eye. He then informs the car owners of the defects of their tires, suggesting the most rapid and effective method of repair. With him he carries a supply of small hand-bills with a schedule of tire prices and repair rates offered by the Central Tire Shop.

At the same time he suggests repairs —and he does this only when he believes they are legitimately needed — he also tells the prospective customers of the speedy service which his shop can afford them. To most tourists saving of time is a vital necessity; therefore when he says he can remove tires in need of repair, put them in the small service truck he drives, take them to the shop and return them by the time the campers have packed their tents and finished their breakfasts, he usually is awarded the business he seeks.

As a result of this service the Central Tire Shop is selling about three casings a week to tourists, an item of no small importance to a comparatively small establishment in a town of Walla Walla's size, 15,000. In addition to the sale of casings a large amount of repair work is also obtained, so that as the tourists whirl past the shop door the proprietors no longer feel that their share of the business is being carried to the next town.

The Central Tire Shop carries two lines of casings, one of the best grade and the other of a less expensive grade which they are able to sell at a low figure through special arrangements with the manufacturers. In this way they are ordinarily prepared to satisfy any tourist who needs new casings.

Editorial Notes

Where Does the Money Come From?

THE above question has been asked by many persons contemplating the record-breaking production and sale of automobiles this year. The logical answer seems to be that the money comes from the earnings of the American people, who are coming to realize more clearly every year that the automobile is one of the leading modern agencies to keep families in a state of health, contentment and enlightenment.

From many sections have come complaints that the summer resorts are not being patronized. There seems to be a partial reason for this condition in the widespread purchase of motor cars, particularly by people who have never owned them before. Thousands of vacations this year are being spent in the car, with home as the overnight base, and thousands of men and women are learning that a few hundred dollars invested in an automobile may mean more to them than an equal amount spent in two or three weeks at a more or less fashionable vacation place.

The majority of first-time buyers, who have had no cars to trade in and who apparently had not been able or had not thought they were able previously to own automobiles, are not careless spenders. The country has pretty well recovered from the free-spending habit of two or three years ago. These people who have bought their first cars this year, many of them on time-payment plans, are investing in personal and family utilities which they think they are entitled to. This trend is encouraging for future business. It pushes still further into the background that bogy of saturation point, and suggests that the ordinary citizen's money will always be available for motor car purchases. It also suggests that in spite of the antagonistic or indifferent attitude of some banks, this very demand for cars and for methods of financing their purchase will compel the expansion of credit facilities which even now are the wonder of many observers.

Self-Analysis

THE Portland, Oregon, Automobile Dealers Association has been dong some interesting work in investigating and telling the public about the importance of the automotive industry within that commonwealth. The association has compiled figures on capital invested, payrolls and volume of business done by automobile men throughout the State and has disseminated the information, first to dealer organizations so that they would understand better their own standing as compared with other businesses, and then to the public in newspaper articles and mail matter addressed to both public officials and private individuals.

The Oregon investigation showed that $56,000,000 was invested in the automobile business in the State, that annual payrolls amounted to $11,000,000, and the volume of business done to $85,000,000. Rather impressive figures, aren't they? They impressed the people of Oregon and helped the dealers of that State to prove their standing as one of the big productive businesses of the community. Among other things, it was established that for every automobile in service in the State there was approximately $840 invested in repair facilities and stocks of parts and accessories.

Would information like this be valuable in your State? It is not expensive either to prepare or publish.

The March of Closed Cars

THE growing tendency of manufacturers to cut down the differential between closed and open car prices has the unanimous approval of dealers, but the trade would like to see also the greatest possible attention paid to production facilities assuring adequate supplies of closed models. Dealers in some lines have suffered much from inability to get closed cars in the early fall months when they are in greatest demand and more recently there has been in some lines a closed car shortage even in the summer. All this suggests that the industry still has quite a task before it in regulating production facilities so that the closed car supply can keep up with the demand, and particularly so that there will be no shortages depriving dealers of potential sales in the logical closed car months.

The bringing out of new models in late summer and early fall naturally complicates the situation, as it takes more time to get closed cars than open cars into production. The result has been that many dealers have found themselves facing the fall months with little to offer their trade except open cars. They have had to sit by and see business go to competitors because prospects would not wait until winter had actually arrived for deliveries of sedans and coupes.

The closed car can be made an important factor, as it has already been made to some extent, in encouraging year-'round purchase of automobiles and in giving dealers a more continuous business throughout the year. Every effort should be made by the manufacturers, both of cars and bodies, to assist in this stabilization. No more favorable opportunity to take the problem firmly in hand has ever been presented than the present growing public demand for closed cars, stimulated by tempting closed car prices.

Government vs. Dealers' Used Car Valuation

The Federal Tax Return Method of Depreciation Is an Arbitrary One While Dealers Base Estimates on Market Value

EDITOR Motor World: Several prospects who have had used cars to trade have argued with me about my allowance, claiming that the Federal Government, in connection with tax returns, depreciates the value of a car only 25 per cent during its first year, while my average allowance for a car in good condition, a year old, is 35 per cent off the list price. Of course, I have told these fellows that I cannot take cars in for more than I can get for them, and that I can't get more than 65 per cent of the new car price, but some of them are hard to convince and have argued pretty hard about these Government figures. Do you know of any way I could state the case more plainly?—Veteran Reader.

Answer: You can tell your prospects at the start that the Government depreciation figure is an arbitrary one, established to simplify figuring of tax returns. As a matter of fact, the Government depreciation figure is the same every year, that is, the depreciation allowed each year is 25 per cent of the original value, so that the investment in the car is entirely written off at the end of four years.

The chart shows the difference between the arbitrary Government depreciation of used cars, for purposes of figuring taxes, and what might be termed an average dealers' depreciation. Note that the Government's figure is higher than the dealers' when the car is undergoing its sharpest decline in resale value, that is, in the first two years of its life as a used car. The Government and dealers' figures cross each other at the end of the third year, but the Government figure reaches zero at the end of the fourth year, while the car does not drop to junk value, in the dealers' estimation, until it is six years old.

An automobile dealer, of course, knows that such a depreciation plan is fictitious, as depreciation of a car's value immediately after it is put in use and becomes a used car is more rapid than during the second and third years.

For instance, in Boston, where the Used Car Statistical Bureau operated by the dealers has fixed valuations on the basis of actual resale prices of many sales of nearly all makes and models of cars, the average is as follows: At end of first year, 68 per cent of list price; second year, 40 per cent; third year, 30 per cent; fourth year, 24 per cent; fifth year, 17 per cent.

A valuation of 68 per cent at the end of the first year, that is, a depreciation of only 32 per cent, would be considered high in many communities, where it has been more or less the custom among dealers at least to start talking about valuations on last year's models at 60 per cent of the current new car price, two year old models at 40 per cent, three year old models at 25 per cent, four year old models at 15 per cent and five year old models at 5 per cent, while some cars six years old or more are rated at junk value.

The difference between what might be termed an average dealers' or market value depreciation and the arbitrary Government depreciation for convenience in figuring tax returns can be shown by a diagram of the two depreciation curves. You might find it useful to show this diagram to some of your prospects, particularly calling attention to the Government rating of a car as of no value at all, for taxable purposes, after the end of its fourth year, while dealers figure it at 15 per cent, more or less, according to its condition and local market condition.

California Dealer's Attractive New Building

Usually a center driveway interferes with display. In a building as wide as the one shown above, however, there is sufficient display frontage on either side of the driveway to take care of the two salesrooms. The center driveway has the advantage of giving the building a more balanced appearance. The lower photograph shows the interior of the garage and service station. The lighting is unusually good. This building belongs to Roy A. Priest, Ford dealer, Ventura, Cal.

A Flat Rate Schedule for Oakland Cars

(*Continued from the August 9 issue*)

18—Fit six new pistons with pins and hang on connecting rod, when connecting rods are brought in with pistons 2.0

1—Remove connecting rod clamp bolt, nut and cotter pin.
2—Remove piston pin and connecting rod from pistons.
3—Measure each piston pin with micrometer.
4—Adjust reamer to piston pin measurement.
5—Ream piston.
6—Fit piston pin to piston.
7—Assemble connecting rods to pistons.
8—Assemble connecting rod clamp bolt, nut and cotter pins.
9—Align pistons and connecting rods with lining bar or an aligning gauge. Repeat operations 3 to 7 for each of six pistons.
Material: Pistons (standard) 2.810-2.811, piston pins.

20—Grind valves and clean carbon.. 5.0

1—Drain radiator.
2—Remove hood.
3—Remove cylinder head cover.
4—Remove cylinder head water outlet cap screws.
5—Remove front and rear rocker arm bracket and shaft assemblies.
6—Remove carburetor head tube elbow.
7—Remove exhaust pipe to manifold screw.
8—Disconnect vacuum tank to intake manifold pipe assembly.
9—Remove hot air stove from carburetor.
10—Disconnect carburetor from intake manifold.
11—Remove cylinder head to cylinder block screws 10 cap screws.
12—Remove cylinder head.
13—Remove 12 "U" washers, valve spring cups and valve springs.
14—Remove cotter pins from valve stems (12).
15—Clean carbon from valves and cylinder head.
16—Grind 12 valves, using screw driver wipe clean after grinding.
17—Replace valve stem cotter pin.
18—Replace valve springs, valve spring cups and U washers.
19—Clean carbon from cylinders.
20—Renew or replace cylinder head gasket.
21—Replace cylinder head.
22—Replace cylinder head to cylinder block screws. (10 cap screws.)
23—Replace front and rear rocker arm brackets (6 cap screws).
24—Replace cylinder head water outlet.
25—Replace exhaust pipe to manifold screw.
26—Connect carburetor to intake manifold.
27—Connect vacuum tank intake manifold pipe assembly.
28—Connect heat tube elbow to manifold.
29—Clean spark plugs.
30—Fill radiator.
31—Start and allow engine to warm up.
32—Adjust valve rocker arms to .010 clearance.
33—Adjust carburetor.
34—Replace cylinder head cover.
35—Replace hood.

21—Adjusting valve clearance.....0.34

1—Raise hood.
2—Remove cylinder head cover.
3—Start engine and run until warmed up.
4—Adjust valves using feeler (.010 clearance allowed)
5—Replace cylinder head cover.
6—Lower hood.

22—Tighten down cylinder head after which adjust tappets.....0.50

1—Raise hood.
2—Remove cylinder head cover.
3—Tighten cylinder head to cylinder block screws.
4—Tighten rocker arm bracket and shaft assembly cap screws.
5—Adjust valve rocker arms to .010.
6—Replace cylinder head cover.
7—Lower hood.

23—Install new cylinder head gasket.1.50

1—Drain radiator.
2—Remove hood.
3—Remove cylinder head cover.
4—Remove cylinder head water outlet.
5—Remove front and rear rocker arm brackets and shaft assemblies (6 bolts).
6—Disconnect heat tube elbow from manifold.
7—Loosen exhaust pipe to manifold screw.
8—Loosen manifold to vacuum tank pipe from manifold.
9—Remove hot air stove from carburetor and exhaust pipe.
10—Loosen carburetor from manifold.
11—Remove cylinder head to cylinder block screws (10 bolts).
12—Remove cylinder head.
13—Remove oil and install new cylinder head gasket.
14—Replace cylinder head after cleaning carbon from same.
15—Replace and tighten cylinder head to cylinder block screws (10 bolts).
16—Replace front and rear rocker arm bracket and shaft assemblies (6 bolts).
17—Replace cylinder head water outlet.
18—Tighten exhaust pipe to manifold screw.
19—Connect carburetor to manifold.
20—Connect manifold to vacuum tank pipe to manifold.
21—Connect heat tube elbow to manifold.
22—Fill radiator.
23—Start and allow engine to warm up.
24—Adjust valve rocker arms to .010 clearance.
25—Replace cylinder head cover.
26—Replace hood.
Material: Cylinder head gasket.

30—Drain oil from motor and put in new oil 0.34

1—Remove oil pan drain plug.
2—Drain oil.
3—Replace oil pan drain plug.
4—Refill oil reservoir.
Material: Engine oil.

31—Remove oil pan and clean same..1.50

1—Drain oil from motor.
2—Raise hood, remove five engine side pan stud nuts.
3—Remove 22 oil pan to crank case screws and oil pan.
4—Wash oil pan and oil pump screen.
5—Inspect oil pan gasket and renew if necessary.
6—Replace oil pan and 22 oil pan to crankcase screws.
7—Replace five engine side pan nuts.
8—Refill oil reservoir to level.
9—Lower hood.
Material: Oil pan gasket.

35—Install new carburetor and adjust 1.0

1—Raise hood.
2—Disconnect carburetor spring from manifold.
3—Remove heat tube elbow, carburetor to manifold.
4—Remove carburetor choker rod.
5—Disconnect foot accelerator rod.
6—Disconnect hand throttle control rod.
7—Disconnect gas pipe carburetor to vacuum tank.
8—Remove carburetor stove from manifold.
9—Take off two stud bolt nuts, carburetor to manifold.
10—Remove old carburetor.
11—Install new carburetor.
12—Replace two stud nut carburetor to manifold.
13—Connect gas pipe to carburetor to vacuum tank.
14—Connect carburetor stove to manifold.
15—Connect foot accelerator rod.
16—Connect hand throttle control rod.
17—Connect carburetor spring to manifold.
18—Connect heat tube elbow carburetor to manifold.
19—Connect carburetor choker rod
Material: Carburetor assembly.

36—Replace vacuum tank.....0.84

1—Disconnect vacuum to carburetor pipe.
2—Disconnect vacuum to manifold pipe.
3—Disconnect vacuum to gas tank pipe.
4—Take off four bolts vacuum tank bracket to dash.
5—Remove vacuum tank.
6—Install new vacuum tank by replacing four vacuum tank bracket to dash bolts.
7—Connect vaccum to gas tank pipe.
8—Connect vacuum to manifold pipe.
9—Connect vacuum to carburetor pipe.
Material: Vacuum tank assembly.

40—Remove and install all or any parts needed to repair fan or water pump 1.50

1—Drain radiator.
2—Remove hood.
3—Remove radiator splash guard by removing two front spring shackle. bolt nuts and two center splash guard screws.
4—Remove radiator support nuts.
5—Remove cylinder head cover.
6—Disconnect cylinder head water outlet.
7—Disconnect water inlet hose.
8—Remove radiator.
9—Remove fan belt.
10—Remove water pump body.
11—Examine and clean water pump body.
12—Remove impeller set screw.
13—Replace or install new set screw.
14—Replace water pump body.
15—Replace and adjust fan belt if needed.
16—Replace radiator and fasten with two radiator support bolts.
17—Assemble radiator slash guard to frame with two splash guard screws.
18—Assemble front spring shackle bolt nuts and cotter pins.
19—Replace cylinder head water outlet.
20—Connect water inlet hose.
21—Replace hood.
22—Fill radiator.
Material—Water pump body, water pump bushing, water pump impeller, water pump shaft, water pump packing net, fan complete.

41—Adjust fan pulley 0.25

1—Raise hood.
2—Loosen three cap screws in fan pulley.
3—Tighten belt by turning outer half of fan pulley.
4—Tighten three cap screws in fan pulley.
5—Lower hood.

42—Install radiator hose upper.....0.34

1—Raise hood.
2—Drain radiator.
3—Remove cylinder head water outlet hose clamps.
4—Remove outlet hose from radiator.
5—Assemble new hose to radiator.
6—Assemble hose to cylinder head water outlet.
7—Fill radiator.
8—Lower hood.
Material: Radiator inlet hose.

Digitized by Google

43—Install radiator hose lower.....0.34

1—Drain radiator.
2—Raise hood.
3—Remove water inlet hose clamp and hose.
4—Assemble new hose and fasten.
5—Fill radiator.
6—Lower hood.
Material: Radiator hose lower.

101—Change transmission gears.... 7.0

1—Raise hood and remove accelerator pedal.
2—Remove carpet, cushions and auxiliary seat.
3—Remove floor board gearset cover plate.
4—Remove floor board.
5—Disconnect clutch release bearing lubricator tube from toe board.
6—Remove lower half of lower toe board.
7—Remove upper half of lower toe board.
8—Disconnect universal joints.
9—Remove hand brake lever.
10—Disconnect speedometer cable. Disconnect clutch pedal come back spring from transmission case.
11—Remove clutch pedal shaft auxiliary bracket and pedal.
12—Remove four gearset to bell housing screws and take off gearset.
13—Remove four main drive gear retainer screws.
14—Remove main drive gear assembly and retainer.
15—Remove retainer and spacer from main drive gear assembly.
16—Remove main drive shaft rear bearing retainer.
17—Remove main drive shaft and gearset sliding gears.
18—Clean gears main drive shaft and rear main driveshaft bearing. Universal joint housing and drain gearcase.
19—Assemble main drive gear felt to new main drive gear assembly.
20—Remove main drive gear ball bearing front from main drive gear and inspect bearing.
21—Replace or renew main drive gear ballbearing on new main drive gear.
22—Fit end of main drive shaft to main drive gear bushing.
23—Fit sliding gears to main drive shaft.
24—Assemble sliding gears and main drive shaft to gearcase.
25—Assemble main drive gear and retainer to gearcase.
26—Assemble and bolt gearcase to bell housing.
27—Assemble pedals and clutch pedal shaft auxiliary bracket.
28—Oil clutch.
29—Assemble universal joint.
30—Assemble gearcase cover.
31—Fill gearset to level with fresh oil.
32—Assemble hand brake lever.
33—Connect clutch pedal come back spring and clutch adjusting line.
34—Connect speedometer drive cable.
35—Replace upper half of toe board.
36—Replace lower half of toe board.
37—Connect clutch release bearing lubricator tube to toe board.
38—Replace floor board.
39—Connect accelerator pedal rod.
Material: Tear down transmission and inform customer price of parts needed before resuming work.

111—Reline clutch cone 5.0

1—Raise hood and remove accelerator pedal.
2—Remove floor board.
3—Disconnect clutch release bearing lubricator tube from toe board.
4—Remove lower toe board.
5—Remove front universal joint.
6—Remove hand brake lever.
7—Disconnect come back spring and clutch pedal adjustment link.
8—Remove four transmission to bell housing screws and take off transmission.
9—Remove clutch release bearing lubricator tube from clutch release bearing.
10—Remove three mud pan to bell housing screws.
11—Remove five clutch bell housing to crankcase screws. Remove bell housing.
12—Unscrew clutch spring support bearing nut.
13—Remove clutch cone assembly.
14—Remove lining from clutch with cold chisel.
15—Assemble and rivet new clutch leather to clutch cone.
16—Assemble four clutch cone leather spring inserts under leather.
17—Assemble clutch cone assembly to fly wheel.
18—Assemble clutch release bearing lubricator tube to clutch release bearing.
19—Assemble bell housing and tighten five bell housing to crankcase screws.
20—Replace gearset and tighten four gearset to bell housing screws.
21—Assemble adjusting link to come back spring.
22—Assemble universal joint.
23—Connect speedometer cable.
24—Connect lubricator tube to toe board.
25—Assemble toe board.
26—Assemble hand brake lever.
27—Assemble and tighten three bell housing to cross member bolts.
28—Assemble floor board.
29—Assemble accelerator pedal rod.
30—Test clutch.
Material: Clutch cone leather, clutch cone leather rivet.

112—Install new clutch assembly.... 2.0

1—Raise hood and remove accelerator pedal rod.
2—Remove floor boards.
3—Disconnect clutch release bearing lubricator tube from toe board.
4—Remove toe board.
5—Disconnect Universal joint.
6—Remove hand brake lever.

This is the tenth flat rate schedule published in Motor World. The previous schedules covered Paige, Overland Four, Studebaker, Dodge, Dort, Buick, Chandler, Hupmobile and Marmon.

7—Disconnect speedometer cable. Disconnect clutch pedal come back spring from gearcase.
8—Remove four gearset ball housing screws and take off gearset.
9—Remove clutch release bearing lubricator tube from clutch release bearing.
10—Remove three mud pan to bell housing screws.
11—Remove five clutch bell housing to crankcase screws. Remove bell housing.
12—Unscrew clutch spring support bearing nut.
13—Remove clutch assembly.
14—Assemble new clutch assembly.
15—Assemble clutch release bearing lubricator tube to clutch release bearing.
16—Assemble bell housing and tighten five bell housing to crankcase screws.
17—Replace gearset and tighten four gearset to bell housing screws.
18—Assemble clutch pedal come back spring and assemble clutch adjusting link.
19—Assemble universal joint.
20—Connect speedometer cable.
21—Assemble toe board.
22—Assemble clutch release bearing lubricating tube to toe board.
23—Assemble hand brake lever.
24—Assemble and tighten three mud pan to bell housing screws.
25—Replace floor board.
26—Assemble accelerator pedal rod.
27—Test clutch.
Material: Clutch assembly.

151—Install new front spring 1.50

1—Jack frame and block at rear of spring shackle.
2—Remove radiator splash guard by removing two front spring shackle bolt nuts, and two center splash guards.
3—Take off four spring clip nuts and remove two spring clips.
4—Take out rear lower shackle bolt.
5—Take out front shackle bolt.
6—Take off old spring.
7—Install new spring.
8—Install rear shackle bolt.
9—Install front shackle bolt.
10—Install two spring clips.
11—Replace radiator splash guard, two center splash guard nuts and spring shackle bolt nuts.
12—Lower car to floor.
Material: Front spring.

156—Replace rear spring 2.50

1—Jack up frame or use chain fall.
2—Remove two spring clips.
3—Take out rear lower shackle bolt.
4—Take out rear spring bolt front.
5—Remove old spring.
6—Install new spring.
7—Install rear spring bolt front.
8—Install rear shackle bolt front.
9—Install two spring clips.
10—Lower and remove jack or disconnect chain fall.
Material: Rear spring.

301—Measure and adjust "gather" of front wheels 0.50

1—Measure the angle of front wheels.
2—Adjust tie rod tube to proper angle.

302—Install any new parts needed in front wheels 1.50

1—Jack up front wheel.
2—Remove hub cap.
3—Remove cotter pin bearing spindle nut and wheel.
4—Remove all bearing parts from wheel.
5—Wash all parts.
6—Assemble inner and outer bearing in wheel.
7—Remove bearing cone from spindle.
8—Assemble new bearing cone to spindle.
9—Replace hub cap and lower wheel.
Material: Hub, inner cone, outer cone, inner balls, safety washer.

310—Reline external brakes 1.50

1—Jack up rear wheel and block car.
2—Remove hub cap.
3—Remove driving shaft star washer and nut.
4—Remove wheel with wheel puller.
5—Remove external brake stop pin adjusting screw.
6—Remove end brake band end clevis pins (2).
7—Remove brake band assembly.
8—Remove old brake lining from band.
9—Assemble new brake band facing to band, 20 tubular rivets.
10—Assemble brake band and stop pin.
11—Assemble brake stop pin adjusting screw and cotter pin.
12—Assemble two brake bad end clevis pins in end of band and cotter pin.
13—Assemble wheel.
14—Assemble driving shaft star washer and nut.
15—Lock star washer and put on hub cap.
16—Adjust brakes.
17—Lower car.
Duplicate above operations if relining both brakes.
18—Road test.
Material: External brakeband facing, rivet tubular band and lining.

311—Reline internal brake bands—
1 brake 1.84
2 brakes 3.75

1—Jack up rear wheel and block car.
2—Remove hub cap.
3—Remove driving shaft star washer and nut.
4—Remove wheel with wheel puller.
5—Remove cotter key and pull connecting link to toggle link pin.
6—Remove internal brake bank stop pin head and brake band clip guide.
7—Remove internal brake band assembly.
8—Cut old brake lining off with a cold chisel.
9—Rivet on new brake band lining.
10—Replace brake band assembly on axle.
11—Assemble brake band clip guide and brake band stop pin head.
12—Replace connecting link to toggle link pin and fasten with cotter key.
13—Assemble wheel to axle.
14—Replace star lock washer, tighten driving shaft end nut and crimp star washer.
15—Screw on hub cap.
16—Lower wheel with jack.
Repeat above when relining both internal brakes.
Material: Brake band facing, rivet tubular band to lining.

320—Change rear wheel oil shedders
1 wheel 1.42
2 wheels 2.75

1—Jack up rear wheel and block car.
2—Remove hub cap.
3—Remove driving shaft, end nut, star lock washer and nut.

Digitized by Google

4—Remove wheel with wheel puller.
5—Clean mud and grease from wheel.
6—Take out six oil shedder screws and remove oil shedder.
7—Assemble new oil shedder and gaskets to wheel.
8—Wash and clean brake drum, wheel and tire with gasoline.
9—Clean grease and mud from brakes and wash with gasoline.
10—Assemble wheel to axle.
11—Replace star washer, tighten driving shaft end nut and crimp star lock washer.
12—Screw on hub cap.
13—Lower wheel with jack.
Repeat same when required on both wheels.
Material: Oil shedder assembly, oil shedder felt, oil shedder gasket.

401—Supply and install any part needed in rear axle 12.0

1—Raise rear end of car with chain hoist.
2—Remove hub caps.
3—Remove driving shaft star washer and nut.
4—Remove both rear wheels, using wheel puller.
5—Remove truss rod.
6—Remove spring clip, two on each rear spring.
7—Disconnect rear universal joint and brake pull rods.
8—Remove rear axle complete (two men).
9—Remove seven housing bolts from differential housing and six piston flange stud nuts from third member.
10—Remove wheel key.
11—Remove axle housing, left and right side.
12—Clean axle shafts and differential.
13—Disassemble third member.
14—Disassemble and clean pinion shaft outer bearing sleeve nut.
15—Remove bevel pinion, bevel pinion shaft and spacer from differential.
16—Remove cotters, main axle shafts, nuts and axle shafts and intermediate bevel gears from differential case.
17—Remove bevel ring gear from differential case, using cold chisel in cutting rivets.
18—Rivet new bevel ring gear to differential case (12 rivets).
19—Reassemble third member pinion shaft outer bearing sleeve.
20—Assemble main drive shaft and intermediate bevel gear with main drive shaft nut inner and cotter to differential case.
21—Assemble bevel pinion with shaft and spacer to differential case.
22—Pin shaft with pinion shaft lock pin.
23—Assemble third member.
24—Clean out left and right axle housings.
25—Assemble differential thrust and Hyatt bearing in axle housing.
26—Assemble left side housing and third member to differential and main drive shaft assembly.
27—Adjust third member to proper bearing and back lash, after which remove from housing.
28—Assemble right side housing and bolt with seven housing bolts.
29—Assemble third member to axle housing by six pinion flange stud nuts.
30—Oil differential. ....
31—Reset brake camshaft shaft collars.
32—Assemble grease cups.
33—Assemble axle to car (two men).
34—Fasten spring clips.
35—Assemble truss rod (two men).
36—Assemble and oil universal joint rear.
37—Connect brake pull rods.
38—Assemble rear wheel key and rear wheels.
39—Lower car to floor.
40—Test car on floor for axle noise.
Material: Bevel ring gear, bevel pinion gear, differential bevel pinions, third member bearing outer, third member bearing inner, differential bevel pinion pins, differential intermediate gears, bevel pinion spacer.

451—Install new front fender, right or left hand 1.0

1—Remove headlight tie rod bolt.
2—Remove two bolts from headlight bracket to fender.
3—Remove front spring shackle bolts.
4—Remove two bolts from radiator splash guard to front cross member.
5—Take off radiator splash guard.
6—Remove three front fender to runningboard screws.
7—Remove six front fender to frame stove bolts.
8—Remove three bolts fender reinforcement bracket to frame.
9—Take off old fender.
10—Install new fender.
11—Replace three bolts, fender reinforcement bracket to frame.
12—Replace six fender to frame stove bolts.
13—Replace three fender to runningboard screws.
14—Fasten radiator splash guard by two splash guard center screws.
15—Replace two front spring shackle bolt nuts.
16—Assemble headlight bracket to fender.
17—Connect up headlight tie rod.
Material: Front fender, right hand, front fender left hand.

455—Install new rear fender, right or left hand 0.7

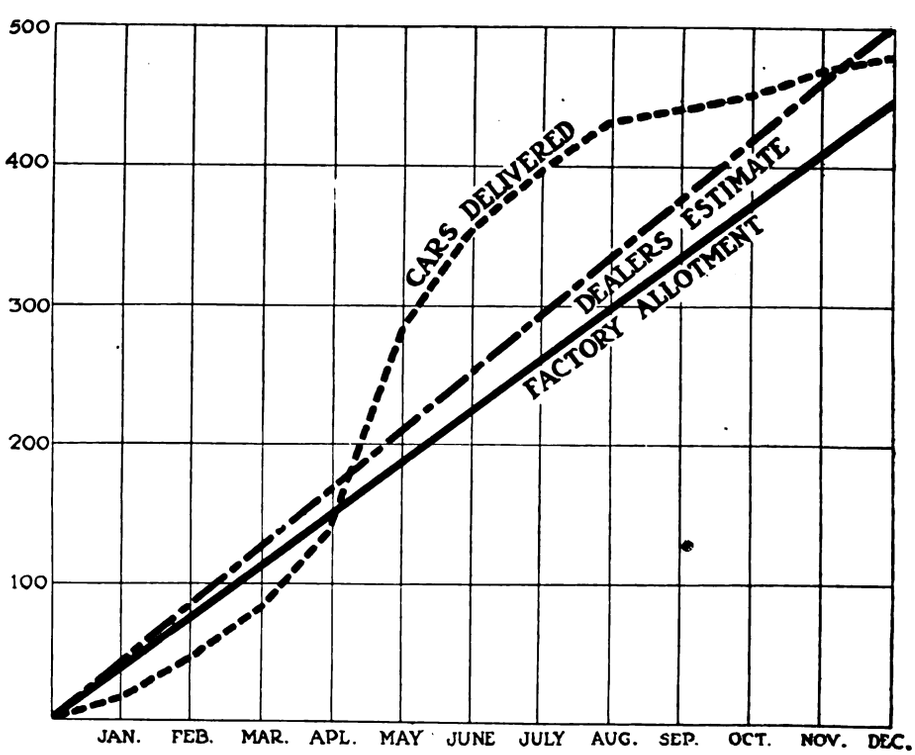
1—Remove three fender to runningboard screws.
2—Remove nine fender to body bolts.
3—Take off fender.
4—Install new fender.
5—Replace nine fender to body bolts.
6—Replace three fender to runningboard screws.
Material: Left rear fender, right rear fender.

551—Adjust distributing or timing...0.4

1—Raise hood.
2—Remove number one spark plug.
3—Crank motor to upper head center on number one cylinder.
4—Remove distributor head and rotor.
5—Set distributor cam.
6—Replace rotor.
7—Replace distributor head and number one spark plug.
8—Start motor.
9—Lower hood.

552—Replace Bendix drive spring....0.8

1—Raise hood.
2—Disconnect wire on starting motor.
3—Remove starting motor lock bolt.
4—Remove starting motor.
5—Remove Bendix spring from starting motor.
6—Remove Bendix gear.
7—Assemble Bendix gear to starting motor.
8—Assemble Bendix spring.
9—Assemble starting motor to engine and connect wire.
Material: Bendix drive spring.



575—Change oil gage.....0.5

1—Remove oil gage and glass and frame.
2—Remove glass from frame.
3—Replace glass in frame.
4—Assemble to instrument board.
Material: Oil pressure gage.

Chart Shows Relation of Car Deliveries to Allotment

VISUALIZATION of the number of cars allotted by the factory for the year and the actual car deliveries by the dealer is not only helpful in guiding the dealer's business but also serves as a stimulus to greater activity. The bicycle rider who is paced makes a better time than the one who is not paced. Let the factory allotment or the dealer's estimate for the year be the pacer to spur sales to increased speed.

Williams & Hastings, Detroit distributor for the Hupmobile, uses a chart on which is laid out the factory allotment for the year and the estimate of the number of cars that ought to be sold. Each month the actual car deliveries are plotted on the chart, including the sales of the previous month. It is easy to see at a glance just how far ahead or behind the allotment the sales are at any month of the year. In the chart shown, deliveries were behind the allotment for the first three months of the year, but picked up rapidly in the spring and summer, running the cars delivered curve far ahead of the allotment. The curve later drops back to a point between the allotment and the estimate.

This chart, used by Williams & Hastings, Detroit Hupmobile distributor, is a selling stimulant through its comparison of estimated accomplishment with actual performance

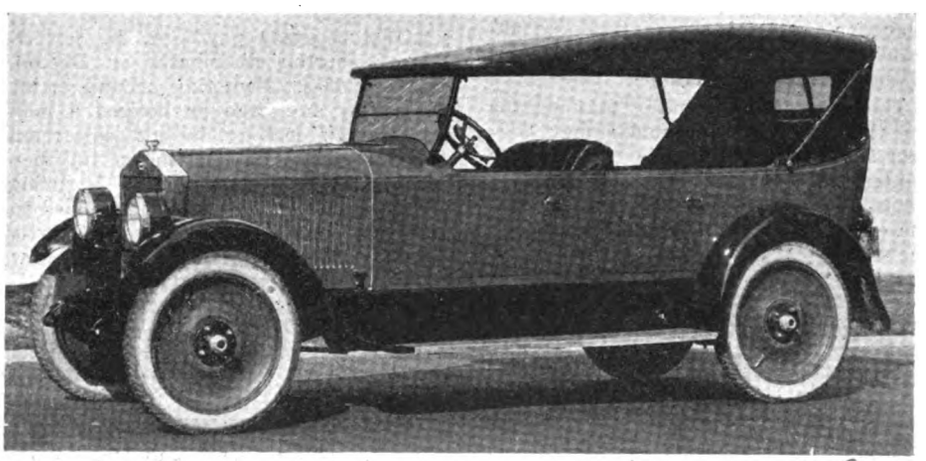
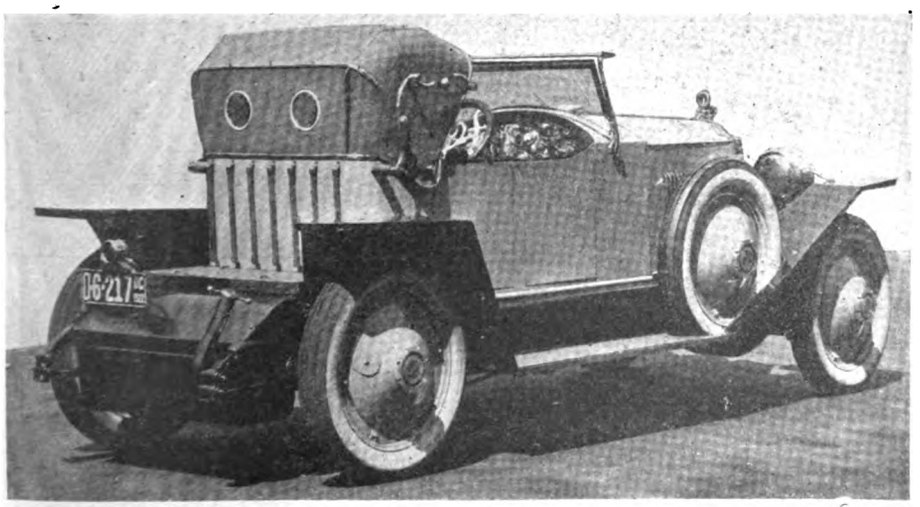
Complete Equipment Features New Mitchell Phaeton

Standard equipment on the new Mitchell De Luxe five-passenger phaeton includes extra tire, tube and tire cover, De Luxe motometer and nickeled radiator cap, windshield wings, sun visor, front and rear bumpers, step plates, rear view mirror, windshield wiper, motor driven tire pump, disk wheels and demountable rims with nickel plated retaining rings. Side curtains are carried in compartments in the rear of the front seat and tools in the left front door. The design of the radiator has been changed as has the name plate. Standard colors are maroon with gold striping and blue with white striping. The price is $1,790





New G M C Road Tractor

Three new models of truck tractors, of which the above is typical, are being placed on the market by The General Motors Truck Co. The tractors are rated at 5, 10 *and* 15 *tons. The prices are* $2,650, $3,900 *and* $4,250 *respectively. The Standard GMC truck design is the foundation for the tractors. The heavy duty power plant is used and standard equipment will include convertible cab and odometers*

New Moon Seven-Passenger Phaeton at $1,785

This phaeton body is mounted on the new Moon 6-58 *chassis, which supersedes the model* 6-48. *Comparing the new and old models, the former has a* 3⅜ *in. by* 4½ *in. engine, as compared with a* 3¼ *by* 4½ *in. in the* 6-48. *The wheelbase has been increased from* 122 *to* 128 *in. and* 4½ *in. tires are used instead of* 4 *in.*

Dagmar Four-Passenger Sport Priced at $3,500

This car is built by the Crawford Automobile Co., Hagerstown, Md. It has a six-cylinder, 3⅝ *x* 5¼ *in. Continental engine, Westinghouse starting motor, American Bosch generator and magneto, Willard battery, Stewart-Warner vacuum gasoline feed and Zenith carbureter. The clutch and gearset are Brown-Lipe and the universals Spicer. The axles are Timken. The springs are half-elliptic fitted with Hartford shock absorbers. Body colors are optional. The wheelbase is* 135 *in. and the tires are* 33 *x* 5 *in. cords*

Parts Show Proves a Good Sales Stimulant

Exhibit in Salesroom of Denver Hupmobile Dealer Draws Large Attendance and Sells Cars

A UNIQUE activity on Denver's "Automotive Row" recently was a parts show at the salesroom of the S. B. I. Motor Sales Co., Hupmobile distributor for Colorado and adjacent territory. The idea was originated by this firm for the purpose of educating motorists and prospective motorists regarding the what, why and how of the principal mechanical parts of the Hupmobile. All the important parts are displayed neatly on tables, and salesmen and members of the firm are on hand to explain carefully the exact workings of these parts, the nature of material and construction, how to get the best results when operating a car, what to expect of a car, etc., and to answer questions as thoroughly as possible, with the aid of the parts to make explanations clear and practical.

The parts show opened with an attendance of about 150, and one night there were fully 400 visitors. From 6 o'clock until 10:30, five men were kept busy explaining, demonstrating and answering questions, and the real interest of the visitors was highly gratifying.

The show was originally planned for the three days of the midsummer outdoor automobile show at the nearby Civic Center, but the attendance has been so surprising and the interest so keen that the enterprise was continued the rest of the week.

At least two cars were sold as a direct result of the parts show, and the event is considered of far reaching value from both an educational standpoint and as a sales stimulant.

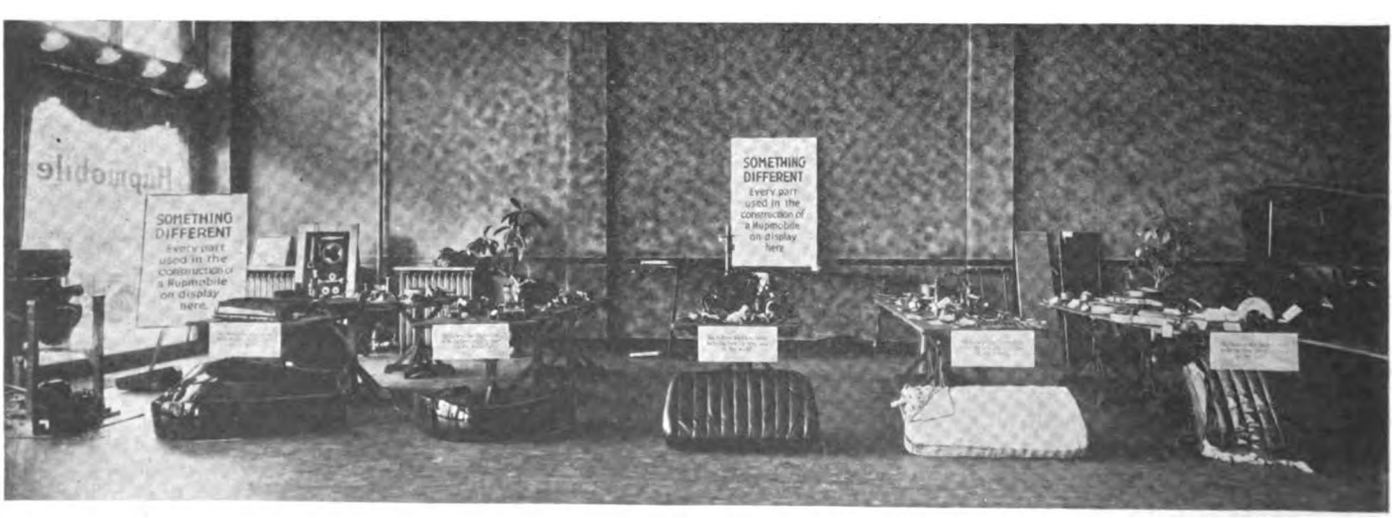
Dealer Writes Personal Letter to Each Buyer

A BIRMINGHAM, Ala., automobile dealer follows up every sale with a personal letter, making the letter carry the idea of individual interest. In this letter he asks the customer to come by for a free examination of his car. Ten or twelve days after this letter is written it is followed up by a post card again asking the customer to call by and requesting that he send in the names of his friends who are in the market for a car. This method of follow-up has produced good results in both the feelings of the customers and in building up the prospect list.

Courtesy Pays

DOES courtesy pay? A. H. Sowers, Lexington distributor in Boston, knows it does. Swinging around in his car a few days ago he noticed a man and woman looking in his salesroom window. They started to go in, then hesitated and passed along. Figuring that they were a bit timid, he decided to remedy that for the future. Shortly afterward there appeared in his window a small, neat card reading:

"Thank you for stopping to look at
THE LEXINGTON
MINUTE MAN SIX.



There are many things about this motor car that we should be glad to explain to you. Stepping inside will not subject you to annoyance by insistent, overzealous salesmen, for we wish to emphasize our appreciation of your courtesy in taking the time to note what Lexington cars look like."

Within a week, while a salesman was booking an order for a Lexington coupe, the woman accompanying the buyer smiled as she said: "We could not resist that little card in the window. It seemed so assuring. And you may charge up part of the commission to whoever wrote it, for he earned this sale from it."

Driving Lessons for Live Prospect

"FREE instruction in driving to anyone who gives us the name of a live prospect." This is the unique stunt adopted by an enterprising dealer in getting new prospects. This sort of thing doesn't cost the dealer anything beyond a little time when there is nothing else doing and in this way the dealer not only gets the name of a prospect but also makes a prospect out of the person he is teaching to drive.

The Parts Display as an Educational and Selling Force

At least two car sales are directly traceable to this parts show staged recently in the salesroom of the S. B. I. Motor Sales Co., Hupmobile distributor in Denver

Lubricating Service Helps Sell Accessories

Philadelphia Dealer Sells Automotive Equipment Through Opportunities Offered by Unusual Plan

PRIMARILY a retail automotive equipment concern, the Fred G. Byers Co., Inc., 2011 Market Street, Philadelphia, is operating a plan which serves to produce customers for the accessories and tire departments. Instead of advertising at the outset that for $35 a year, payable in advance, the concern would service a car on a yearly contract basis involving thorough inspection and lubrication once a month, the Byers company employed the more attention-compelling terms of announcement that "$2.92 a month keeps your car in perfect condition as far as lubrication is concerned."

As lubricating service, offering as many advantages as this, commonly costs in Philadelphia from $6 to $8 a month and the prospect readily recalls this fact, that low charge of $2.92 stands out prominently.

Patrons of the house, secured by means of such announcements, acquire their confidence in it, of course, through the service end and it is extremely necessary that this service be most thorough and painstaking.

Once a month the owner brings, or sends his car to the service station, which is in the rear of the accessories salesroom, in a closely shut-off department, so that the gasoline fumes will not penetrate into the store. The car is run up on a specially-built lubricating platform of iron, with flanged tracks, so that the vehicle cannot fall off. The platform is high enough so that the workmen engaged in the lubricating process may sit beneath it. There is no lying on the floor and the arrangement is superior to a pit. If the car is not equipped with high-pressure lubrication cups, the company will install them, free of charge. The crank case is drained and refilled, the dead grease being cut with kerosene, by means of a high-pressure lubricating gun and then every part of the car requiring it is thoroughly greased and oiled in strict compliance with the specifications of the car manufacturer. If the car has grease cups, the company will equip them with nipples, free.

The speedometer reading on every incoming car is checked to see whether the car has been run 600 to 800 miles and upward, in which case it needs the thorough lubrication.

The opportunity to examine the car, note what it lacks in the way of accessories and "ask 'em to buy" when it is on the stand, or afterward, makes the lubricating system an invaluable "feeder" to the store's business. Not only does every employee in the store proper "ask 'em to buy," but this good habit extends to every shopman in the service station department. The results are worth while and are becoming increasingly so.

The house has still another contract, whereby it agrees to lubricate a car twice a month for $50 a year, payable in advance.

Under either contract, the owner's car, as soon as it has been placed upon the lubrication stand, is rocked back and forth and sideways to note if there are any body-squeaks. The company is particular about stopping and preventing such noises—another point that is always keenly appreciated by the customer. If a bolt is found to be loose, it is immediately tightened and other such minor adjustments are made so that the car will run smoothly and receive the good of its new lubrication.

The company has among its customers a large number of physicians, surgeons and other professional men. In most cases they enter the store, attracted by the notably good display window which is changed at least once a week, get to examining the wares and discussing them and usually make substantial purchases.

Women car owners frequently come into the store, after noting the window. As the interior of the store is as neat as the proverbial pin, and always is kept so, they are apt to repeat their visit when they need accessories.

Those who have their car greased and oiled, usually bring it and also call for it, thus affording two good opportunities to "ask 'em to buy."

In addition to advertising in the newspapers the company sends out postcards every month to its large list of customers and prospects. Stiff folders, a part of which forms a return postcard, are mailed to prospects only. The return postcard states that the writer, without incurring any obligation, wishes to learn more about the lubricating service, and gives the type of car he owns.

In addition to the lubricating service, the house is a battery service station, has a towing service and washes cars and cleans their interiors with a vacuum cleaner. There is a free air line, and tubes are repaired free of charge in cases where the tires have been purchased from the company. U. S. Royal Cords, Goodyear, Fisk, Michelin and Goodrich tires are kept in stock.

The lubrication system, begun as an experiment, forms a very valuable part of the business, not only for its own sake, but because of its greatly increasing the sale of accessories.

Selling Lubrication Service

A monthly lubrication service, sold in newspaper advertising like this and through direct mail effort is also providing the opportunity for accessory merchandising for the Fred G. Byers Co., Philadelphia

Frequent Use of Tags Sells Tires

H. C. MACK, of Hellums & Mack, operating a tire service station at Independence, Mo., nine miles from Kansas City, has a definite idea on how to get good from advertising.

"Give it to the public often," he says. The company uses chiefly shipping tags which are thrown into cars on the streets, or tied to windshield. There is much casual traffic through the town. But the frequent distribution of the tags is not for the purpose of reaching motorists who had not seen the cards before. The chief purpose is to keep the name before motorists.

"If they see the name often, it will make an impression finally," said Mack, "and we will get some business. A single shot is just as futile in use of advertising cards, as in newspapers."

Power and Economy Depend on Carbureter Adjustment

General Principles of Adjustment Applying to All Carbureters and Detailed Instructions for Some Widely Used Models

A GREAT majority of the automobiles operating on the streets and roads to-day have poorly adjusted carbureters. This statement can easily be verified at any congested traffic corner by watching the number of cars emitting black smoke from the exhaust, an indication of a mixture too rich. There are probably two reasons for this condition. In the first place, many of these carbureters have been adjusted for easy starting, or for cold weather running, with the result that when the engine gets warmed up, or when it operates under summer temperatures, the mixture is entirely too rich. The second reason is that carbureter manufacturers and car manufacturers have printed so many cautions against making adjustments on the carbureter that the average owner and some repairshops hesitate to make any adjustments with the carbureter, on the theory that as long as the car runs pretty well at present, they better let things alone. Poor carbureter adjustment is responsible not only for low gasoline mileage, but for fouling of the cylinders, and dilution of the crankcase oil.

Any standard designed carbureter embodies parts with two distinct functions. The portion of the carbureter into which the gasoline enters from the feed pipe and which is known as the float chamber, is in reality a very small tank in which the gasoline is maintained at a constant level so as to supply gasoline to the mixing chamber always at the same head or pressure and to maintain it at the same level when the engine is not in operation.

The other portion of the carbureter is the metering device and vaporizing device. By various means the gasoline is atomized, then vaporized and supplied to the engine, mixed with air in the correct proportion to effect combustion in the cylinders at the proper time.

In order to make a good adjustment on the carbureter, it is first necessary to see that other operating parts of the engine are in good condition. The ignition should be tested as to the breaker points in either the magneto or distributor, the condition of the spark plugs and the gaps which should be gaged in accordance with the manufacturer's instructions. The fuel feeding device, whether of the vacuum or gravity type, should be gone over to see that the carbureter receives its gasoline without interference or obstruction. It almost goes without saying that the engine should have good compression and that the timing of the valves should be correct.

The most common trouble with carbureters is that of dirt getting into the needle valve or jet. It is almost impossible to be sure that dirt or water does not get into the gasoline tank, along with the gasoline, and even if it is very carefully strained, there are liable to be particles of dirt or chemical combinations on the inside of the tank and the fuel pipe which will eventually work down into the carbureter. For this reason the carbureter is supplied with a sediment trap, or a strainer, or both, and these must, from time to time, be cleaned.

When for some reason or other dirt manages to slip through the strainer, or get by the sediment trap, it lodges in the small hole of the jet with the result that the engine shows signs of insufficient gasoline. It is often possible to get rid of this dirt by suddenly throwing on the choke when the car is operating at a speed of about 25 m. p. h. on high gear. The high vacuum caused in the jet by this action will often draw small particles of dirt through the jet, and get rid of them in this way.

The air control band on the carbureter is of considerable importance in the operation of gasoline engines to-day. The gasolines sold for automobile purposes are of low grade and require heat for their effective vaporization. Practically every car on the market is provided with some kind of a stove, which surrounds the exhaust pipe and draws hot air from this vicinity. Other cars are equipped with additional means of vaporizing the gasoline, some by diverting a part of the exhaust through a section of the carbureter, and others by means of water jackets surrounding the float chamber. The air control band controls the amount of cold air admitted near the carbureter. When the air control band is all the way closed, all the air that gets into the carbureter is heated air from around the exhaust pipe. Opening the orifice increases the amount of cold air and as the suction on the hot air portion is reduced, not so much hot air comes in. In the winter time it is necessary to completely close the air band on practically all makes of cars, so that all the air admitted to the carbureter has been previously heated. In the summer time it is possible to effect a little better adjustment by opening the air band slightly to admit the cold air.

Idling Adjustment

The throttle adjustment can be very much improved on a great many cars that are in use at the present time. Most of the throttles are kept open too wide at their lowest position, with the result that the engine idles at a high rate of speed and this leads to noisy changing of gears. It also results in the consumption of a considerable quantity of gasoline that could otherwise be saved by slowing this adjustment down. The adjustment is practically always controlled by a small screw and lock nut on the throttle quadrant. This is adjusted with a screw driver and should be closed up until the engine just idles slowly when it is warm. To keep the engine running when it has not warmed up to its running temperature the hand throttle should be opened slightly. After making the adjustment, the screw should be locked.

A flooding carbureter is nearly always caused by dirt on the float needle. There are, of course, some other causes for flooding, but this is the most usual cause. The dirt can sometimes be removed by moving the float up and down in the bowl, thus washing the seat off with gasoline. At other times it is necessary to disassemble the float mechanism and remove the obstruction. In case of mechanical injury to the valve seat, this can be overcome in most cases by giving the needle a slight tap against the seat with a very light hammer. It is impossible to grind a needle to a seat.

The actual mixture adjustment of any carbureter is controlled by the fuel needle valve or the jet. On some carbureters this adjustment is made by a needle valve which closes or opens the jet, allowing a larger or smaller quantity of gasoline to be drawn through. On other models the jet is a fixed size, and the proportion of the mixture is controlled by the air valves. On any carbureter the proper adjustment is obtained by making the mixture leaner, or reducing the amount of gasoline, until the engine pops back in the carbureter. The adjustment should not be attempted until the engine has reached its running

Better Mechanics

ARTICLE No. 253

Readers are invited to ask this department for suggestions to work out mechanical difficulties. When asking for information, please state whether you maintain a permanent file of Motor World, as many inquiries are answered by reference to previous issues.

Digitized by Google

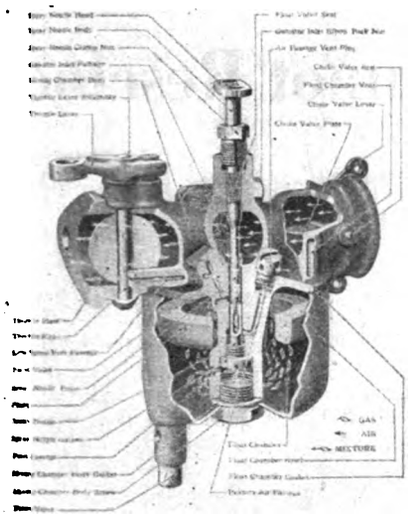

Fig. 1—Ford carbureter (Holley or Kingston)

temperature, which is around 140 deg. or over. When the engine pops back in the carbureter, the mixture can be made just a trifle richer to allow for normal running and it can then be considered correct.

The following are brief instructions for adjusting various types of carbureters in common use.

Ford

The carbureter adjustment on the Ford is from the dash, the lower end of the rod having a fork which rotates the needle valve on top of the carbureter. Some mechanics prefer to remove the rod from the needle valve and adjust the needle valve direct, but this does not make any difference in the adjustment. The adjustment is made by turning the needle valve in the clockwise direction until the mixture is lean enough to pop back in the carbureter. The needle valve is then given about one-eighth turn in a counter clock-wise direction to allow for smooth running. When the adjustment is correct, the control rod to the dash is put in place and the lock nut tightened up so that the adjustment cannot be changed.

Dodge

There is only one point of adjustment on the Dodge carbureter. This adjustment varies the relative height of the metering pin to the opening of the aspirating tube or spray nozzle, when the dash control ratchet on the instrument board is in its regular running position. The tapered metering pin is subject to control within fixed limits by means of the dash control ratchet, located on the instrument board, for the purpose of obtaining a rich mixture for starting. This fixed adjustment can be changed by turning the top screw to the right or left, as desired. The turning of the screw to the right lowers the position of the metering pin and allows more gasoline to be admitted to the spray nozzle, thus enriching the mixture. Turning the screw to the left raises the pin, decreasing the supply of gasoline and impoverishing the mixture.

Hudson

The Hudson carbureter has a pneumatic control for regulating the amount of air admitted and this pneumatic control is carried out by means of a piston. The piston should be examined to see that the packing gland nut in the base of the carbureter, is holding the packing tight, thereby preventing leakage at this point. The piston should be removed and cleaned with whiting and oil, metal polish or jeweler's rouge, until the surface is polished. Under no circumstances should crocus cloth, emery cloth, sand paper, valve grinding compound or anything of this nature be used on the piston. When the carbureter is reassembled, the arrow on the top of the piston and the groove in the metering pin should point toward the engine. Should the packing gland nut become loose, it will not manifest itself in a leakage in the carbureter, but the gasoline mileage will be low and there will be trouble due to diluted crankcase oil, fouled plugs, etc. To tighten this gland, it is necessary to remove the pet cock and float chamber. The gland nut outside can be tightened with a broad screw driver and they should be tightened until the regulating lever offers resistance. If necessary, the glands should be repacked with soft candle wick.

Reo

The Reo carbureter is a Rayfield. It has no air valve adjustment, but has two gasoline adjustments. Both adjustments are turned to the right for a richer mixture and to the left for a leaner mixture. The carbureter should

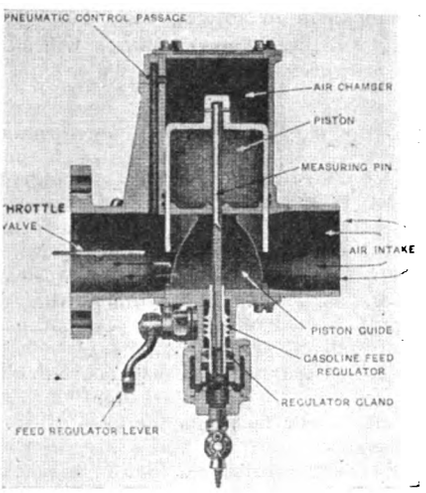

Fig. 3—Hudson carbureter

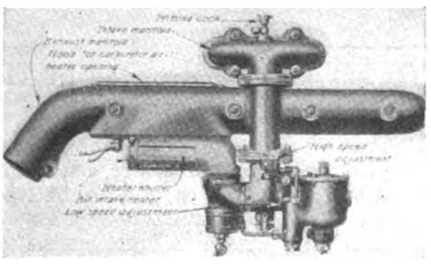

Fig. 4—Rayfield carbureter on Reo

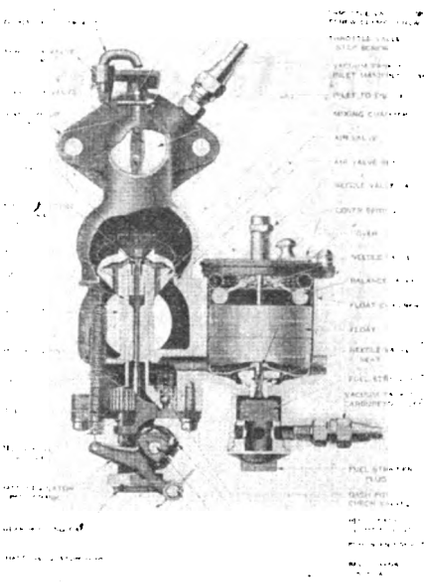

Fig. 2—Dodge carbureter (Michigan Lubricator Co.)

always be adjusted with the steering column control lever set at "run." The low speed adjustment must be completed before adjusting the high speeds. Adjustment made for high speeds will not affect the low speeds and the low speed adjustment must not be used to get a correct mixture for high speed. In adjusting for low speed, the throttle should be closed. Close the nozzle needle by turning the low speed adjustment to the left until the block slightly leaves contact with the cam. Then turn to the right about three complete turns. Start the engine and allow it to run until warmed up to a temperature of about 170 deg. After the engine is thoroughly heated, the control lever is pushed all the way to the "run" position and with a retarded spark close the throttle until the engine runs slowly without stopping. Make the final low speed adjustment by turning the low speed through to the left until the engine slows down and then turn to the right and notch it a time until the engine idles smoothly. The quality of the mixture can be tested in the following manner: With the shutter of the heater body open, it is possible to press with the fingers gently on the air valve so as to just unseat it, and admit more air to the carbureter. If the engine begins to pick up in speed, it indicates that the mixture is too rich. If the engine begins to die immediately when the engine valve is open, the mixture is too lean. When the mixture is correct, you can press on the air valve, admitting more air and the engine will hold its speed for several seconds before it will begin to die away very slowly.

To adjust the high speed, the spark should be advanced about one-fourth the way. The throttle is opened rather quickly. Should the engine back fire, the high speed adjusting screw is to be turned to the right, one notch at a time, until the throttle can be opened quickly without back firing.

In Absence of Fraud Buyer Cannot Rescind

Case in Which Identification Plate Number Does Not Agree With Motor Number Raises Legal Question

EDITOR Motor World: We handle a truck which has an identification plate attached to the instrument board. In this is stamped the serial number and motor number of the truck. There is apparently no other serial number marked on the chassis. The motor, however, has the number corresponding with the plate stamped on the motor arm.

Some months ago we sold one of these trucks and used our office records in making out the conditional sale contract. The numbers in our records correspond with the numbers on the identification plate. We did not check these numbers with the numbers stamped on the motor arm.

After a number of months' service there was some dissatisfaction with the truck, and in some way it was noticed that the number on the motor arm and the number on the plate did not correspond. Wishing to leave this section of the country, and the truck giving them some little trouble, they seized upon this as a pretext for refusing to go on with their contract, and on their failure to do this, we repossessed the truck.

They have turned the account over to an attorney and are now starting action against us for an amount equal to the original purchase price of the truck plus an additional amount for damages.

Our difficulty is somewhat aggravated because of the fact that this truck along with a number of others was taken over by us from the previous distributor in this section and the numbers appear to be somewhat mixed in the records of the state license bureau.

These identification plates could have been changed by taking out the screws and changing the motor from one machine to another, and, we are to blame in a way, in not having checked the office record numbers with those on the trucks. It was not our intention to practise fraud in any manner. The truck delivered to this purchaser was absolutely new, but the motor in the truck in question is shown by the records in the license bureau to have been sold a couple of months previous to another purchaser.

Our attorney does not fear any serious consequence in the suit, as they have the original chassis and motor purchased from us and which was new at the time of purchase.

They had the opportunity to inspect and examine the truck thoroughly and, in fact, did so before delivery.

This truck was used in exceptional heavy jitney service here over a period of several months, making between twenty-five and thirty thousand miles of travel, yet because of the fact that the motor, according to the state records shows as having been sold a couple of months previous to another purchaser, we are very anxious when this goes before a jury as to what their action on it would be.

Do you know of any other such instance?

We would be pleased to have information and advice from you.—O. M. Co., Spokane, Wash.

Answer—The best suggestion I can make is for you to follow the advice of your attorney and not worry if he is able to tell you that he knows there will be no serious consequence to the suit. It is difficult to give a satisfactory answer in a case of this kind where the facts are set out briefly in letter form.

I see no reason why you should not convince any jury that you were not guilty of fraud or deceit, and from the letter I cannot see that the purchaser suffered any actual damage.

There are many cases reported similar to yours. The latest one which has come to our notice is the case of W. D. Sessums Motor Co. vs. White, in which the Texas courts held that in absence of actual fraud or agreement to return, a buyer cannot rescind for breach of warranty. (239 S. W., page 329.)

Practical Questions of

Business Law

Are discussed every week on this page

By GEORGE F. KAISER
Attorney at Law

Readers are at liberty to write to the legal editor of Motor World for help in solving their business problems. Their inquiries will be answered through the mails.

Owner Cannot Recover in This Case

That a motor car owner who delivered his car to a used car dealer and authorized him to make repairs when he stated he could sell the car if the repairs were made, could not sue and recover the purchase price from a subsequent buyer who paid the dealer, was the recent decision of the Supreme Court of the State of Washington.

The court held that as the owner had knowledge and encouraged the negotiations between the dealer and the prospective buyer he could not afterward contend that the dealer was limited by an agreement that he must sell before a certain date. (Buckley vs. Matheson, 206 Pac. page 935.)

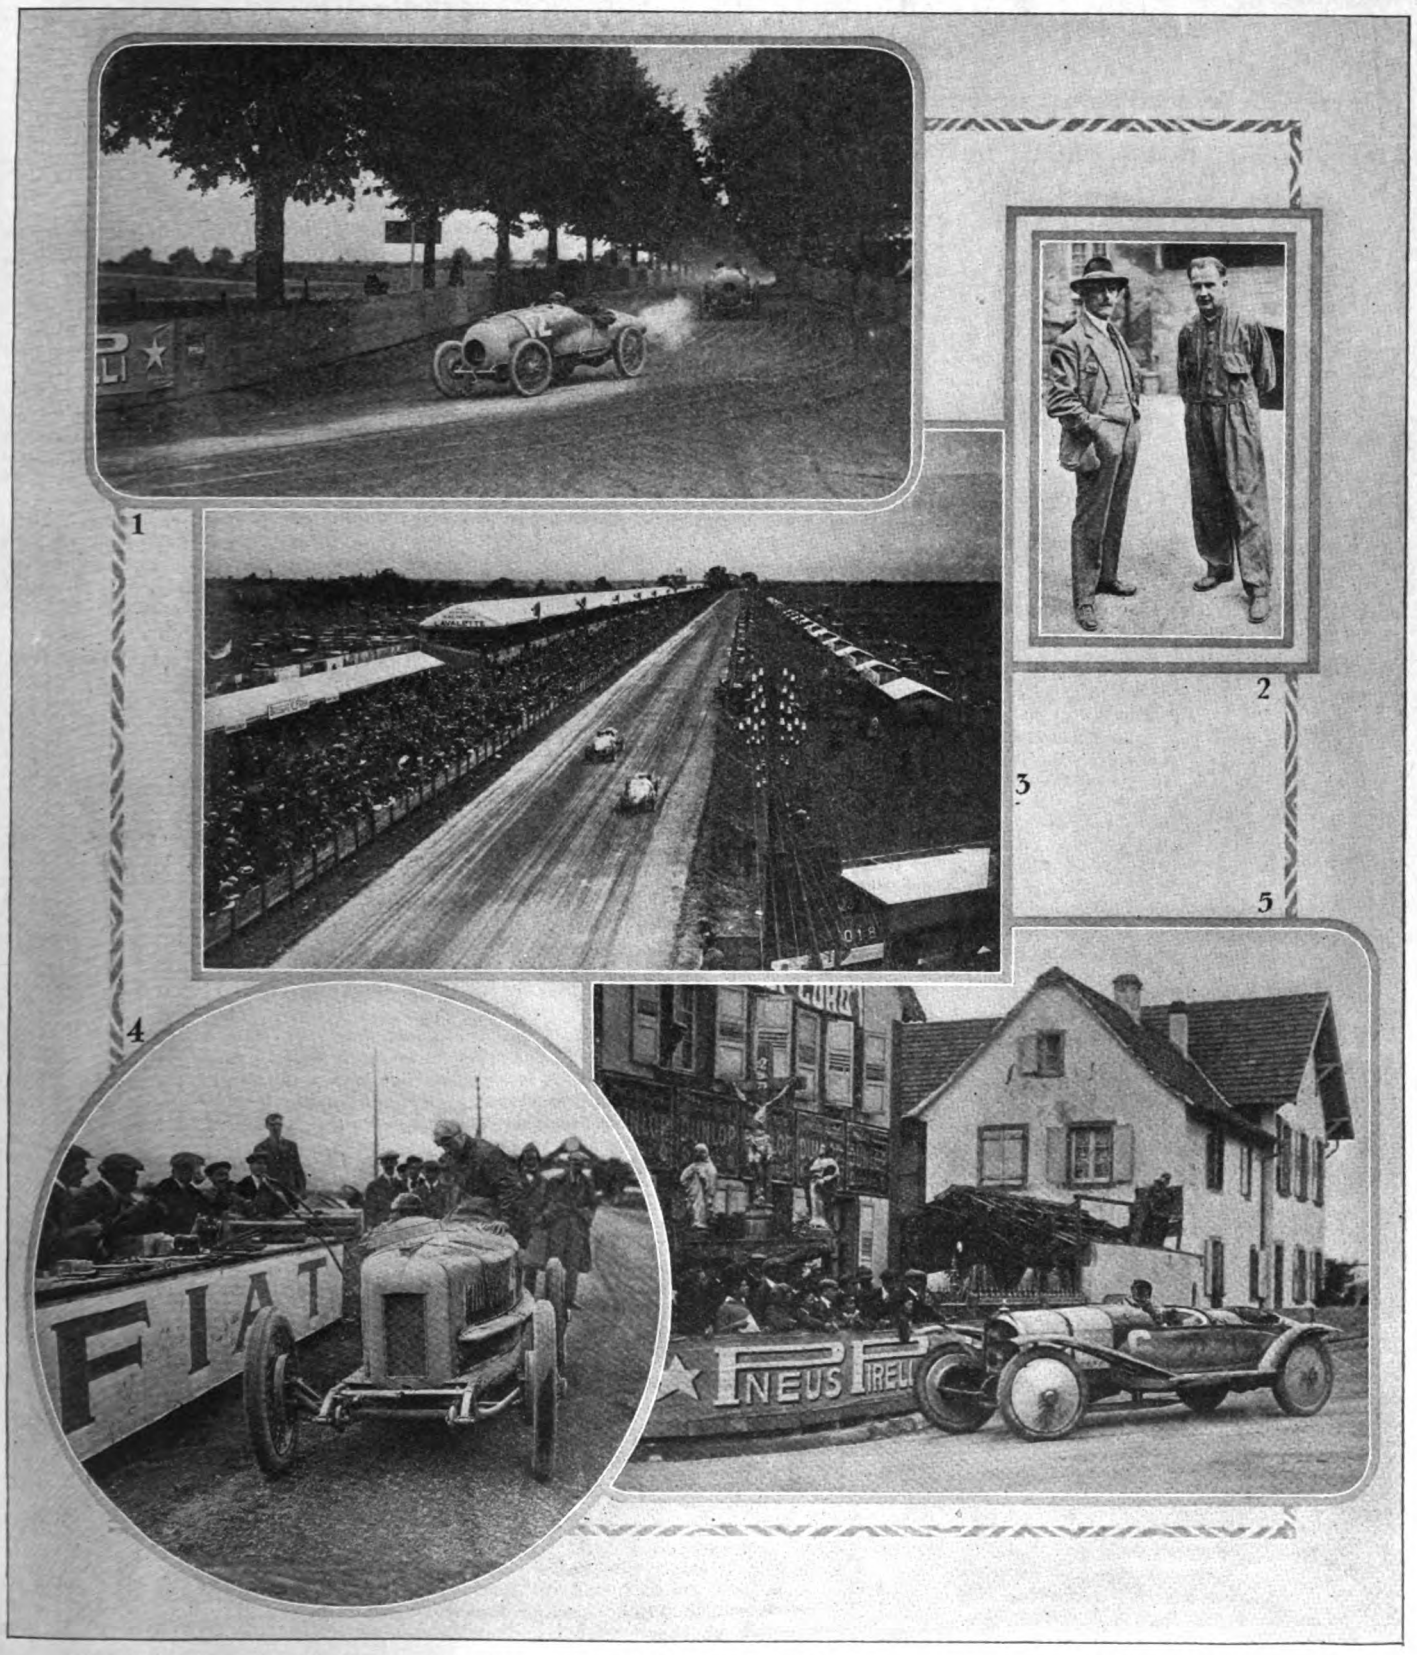
Garageman Should Have Lien for Labor

Editor Motor World: One of our customers filed a petition in bankruptcy within the last two weeks. Last summer he obtained credit for a sizable amount saying that he would pay us in the fall of 1921, but he did not. Last winter we stored his car and have that account as well as the last year's account against the car. Will you kindly advise us if we can hold the car for the both accounts and if so, what our procedure would be. —W. M. Co., Washburn, Maine.

Answer—You do not say what you extended credit to your customer for. That is, whether you gave him credit for labor, repairs, supplies, accessories, etc. You apparently have no lien for your storage charges, but you would have a lien for labor. Under the circumstances the best thing you can do is put the matter in the hands of local counsel and let him advise you whether or not it is possible to foreclose your lien if you have one.

Unlawful to Lock Car in Garage?

Editor Motor World: When a person brings his car in a garage for storage, is it against the law for him to lock his car?



Some people insist upon locking the car, which in case of fire would be an obstacle in getting cars out.

I often hear this question argued pro and con and would like to know if there has ever been any legislation enacted to prevent the owner locking his car under these circumstances. Will you please enlighten me.—J. S. T., Newburgh, N. Y.

Answer—Never heard of this one. Might be a good thing at that. If it is unlawful it would be by virtue of some municipal ordinance or department regulation and there are so many of these in our big United States that we simply cannot keep track of all of them. Can any subscriber furnish the answer to this inquiry?

Equipment to Sell

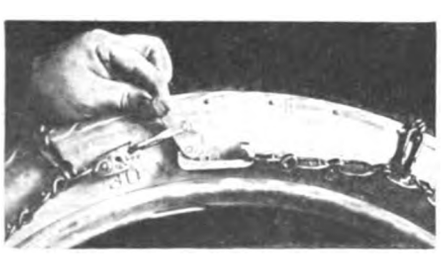
New Devices for the Car and Truck

Commonsense Radius Rods for Fords

Silver Mfg. Co., Salem, Ohio
Price $10.

The radius rods extend from the front axle of the Ford to a point on the frame, just back of the dash, instead of the lower side of the crankcase. The anchorage at the rear end is floated between two springs and is adjustable by means of nuts. One portion of the arm goes to the top of the axle and the other to the bottom to keep it in line.

American-Akron Cord Tire for Fords



American Rubber & Tire Co., Akron, Ohio
Price $12.50.

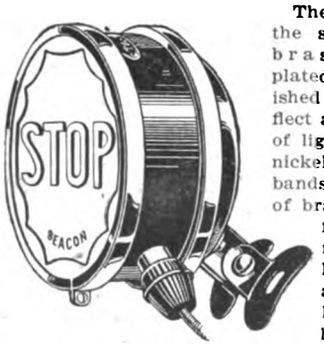
This is a 30 x 3½ regular sized cord tire, carrying the name American-Akron regular, differentiated from the old 30 x 3½ size tire which has been in production for some time. It carries the same non-skid design as the other cords, but the tread is banked to conform with the present day practice to secure the greatest traction contact. It is considerably larger than the average fabric casing, and is slightly smaller than the oversize 30 x 3½ cord. It is being made in both clincher and straight side type and carries the regulation four plies of cords. The tread and side wall are black, with a scarlet band on the side.

Brown Safety Hook for Skid Chains

William A. Brown, Lincoln, Me.
Price $1 per set of four.

The safety hook operates by pressing the sides of the hook. This opens the hook so that the end of the chain can be inserted and the hook then closed. The loose links are cut off. Chains are removed by unlocking the hook.

Jiffy Dump Body for Ford Trucks



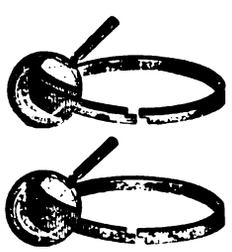
Griscom-Russell Co., 90 West Street, New York City.

This is an automatic dump body which operates by reason of the fact that the larger part of the load is back of the pivot and the body is dumped by tripping the catch. The dumping mechanism can be operated from the driver's seat and without stopping the truck. The tail gate automatically opens at the time the load dumps. The balance support is about 5 in. in front of the rear axle.

Beacon Drum-Shaped Stop Light

Beacon Motor Lamp Mfg. Co., 515-517 Huron Road, Cleveland
Price $5.50 Black; $6 Nickel Plated; $7.50 Silver Plated

The reflector of the stop light is brass, silver plated and polished highly to reflect a full stream of light. The two nickel plated bands are made of brass and conform to the new drum head lights and side lights being largely used. The cable is armored. The lens is molded so that the black background is a permanent part and will not rub or peel off.



Trainor Front Spring for Ford Trucks and Cars

National Spring Co., New Castle, Ind.
Price $2.50.

The spring is designed to replace the standard seven leaf front spring on Ford cars and trucks. The Trainor spring has nine leaves which are heat treated and oil tempered. The springs are intended for cars and trucks engaged in unusual service. The company has also developed special eight and ten leaf front springs and nine, ten and eleven leaf rear springs for Ford cars and trucks.

Unico Piston Ring

Unico Motor Products Corp., 4969 71st Street, St. Louis, Mo.
Price 30 cents plain; 50 cents with oil groove.

The piston ring is made in two styles, either plain step joint with a plain finish or the same style with an oil ring cut at the top to prevent oil pumping. The rings are made of light and soft gray iron individually cast. The inside scale of the ring is only partly removed to leave resiliency in the metal and increase the tension. Oversizes in the plain step cut are 35 cents each. Ford sizes 25 cents.

Mason Maxi-Mile Cord Tire for Fords

Mason Tire & Rubber Co., Kent, Ohio
Price $11.80.

A new cord tire 30 x 3½ clincher type has been added to the Mason line. It is of full cord construction, air bag cured and about 3 per cent oversize. The tread has the same non-skid design as the larger Mason sizes and also the distinguishing green stripe.

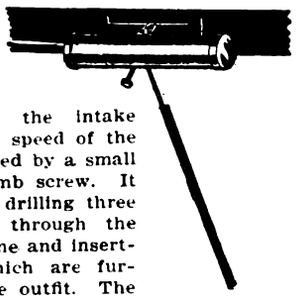
Stirling Moto-Meter Lock

East Chicago Mfg. Co., 4426-30 Olcott Avenue, East Chicago, Ind.

The lock replaces the regular cap on the radiator and an extension is provided for filling the radiator. The lock itself is attached with a screw with a special head which breaks off at the last turn so that the device can only be removed by drilling out the screw. An apron protects the Moto-Meter nut and prevents it from being turned. Furnished in two sizes, Junior and Standard

Digitized by Google

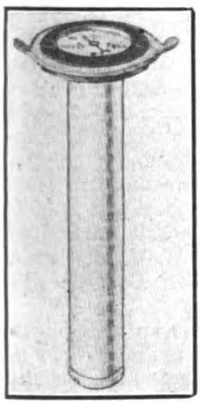
R-K-D Instrument Board Gasoline Gage



Reiter-King-Dugan Co., Akron, Ohio
Price $8.50.

The gage is electrically operated and registers the amount of gasoline in the tank by means of a float mechanism which replaces the stock gage. The recording is shown on a dial placed on the instrument board and the dial is operated by single protected wire which extends from the tank to the meter on the instrument board.

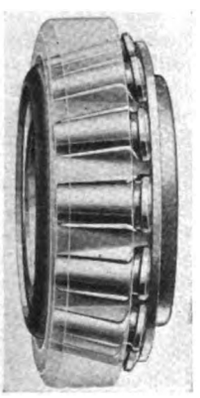
Thorn Automatic Windshield Wiper



Thorn Machine Tool Wks., Syracuse, N. Y.
Price $5

The wiper is operated automatically by a small vacuum pump which connects with the intake manifold. The speed of the pump is adjusted by a small regulating thumb screw. It is installed by drilling three small holes through the windshield frame and inserting screws which are furnished with the outfit. The connection to the intake manifold is made with flexible rubber tubing. Connection can also be made to the vacuum tank. The parts are made of non-corrosive metal.

Tasco Gasoline Gage for Fords



Akron-Selle Co., Akron, Ohio
Price $1.

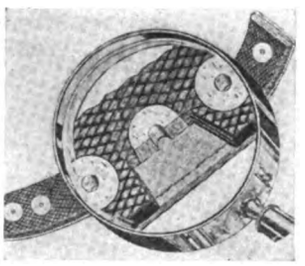
The gage has a threaded upper portion which screws into the tank filler opening of the Ford. A glass-covered dial on the top indicates empty, one-quarter, one-half, three-quarters, and full. The gage takes the place of the filler cap which is not used.

Improved Cage for Bock Taper Roller Bearing

Bock Bearing Co.,
Toledo, Ohio.

A new cage is in production for the Bock bearing. In this design the cage and rollers are assembled with the cone as one unit, the cup being the second unit in the complete bearing, which formerly consisted of three parts. This allows for greater convenience in handling and leaves less to the discretion of the mechanic.

Bec-Mar Spark Plug



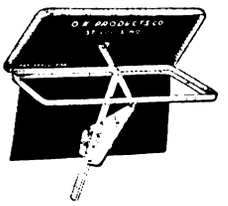
Bec-Mar Mfg. Co., 109-111 Sylvan Avenue, Newark, N. J.
Price $2.

The upper part of the plug contains a visible spark gap which is seen through any one of the four holes in the insulator. The shell is of conventional type with lock-nut and standard terminal.

Feltbak Transmission Lining for Fords

Advance Automobile Accessories Corp.,
1721 Prairie Avenue, Chicago
Price $2.75 Per Set

The lining has cork inserts intended to take the harshness out of the brake action. Beside cushioning the action the felt acts as a reservoir for the oil which comes out through the holes in the cork.



Deluxe Velvet Clutch Control for Chevrolet 490

Clarke-Turner Piston Co., Los Angeles, Cal.
Price $6.50 installed.

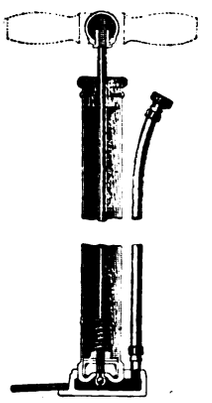
This is a clutch control for the Chevrolet 490 to ease the clutch action and prevent premature clutch seizure, through the introduction of a new compound leverage ratio, reducing the tension 8 to 1.

O-K Cowl Ventilator

O. K. Products Co., St. Louis, Mo.
Price $3.00

This is a cowl ventilator for Fords and other cars. It is installed by cutting a hole in the cowl and fastening the ventilator with small bolts on the inside of the ventilator. The air inlet is 3 by 7⅝ in. and the ventilator is finished with black baked-on enamel or can be had in brass, nickel-plate or any color to match the car.

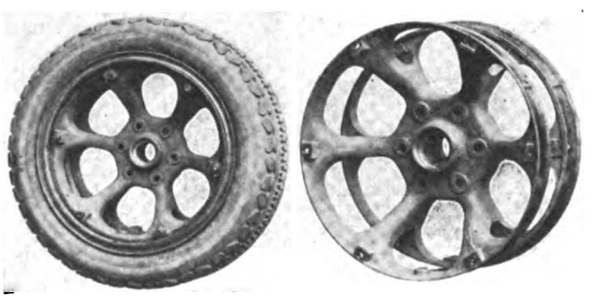
Sunbeam Warning Signal



M. & M. Auto Products Co., Rock Island, Ill.

The device combines the features of a stop signal, tail lamp, backing light and license plate holder. As a stop signal it has a flash effect which shows up by day or night with red and white beams. When not in operation it is a tail lamp. A little pressure on the brake pedal raises the lid, which gives illumination to the rear for backing.

Coleman Quickfill Tire Pump



Coleman Lamp Co., Wichita, Kan.

The pump has a barrel of seamless nickel plated brass and a large nickel stirrup. A large catch chamber prevents pumping oil into the tire, but the pump lubricates itself at every stroke. The handle is ebonized and threaded to extend up into the wood and through a brass bushing, thus preventing the handle from coming off. The rubber hose is fitted with a quick fastening device.

Dayton Dual Pneumatic Cast Steel Wheel

Dayton Steel Foundry Co., Dayton, Ohio.

A new addition is made to the Dayton Steel Wheel line in which the spokes, hub and rim are cast integral, just as in the other type, but each wheel has two rims with a center of 8⅛ in. The dual pneumatic is designed for either a 30 x 5 or 36 x 6 tire. The wheel is made for trucks from ¾ to 2 ton capacity. The weight is 100 lbs. without rims. It is supplied completely machined and ready to receive standard rims and rim fittings for either of the two sizes in tires. The hub is an integral part of the wheel itself and each wheel and rim itself and the rim fittings are a complete and separate unit.

A Good Idea for Sanding in Generator Brushes

THIS week we hand the cut glass bathing suit to No. 3359. This idea ought to save at least an hour or more on every Ford generator brush fitting job brought into the shop. There is no reason why it cannot be applied to some other generators. There are some others that will save you something too if you will try them.

Send some other good ideas to Motor World and make a dollar. We pay this amount for each practical idea accepted. If you cannot find time to do this yourself, give this notice to some of your men and let them make some pin money and get their names and the name of your establishment printed after the idea.

No. 3356—Control Lever Silencer for Chevrolet 490—The control lever of the Chevrolet 490 is prevented from chattering by removing the shifting lever and drilling a ⅛ in. hole about 2 in. from the control lever collar, inserting a cotter pin and valve spring.—R. Spellerberg, City Garage, Highland, Ill.

No. 3357—Finding the Top Dead Center—To find the top dead center of any cylinder, a whistle is made from a piece of copper tubing, one end being flattened and sealed and the other end fitted with a piece of rubber ground to fix the priming cup.—H. D. Booth, Cortland, N. Y.

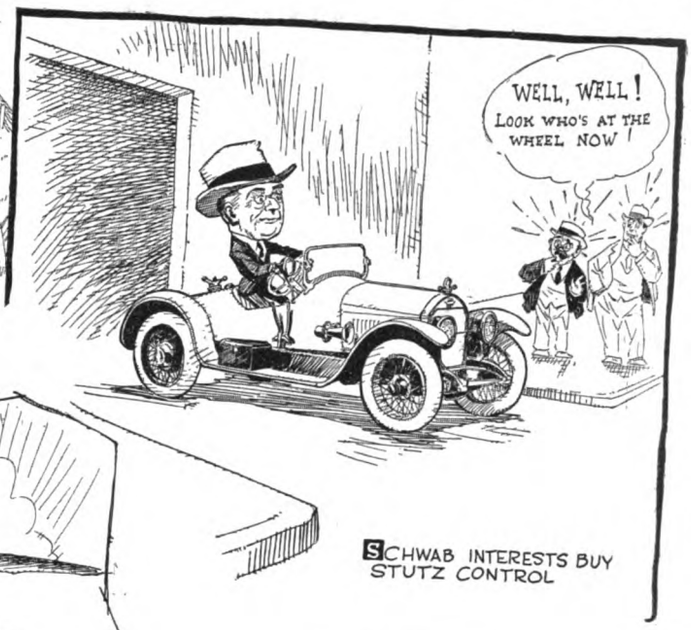
No. 3358—Starting a Fordson Tractor Engine—A stiff engine on a Fordson tractor is started by jacking up the left rear wheel of a 1-ton truck and attaching a wheel puller to the wheel. A Ford drive shaft with squared end is placed between the wheel puller and the Fordson crankshaft.—Reader.

No. 3359—Sanding Ford Generator Brushes—A tool for sanding the brushes of the Ford generator is made from a discarded armature by turning the commutator down about ⅛ in. and glueing a band of No. 0 sandpaper around it. After the brushes have been installed this is slipped in place of the regular armature and revolved by hand.—H. V. D. Sweet, Canajoharie, Motor Sales Co., Canajoharie, N. Y.

No. 3360—Fitting Piston Rings—In fitting new rings to a cylinder, saw a small piece from a discarded piston and upsert in the cylinder upside down, leaving one ring on to keep it from falling through.—Canajoharie Motor Sales Co., H. V. D. Sweet, Canajoharie, N. Y.

No. 3361—Insulator for Stop-Light Switches—An insulator is placed in the pull wire of a stop-light switch to prevent damage to the wire in case of a short circuit in the switch.—H. V. D. Sweet, Canajoharie Motor Sales Co., Canajoharie, N. Y.

No. 3362—Assembling the Ford Rear Spring Shackles—The car is lowered enough to allow one side to be assembled and then a short piece of 2 by 4 is placed on the axle housing under each end of the spring. Lowering the blocks will force the spring eyes in line with the shackles. H. V. D. Sweet, Canajoharie Motor Sales Co., Canajoharie, N. Y.



Digitized by Google

July Production Reached 246,000

MONTH PROVED THIRD BIGGEST IN HISTORY

Surpassed Only By May and June—Total Thus Far, This Year, 1,403,000

NEW YORK, Aug. 15—The automobile industry has set another production record. Passenger cars and trucks produced in July numbered approximately 246,000, which is the largest July business and also the third largest month in the history of the industry, the record month having been June, 1922, with 288,000, and the second May, with 256,000.

Strikes May Interfere

The July record brings total production for the year up to 1,403,000 and indicates that 1922 will be the industry's greatest year unless the railroad and coal strike situations, with their effect on supplies of raw materials and general business, exert a serious curtailing influence on manufacturing activities for the rest of the year.

August production is bound to fall below the July record because of the natural midsummer decline in demand, and it may be still further affected by the coal scarcity which is rapidly approaching a crisis in the Detroit district. So far fuel shortage has not curtailed manufacturing but supplies on hand are being rapidly depleted and prospects are not bright for replenishment unless there is a sudden turn in the Detroit situation. If coal is not made available many plants will be forced to curtain production within the limitations of restricted power facilities available from Detroit public utilities.

No Excitement Over Cuts

Outside the strike situation the industry is going forward with confidence of a brisk business throughout the remainder of the year, as indicated by the absence of excitement over price reductions in the highly competitive field, ranging principally between $500 and $1,500. It is significant that reductions have been confined almost exclusively to cars in the big production class, none at all having been made by manufacturers producing cars ranging from $2,000 up. Reductions have been made by manufacturers whose quantity production has enabled them to pass the benefits of manufacturing economies on to the public. There is entire absence of indication that there is to be an epidemic of price cutting, or anything approaching a price war. A contrary indication is found in the fact that Durant Motors has guaranteed prices to Aug. 1, 1923.

Reports from various parts of the country indicate that the public has shown a normal reaction to the price reduction announcements. Sales have been stimulated slightly on most of the lines reduced while there is a temporary stagnation in some of the competing lines due to a natural holding off attitude on the part of purchasers. However, there are indications that the public is already beginning to see the reductions in their true light of a passing on of production economies by manufacturers.

DON'T CROWD DRIVER, ADVICE IN MICHIGAN

DETROIT, AUG. 15—The Wayne County coroners have asked the common council of the city of Detroit for an ordinance which will prohibit the crowding of drivers' seats of automobiles. The communication declares that many fatal accidents in the past few months could have been avoided if the driver's seat had not been crowded. The ordinance would prohibit the crowding of more than two people into a seat built for two. The proposal has been favorably received and has been referred to Inspector Jackson of the police traffic division for his approval.

RULING IS REVERSED ON GASOLINE PUMPS

WASHINGTON, Aug. 14—Orders of the Federal Trade Commission which forbade the lease of gasoline pumps to retailers upon the condition that only lessor's oil should be used in the pumps have been set aside by a recent decision of the United States Circuit Court of Appeals for the third district upon application of the Standard Oil Company and a number of other oil companies.

The court held that such a lease was not a tying contract which violated the Clayton Act. The court said that the public was not injured by the practice. As the retailer is free to install other pumps, the court held that the tying contract did not lessen competition to the extent contemplated by the statute.

Ruark A. E. A. Secretary

CHICAGO, Aug. 10—B. W. Ruark, formerly connected with the Champion Spark Plug Co. and later with the Pittsburgh Auto Equipment Co., has been appointed field secretary of the A. E. A.

FEW SLOUGH TRUCKS NOW REMAIN UNSOLD

Company Also Reports That It Can Get No More to Reimport to U. S.

NEW YORK, Aug. 14—Disposal of American trucks re-imported from the former war zones by the Slough Trading Corp. of America is proceeding rapidly and, according to officials of the company, only about 300 vehicles are yet to be sold at wholesale. It is also stated that reports indicate that dealers in various parts of the country who have bought the trucks for resale have been successful in disposing of the greater number of them.

Up to date the Slough company has brought into the country only about 1200 trucks, and about 200 others were brought here in small lots by other importers.

Information given the American company by the Slough Trading Corp. of England is that nearly all of the trucks available for reshipment to the United States have been sent here and that the process of putting these vehicles on the American market is practically completed. It was at first expected that a much larger number of trucks would be brought here, but a good many have been sold in Europe, and recent attempts of the Slough Trading Corp. of America to get additional shipments started on the way here have been met with the information that there are no vehicles to be had.

Virtually all the trucks brought here are heavy-duty vehicles, including Macks, Packards, Pierce-Arrows, Whites and a few other makes.

ASSOCIATED HEADS AT NATIONAL PLANT

INDIANAPOLIS, Aug. 14—Will H. Ohmer, chairman of the board of directors, and Louis Ruthenburg, president of Associated Motor Industries, visited the plant of the National Motor Car & Vehicle Corp. and with George Dickson, president of the National company and vice-president of Associated Motors, which recently absorbed the company, made an inspection of the plant.

The visitors expressed themselves as well pleased with the facilities and predicted that the plant would become more important than ever to the motor industry through Associated Motors plans. No details of definite plans for increasing production at the plant was available from the officials.

Makers Prepare for Output in 1923

CLOSED CARS TO GET MORE PLANT SPACE

Demand in Cities for This Type Expected to Reach 60 to 75 Per Cent

DETROIT, Aug. 14—Despite the exigencies of the coal and rail strikes, the industry is proceeding unhesitatingly with its plans for expansion and increased production in 1923. The central thought in the general expansion program is to provide more room for the production of closed cars, though in some cases the expansion is to provide for increased output in all models.

In this expansion body and car makers are both participating, the former, however, on far the larger scale. By the spring of 1923 body manufacturers should be equipped with ample space to meet whatever demand for closed cars develops, and indications are at this time that the demand will run from 50 to 60 per cent of all cars produced. Demand in the cities, it is predicted, will run from 60 to 75 per cent for closed vehicles.

A noteworthy feature of the closed car demand is that it has resulted in a general extension of business to body builders in all parts of the country. With closed car demand prevailing, the body business has been limited to a smaller number of builders—almost concentrated in a few hands. This condition has given way to a widely diffused buying, making for more individuality and variety in coach work and equipment.

Closed Cars at Low Mark

Bodies are now coming into Detroit from all parts of the country. Despite the scattering of production into many hands, and the addition of freight rates which must be borne, closed car prices are lower now than ever before. This is due to improved manufacturing methods and the development of new types which permit of a reduction in operations. Increased demand has permitted car factories to adapt better handling methods. More space in the car factories will result in closed car production on any scale required.

Price of Gasoline Falls

NEW YORK, Aug. 14—The Standard Oil Co. of New Jersey announces a reduction of 2 cents in the price of gasoline for all of its territory. A similar cut in price together with a 1 cent reduction in kerosene throughout Pennsylvania and Delaware was made by the Atlantic Refining Co., the retail price of gasoline now being 27 cents and to garages, 24 cents. The Texas Co. has followed these reductions in the same territory and has also reduced crude oil 25 cents a barrel in Oklahoma, Kansas and Northern Texas districts.

CHEVROLET APPROVES BETTER WINDOW PLAN

DETROIT, Aug. 14—The Chevrolet Motor Co. has indorsed a program for better window displays throughout its dealer organization, under which the windows of the Chevrolet branch in the General Motors building will be a key for all sales windows throughout the country. This window will be given an elaborate dressing each month in which the utility of the car as a means to promoting outdoor pleasure will be featured.

The treatment of the window will be carried to all Chevrolet dealers by photographs and minute descriptions in the Chevrolet sales organ.

In indorsing the plan the company takes the attitude that it can be used effectively in all cities of 50,000 population or over to promote ownership desire among persons hitherto without cars, and of concentrating general automobile attention upon the Chevrolet line.

FORMER SAXON PLANT LEASED BY COLUMBIA

DETROIT, Aug. 15—Columbia Motor Car Co. has leased the plant formerly occupied by Saxon Motor Car Co. in this city and will begin using it in the manufacture of light six and de luxe model Columbias by Sept. 1. With the addition the company will have capacity for 300 cars daily, and expects to step up its production gradually to this figure, reaching 200 daily soon after the first of the year.

Demand for Columbia models was reported to be very brisk in practically all sections of the country, and reports from dealers in the farm district were to the effect that farmers would be large buyers in the middle priced car field.

Optimism at Buick Meeting

ATLANTA, Aug. 15—The keynote of the annual convention of southeastern Buick dealers held in Atlanta this month was optimism over the outlook, every dealer expressing the opinion that business the past four or five months has been very close to the pre-war normal, and that the outlook portends a steady sales demand for the coming year. About 150 dealers attended from five southeastern states.

SHORTAGE OF COAL MAY CLOSE WORKS

Detroit-Edison Warns Manufacturers That Power May Be Cut Off

DETROIT, Aug. 14—The coal situation continues to be the most serious problem facing Detroit manufacturers. Notices have been issued by the Detroit Edison Company and its power producing subsidiaries, that unless a material increase in its coal shipments take place immediately, it will be compelled to use its fuel for light producing purposes only, and for supplying power to companies engaged in the preparation or preservation of food-stuffs.

Under the terms of this notice it is indicated that a shutting off of power to companies other than these will take place within a period of ten days to two weeks. By this every company using Edison power exclusively would be compelled to close. The purpose in issuing the notice is to enable manufacturers to make any preparations necessary to meet the situation.

Without Edison power the big car and parts factories with power plants of their own will be compelled to reduce operations, as in most cases the private plants are not equipped to provide power in more than 25 to 50 per cent of requirements. Operations could be maintained in these factories on a reduced basis for several months, dependent upon the amount of coal in reserve. In most cases this represents from two to three months supply.

Ford Situation Serious

Ford Motor Co. is continuing full operations in all plants despite the serious shortage of coal in the company's bins at the River Rouge power plant. When this is exhausted the company will be enabled to operate on about 25 per cent of normal capacity on Edison power. When this is cut off the Ford factories at the Rouge, Highland Park and the Lincoln plants will close, sending about 80,000 men into enforced idleness.

The Ford situation is the most serious in the city because the company, owing to the immensity of its operations has been unable to lay aside a sizable reserve. Until the establishment of priorities it had been receiving a fair daily supply over its own railroads, but this has since been cut off. Some coal is still coming in but in negligible quantities, practically all shipments since the issuance of the priority order going to meet domestic demand and to utility companies.

DUESENBERG SEEKING GREATER PRODUCTION

Breaks Ground for Addition to Plant—Fleetwood Bodies for Cars

INDIANAPOLIS, Aug. 14 — The Duesenberg Automobile & Motor Co. of this city will break ground at once for the erection of an additional building, which will be used as an assembly plant as well as for fitting-up and finishing cars. The announcement made by General Manager Chester Ricker also stated that Duesenberg will shortly add a line of Fleetwood bodies to be ready for fall deliveries.

No price announcements have yet been made regarding cars with Fleetwood bodies, but it was definitely stated that there would be no decrease in Duesenberg prices now or in the near future. At present there are practically no extras for Duesenbergs.

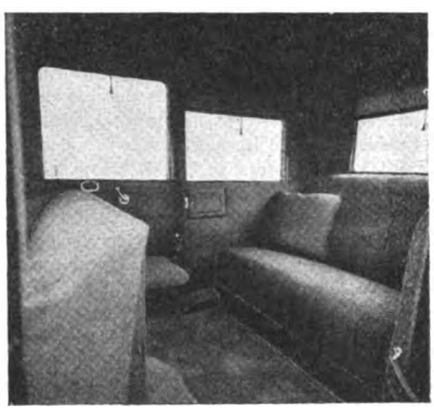
Increased production is what is being sought in the additional building and the desire to carry on all processes of manufacture and finish in the company plant. Some work has been done in outside buildings in recent times, but the new addition will remove this necessity. Since the first of July the production figures of the plant have been greatly increased. During July the plant was able to turn out 45 per cent as many cars as it had in the entire previous part of the year. This was brought about by reorganizations and by more efficient methods put into operation in recent weeks. The pace set in July is being kept up.

Variety of Body Styles

The Fleetwood line when offered will have a variety of body styles in both open and closed jobs. There will be five and seven passenger phaetons and and roadsters, as well as town brougham, sedan, inside drive cabriolet with Fleetwood bodies.

When the new building is ready about the first of the year it is hoped that production can be raised to four cars a day, these to include both standard models and the Fleetwood line. Factory officials insist that while production has been increased by rearrangement and better methods, the Duesenberg policy of building what are to all intents and purposes custom jobs will be continued with every car turned out by the plant.

Oakland 20 Per Cent Better



PONTIAC, MICH., Aug. 5—The Oakland Motor Car Co. reports an increase of output and of sales during July of 20 per cent over June.

Elgin to Keep at Capacity

CHICAGO, Aug. 14—Full production by the Elgin Motor Car Corp. is planned for the remainder of this season, according to an announcement made by the officials of the company. Shipments of Elgin cars for the months of May, June and July were greater than those of any three months since the peak buying season of 1920, according to factory statements.

The demand is said to be considerably in excess of the present factory output. Sales of closed models have exceeded the company's contemplated production, and it has been necessary to change the schedule to provide for the larger production of closed cars.

Interior of New Lexington Sedan

The new sedan, priced at $2,545, provides for five adult passengers and, in addition, has two folding taxi seats which fit into the back of the front seat.

GLENN A. TISDALE RETIRES AS DEALER

NEW YORK, Aug. 10—Glenn A. Tisdale, owner of the Franklin Motor Car Co. of New York and for the past ten years Franklin dealer in New York and Brooklyn, has given up his contract and will retire from business Oct. 1. His successor has not been selected.

Coming into the automobile business from an outside field, Tisdale has built up the Franklin business in New York from a few hundred thousand ten years ago to a volume which for several years past has been counted in the millions annually. He has maintained salesrooms and service stations in New York and Brooklyn and at times in several suburban communities.

Tisdale's present intention is to retire permanently from business, and unless this plan is altered it will probably be necessary to make some changes in the official personnel of the Automobile Merchants Association of New York, of which he is president.

Co-incident with Tisdale's retirement, his son, Glenn W. Tisdale, who for several years has been retail sales manager in New York, has taken over the Hupmobile agency in Newark, N. J., under the name of G. W. Tisdale, Inc. His territory includes Essex and Union Counties.

FINANCING OF SALES BY G. M. INCREASING

Acceptance Corporation's Business Indicates This Will Be Greatest Year

NEW YORK, Aug. 14—The condensed balance sheet as of June 30 shows that for the first six months of the year 1922 the General Motors Acceptance Corp. has exceeded the volume in any corresponding period since the organization of this institution, which finances the wholesale and retail sales of such General Motors properties as Buick, Cadillac, Oakland, G. M. C. truck, Chevrolet and Oakland. A total business of $68,251,586 for the half is reported, a showing which, if continued, will make this the corporation's greatest year.

Total assets for the six months are $49,405,658, of which $6,075,150 is cash and $41,667,151 secured receivables. Capital, surplus and undivided profits are $5,132,635.

186,161 Under Retail Plan

The report also shows that since the inception of the corporation early in 1919 to June 30, 1922, there have been financed under the G. M. A. C. retail plan a total of 186,161 cars, trucks and tractors, and under the wholesale plan 126,920. This does not include other General Motors products financed nor the operation of the foreign department. The total amount of financial accommodation extended by General Motors Acceptance Corp. from inception to June 30, 1922, is $270,692,236, distributed as follows:

	Foreign Department	G.M.A.C. Plan—Retail	G.M.A.C. Plan—Wholesale
1919.....	$3,256,192	$9,989,019	$7,635,777
1920.....	19,830,994	46,693,170	37,578,470
1921.....	3,361,881	39,725,007	34,370,140
1922*.....	3,303,479	36,339,750	28,608,357

*First six months.

The total business for 1919 amounted to $20,880,988; for 1920, $104,102,634; for 1921, $77,457,028 and for the first six months of 1922, $68,251,586, making a total of $270,692,236.

Record of Sales

Through a comprehensive sales organization the obligations arising from the sale of General Motors products under these financing plans are sold directly to banking institutions. From inception to June 30, 1922, total sales of obligations have been $267,257,000, representing over 5600 individual sales to over 1100 banks and trust companies. This record by years follows:

	Number of Sales	Amount of Sales
1919.....	258	$13,018,000
1920.....	2,078	92,389,000
1921.....	1,646	96,741,000
1922*.....	1,690	65,109,000
Totals.....	5,672	$267,257,000

*First six months.

SCHWAB PURCHASES CONTROL OF STUTZ

Obtains Stock from Guaranty Trust—W. N. Thompson Remains as President

NEW YORK, Aug. 14—Charles M. Schwab became an automobile manufacturer to-day when he and Eugene V. R. Thayer, formerly president of the Chase National Bank of New York City, secured the controlling interest in the Stutz Motor Car Co. of America from the Guaranty Trust Co. of New York, which has been in power since it bought at auction last week 132,914 1/3 shares of the Indianapolis concern at $20 a share.

Rumors that Schwab really was acting for his friend, Allan A. Ryan, in consummating this latest deal, are scouted by those who have been in close touch with the chairman of the directors of the Bethlehem Steel Corp. They say that Ryan is completely out of Stutz affairs and that Schwab personally will take an active part in the operation of the company. In fact, following the closing of the deal with the Guaranty Trust Co. he started for Indianapolis to map out a vigorous campaign for Stutz.

It is understood that the deal whereby Schwab comes into control is one that the Stutz directors have been working on ever since the auction, and that the change in control is one that is most satisfactory to all parties concerned. That harmony exists and the old manufacturing administration has been indorsed is borne out by the action of the directors to-day by which W. N. Thompson is continued as president and given complete authority. Thayer and Willard Mitchell have been elected directors to fill the two vacancies, and Mitchell succeeds as secretary and treasurer George F. Lewis, who has resigned.

It is said that Schwab and Thayer secured the stock from the Guaranty Trust for about the same price—$20 a share—that the bank paid for it at the auction.

BIRMINGHAM MOTORS OFFICIALS INDICTED

WASHINGTON, Aug. 12—Alleged to have sold more than $300,000 worth of worthless stock to Virginia, Maryland and District of Columbia investors through misrepresentation, eighteen officials of the Birmingham No-Axel Motors Corp., Jamestown, N. Y., have been indicted by the Federal Grand Jury on a specific charge of violation of Federal statute number 215, involving misuse of the United States mails.

The indictment was returned as a result of more than ten months' investigation by the Post Office officials who charge that agents of the company sold hundreds of thousands of dollars worth of stock on fictitious holdings and on promises which were never lived up to and which, according to the Government's case, "the said Birmingham Motors knew never would be complied with."

President Denies Knowledge

BUFFALO, Aug. 14—In a dispatch received here to-day from Jamestown, N. Y., Samuel A. Carlson, mayor of that city, denied all knowledge of alleged fraudulent use of the mails by persons said to be interested in the Birmingham Motors Co., of which he is president.

VELIE DEALERS FORM NATION-WIDE BODY

MOLINE, ILL., Aug 14—Distributors and dealers handling the Velie cars have effected a permanent national organization. The following officers were elected at a meeting largely attended by representatives of Velie sales organizations from all over the country, at the factory in this city: President, J. K. Gregory of the Gregory Motor Co., Kansas City; vice-president, A. J. Shorey of the New England Velie Co., Boston; secretary, R. C. Cook of R. C. Cook Co., Chicago.

The organization is entirely independent of the factory and its field staff. The main purposes are close and active co-operation in expanding the market, the interchange of ideas.

SAXON STOCKHOLDERS APPROVE FINANCING

Company Now Working Out Plans Concerning Proposed Changes in Car

DETROIT, Aug. 15—The Saxon Motor Car Co., following the authorization by its stockholders of a new issue of preferred stock which will give the company $750,000 in additional working capital, is working out plans for revisions in its product which, if followed through, will result in changing it into a six cylinder line which will market at about the same selling price as the present four cylinder.

It is expected, too, that the introduction of the new capital will see the reorganization of the company, and the election of a new directing group, so that the company may proceed to market its product on an extensive scale. Harry L. Bill, vice-president in charge of manufacturing, who has been directing the affairs of the company since the resignation of Clarence A. Pfeffer as president, will probably become president of the reorganized company. The company will issue 200,000 shares of stock.

Twenty-five Years Ago with Oldsmobile

Oldsmobile is celebrating its twenty-fifth anniversary this month. Indulging in a bit of retrospection brings forward some of the Oldsmobile advertising of other days which suggests quite forcibly the advancement that has been made in this and other motor cars in but a few years. Look as these vehicles of the industry's "creeping days." One of the ads says: "The ideal vehicle for shopping and calling—equally suitable for a pleasant afternoon drive or an extended tour. It is built to run AND DOES IT—A turn of the starting crank and the Oldsmobile goes with NOTHING TO WATCH BUT THE ROAD. Price, including MUD GUARDS, $650

Digitized by Google

SALES IN NEW YORK INCREASED BY CUTS

Effect Would Have Been More Keenly Felt Before Vacation Period

NEW YORK, Aug. 14—Price reductions on several popular lines of passenger cars have had the expected effect in New York, stimulating slightly midsummer sales of the cars reduced and materially slowing up deliveries in competitive lines.

Coming at one of the slow periods of the year in the Metropolitan District, when a large majority of car buyers are away on vacation, planning to go away or just getting back, the effect of price reductions has not been so keenly felt as it would have been a month or two ago. The lines reduced have made a more than seasonal number of retail sales within the past week, an unusually large number of which were without trades, indicating that the new prices had reached out and brought into the market some buyers who were holding off until the cars they wanted got within reach of their pocketbooks.

Wholesale Business Improved

There has also been quite a bit of improvement in wholesale business in these lines, and particularly there has been an increased demand for dealerships in some of the smaller communities of the territory. This applies especially to two or three cars in the class recently reduced whose dealer organizations had never been wholly rebuilt after the stagnation period of a year ago.

In connection with low and medium priced cars whose prices have not been reduced the public has adopted a natural waiting attitude. Some dealers, as well, are looking for reductions on their lines between now and the first of September.

The demand for closed cars continues strong and this with general conditions outside the railroad and coal strikes has prompted Metropolitan distributors and branch managers to anticipate a brisk fall business, provided the national industrial troubles are settled.

Sales During July

NEW YORK, Aug. 12—Registration figures as compiled by Sherlock & Arnold, publisher of the Automobile Sales Analysis, for the ten counties in and around New York City for July show a total of 8494, as compared with 9068 in June and 9431 in May. For the first seven months this year registrations aggregated 48,073 as against 30,422 for the same period last year.

In the medium and low priced class four cars lead the field with three others some distance behind, but considerably ahead of those following them. Nine cars are well in the lead in the higher priced cars.

A summary of registrations for the first seven months in the high, medium and low-priced classes is as follows:

	High Price	Medium and Low Price
January	283	2,017
February	273	2,231
March	632	6,354
April	862	8,428
May	961	8,470
June	865	8,203
July	678	7,816
Total	4,554	43,519
Total (1921)	2,879	27,543

BILL STATES DEALER MUST HAVE $10,000

ATLANTA, Aug. 14—A new bill that has as its objective a reduction in the number of automobile accidents in Georgia is being advocated for presentation before the present session of the Georgia Legislature, and should the plans of its formers materialize to the extent of resulting in its passage, it would probably have the effect of forcing at least 75 per cent of the dealers in this state out of business within another year.

The bill contains a number of objectionable features so far as the dealers are concerned, but the one that would have such disastrous results would require every individual, co-partnership or corporation before it could obtain a license to furnish evidence to the Secretary of State that the said applicant was worth over and above all debts, etc., the sum of $10,000. The average dealer can readily realize how ruinous to the industry any bill containing such a clause would prove, and if the present bill is actually offered before the legislature here, it will be bitterly opposed by the Georgia Automotive Dealers' Association.

Boston Sales Stimulated

BOSTON, Aug. 12—Whether the anticipation of reduced prices had anything to do with it or not, some of the dealers state that sales began to show a drop during the latter part of July. This does not apply to all dealers, for some of them had better July business than a year ago, others as good as June and some more showed a falling off. In other words the big buying wave showed a tendency to flatten down.

New prices seemed to stimulate sales among the cars announcing new figures.

Schillo Dies in Plane Crash

CHICAGO, Aug. 11—An aeroplane crash near Napierville, Ill., yesterday resulted in the death of Edward W. Schillo, president of the Schillo Motor Sales Co. of Chicago, representing the Mercer and Templar, and one of his employees, LeRoy Keller, who was piloting the plane. Schillo had been prominent in automobile trade circles in Chicago for more than ten years.

HARD WORK, SLOGAN IN ROCKY MOUNTAINS

As Result Gloom Is Gone and Business This Year Was Never Better

DENVER, COL., Aug. 14—"Business is better now than it has been at any time within a year."

This declaration, based upon a careful study of conditions, came to-day from W. W. Barnett, Oldsmobile distributor for Colorado and part of Wyoming and New Mexico, at the close of a two-day sales convention of his organization. The convention was attended by thirty dealers from all parts of the territory, and also by Thomas O'Brien, assistant general sales manager of the Olds Motor Works.

"There is no question but that stagnation was here, and that it had a frightful grip on a heap of normally good business folks for a rather long time," Barnett said. "But that fearful stagnation is now gone, and the right kind of thinking and the right kind of working will keep us from feeling the grip of stagnation again soon."

Encouragement for Dealers

Relating personal experiences, he said:

A few months ago one of my dealers in a somewhat thinly settled territory claimed that business was absolutely dead. But a little encouragement renewed his grit and prevented his believing this claim fully enough to cause him to give up entirely. He set his teeth for further effort, gradually turned the tide of the struggle, and for the last six weeks has been coming to Denver with a smile like a mountain sunrise and driving home with an average of three cars a week.

Another dealer came to me recently with a similar case of gloom, and I simply told him to go back home and see just how hard he really could work if he tried his darndest. He is now going strong on sales, and his determination and cheerfulness are having a mighty wholesome effect on other dealers, as well as on people in general in his community. A lot of folks are gradually learning that the safest and sanest cure for most business ills is downright hard work.

One lively feature of the sales convention was a banquet out at Lakeside's Casino Balcony, which affords an inspiring across-the-lake view, particularly at sunset, of some of the highest peaks of the Rockies, the nearby foothills and the well-farmed Clear Creek Valley. On this occasion, which was attended by eighty-six members of the Barnett sales and service organization, Old Man Gloom was given an elaborate funeral service and laid to rest amid ceremonies of befitting grandeur.

Moon Dealers Form Agency

CHICAGO, Aug. 10—Formation of the Dealers' Sales Corp., a retail Moon agency owned by ten community Moon dealers in Chicago, is announced by John Quinlan, president of the Quinlan Motors Co., wholesale distributor of Moon cars in Chicago.

Digitized by Google

DURANT GUARANTEES LISTS FOR ONE YEAR

Does Not Concern Locomobile, Flint and Star Cars or Mason Truck

NEW YORK, Aug. 9—Present prices on Durant four and six cylinder cars are guaranteed until Aug. 1, 1923, by W. C. Durant, who has just advised his distributors and dealers of his decision.

"Our present prices were established when business was at a standstill, with material cost as low or lower than now prevailing," Durant writes. "Durant Motors, Inc., made an absolutely clean start Aug. 1, 1921, with no high priced inventories and no burden incident to war-time operations."

This price guarantee does not apply to others in the Durant line like Locomobile, Flint and Star cars and the Mason truck.

SCHWAB CUTS PRICES ON ALL STUTZ MODELS

INDIANAPOLIS, Aug. 14—Following the arrival in Indianapolis of Charles M. Schwab, came the announcement of substantial price reductions on the complete Stutz line, which was coupled with a statement from Schwab that he will give the company's affairs his personal attention and that the present officers will continue to handle the manufacturing operations.

The new schedule is as follows:

	Old Price	New Price
Roadster	$2,950	$2,450
6-pass. phaeton	2,990	2,640
4-pass. phaeton	2,990	2,790
Coupe	3,990	3,490

Noma Increases

NEW YORK, Aug. 14—Noma Motors of New York announces an increase in prices, ranging from $300 to $500, affecting the whole line of C models. The prices are as follows:

	Old Price	New Price
2-pass. speedster	$2,000	$2,500
Foursome	2,100	2,500
6-pass. phaeton	2,200	2,600
5-pass. sedan	3,200	3,500

Dort Prices

In the Aug. 9 issue of Motor World errors were made in quotations on the closed models of the Dort. The revised figures, showing substantial reductions in all but the open types, are as follows:

	Old Price	New Price
2-pass roadster	$885	$885
5 pass. phaeton	895	885
Large coupe	1,315	1,265
Small coupe	1,065	1,045
Small sedan	1,115	1,095
Large sedan	1,445	1,385

Amazon Tire Lower

AKRON, Aug. 14—Price reductions are announced by the Amazon Rubber Co., the cuts being on the heavy duty non-skid cords and the air bag cushioned non-skid fabrics. The excise tax is included in the new prices. Reductions on some of the popular sizes in cords are as follows: 30 x 3½, from $18.00 to $15.95; 33 x 4½, from $33.40 to $30.05; 34 x 4½, from $45.20 to $39.50. Fabrics: 30 x 3½, from $13.95 to $10.50; 31 x 4, from $21.75 to $20.65. In the larger sizes in the fabric line the old prices are retained.

$100 TO $110 TAKEN FROM COST OF REO

LANSING, MICH., Aug. 10—New prices announced by the Reo Motor Car Co. show a reduction of $100 on the 5 passenger phaeton and $110 on the 7 passenger phaeton. The prices on the two closed jobs remain unchanged. The revised list is as follows:

	Old Price	New Price
5-pass. phaeton	$1,745	$1,645
7-pass. phaeton	1,595	1,485
7-pass. sedan	2,435	2,435
4-pass. coupe	2,355	2,355

Auburn Prices Lower

AUBURN, IND., Aug. 14—Reductions ranging from $50 to $200 are announced by the Auburn Automobile Co. The new list is as follows:

	Old Price	New Price
2-pass. roadster	$1,575	$1,575
5-pass. phaeton	1,575	1,475
4-pass. sport	——	1,895
4-pass. sport (except equipment)	2.195	1,995
7-pass. phaeton	1,615	1,545
Coupe	2,275	2,275
Sedan	2,395	2,345

Prices Fixed on Buick Truck

FLINT, MICH., Aug. 11—The prices on the four-cylinder, special delivery Buick truck are based on a chassis price of $725. The body prices vary with the type and are as follows: Open express body with cab, $840; panel body with cab, $860; canopy top with roll curtains and cab, $855; canopy top with screen sides, roll curtains and cab, $875; de luxe panel body with cab, $960; combination passenger and express body with cab, $935.

Anderson Light Six Price

A description in last week's Motor World of the new Anderson Light Aluminum Six gave the price as $1,195, but a caption under a picture of the car quoted $1,650 as the price. The caption was incorrect, $1,650 being the price of the phaeton model of the Anderson Series 40 which will be continued in production along with the light six line. As stated, the new model phaeton will sell for $1,195 and shortly closed cars will be brought out priced only a little above the open model.

Templar Branch in Atlanta

ATLANTA, GA., Aug. 12—A factory distributing branch for the southeastern territory is to be established immediately in Atlanta by the Templar Motor Co. of Cleveland. The branch will handle southeastern Templar sales.

CITY OWNED BUSES PLANNED IN CHICAGO

Mayor Had Asked for Appropriation Before Street Car Strike Ended

CHICAGO, Aug. 15—Just when Chicago was about to experiment on a large scale with municipally operated motorbus transportation at a 5 cent fare to take the place of street car transportation the strike of street and elevated railway employees, which prompted the experiment, was ended. Mayor Thompson, who was back of the plan, stated, however, that he would proceed with the movement to have the city acquire and operate buses.

In the six days that the strike was on, the city arranged for a number of privately owned buses to operate under the municipal banner, charging 5-cent fares. On the last day of the strike the number of such buses was 20. On the day following the end of the strike 11 of these buses discontinued the regular passenger business and returned to the carrying of sightseers.

Preceding the end of the strike Mayor Thompson had asked the city council to appropriate $3,000,000 for the purchase of buses. He announces that he will press this request, and the transportation committee of the Council has decided to give it careful consideration.

The splendid assistance given the passenger transportation problem in the city during the strike by the municipally operated and other privately owned and operated buses was such that many strong advocates have been won over to this form of transportation.

FORD'S JULY OUTPUT APPROXIMATED 152,000

DETROIT, Aug. 14—Ford Motor Co. figures show that July production approximated 152,000, which surpasses June when a new Ford record was hung up in retail sales of cars, trucks and tractors. Sales for June totaled 148,439 vehicles, an average of 5709 daily. Of this total 132,950 were sold in the United States, 6054 in Canada and 9435 in Europe.

Another record is shown in the report of total sales for the first six months of 1922, a total of 652,261 being reached.

Peerless 1923 Line

CLEVELAND, Aug. 14—The Peerless Motor Car Co. will show its 1923 line about Sept. 1. The new models will have changes and refinements both in chassis and body styles.

New Southern Tire

AUGUSTA, Aug. 15—The Southern Tire & Rubber Co. manufacturer of fabric and cord tires, announced a new tire this month, a 30 by 3½ inch, five ply, to sell for $8.50.

Digitized by Google

ELLIOTT SETS RECORD ON COTATI SPEEDWAY

In Leach Special Drives 50 Miles at Average Speed of 117.5 M.P.H.

STANDING OF DRIVERS

NEW YORK, Aug. 14 — No change in the standing of the leaders in the fight for the title of racing champion of 1922 resulted from the meeting at Cotati, Cal., Aug. 8, except that Elliott, the Cotati winner, was advanced to fourth place in the championship table. Jimmy Murphy, with his Miller-motored Leach, continues to lead the field by a big margin; in fact, he is so far ahead that Harry Hartz could not catch him even though Hartz won all of the remaining championship events.

The standing of the championship is announced as follows by the American Automobile Association:

Driver	Total Points	Driver	Total Points
Murphy	2910	Thomas	109
Hartz	1238	Fetterman	99
Milton	1100	Wilcox	83
Elliott	675	Hill	50
Hearne	363	Alley	44
Sarles	280	De Paolo	35
Wonderlich	280	Miller	28
Bordino	270	Vail	25
Klein	195	Koetzla	21
Mulford	179	Shafer	19
De Palma	160	Morton	17
Halbe	155	Melcher	15

COTATI, CAL., Aug. 12—Frank Elliott set a new world's record in winning the 50 mile race and also won the 100 mile feature of the triple event program of automobile races on this speedway.

Driving a Leach special, equipped with a Miller motor, California products, Elliott did the 50 miles at an average speed of 117.5 miles an hour, beating Bordino's record of 116.2 miles an hour, made in this same bowl last spring. Elliott's time was 25 minutes, 49.7 seconds. Tommy Milton, driving a Leach special, was second, and Eddie Hearne, in a Disteel Duesenberg, came third. Elliott did his fastest lap at the rate of 122 miles an hour.

Elliott won the 100 mile race in 53 minutes flat, at the rate of 113.7 miles per hour. Jimmy Murphy came in second. Murphy was forced into the pits in the 17th round of the 50 mile race and discovered that a tire had become wound into the inner disc of the wheel necessitating much time for repairs and so withdrew.

Tommy Milton was third in the long race, and Bennett Hill, a newcomer in Northern California racing, was fourth. Jerry Wonderlich, Harry Hartz, Joe Thomas, Al Melcher, Art Klein and Roscoe Sarles were the other entrees.

The 50 mile Ford dealers race, preliminary of the afternoon, was won by A. G. Matthews, driving the Hugheson Ford special in 43 minutes, 11.4 seconds.

To Open Kansas City Speedway

KANSAS CITY, Aug. 14—A sanction has been granted by the American Automobile Association for the opening meet of the new Kansas City board speedway, which is scheduled for Sept. 16. It will be a championship meet for which $30,000 in cash is hung up, while it is expected that $20,000 additional will be raised among the business houses to be distributed as lap prizes. The new speedway is 1¼ miles and the cost is estimated at around a half million dollars, including a steel framed grandstand.

"STAR" DISTRIBUTORS MEET IN CONFERENCE

NEW YORK, Aug. 14—At the meeting of 75 of the eastern distributors of the Star at the Biltmore here, it was announced by President Carroll Downes that the Star now is in production at the Lansing and Long Island plants and that production will start in the California plant in two weeks.

The distributors also were told of the awarding of a $1,000,000 contract for the construction of new buildings at Leaside, Canada, which will be used for Star construction. The new plant will have a floor space of 500,000 sq. ft. This Canadian plant will turn out 18,000 for 1923, 10,000 of which will be for domestic trade and 8000 for export. This plant will be completed Dec. 1.

While it has not been officially announced, it is believed that the Star policy to distributors and dealers will take the form of a fixed allowance instead of a discount on cars, which would protect the agents in case of a price reduction. The Star will be marketed through Durant distributors and dealers in that the Durant representatives will be given first choice when an appointment is made.

Forms for Stolen Cars

CONNERSVILLE, IND., Aug. 14—Lexington Motor Co. has inaugurated a bulletin service to aid Lexington owners in the recovery of cars which are stolen. The company supplies its dealers and insurance companies with printed forms upon which they are to report the theft of Lexington cars, giving name of owner, description of car and place from which it was stolen. The Lexington Company will then fill out the necessary number of duplicate forms and mail them to all Lexington dealers and to insurance companies.

Olds Factory Meeting

INDIANAPOLIS, Aug. 15 — Indiana Oldsmobile dealers visited the factory at Lansing and held a meeting there last week. The trip was arranged by Lathrop, McFarland & Co., Indianapolis distributor.

BETHLEHEM CONTRACT ON PERPETUAL BASIS

Provides Sliding Scale of Discounts, Depending on Territory and Deliveries

NEW YORK, Aug. 11—The Bethlehem Motors Corp., manufacturer of the Bethlehem truck, has developed a contract with dealers which will embody the best features of usual truck contracts, but will be on a perpetual basis, automatically renewable year after year, so that Bethlehem dealer connections will be permanent conhections of the new corporation.

The new contract provides for a stipulated number of deliveries during the first year—the number of trucks specified being on a conservative basis, in many instances only half the quantity the distributors and dealers estimate their territory will absorb. If the quota in the first year is taken, the contract continues for the second year, with an increase of 25 per cent in delivery specifications for the second year period and a similar increase each year thereafter.

A sliding scale of discounts is used, the chassis and parts discounts depending on the size of the territory and the number of deliveries to be taken during the first year.

Under the new form of dealer relationship, there will be no renewing of contracts at stated intervals, but, instead, changes that may be advisable from time to time will be made in the form of appendices to the contract proper.

FORD NOT DECIDED ON MEXICAN PLANS

MONTEREY, MEXICO, Aug. 10—No definite decision has as yet been reached by Henry Ford as to whether he will establish a plant in Mexico for the manufacture of automobiles and tractors, according to information received here direct from headquarters in Detroit.

Ford has had two sets of representatives in Mexico during the last few months. One set made an investigation of possible sites for the proposed plant and the other made a study of the iron ore and coal supplies.

It is explained by men who are in close touch with Ford's tentative plans for industrial development in Mexico that it may be several months before he is ready to make a move for their consummation.

Shaler Completes Plant

WAUPUN, WIS., Aug. 14—The C. A. Shaler Co., manufacturer of vulcanizing apparatus, headlight lenses and other specialized lines of garage and repairmen's and owners' equipment, has completed its new plant, erected to replace the works destroyed by fire early in the year. Operations were reinstated as quickly as the various departments were finished.

SOUTH AFRICA HAS USED CAR PROBLEM

Dealers Buckling Down to Work of Making Strong Selling Efforts

JOHANNESBURG, July 14 (*By Mail*)—Dealers throughout South Africa are finding the used car problem difficult to solve. A number of dealers have stocks on hand taken in at very high prices, and they are now proceeding to cut their losses. In many instances these used cars have been sold at auction. Often the auctioned cars bring low prices and sometimes are bought in by other dealers who recondition them and get fair prices.

Up to the present the used car business has been poorly handled, as few dealers have taken the trouble really to sell the cars. It is good to be able to report, therefore, that several large firms in Johannesburg and elsewhere in the Union have decided to sell used cars properly. The General Garage, Dodge Brothers agent for the Transvaal and Orange Free State, has started a department for reconditioning Dodge Brothers' cars. These are thoroughly overhauled and are sold with the company's backing. The cars are kept in a good salesroom.

Some dealers are refusing to take in second hand cars at all, but it is certain that they are losing sales of new cars through this. They feel that the used car market is too unsteady to allow of holding any in stock. Others again are offering fair prices—prices that are too high in the opinion of many.

Tire Reductions Stop

The tire firms appear to have stopped price reductions. In one or two instances a rise in price is foreshadowed. A large number of small firms handling tires have come into being during the past few months. Some of these firms are importing direct from the United States and England, while others are simply jobbing them. The Union Government has just past an anti-dumping bill which prohibits the sale of goods below cost in South Africa. It is thought that this bill has been passed to stabilize prices of rubber goods. There is a fairly large rubber manufacturing company in South Africa, and it is said that this is a form of protection for them as well as many other industries that have been started.

The Provincial Councils of the four provinces of the Union are endeavoring to cut down allowances for roads, but are doing so in the face of much opposition. South Africa has few roads worthy of the name, and the importance of the motor car and motor truck is not fully realized.

Willys-Overland Report

TOLEDO, Aug. 14—The Willys-Overland Co. and subsidiary companies for the five months ended May 31, 1922, report net loss of $1,661,262 after charges and depreciation. The net sales totaled $28,281,981 and the operating profit $847,714. The consolidated balance sheet for these companies, with the exception of the Wilson Foundry & Machine Co., shows inventories of $15,263,753; accounts receivable, $2,291,643, notes receivable, $858,075, and cash, $7,703,713. Among the liabilities are included notes payable of $18,334,035 and accounts payable of $3,860,685.

DEALERS ISSUE "COURTESY" STICKERS TO RESTORE OLD CHIVALRY

Chicago, Aug. 15.

THE Chicago Automobile Trade Association has inaugurated a campaign to promote "Automobile Courtesy." It has had windshield stickers printed bearing the words: "Automobile Courtesy—Chicago Automobile Trade Association." The word "courtesy" is in large, bold type, the other words being subordinated. The inscription is on a white field, surrounded by a green border decorated with white stars.

Members of the association are to be supplied with all of these stickers they can use and they are urged to paste one on the windshield of every car that drives up to the door or into the service station.

The reason for the campaign is stated in a letter sent to members by James Levy, secretary of the association, as follows:

"In the early days a motorist approaching a crossing would pause and let pedestrians cross—he did it with a smile. Today the average motorist assumes the attitude of 'to h—— with the other fellow.' Another thing, courtesy among motorists themselves seems to be on the wane. It used to be the custom if one motorist saw another in trouble, he would stop and lend a helping hand. Not so today—a fellow in trouble might just as well be in the middle of a desert somewhere as on a busy throughfare, because every one drives by with heads in the air."

GOODYEAR HALF YEAR SALES, $51,410,240

NEW YORK, Aug. 14—Net sales of $51,410,240 for the first half of 1922 are reported by the Goodyear Tire & Rubber Co. The surplus account shows a total of $1,915,889. The general balance sheet as of June 30, 1922, shows that the company has no bank loans and that the ratio of quick assets to current liabilities is in excess of ten to one.

The net quick assets totaled $65,511,157, of which $32,756,663 was in the form of inventories; $14,603,402, accounts receivable; $8,500,856, United States Treasury certificates and other marketable securities, and $9,560,136 cash on hand and in banks.

Net current liabilities totaled $6,223,554, of which $4,797,720 consisted of trade acceptance accounts payable; $80,500, notes payable, and $1,345,334, accrued interest and premiums on bonds redeemed. The profit and loss surplus is $5,535,933.

Production and sales for the first half exceeded those of the same period last year, with June a record month for the company. June sales and deliveries totaled 779,590 beating the previous best —734,948 in March, 1920.

Hupp Increased 60 Per Cent

DETROIT, Aug. 14—July sales as reported by the Hupp Motor Car Corp., were 60 per cent greater than any previous July. The company states that no immediate decrease in production is anticipated.

CARLOAD MINIMUMS AROUSE NORTHWEST

Dealers in Oregon and Washington Will Protest Against Discrimination

PORTLAND, ORE., Aug. 14—Automobile dealers of the Pacific Northwest are to seek relief from what they claim to be discriminatory carload minimums, in action before the Interstate Commerce Commission. This decision was reached following meetings at Portland and at Olympia, Wash., where it was shown that California shippers of automobiles are paying as much as $50 less per carload than shippers into Portland, Seattle and Spokane.

The trouble, according to the dealers' committee, lies with the minimum weight restrictions on the average carload used for automobiles. This minimum for cars coming into Oregon and Washington is 11,200 pounds, while into California the minimum is 10,000 pounds. The carload charges are based on this minimum, though the freight may weigh less. The rates per hundred in both districts are practically the same, and the dealers claim that the railroads cannot justify the discrimination, since the rate structure on all but a very few commodities is the same to all points on the Coast.

High Charges for Freight

With the demand for closed cars constantly increasing, this matter is becoming increasingly important, the amount of "dead" space in the car being greater. In some cases this has reached such a proportion that the freight charged on each automobile has reached nearly 20 per cent of its total sales price in Portland.

The Automobile Dealers Association of Portland has appointed a committee, headed by F. W. Vogler, president of the Northwest Auto Co., to co-operate with committees from other Northwest dealer bodies to fight the case.

CHANGES IN THE TRADE

Irey & Allsup, Monmouth, Ill., has been appointed local territory agents for the Hupmobile.

Float-A-Ford Sales Co., Cincinnati, has changed its name to the Minor & Colby Auto Supply Co.

Franklin Holyoke Corp., Holyoke, Mass., has opened a service station for the Franklin in that city, under the management of **H. L. Carroll.**

F. M. Gibbs has joined the Philadelphia branch of Martin-Parry after spending several years in the factory. Recently he has been in charge of territorial sales in the York region.

Thomas J. Ferguson, connected with the Dean J. Deakyne Co., Wilmington, Del., has taken over the local agency for the Chandler and Cleveland lines.

Hanson-Nash Motor Co. has been organized at Tampa, Fla., by **Charles E. Hanson,** to handle Nash sales, retail and wholesale, in south Florida.

Phil Miler has purchased business of **Hay Brothers,** Kewanee, Ill., tire and accessory dealers and will conduct the business as both wholesale and retail store.

Eldredge F. Shaw supersedes **Frank M. Gibbs** in assuming charge of all territorial sales of the York region excluding Baltimore for the Martin-Parry Corp.

Moon Co. of Georgia has been organized and incorporated in Atlanta to handle the distribution of Moon cars in Georgia. **Larry Grant** is president of the new company.

Charles W. Tway of Atlanta, Haynes distributor in twelve southern states for some years, has been appointed southern district sales manager for this same territory with headquarters in Atlanta.

Willys-Overland, Inc., has turned over the sale of parts and service business for the Willys-Knight and Overland in Springfield, Mass., to **Fred Darnstaedt,** who has taken space in the Forest Park Garage.

T. Harris Smith, formerly general manager of the Packard factory branch at Kansas City, Mo., has joined the factory organization of Mitchell Motors Co., Racine, Wis., as manager of advertising and sales promotion.

International Harvester Co. announces the establishment of a branch at Savannah, Ga., for the handling of International trucks in that territory. A service station is also maintained. **M. A. Mongeua** is manager of the branch.

Smith Motor Sales Co., 6140 Cottage Grove Avenue, Chicago, has acquired a franchise for the sale of Maxwell and Chalmers cars and will handle these lines exclusively **F. H. and L. H. Smith** are at the head of this company.

Backmeier Sales Corp. is the new name of the former Southern Sales Corp., Cincinnati, manufacturers' agent distributing a wide range of automotive lines. Under the new name the company has just issued catalog No. 200 A.

Broadway Motor Sales Co. formally opened its fourth Chicago store this week. Paige, Jewett and Willys-Knight cars are handled at this store which is housed in a new building. **O. H. Bernstine** is president of the company.

Garinger Motor Co. has been formed in Springfield, Mass., to take the agency of the Auburn. **F. D. Garinger,** formerly in charge of distribution of the Buick in that territory, heads the new concern, of which his son, Carlton H. Garinger, is treasurer.

Fred Rawlings, formerly with the Cadillac Co. in Atlanta and well known in the automotive industry in that district, will establish a manufacturers' agency in Shanghai, China, early in 1923, handling business in China and parts of Asia, specializing in automobiles and tractors.

Rolfe C. Spinning has resigned as advertising manager of the Service Motor Truck Co., Wabash, Ind., to become manager of the Detroit office of the Service Corp., Troy, N. Y., which specializes on automotive development, maintaining offices in Troy, Detroit and New York City.

Walter P. Coghlan, recently general sales manager of the American Hammered Piston Ring Co., Baltimore, has been appointed vice-president and director of sales of the Trexler Co., Philadelphia. Coghlan will direct the sales of the Trex air valve lock, which was placed on the market last spring.

J. W. Harris & Co., Cincinnati representative of the Eisemann Magneto Corp. and the Briggs & Stratton Co., has been appointed official representative of the automotive products of the Westinghouse Electric Co. and the Leece-Neville Co. for the Cincinnati district.

McBee Engine & Implement Co., Memphis dealers for Mack trucks, Lee trailers, G. E. motors and other mechanical equipment, has established a sales and service agency for C-T electric motor trucks in the Memphis territory. **John H. McBee,** manager of the company, will have charge of the sales of electrics.

John A. Camm, for twelve years director of sales of the Kearney & Trecker Corp., Milwaukee, a large manufacturer of milling machine and other machine tools, has resigned to become president of the Western Iron Stores Co., Milwaukee, which will develop its machine tool department under his direction.

Clevenger Motor Co. has been organized at Topeka, Kan., to handle sales of the Hupmobile. **R. T. Cowgill,** who has been with the Franklin Motor Co., is in charge. The company now operates in Lawrence under the direction of **J. M. Clevenger,** who has been the Hupp dealer there for a number of years.

F. P. Nusslock has been appointed general sales manager of the Nelson-Mitchell Co., Milwaukee, distributor of the Mitchell in Wisconsin, and retail dealer in Milwaukee. Nusslock in 1912, 1916, and again in 1918 was associated with the distribution of the Mitchell in this territory. For several years he was on duty at the factory in Racine, Wis.

Emerson-Brantingham Tractor Co., Rockford, Ill., has appointed **Shaler G. Smith** manager of the newly created special appliance department. Smith has resigned as president of the Modern Power Appliance Co., distributor of the Delco light products, located at Rockford, Ill., to take charge of his new post. He will be in charge of the sales organization of the new department.

Zell Motor Car Co. has been formed in Baltimore to act as Packard distributor for the greater part of Maryland. The company succeeds **Packard Motor Car Co.** of Baltimore which has acted as Packard distributor in that territory since 1905. **George Miller,** head of the old company, is retiring from business which is the principal reason for the change. **A. Stanley Zell** is president of the company.

Grand Avenue Buick Co. of Milwaukee is a new corporation organized by **John P. Meehan, G. P. Allen** and others. It has been granted a retail dealer franchise, making six Buick dealers in Milwaukee county, including the **South Side Buick Co.,** also a new organization, with **Stanley P. Jack** and **John A. Piszczek** as owners. Both new concerns are headed by men who have been associated with other Buick dealer concerns in Milwaukee for many years.

William C. Small, in charge of the technical service division of the service department of the Franklin Automobile Co., Syracuse, N. Y., has resigned to become service manager for **C. G. Heck,** Franklin dealer at Philadelphia. Small was with the Franklin company for almost thirteen years, during five years of which he acted as Pacific coast engineer. His position at the Franklin factory will be taken over by **L. R. Hodge,** formerly service manager for the Franklin dealership at Cleveland.

James H. Joyner, until recently manager of the **Ohio Valley Motor Car Co.,** Cincinnati distributor of the Premier, has left Cincinnati for Atlanta, where he has been engaged as manager of a branch of Templar Motors. Joyner, after several days spent in studying Templar policies at the company's offices in Cleveland, motored through to Atlanta, taking with him **Floyd Prothero,** who will serve as sales manager of the Atlanta branch.

A. C. Bennett, for the last five years Buick branch manager, at Pittsburgh, has been promoted to the position of district sales manager for the Eastern territory with offices in Pittsburgh. Bennett entered the employ of Buick as salesman at the old Des Moines branch in 1911 and was transferred to Chicago as sales manager, and in 1916 was promoted to the position of manager at Pittsburgh. **R. R. McVicker,** for the past three years sales manager at the Pittsburgh branch, has been promoted to the branch managership.

Del Lang and **Joseph Pender** have joined the sales force of the **Weaver Manufacturing Co.,** Springfield, Ill., maker of garage and shop equipment. For the last five years Lang has been with the Champion Spark Plug Co., representing it in the northwest territory. He will be stationed in Minneapolis and will travel Wisconsin, Minnesota, North Dakota, South Dakota and Illinois, except Quincy. Pender previously was connected for a number of years with the United States Steel Products Co. His territory includes Texas, except El Paso; Oklahoma, Arkansas and Louisiana, except New Orleans. He will make his home in Texas.

LeRoy Hodge has been placed in charge of the technical service division of the service department of the Franklin Automobile Co., succeeding **W. C. Small,** now service manager for **C. G. Heck,** Franklin dealer at Philadelphia. Hodge started with the Franklin organization in 1908 and spent several years working in the shop. In 1912 he took charge of Franklin service in the Southwest with headquarters at Kansas City, and from 1916 to September of last year had charge of Franklin service in Cleveland. Since last September he acted as traveling service man for the factory in Syracuse.

No Successor to Cobb

In the issue of Motor World of July 19, T. B. W. Zumstein was stated to have succeeded W. E. Cobb as New York branch manager of Master Trucks, Inc. A successor to Cobb has not been appointed, Zumstein being in charge of all sales activities of Master Trucks, Inc., and temporarily looking after the company's New York interests.

ASSOCIATION ACTIVITIES

A. E. A. Meeting at Peoria

PEORIA, ILL., Aug. 14—One of the largest merchandising meetings held in Illinois since the inauguration of the "Shop Profits" campaign of the Automotive Equipment Association, was held at the Jefferson Hotel here. The speakers were E. C. O'Donnell of the A. E. A., Geo. Rickenberger of the Washington Auto Supply Co., Walter G. Hecker of the Curtiss Pneumatic Machinery Co., of St. Louis, and B. W. Ruarck, field secretary of the A. E. A. The meeting was presided over by A. G. Thede, president of the Peoria Automobile Dealers Association.

The two motion pictures of the Automotive Equipment Association, "Ask 'em to Buy" and "Shop Profits," were shown. At a dinner, which followed the showing of these pictures, there were 552 dealers, employees and guests.

The second meeting the following night, attended by about 100 jobbers, was addressed by Ray W. Sherman, merchandising director of the A. E. A., who was not able to attend the earlier meeting. Unusual enthusiasm was shown by dealers and jobbers in attendance at both gatherings.

Taxicab Operators Organize

CHICAGO, Aug. 15—The National Association of Taxicab Operators has been organized, including in its membership more than 80 operators in about 200 cities. More than 5000 cabs are owned by members of the association.

At a convention held here a code was adopted which will be printed and displayed in the garages of the association members. This code points out the necessity for fair dealing and a promise to elevate the moral character and financial condition of the employees. It promises the public that it will take no advantage of a man's ignorance or condition; that it will see that employees are truthful and straightforward and courteous to everyone—passengers, pedestrians and other drivers.

"We will see to it, above all things, that he drives his own vehicle safely," is the promise held out for the driver.

Cleveland Show in September

CLEVELAND, Aug. 14—The Cleveland Automobile Manufacturers & Dealers Association has contracted for the central section of the exhibition hall in Cleveland's new municipal auditorium for a display of closed cars during the merchants and manufacturers exposition which will be held Sept. 18 to 28.

Retail merchants and manufacturers are staging an ambitious fall exposition and style display just prior to the fall season and this has been deemed an opportune time for a concentrated display of closed cars instead of individual displays, therefore the automobile trade organization as a whole contracted for a block of 15,000 sq. ft. which would permit of showing one closed car from each line represented in the association. The exhibit will then be uniform and impressive. The details are being handled by Herbert Buckman, manager of the association.

Changes in Detroit

DETROIT, Aug. 15—A. L. McCormick, manager of the Paige Sales & Service Co., has been elected treasurer of the Detroit Automobile Dealers Association, succeeding Charles W. Hathaway, and H. W. Peters, manager of the Detroit Packard branch, has been named a director succeeding C. A. Triphagen.

Hathaway was formerly manager of the Detroit Lincoln branch which was closed under the new Lincoln sales plan, and he has become connected with the Cleveland Cadillac organization. Triphagen was formerly manager of the Detroit branch of Reo Motor Car Co., having been called to the Reo factory to become one of the sales executives there.

Dayton Has A. E. A. Meeting

DAYTON, OHIO, Aug. 11—Two hundred and twenty-five dealers from Dayton and surrounding towns attended an "Ask 'Em to Buy" meeting at the Gibbons Hotel. Following an address by Ray W. Sherman, merchandising director of the Automotive Equipment Association, and the showing of the "Ask 'Em to Buy" film, many in the audience expressed their intention of establishing better automotive equipment departments. The meeting was arranged by the Dayton Iron & Steel Co., G. W. Shroyer & Co., the local branch of the I. J. Cooper Rubber Co. and the Lewis Motor Mart Co., and was presided over by President Hinkley of the local trade association. C. B. Ozias, president of the Dayton Iron & Steel Co. told of the A. E. A. and its initiation of the "Ask 'Em to Buy" movement.

Elected to Legislature

SAN ANTONIO, TEX., Aug. 12—W. A. Williamson, vice-president and general manager of the Texas Automotive Dealers Association, has been elected as a representative to the Texas legislature from Bexar County (San Antonio).

Williamson is widely known among the trade throughout the states, and the fact that he defeated his opponent by more than 2,000 majority shows the esteem in which he is held.

He had the active support of practically all the car and accessory dealers of San Antonio in his campaign. Williamson said he will work for the best good of the automobile interests of the state and render every aid in his power in behalf of good roads.

Offers Prize for Slogan

HOUSTON, TEX., Aug. 12—The Houston Automobile Trades Association is conducting a contest in which a prize of $20 is to be awarded for the best slogan for the association. The contest will close Sept. 1. The only conditions are that the slogan be short and express the thought that every member of the association is reliable and will satisfy the customer.

Golf at Atlanta Outing

ATLANTA, Aug. 14—Practically the entire membership of the Atlanta Automobile Association, an organization of dealers and equipment merchants, attended the annual outing and frolic the organization held at the Brookhaven Country Club here. A golf tournament featured the event.

Tire Changer at Outing

PHILADELPHIA, Aug. 14—Charles W. Paine of this city, who claims the championship as the fastest tire changer in America, was one of the main attractions in lightning tire-changing feats at the first annual outing of the Automotive Service Association at Betzwood Farms Inn, Betzwood, Pa. The association, with the Automobile Accessories Business Association, whose board of directors were guests at the outing, presented to Paine, at the conclusion of his contest against time, a handsomely engraved silver loving cup trophy, which will be held by him until he has been beaten in a championship contest, open to all comers.

Sherman at Cleveland

CLEVELAND, Aug. 12—Ray W. Sherman, merchandising director of the Automotive Equipment Association, made a talk last week to members of the Cleveland Automobile Manufacturers and Dealers Association and the same day he spoke at a convention of the National Lamp Works salesmen, executives and jobber guests, where he exhibited the "Shop Profits" moving picture.

Battery Men Elect

CINCINNATI, Aug. 15—At a meeting of the newly-organized Cincinnati Battery Association, at which more than fifty battery dealers were the guests of G. Earl Koch of the Auto & Aero Supply Co. at a camp adjacent to Cincinnati, permanent officers were elected as follows: President, Peter Duffy; vice-president, G. Earl Koch; treasurer, John P. Rieley, and secretary, Fred T. Gage.

HIGHWAY COMMITTEES PLAN SECOND MEETING

WASHINGTON, Aug. 10—The second meeting between a committee from the National Automobile Chamber of Commerce and representatives of state highway associations will be held in Seaview, N. J., Sept. 14, 15 and 16.

This joint committee will continue the work of the first meeting in Washington this spring when the subject of highway finances, legislation, regulations of loads and kindred topics affecting good roads, were first taken up and discussed from a national aspect.

One of the most difficult problems in the construction of good roads, is their finances, the committee reported at the conclusion of the Washington conference, and some method of financing highway construction, it is anticipated, will be evolved out of the series of conferences, which will enable states to go ahead with their good roads programs during years of depression.

14,746,370 CASINGS MADE IN SIX MONTHS

NEW YORK, Aug. 15—Figures furnished the Bureau of Foreign and Domestic Commerce by the Rubber Association of America show a total output of pneumatic casings of 14,746,370 for the first six months of 1922 as against 8,752,236 for the same period of last year.

June of this year showed an increase of approximately 100,000 over the May total and shipments increased approximately 500,000. A substantial decrease in inventories is reported for the month of June. A gain in production of more than 100,000 is shown for the month.

Production and shipments of inner tubes increased materially and a large reduction is reported in inventories.

MOSSBERG

ALL STEEL WRENCHES AND TOOLS

No. 612 Speed Brace

Speed Brace Socket Wrenches

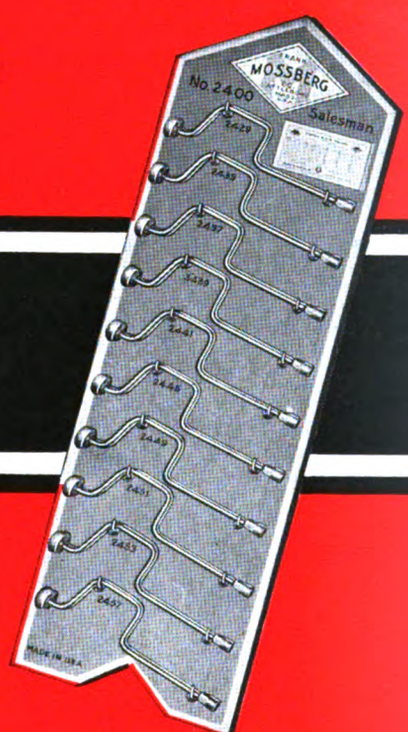
No wrench can handle that out-of-the-way nut or bolt like a Speed Brace Socket Wrench. And the Mossberg line contains a complete assortment of these efficient wrenches in all sizes and shapes for all kinds of work.

These are supplied the dealer, together with sales boards—Silent Salesmen—in assortments that correspond with the demand. All live ones. Mossberg all-steel construction, finished in burnished nickel. Rugged, practical wrenches, made for hard work. Popular among your customers.

No. 2400 Salesman

This well balanced display board assortment contains 70 Speed Braces in quantities ranging from four to nine of each wrench. Each number is made of ½ inch steel bar, is 19¼ inches in length, and is finished in burnished nickel. The board itself is made of chestnut with nickeled steel hook. Size, 20 inches by 60 inches. Free with complete assortment.

"L" Salesman



Assortment contains 140 Solid Socket Wrenches—47 6-inch "T" Wrenches—57 12-inch "T" Wrenches, and 36 10-inch Offset Wrenches. All fast sellers. Constructed of ½ inch steel bar, finished in burnished nickel. Board 20 inches by 60 inches—same high quality as "2400" board. Furnished free with complete assortment.

Gill

One-piece Piston Rings

When your Customers ask for Gill Rings

When a car driver asks for Gill Piston Rings, the chances are he knows Gill Rings save gasoline and oil, increase power and add life to the motor. That's why he's going to keep asking for Gill Rings until he gets them.

A few sizes of Gill Rings—as you very well know—will take care of this customer and practically all the piston ring business in your territory. ***Every piston ring customer is a prospect for every accessory you carry.*** Invest a few dollars in Gill Rings now and cash-in on this profitable business. Your jobber has Gill Rings. Order them today.

THE GILL MANUFACTURING COMPANY,
8300 South Chicago Avenue, Chicago, Illinois

Installed in five minutes no adjustments necessary

THE Boyce Moto-Meter can be installed on *any* car in *five minutes* – no adjustments are necessary. In fact, it is the most easily installed instrument on a car, and one of the most useful.

The Boyce Moto-Meter never fails to give its warning of an overheated motor. The jars and shocks of the roughest road *cannot* affect it – it has no delicate mechanism —it is a rugged, reliable, simple instrument which gives honest service 365 days in the year. That is why three million car owners are satisfied Boyce Moto-Meter users—they *know* that it is indispensable —always on guard.

Boyce Moto-Meters are building tremendous good-will for dealers everywhere—giving absolute and unfailing satisfaction.

The "Service Tax" on Your Profits

HAVE you ever stopped to figure it?

Maybe you have never looked at it from this angle—perhaps you never consider this important feature when choosing the line of products you carry.

When a customer leaves your store with the assurance that immediate repair service is available, should anything go wrong with the product he has just purchased, he will come back to buy from you again. Satisfied customers return. Failure to give such service eventually turns business from your doors to those of your competitors.

The ruling god of your business is SERVICE. It levies a tax on the profits of every dealer. You pay tribute to it every time you make a sale, for every customer demands it.

However, this tax on profits can be reduced to a minimum. To assist dealers in this pursuit was the motive in the establishment of the Stewart system of distribution and service. Wide-awake dealers were quick to see the advantage of it—that is why they handle Stewart Products.

Coupled with the nation-wide distribution of Stewart equipment thru 120 Authorized Distributors, is the system of Stewart Service Stations, located in 53 principal cities thruout the United States. These stations were established for the exclusive sale and repair of Stewart Products. Each is equipped with a corps of factory-trained expert mechanics, thoroughly familiar with Stewart Necessities.

This method of distribution and service brings right into your district a complete line of Stewart Products, and places at your disposal an unequaled specialized, Same-Day Service. It nets you a large saving in time and in transportation charges.

Dealers who choose to handle Stewart Products find the Service Tax on their profits automatically reduced to a minimum. It's an easy method of gaining prestige, cutting overhead and adding to your profits.

What kind of radiator hose are you buying?

IF you're buying Goodrich Radiator Hose you're buying the best.

You are installing satisfaction, service, economy and reliability.

You are building a reputation as a dealer in first-class, reliable, service-giving materials *plus* increasing profits and trade. Radiator hose must have Goodrich Quality to give service. It must have the stamina and first grade materials to withstand the terrific heat from the engine, boiling hot water, splashing oil and abuse. Goodrich hose has these qualities —that's why you find it on the finest cars.

And that's why garage, tire and radiator dealers who value the car owner's good will buy and install it. For prices, etc., consult your nearest Goodrich Branch.

How Shall the Industry Pay Its Salesmen?

One Dealer Makes Them Share Profits or Losses on Used Car Deals—Another Has Sliding Commission Plan, but Puts Limit on Trading

BOTH the dealer and his salesman are interested in profits. To the dealer profits mean what he has left of his income from sales after all expenses have been paid. To the salesman, profits mean his compensation for selling cars. Each is primarily interested in his own profits, yet neither can afford to be selfish in the matter. The dealer must allow the salesman a compensation that will be satisfactory to him. And the salesman must operate with a view of making profits for the dealer.

The point at which the interests of the dealer and his salesmen are most likely to conflict is in the matter of new car sales involving the trade-in of used cars. The dealer wants to buy the used car at a figure that will allow him a profit. On the other hand, the salesman can increase his volume of sales materially if he offers his prospects high appraisal values on their used cars.

If the salesman is paid on a straight commission on new car sales basis, there is a perfectly natural tendency for him to make excessive allowances, or to induce the dealer to make such allowances, in order to increase his new car sales. This will be true even if his commissions are based on the difference between the new car selling price and the used car allowance.

Every dealer has this problem to solve. He must develop a plan of compensating his salesmen that is fair to them and at the same time gives them a definite interest in making user car deals that will allow the dealer a profit. Plans used by two dealers to secure these ends are described on this and the suceeding pages.

How Do You Pay Your Salesmen?

THIS is Motor World's second discussion, within a few weeks, of methods of compensating salesmen, with particular reference to the relation of used car profits and losses to the work and pay of the sales force. The compensation plans of two dealers are described in this story.

The subject is commanding more and more attention in the trade. Dealers everywhere are seeking ways of getting more intelligent and more aggressive work out of their salesmen by making them more directly interested in the profits of the business.

What do you think of the plans outlined here? Have you a better plan? If you have—

Write to Motor World About It

THE plan used by the Ostendorf Motor Car Corp., Franklin distributor in Buffalo, N. Y., gives the salesmen a twofold interest in making used car allowances that will be profitable to the company. This plan makes each salesman share in any losses incurred on the used cars he accepts in trade, which naturally makes the salesman cautious regarding over-allowances. Furthermore, he cannot collect any commission on the sale of a new car on which a used car is accepted as part payment until the used car has been sold. As a result, it is to his advantage to appraise used cars at a figure that will permit a selling price that will move the car quickly.

The plan is simple and easy to apply. Suppose a salesman sells a car listing at $2,000. The factory discount to the dealer is 20 per cent, so the gross profit on this sale would be $400. This gross profit is distributed as follows: $200, or 10 per cent of the list price, is credited to the company; $100, or 5 per cent of the list price, is credited to the salesman's commission account. The remaining $100 is credited to the sinking fund account of the salesman making the sale.

If a used car is accepted as part payment on the new car, payment of the $100 credited to the salesman's commission account is deferred until the used car has been sold. A 5 per cent commission on the used car selling price is paid to the salesman who sells it. This commission is charged to the sinking fund account of the salesman who took the used car in trade. Of course, when a salesman sells a used car that he traded in himself, his commission account is credited with the 5 per cent on the used car selling price.

Any losses incurred in selling a used car are charged to the sinking fund account of the salesman who took it in. If these losses exceed the balance in the salesmen's sinking fund account, the excess is charged to his commission account. The commission accounts are settled quarterly. The salesman has liberal drawing account.

The sinking fund accounts are settled at the end of the year. Any salesman having a balance in his sinking fund at that time receives one-half of this balance, the other half going to the company.

To illustrate the workings of the plan, assume that salesman Smith sells $100,000 worth of new cars during the year. His commissions at 5 per cent would be $5,000. Smith's sinking fund account would also receive a credit of $5,000. In making these sales, assume that he takes in used cars that sell for a total of $30,000. The selling commissions on these cars at 5 per cent total $1,500. This amount would be charged to his sinking fund account, leaving a balance of $3,500. If Smith's used car sales during the year total $30,000, the $1,500 commissions on these sales would be added to his commission account, making the total $6,500. Continuing, if no losses are sustained on the used cars Smith takes in, he gets half of the

Digitized by Google

balance in the sinking fund account, which amounts, in this case, to $1,750. This brings his commission account up to $8,250, or about 6⅓ per cent on sales of $130,000.

If Smith takes in used cars that sell for $30,000 but only sells $10,000 worth of used cars during the year, the commission on the difference of $20,000, which amounts to $1,000, goes to the salesmen selling the cars and is deducted from Smith's sinking fund account. On the other hand, if he takes in $30,000 worth of used cars and sells $40,000 worth, his used car commissions amount to $2,000. Five hundred dollars of this amount comes from the sinking fund accounts of the salesmen responsible for the extra cars he sold.

If some or all of the used cars taken in by Smith are sold at a loss, the deficit is charged to his sinking fund account. Assume, for the moment, that the loss on Smith's used cars for the year is $2,000. This amount is deducted from the balance remaining in his sinking fund account after commissions on his used cars have been deducted. This balance is assumed to be $3,500, so after the loss is deducted, there remains $1,500 at the end of the year to be divided between Smith and the company. Under these circumstances, the company shares equally with Smith in his used car losses.

In the ideal business the salesmen will be as much interested in the firm's profits as in their own commissions. How can automotive merchants reach this ideal?

However, if Smith lost $4,000 on his used cars, he would exceed the balance of $3,500 remaining in his sinking fund, after deducting used car commissions, by $500. This would be charged to his commission account. In this case his earnings for the year would be 5 per cent on his new and used car sales less $500. In other words, if his losses exceed the balance in his sinking fund, Smith has to make the excess good entirely out of his own pocket. Under these particular conditions, the company stands about 44 per cent of the loss and Smith 56 per cent.

The sinking fund gives the salesman a definite margin to work on in making allowances. So long as he keeps his over-allowances within the limits of this account he gets the customary 5 per cent on the new car sale. Furthermore, by minimizing the losses on his used car deals, he can increase his compensation. The amount of money the company can lose on any used car sale is limited to one-half the amount of money in the sinking fund accounts. Inasmuch as the totals of these accounts cannot exceed 5 per cent of the total new car sales, less 5 per cent on used car sales, this loss cannot be very large.

THE plan used by another dealer gives the salesman a definite pecuniary interest in each used car he takes in, and provides an incentive for selling the car quickly.

This dealer expects each used car to be sold for appraisal price, plus the cost of reconditioning, plus a selling commission of 5 per cent. The car is held at this price for three months. If it is unsold at the end of this period, 10 per cent of the appraisal price is deducted from the sale price. This loss is charged to the commission account of the salesman who took the car in. Each succeeding month that the car remains unsold, 10 per cent of the appraisal value is deducted from the selling price and charged to the salesman's commission account. It is consequently very much to the salesman's interest to appraise used cars that he takes in trade at a figure that will allow their sale without loss.

Another part of the plan provides that a salesman can have but one used car on hand at a time. This limits the dealer's investment in used cars definitely. As a result, the salesman's ability to make money selling new cars depends to a considerable extent on his appraising used cars at a figure that will permit a quick sale.

Any salesman may sell any used car in stock and he receives a 5 per cent commission for making the sale. If Smith sells a car taken in by Jones, Jones is relieved of the responsibility for it and may trade in another car.

To secure the co-operation of the sales force, a sliding scale of commissions is in force. Inasmuch as this distributor receives a factory discount of 25 per cent, he is able to be rather generous in the matter of commissions. On the first car delivered each month by a salesman, a 6 per cent commission is paid. The salesman receives a commission of 9 per cent on the second car he delivers during the month, 11 per cent on the third car, 12 per cent on the fourth and 13 per cent on the fifth and succeeding cars. In order to earn the 11 per cent commission, however, the salesman must have delivered one car during the preceding month. For the 12 per cent commission to be effective, he must have two deliveries during the preceding month and, to earn the 13 per cent commission, three deliveries during the preceding month are required.

For example, if Smith delivered one car in May, he would receive 6 per cent on the first car he delivered in June, 9 per cent on the second, and 11 per cent on the third, fourth, fifth and succeeding cars delivered in June.

The sliding scale of commissions provides a strong incentive for the salesman to make high monthly sales records. To make such records, however, the salesmen are likely to find it necessary to make several trades. If a salesman has an unsold used car charged against him, he cannot trade until it is disposed of. Consequently, his chances of earning the larger commissions are very much diminished. As a result, he is very much interested in accepting only such used cars as have a ready market and in appraising them at a price that will insure a quick sale.

The sliding scale of commissions also gives him an opportunity to cover any losses he might be charged with as the result of an excessive appraisal.

Doing "Something Different" in Tire Advertising

Distinctive Copy the Secret of This Los Angeles Dealer's Success—How He Invests $1,000 a Month and Makes It Bring Results

IN searching for "something different" to use as a basis for an extensive advertising campaign, E. Richard Just, tire dealer of Los Angeles, went back through the history of American printing and finally came to Poor Richard's Almanack. In Benjamin Franklin's publication, Just believed he had found the foundation for his appeal, and set his advertising man to work out the campaign.

Using the quaint type and set-up of Poor Richard's Almanack, Just has been conducting a vigorous advertising drive in Los Angeles daily newspapers during the past few months that has brought substantial returns. The distinctive character of his printed messages stand out prominently on the newspaper page and it is almost impossible to escape reading them.

JUST features the words "Richard's Almanack" in bold type at the top of all his display ads. The fact that his middle name is Richard is justification for his use of Franklin's product. Each "page" from the "Almanack" contains "words of tire sense, being a guide to the art of buying tires and prolonging their service."

Typical of the "advice" contained in the advertisements is the following:

"Richard says: He who waits upon Fortune is never sure of a dinner, even as he whoever fears a blowout rides not with much comfort. And further, as Richard says, great modesty often hides great merit, and though big bargains and cheap prices are not noisily proclaimed in this Almanack, yet know you that the standard tires that Richard Just sells are marked quite low indeed, and giving long mileage, make for a great saving withal."

Just is a firm believer in the pulling power of advertising. While not a particularly large establishment, Just's institution is one of the most widely known tire sales and service shops in the entire West, and he has a remarkable turnover considering the size of his place. The six space stalls in the service department, with an area of 3200 square feet, are nearly always filled with automobiles and trucks obtaining tire service during the business hours.

"My advertising bill since I started the Richard Almanack campaign has been running around $1,000 a month," said Just. "Some dealers may think that I go in too strong for advertising for an establishment of my size, but I find that it pays. No business man will go wrong on advertising if he creates, or has created, the proper kind of copy, and he does not expect overwhelming returns immediately. I have found that advertising to be productive, must be continuous and consistent. The day after my first twelve inch advertisement appeared in the paper in the first shot of my new campaign did not find me waiting to be swamped with business, and my expectations were not misdirected. I did find, however, a gradual increase of a substantial nature in business, just as I figured on, and this increase is keeping up as the advertising campaign goes on.

"I don't know just how long I will spend $1,000 a month on advertising, but when arriving at a permanent policy I plan to set aside a minimum of 5 per cent of my gross receipts for this form of sales promotion."

Mr. Just started in the tire business about eleven years ago in a small way. Most of his service was done out in the street, but the way he greeted his customers and the efficiency of his work soon won a following that demanded expansion. He has moved several times. Today he is quartered in a new building that represents the last word in the modern tire service and sales shop.

Just also employs direct-by-mail circular matter to good advantage. Most of his circular matter appeals to individual or fleet truck operators and for the most part centers around "satisfied customers."

From a recent piece of circular matter, the following introduction is quoted:

"Nothing 'sentimental' about truck tire service. Your own brother might be in the tire business, say, and yourself the owner of a dozen trucks. You know mighty well you wouldn't bring your business even to him—couldn't afford to—unless he could actually deliver to you a real service.

"Truck tire service means something more than good standard tires, solid or pneumatic, at right prices. Every time you tie up a truck, even for a few hours, it costs you good money and adds to the operating cost of that particular unit. You've got to get in, get fixed and get out—get the wheels to rolling again—on tire repairs and renewals—that's a big element in service.

The testimonial, Just finds, is one of the most effective appeals that can be employed in circular matter.

This Is the Home of "Just" Service

Not large as buildings go, but "big" in tire sales and service is this establishment of E. Richard Just, Los Angeles tire dealer, whose distinctive advertising is an outstanding feature of his merchandising

Digitized by Google

Wouldn't You Read These Distinctive Tire Ads?

Read about them on the opposite page.

THERE'S evidence that Los Angeles is reading them and is being impressed by the merchandising messages they contain. They are used by E. Richard Just, whose tire sales and service business has become widely known on the Pacific Coast through his distinctive advertising. Just invests $1,000 a month in this type of advertising and says it pays handsomely. He also uses a direct mail selling appeal based on testimonials of satisfied customers.

Universal Flat Rate Plan Pays Mechanics on a Job Basis

More Jobs, More Profits and More Pay for Mechanics Are Some Advantages of This Novel Application of Flat Rates in Kentucky Service Station

By DONALD D. BLANCHARD

"HOW much will the job cost?" gets a definite answer from the service department of the O. K. Motors Co., Louisville, Ky. No matter what make of car is brought in for repair, this company makes a flat rate charge for the labor required at the time the order is taken. The customer knows definitely when he signs the repair order what he will pay for the completed job.

O. K. Motors not only makes a definite price contract with the customer for the labor required but it also *buys this labor at a definite price.* The mechanic who does the work receives one-third of the flat rate charge made the customer. In accepting employment with this company, every mechanic agrees to be bound by the flat rate charges made by the service department and to accept these charges as the basis on which his pay is computed.

THE O. K. Motors Co. is the Studebaker distributor in the Louisville territory. Until a few months ago the company handled the Hupmobile. The schedule of flat rate operations in use was originally worked out for the Hupmobile. The same schedule is now being applied to the Studebaker and other cars. Naturally the majority of the work handled in the shop is on these two makes of cars. But the company does a general service business on all makes.

On Studebaker cars, in addition to the flat rate labor charge, the company makes a maximum estimate on the parts required for the job. These maximum estimates are based on the schedules printed in Motor World in connection with the Studebaker flat rates.

The Hupmobile flat rates were developed by Frank T. Sullivan, general manager of the company, and he is responsible for the extension of their use to all makes of cars. In justification of this action, he says that the time required to perform the same operation on two different makes of cars is practically identical. He believes that automobile construction is sufficiently well standardized so that the operations required to make a repair on one will not differ materially from the operations required to make the same repair on another make. He has worked on this theory in making flat rate charges on any make of car and he has found that it is justified by practical experience.

The system works out profitably both from the standpoint of the company and of the employee. The company gets two-thirds of the labor charge to cover its overhead and margin of profit. Even if the flat rate charge is considerably under what it should be, the company is not likely to lose with this margin of gross profit. In such a case the workman would suffer as his cut of one-third would not be large enough to pay for the time spent on the work.

Basic Flat Rate for All Cars?—Sure!

HERE it is at last! A basic flat rate plan that is being used on ALL makes of cars.

It quotes the customer a definite price

It gets the job done in a definite time

It pays the mechanic a definite price for each job, and

It is making more money for both the dealer and his mechanics.

Every dealer and every service manager will want to read every word of this interesting story of how the O.K. Motors Co., Louisville Studebaker distributor, has worked out and is operating successfully a basic flat rate plan that may be applied to repairs on any make of car.

Such cases seldom arise, however. The mechanics in the O. K. shops make more money than do the men in many of the other shops in the city. The first class mechanics average about $50 a week and on occasions their pay amounts to $70. The highest rate paid an automobile mechanic in Louisville is 60 cents an hour. On the basis of a 54-hour week, the maximum weekly wage is $32.40. The flat rate system of buying and selling labor in use in the O. K. shops is obviously advantageous to the men. The company must sell its service in competition with other shops in the city, and to do this its prices must compare with those offered by competitive service stations. The fact that nine men are kept busy in the shop indicates that owners are satisfied with the charge.

Sullivan regards the purchase of labor on a piece work basis as essential to the success of a flat rate system. If the mechanics are paid on an hourly basis there is no incentive to work fast to complete the work in the time allowed by the flat rate. Shops selling on the flat rate basis and buying on the hourly basis keep record of the time the mechanics spend and compare it with the flat rates. If the mechanic spends more than the allotted time on an operation, the service station must stand the loss or increase the rate to cover such contingencies.

By paying the mechanics a definite percentage of the flat rate charge, if a mechanic spends more than the estimated time on a job, he loses along with the service station. He works faster than he ordinarily would so as not to incur such losses. His earnings are determined by his own productivity. If he

Digitized by Google

does a job in less than the estimated time, he can apply the time saved to another job. The more jobs he completes the more money he makes.

The natural objection to paying mechanics on the piece work basis is that they will not make the repairs properly in their efforts to make more money. This difficulty is avoided by having each mechanic guarantee his own work. If a job comes back unsatisfactory, the mechanic who made the repair must do it over on his own time. This condition insures first class workmanship.

Schedule Divided According to Units

The flat rate schedule is completely worked out. The operations are divided into groups in accordance with the units in the car. Each group is represented by a letter and each operation in each group is numbered. The individual operation is given a short name such as "Overhaul Engine" or "Grind Valves and Clean Carbon." These are indefinite terms and are further explained by a complete listing of all the work that will be done for the flat rate charge.

In making out the repair order, the service salesman lists the operations by group number and name. A copy of the order goes with the car to the shop. The shop superintendent has a copy of the flat rate schedule in card index form. Each operation is set down on its own card and these cards are filed in numerical order by groups. The superintendent takes the cards out of the file corresponding to the operations indicated on the repair order. These cards are placed in an open face envelope together with the repair order.

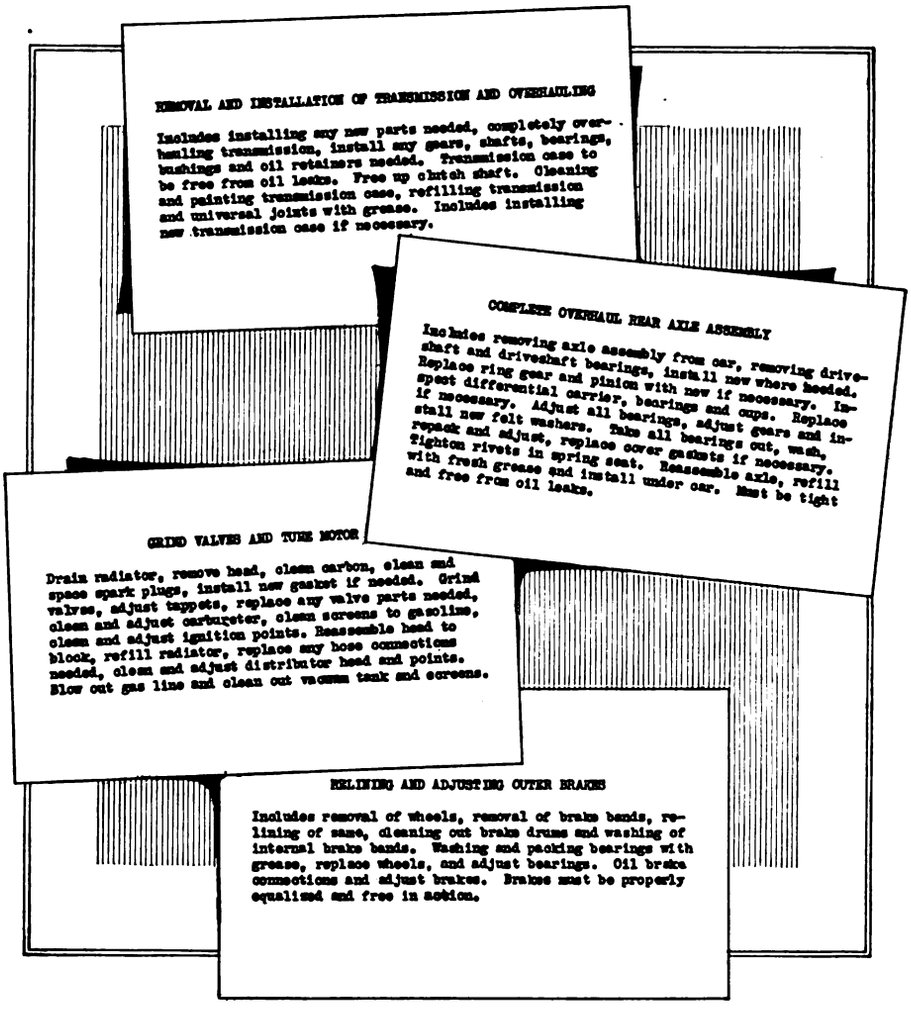
How Jobs Are Assigned

There are nine mechanics in the shop and each one has a numbered box in a wall rack. The boxes are assigned after the ability and seniority of the employees have been considered. Assuming that all the boxes are empty, the first order to come to the shop goes in the first box, the second order in the second box, etc. The shop superintendent endeavors to keep all of the men busy all the time, but if there are two men idle and there is only one order to be given out the man with the lower numbered box gets the preference.

When a mechanic completes a job he goes to the rack and gets his instructions for his next job. The repair order tells him what operations are to be performed and the cards give him the details of what these operations include. This feature insures the customer getting just what he pays for. If the mechanic does not carry out the instructions given on the cards, there is quite likely to be a come-back, in which case he has to do the work over at his own expense.

Each mechanic has his own shop. After getting his instructions from the rack he rolls the car into his shop and proceeds to work. His shop is equipped with bench, vise, hand tools and a set of speed wrenches. The mechanic is expected to keep his personal equipment complete and in good condition. The shop superintendent inspects it weekly to see that it is in good shape. Various special tools are kept in the toolroom, from which they may be withdrawn by the mechanic.

After the work is completed the job is tested by a service salesman, these men acting as inspectors. If it is satisfactory it is placed on the floor awaiting the customer's call. If not, it goes back to the mechanic who did the work.



Making Flat Rate Universal

Each job is recorded in the payroll under the name of the man doing the work. An entry is made of the total sale and also of the mechanic's one-third. If a mechanic is paid for any portion of his time on the hourly basis, this is also credited. It is sometimes necessary to take a man out of the shop to work in the quick service department and he is paid for this time on an hourly basis. However, if he spends all his time on piece work his pay for the week equals one-third of the total sales of his work as shown by the payroll.

On an unusual job such as a wreck or on a car which the service salesman does not think the standard flat rate charge will be correct, he makes a careful estimate of the cost and then makes a flat rate. If he is not sure of his estimate, he will call a mechanic from the shop and ask him what he will do the job for. The mechanic makes an estimate and, if it is acceptable to the customer, the mechanic agrees to do the work for that price.

In making the flat rate applicable to all makes, the four-cylinder car is used as a basis. Where the amount of time required to perform an operation on an engine is influenced by the number of cylinders, the charge for it is in proportion to the number of cylinders. For example, grinding valves, cleaning carbon and tuning engine carries a flat rate price of $8 or $1 per valve. On the Stutz engine, which has 16 valves, the charge for this operation would be $16. The charge for a six-cylinder engine is $12, for an eight $16 and for a 12, $22.10. Working on the basis of $1 a valve, the charge for a 12-cylinder engine would be

How Universal Flat Rate Plan Groups Some Operations

Here are a few samples of operations that have been worked out in the flat rate plan, applicable to all cars, which is being used by the O. K. Motors Co., Studebaker dealer in Louisville, Ky. The company gets two-thirds the labor charge and the mechanic receives one-third. The system works out profitably for both the company and the employee

Digitized by Google

$24. The difference is accounted for in the fact that but two gaskets have to be installed instead of three as would be the case if the 12 cylinders were divided between three four-cylinder engines. The charge for installing a gasket is $1 90.

The following are some typical operations and prices taken from this company's flat rate schedule:

Grind valves and tune engine (4-cylinder engine)	$8.00
Overhaul engine without removal from frame (4-cylinder engine)	50.00
Removal and installation of clutch assembly or release, bearing or any other repairs to clutch	12.00
Removal and installation of transmission and overhauling	15.00
Completely overhauling rear axle assembly	15.00
Removal and installation of front spring	1.50
Removal and installation of rear spring	2.00
Relining and adjusting outer brakes	5.25
Relining and adjusting inner brakes	5.25
Relining and adjusting both brakes	10.00

The details of some of these operations are listed on the cards shown in the illustration.

In the winter months, when work is slack, the force is cut to six men. In the operation of a system of this character it is, of course, necessary to keep the men busy as they only earn when they are working. However, the O. K. company goes after service aggressively in winter with advertising, sales letters and personal solicitations.

Shop Work Paid Same Rate

Sullivan has kept careful record of the work done by the shop for other departments of the business. He finds, on the average, that more than one-third of the employees' time is spent on jobs for other parts of the business. These departments are charged for this work at the full retail price. On repair operations the shop is paid the same rate that a customer would be charged and the man doing the work receives his one-third. This applies to the reconditioning of used cars as well as to the repair of company cars and free service.

Sullivan has found the extension of his basic flat rate, which he developed for the Hupmobile, to all makes of cars to work out satisfactorily. He is able to quote the customer a definite price at the time the job is accepted. The price he makes meets competition. His men earn more money than do the men in other shops in Louisville. They guarantee their work which removes this labor charge from the overhead. Lastly, the shop is operating at a profit.

A Rancher Buys a Limousine

The Dealer's Part in the Transaction Wasn't Exactly Ethical But the Yarn Makes Interesting Reading

TO listen in on the conversation of a group of automobile dealers who have been in the business since its infancy is to hear methods of salesmanship which would hardly fit the code of modern salesmanship, but which, for their resourcefulness, may be chronicled before they are lost in the memory of a new generation.

Some of these old-time salesmen were great believers in "what they don't know won't hurt them," and were adept at converting their greatest weakness into their greatest strength.

"Somewhere in the western plains," an old timer recently told his cronies at one of these reminiscent conferences, "are the remains of a beautiful chauffeur-driven limousine. I've always been curious to know what became of that particular car." The facts, as he recounted them, were about as follows:

It seems that the factory whose line he sold was over-produced one year on limousines and those which were left over after the eastern market had been supplied were forced on dealers in towns where a limousine and much less a chauffeur had never even been heard of.

This dealer, who did business in a small western city, was one of the victims.

After unloading the car he put it on display in his salesroom. It was a magnificent sight, high and imposing, with lights which hung out from the body above the doors, and profuse in nickel and brass—everything on it, as this dealer expressed it, "but the kitchen sink." The interior was upholstered in rich material with a satinlike finish in a sort of checkerboard pattern, set off with heavy braid and tassels. The front compartment, of course, was upholstered in leather for the chauffeur. It was a sight for kings.

This car stood on the salesroom floor for more than a month without a nibble. Realizing that the people must be getting tired of seeing it there, the dealer hid it away among the used cars on the second floor of the building. He kept it there a month, then put it back on the salesroom floor for another try. Thus he alternated for nearly a year and he was getting pretty discouraged about it.

One night just as he was closing up a sheep rancher whom the dealer had never seen before came into the showroom and said, "I want to buy the best damned car you've got in the place."

At that particular time the beautiful limousine was off duty, reposing on the second floor. Of course the dealer instantly thought of this car, but he knew well enough that the average sheep rancher is likely to be a pretty crafty fellow. It would be one thing to sell him a car which he could drive himself and another to send him away with a limousine which was permanently divided into two compartments and with no means of communication between the two except a horn. But this man had the money in his pocket; the dealer could see it bulging out. It was an opportunity that might never come again. So he led the rancher upstairs, thinking hard as he did so and explaining to his would-be victim that he wanted to show him a car which had just been received from the factory which would be just the thing for him.

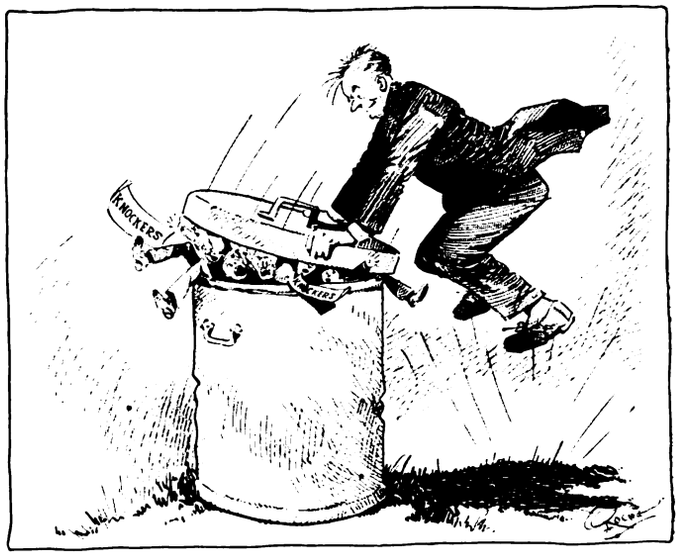
It was dark on the second floor. Instead of lighting the room he switched on the lights inside the car, and the dealer himself admits that as it stood there, radiantly aglow amid the surrounding gloom, it was a beautiful sight.

"There," he announced, pointing proudly to the car, "is the finest automobile you can buy."

The rancher was obviously impressed, but entered into a minute examination of his proposed purchase. He looked it over carefully for fully five minutes.

"Nice car, all right, but what's the two parts for?" he asked at length, with all the humility in the world.

"Well, I'll tell you," answered the dealer, summoning his courage, "that's the big advantage of this car. At home I suppose you have one room that you keep looking nice and have it shut off from the rest of the house for company and special occasions. Then you have another room that you ain't so particular about, where you live most of the time. Well, that's the idea of this car. This back part is separate from the rest so it won't get dusty or mussed up, and up here in front where you do your driving it's plainer and upholstered in leather. You couldn't beat it if you went a thousand miles. It's rich. It's the last word."



As he proceeded with his argument understanding dawned over the rancher's countenance.

"That is a good idea, ain't it?" he said. "I just believe I'll take it."

He paid for it in cash and, obviously happy over his purchase and the two-room idea, drove the luxurious limousine away over the plains. The dealer never saw or heard of him again.—LEO N. BURNETT.

Forever and Ever—

By NEAL G. ADAIR

HENRY BENNETT Redman dealer in Callawassa, was always agitated about something. Usually he had to turn to the weather in August, for lack of any other cause of woe, but this year a succession of price reductions on competing cars opened the way for an orgy of agitation which reached a climax when three weeks had passed and the Redman still stood pat on its old prices. Factory officials having refused to get agitated over Bennett's letters and telegrams, the Redman dealer hot-footed it down the street to the establishment where Cornelius J. Reilly dealt in Sennett cars and a brand of common sense that during many years of business and personal friendship had withstood the onslaughts of Bennett's agitation.

"Cornelius," Bennett demanded, as he plumped his 200 pounds of agitated anatomy down into the visitor's chair in the Sennett distributor's office, "what about this price thing?"

"Well, what about it?" Reilly retorted.

"Is the Sennett going to cut?" Bennett demanded.

"How do I know? I'm not the factory," Reilly answered. "But I don't believe they are."

"Looks like that for the Redman, too," Bennett declared. "Wonder whatinell they expect us to do?"

"Sell cars, I suppose," Reilly replied drily.

"Don't want much, do they?" Bennett said.

"Don't want any more than I do," Reilly observed. "I want to sell cars, too. Expect to sell 'em, too."

"But how—" the Redman dealer began.

"On their merits—just as I always have," the Sennett distributor shot back.

"Well, maybe it can be done," Bennett said, somewhat calmed down. "Good car, good price; cheap car, cheap price—maybe we can take a fall out of these 'rock bottom' shouters yet."

"You mean—knock 'em?" Reilly asked, rather pointedly, Bennett thought.

"Not exactly knock 'em, maybe, but they're shoving 'em out pretty fast, you know, and it might help us some to warn some people that—"

"—that they may get stung if they buy an Empire or a Brighton or some other car that's cut its price," Reilly finished, taking the sentence out of Bennett's mouth. "Is that what you mean, try to sell the Redman and Sennett by hinting around that some other cars had to cut their quality when they cut their prices?"

"Not exactly, but—" Bennett began again and was again interrupted.

"Henry, I'm ashamed of you," Reilly said indignantly. "You know and I know that nearly every one of these cars is just as good as it was before the price was cut and some are better. You'll dig your own grave if you try to fool even some of the people some of the time with all the motorwisdom that's scattered around nowadays. Don't you know that?"

"But we've got to do something—say something," Bennett persisted.

"And we've got to do something—say something—sensible," Reilly retorted. "And it isn't sensible, or even decent, to roast your competitor.

"Politicians may do it and get away with it, though I notice that even in politics the slam-bang artists aren't as popular as they used to be, but in business—

"We're business men—or supposed to be—you and I, Henry. We can't be wigwagging the factory for help every time the sales manager out there shifts his eating tobacco from one cheek to the other. And we can't go boiling over like a teapot or hollering that the world's all wrong every time the factory can't see things just the way we do. We've got to stand on our own feet as business men, get the factory to think our way if we can—and often we can—and go ahead and sell our cars instead of spending our time worrying about the other fellow's.

"And knocking—why, Henry, I thought we had agreed that there was no place for it in business. Years ago we said the other fellow's car wouldn't run, then when he proved it would we said it wouldn't run all the time. Then we said it was noisy or had a bum rear end or wouldn't climb hills or some other thing. And last year we whispered around that the company that made the other fellow's car was on its last legs and 'You'd hardly want to own an orphan, would you, Mr. Prospect?'

"And so it has gone on. We've hurt our own business by trying to help it by hurting the other fellow's. At the same time we've hurt the whole automobile business, encouraging people to be suspicious of it and of the men in it; prompting people to play one dealer against another when they want to palm off an old car for more than it's worth; making our own business and all our competitors' just a little harder than they need be—all because we use boys' tricks instead of men's methods

"Henry, I've been gossiping with owners about their cars a lot lately. Some were Sennett owners, some had cars that compete with ours. And I noticed one thing about all of them. They were all proud of their cars. Every one, except for an occasional disgruntled individual, insisted that his car was the best car on the market for the money, yet perhaps he paid a hundred or two or three hundred dollars more than his neighbor paid for his car, which the neighbor thinks is just as good.

"That's the thing we've got to cash in on now—we fellows whose cars haven't been cut. We've got to turn to our advantage the fact that it takes all kinds of people to make a world, that they will never agree about what kind of car is the best car and that they are willing to go down into their pockets for the privilege of disagreeing."

"But some of them aren't willing and most of the prospects we've been working on seem to be the unwilling kind," Bennett objected.

"Naturally—to-day and possibly to-morrow, but hardly after the story of the price reductions gets stale," Reilly replied. "After that people will just drop back into the old familiar groove of human nature, wanting what they want and insisting on having it. And you and your salesmen and I and mine are good enough salesmen to make a fair share of them want what we want—without knocking what the other fellow wants them to want—aren't we?"

"But I didn't mean—" the Redman dealer protested.

"Of course you didn't, Henry, you were just—just—a little bit agitated," Reilly assured him. "But while we are on the subject let's agree that there's only one way to sell our cars and that's to sell *our* cars. Let's cut out all kinds of knocking and see that our salesmen cut it out—forever."

"And ever," Bennett added solemnly.

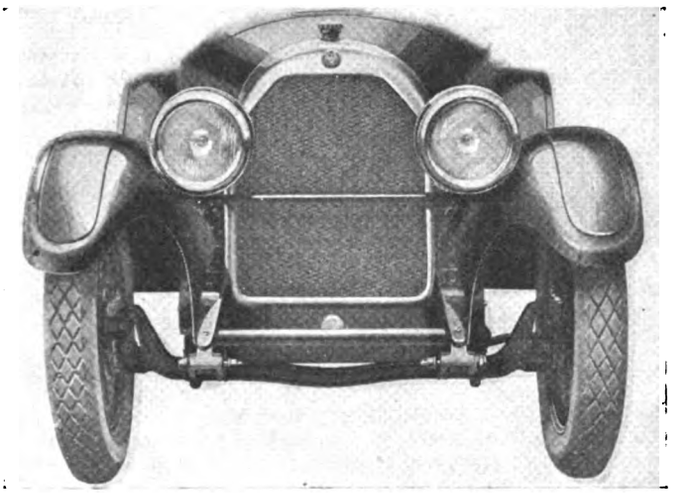
Peerless Has a Brand New Body and Chassis Refinements

Nine Models Make Up the 1923 Line—Changes Include New Radiator, Lengthened Wheelbase and Lower Bodies —Semi-Elliptic Springs Replace Platform Type



NINE body models of improved appearance on a chassis that has been thoroughly refined mechanically, constitute the Peerless line for 1923. The old familiar Peerless radiator has been replaced by one with a rounded top. The car has been lengthened by increasing the wheelbase from 125 to 128 in., and is lower in appearance due to the redesigned straight line type of bodies, underslung springs and smaller wheels.

The use of semi-elliptic springs is another new departure for Peerless. This make of car has long been known for its use of the platform type of suspension and was one of two makes of American cars to use this type of spring. This change in the springs, together with a line of bodies that are so radically different from their predecessors, is particularly striking in view of the length of time that the platform spring and rather high bodies have been Peerless earmarks.

Practically every unit from one end of the chassis to the other has been altered in some detail to either increase its accessibility, to render it more sturdy in construction, or better in appearance. While the engine has not been materially changed as far as the fundamental specifications are concerned, there are, nevertheless, a number of alterations of importance. By removing the tire pump from the front end of the engine, it has been possible to shorten the fan shaft, allowing the engine to be moved forward in the frame, thus giving a larger space in the front body compartment and greater accessibility to the steering gear and connections. A larger oil strainer screen has been installed as an independent unit in the lower half of the crankcase. This screen can be removed for the purpose of cleaning without taking down the lower half of the crankcase. An oil drain plug has been installed on the lower left side of the crankcase, this plug being removable for the purpose of draining oil with a special wrench furnished with the tool kit which obviates the necessity of getting under the car to drain the oil reservoir.

The front gear case has been altered to suit the new method of front engine support, as well as because of the transfer of the tire pump from this point to the gearset housing. The front engine support has now been installed on the frame cross-member in a universal socket. Lubrication of this is obtained from an Alemite oiler. The water pump has been redesigned, the important features of the new pump being its larger capacity and the double bearings, one on each side of the rotor. This, in connection with a larger packing nut, increases the life of the pump and makes it more accessible in taking up wear. The capacity of the new Fedders honeycomb radiator is 7½ gal. In recent tests the temperature maintained was not over 178 degrees while ascending the Uniontown hill. The radiator shell is of brass with several coats of nickel plate.

New Peerless Radiator Design

The shape of the opening in the radiator shell is suggestive of the old Peerless radiator shape but in all other respects the appearance is entirely changed. Even the name plate is different. This picture also shows the tubular front frame cross member and the Alemite oilers on the spring shackles

A slight alteration has been made in the exhaust line, the pipes now being carried down at the front end of the engine, instead of the rear, to permit of cleaner engine design, as well as to keep the heat from the front compartment of the car.

The former electrical units have been supplanted by the Delco system for starting, lighting and ignition. The distributor has been placed at the front end of the engine, now being bolted to the rear side of the timing gear housing and driven from the fan shaft gear. This location is more convenient when making adjustments. All wires have been placed in conduits. The distributor is an automatic type with double breaker contact points.

Practically no alterations have been made in the clutch with the exception of a somewhat lower compression rate on the clutch spring to give a softer pedal action. Oilless bushings have been installed for the clutch release parts. To take care of the installation of the tire pump, the gearset housing has been altered. A hose connection has been provided at the left dust shield to facilitate the operations of the pump which is now started by inserting a screw driver in the slotted head, that protrudes through the floorboard. A quarter-turn is sufficient to engage the pump gears. Another alteration in the gearset is due to the installation of a transmission lock immediately back of the shifting lever. A 250 key change lock has been supplied to comply with the standard of the National Insurance Association, thereby giving the owner the benefit of a reduced premium on his policy. Both the clutch and service brake pedals have been altered from adjustable to permanent type. The gearshift lever has also been redesigned, and the foot and emergency brake levers have been changed in regard to length and shape for the purpose of rendering less pressure necessary when applying the brakes.

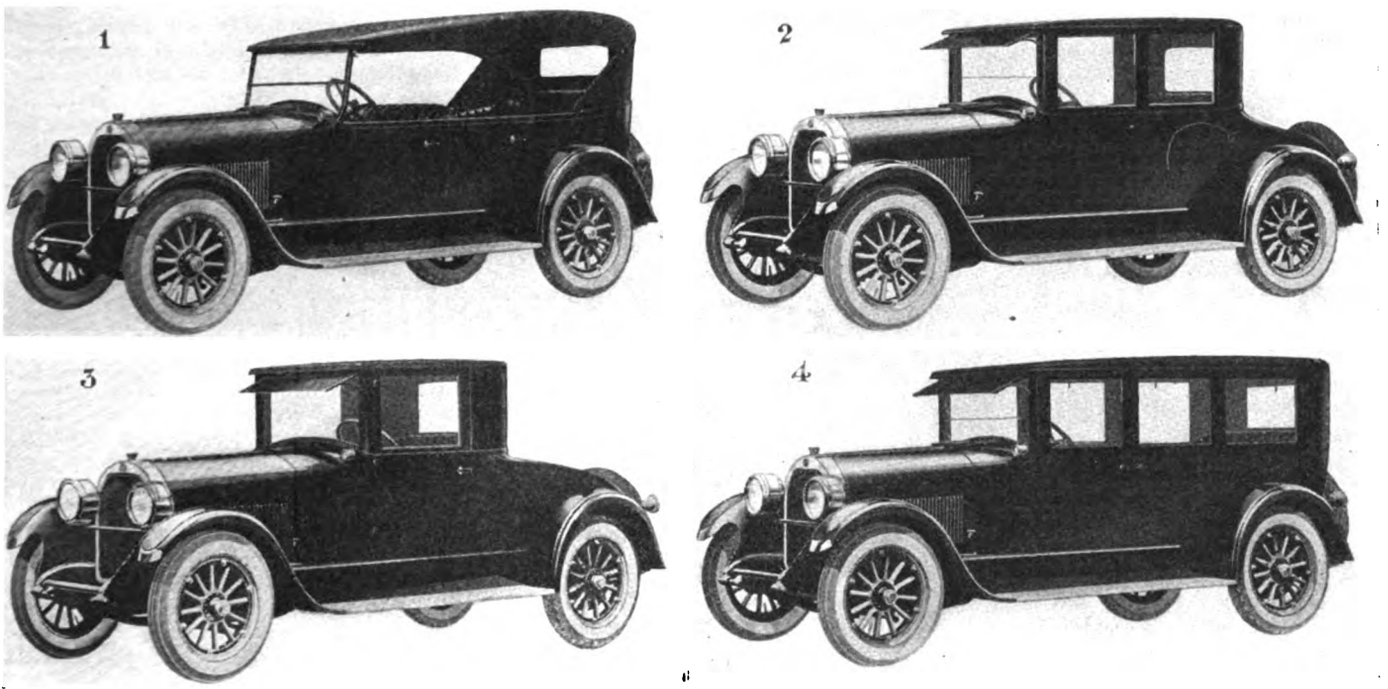
Heavier construction is used for the

Digitized by Google

propeller shaft. This embodies a tubular shaft equipped with Spicer universal joints protected by metal housings and lubricated by Alemite oiler. New type Timken axles, both front and rear, are employed, the front axle being drop forged from special alloy steel with integral yokes and spring perches. The steering knuckle is fitted with roller thrust bearings at the upper end, to promote ease in steering.

The rear axle incorporates the straddle mounted pinion shaft in which there are two Timken bearings with the pinion gear in the center instead of the two bearings on one end and the gear in the outer position. The rear axle has been provided with a pressed steel torque arm having a fabric connection at the front end instead of the usual spring type of connection, thus eliminating any necessity for adjustment or any possibility of rattle at this point. The rear end is fastened to the rear axle housing by a pin encased in brass bushings, lubricated by the Alemite system. This same system is employed for lubrication of the axle shaft bearings and the spring shackles through tubes which are connected on each side of the rear axle near the brake drum. The brakes are 15½ inches in diameter and 2½ inches wide. The internal brake is a new design having no adjustments other than the brake rod, which takes up wear on the lining.

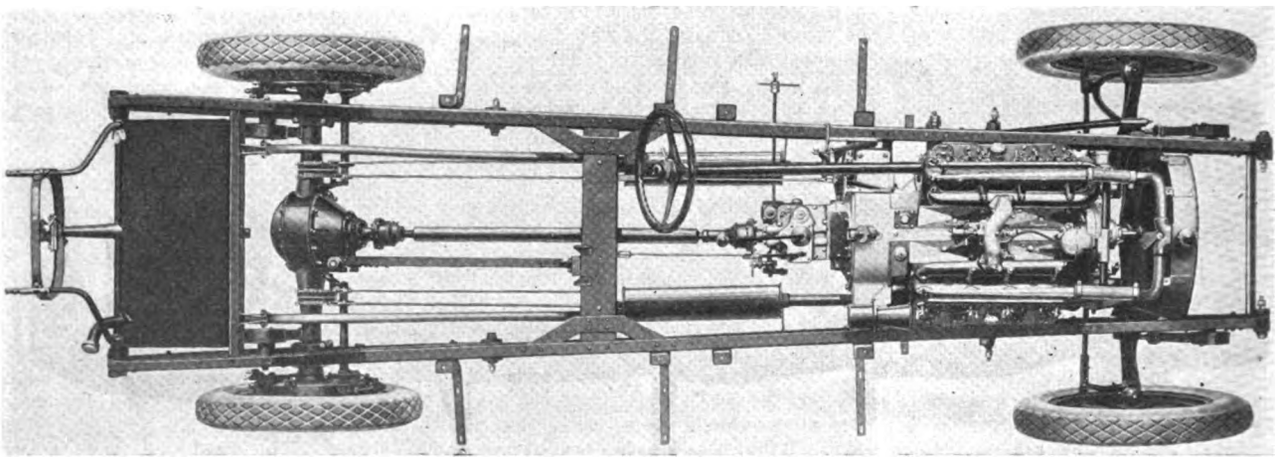
An entirely new design of frame is incorporated, this being more rigid and a better production job than the previous model. The side members are straight and have a maximum depth of 7½ inches, thus eliminating truss rods to support the frame. Among the new features are tubular cross members, front and rear, pressed into the frame to take care of frame twist. In addition, there are also a radiator and engine front support cross member, a cross member which takes care of the brake rocker shaft and also the front end of the torque arm and a rear cross member for the front gasoline tank support. The new frame, due to the added cross members, is lighter, but stiffer than the previous design. The springs are carried directly underneath the side members and in this way eliminate the side member twist due to offset brackets, etc.



Smaller wheels are used, the rims being 32 by 4½ inches, permitting the use of 33 by 5 inch tires. The former size was 33 by 4½ front and 34 by 4½ rear. The wheels are of the Kelsey metal felloe type with twelve hickory spokes for both the front and rear wheels. The springs are semi-elliptical front and rear. The front springs are 41 inches long and 2¼ inches wide, containing nine leaves for all body types. The rear springs are 60 inches long and 2¼ inches wide, containing eight leaves for the lighter bodies and nine leaves for the heavier types. The spring shackles are adjustable to compensate for wear. The size of the spring bolts is ⅞ inch and are designed for adjustment without the use of spacers or cotter pins for locking them when making the adjustment.

A Gemmer steering gear with 9½ to 1 ratio is used in these models. The steering gear is equipped with a solid walnut corrugated wheel 18 inches in diameter. The spark and throttle control levers are mounted on the upper portion just above the wheel proper. With the 9½ to 1 ratio, a turning radius of 41 feet to the right and 44 feet to the left is provided.

The chassis equipment has been improved throughout. The battery is an Exide, 6 volt, 120 ampere type carried in a special compartment on the right side of the frame, access being had by removal of the cover which is set flush with the dust shield. This new location is, of course, quite accessible. The horn is a Kellogg, motor driven type, mounted on the right rear engine frame. The horn button is located on the steering column. The head and cowl lamps are of Guide design and manufacture. The rear lamp provides a combination tail light and stop signal. The stop signal switch is connected with the service brake pedal. The tail light also illuminates the dial on the gasoline tank and a trouble lamp of the reel type is mounted on the front face of the dash under the hood on the right side. The tire carrier is of the ring type and supported by the rear cross-member. It is designed to carry two extra tires, which are protected against theft by locks, the barrel of which is integral with the carrier.



Nine types of bodies are mounted on the standard 128 inch wheelbase. These include a four-passenger touring, phaeton, seven-passenger touring, phaeton, two-passenger roadster coupe, four-passenger Victoria coupe, four-passenger suburban coupe, five-passenger town

Peerless Bodies for 1923 Have Improved Appearance

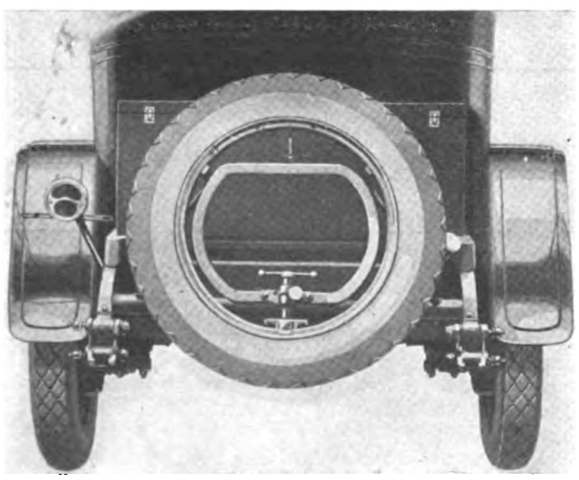
1—The seven-passenger phaeton has a permanent top. The side curtains fit well and open with the doors. 2—This model is called a four-passenger town coupe. 3—Two-passenger roadster coupe. 4—Seven-passenger suburban sedan, a new body type for Peerless. All closed models are regularly equipped with sunshields. The tops of the closed cars are of the soft type and no metal is used in their construction

Digitized by Google

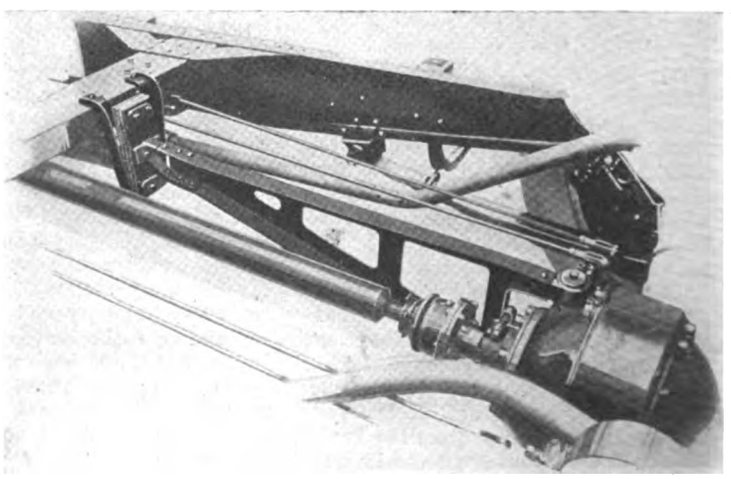
Plan view of the new Peerless chassis. The frame is lighter and stiffer. The tubular cross members and straight side rails are departures from previous practice. The power tire pump is now located at the rear of the gearset on the left side

sedan, seven-passenger suburban sedan, five-passenger Berline limousine, four-passenger opera brougham. All of these bodies are new, not only in appearance, but in construction. The open cars have several unique points of construction which may be mentioned.

The four and seven-passenger phaetons are equipped with a permanent type of top constructed of steel tubing, with white ash strips, heavily padded and provided with the usual weatherproof top material. Although this is somewhat along the lines of the regular folding top, it presents an unbroken surface to the eye. At the rear, the top is fashioned in the shape of the gypsy quarter curtain and a bevel plate glass window is provided. The rather solid construction of the top permits of good fitting for the curtains. These open with the doors and give an enclosed body which is substantially weather-proof.



The open bodies are equipped with a ventilator made integral with the top of the cowl and operated by a lever located just beneath the instrument board. The use of the ventilator makes possible a windshield of special design, the lower panel of which is unusually narrow in order that the intersection of the two glass panels will not come within the direct range of the driver's vision. The lower panel is removable and the upper panel is adjustable in or out. The mounting on the instrument board incorporates all of the units in three symmetrical ovals, two of glass and one of metal. The first oval houses the ammeter and oil gage, the center, somewhat larger than the other two, contains the speedometer and the eight day clock and the third oval is of metal and is the switch terminal for the ignition and lighting system. All of the smaller tools such as are used for changing tires and making minor adjustments are carried in a pocket in the left front door. If it is desired, the tools can be taken from the door as one unit, for they are fitted to a removable panel. The larger tools are carried under the front seat.

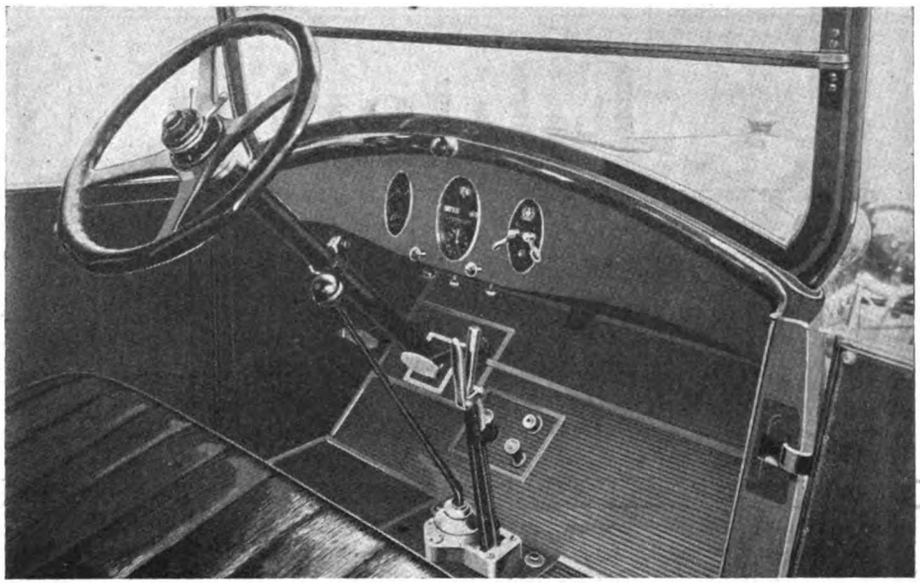


Additional equipment on these cars includes a rear vision mirror and a windshield wiper, hand operated. The four-passenger phaeton is equipped with a weather-proof trunk mounted on the rear. The open cars have the following optional paint colors: maroon, suburban blue, dust-proof gray. The body, hood and wheels are in colors and suitably striped to accentuate the lines of the body. The running gear and fenders are black. Special color combinations are available at additional cost.

The closed cars are all of the soft top variety, no metal being used in their construction, but in its place a covering of wood strips padded and finished with a glazed top material. The upholstery

1923 *Peerless Specifications*

Engine—8 cylinders, 3¼ x 5 in.
Electrical System—Delco
Battery—Exide
Axles—Timken
Springs—Semi-elliptic
Steering Gear—Gemmer
Wheelbase—128 in.
Tires—33 x 5 in.



Left—Rear view showing trunk regular equipment on Peerless four-passenger phaeton, four-passenger suburban coupe and five-passenger town sedan. The change in the rear spring construction, the combination tail and stop light, and the spare tire carrier are also shown. Right—The pressed steel torque arm has a fabric connection at the forward end instead of the usual spring type of attachment. This will eliminate the necessity for adjustment and the possibility of rattles at this point

Digitized by Google

used in the five-passenger sedan is a mohair velour offered in a variety of patterns. The coupe, limousine and brougham are upholstered in cloth. The ceilings and walls above the belt line are covered with materials that harmonize in texture and color with the upholstery. The carpets used in the closed car interiors are of wool and match the upholstery. The driving compartment of the limousine and the brougham is finished in bright enamel leather with corrugated linoleum on the floor.

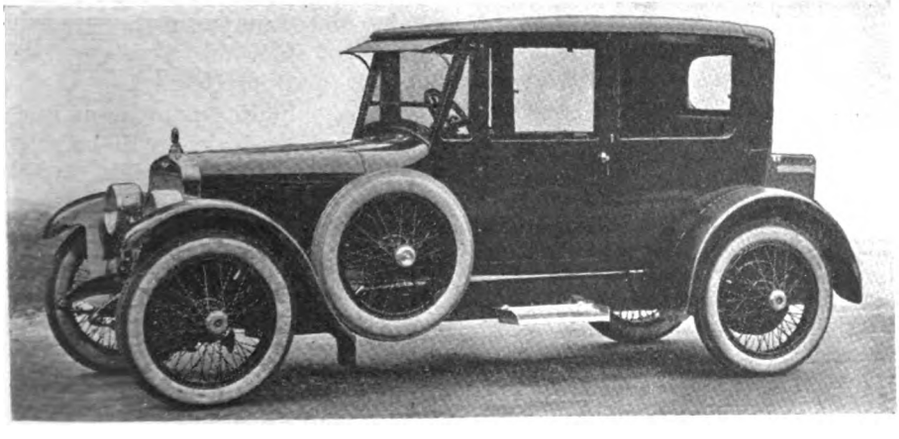
Dome Lamps Standard

Dome lamps are standard equipment and the sedan, limousine and brougham carry corner lamps in addition. In place of the standard cowl lamp, the brougham is equipped with distinctive designed coach lamps on either side of the body just back of the driving compartment. The windshields differ from those furnished on the phaeton in that both the upper and lower glass panels are adjustable. A leather covered glass visor is fitted as standard equipment and the finishing colors are the same as those mentioned in connection with the open car.

The driver's compartment is more comfortable and better looking on the new Peerless. The instrument board carries three ovals. The left oval contains ammeter and oil gage, the center one combines the clock, speedometer and odometer, and the switches are located on the right oval. A lock is fitted on the gearset. The open models have cowl ventilators and windshields the upper portion of which is adjustable and the lower half removable

Important Mechanical Changes in Series IV H. C. S.

SEVERAL important mechanical changes and numerous body improvements have been made in the new Series IV H. C. S. The standard line of bodies includes the phaeton at $2,475, the roadster at $2,475, the sport sedan at $3,250 and the standard sedan at $3,475.



The bore of the cylinders has been increased from 3⅝ to 3¾ inches. The pistons are lighter, the location of the piston pin has been raised one-half inch and the connecting rod has been lengthened by the same amount. The lubrication of the overhead valve mechanism is now regulated so that the flow of oil is proportioned to the speed of the engine. The generator is more accessible and an automatic spark advance has been added to the ignition system.

A change has been made in the clutch and gearset, Brown-Lipe units being used in the new car. The new rear axle is stronger than the one it displaces. The torque tube has been strengthened and two double rows of annular ball bearings are now used in back of the driving pinion instead of one. The gear reduction has been changed from 4 to 1 to 4.375 to 1.

The steering wheel is larger and has an all-wood spider. The windshield and the front of the top is 1½ inch higher, thus providing better vision forward for passengers in the rear seat. The height of the radiator has also been increased by an inch. The radiator shell, drumhead lamps and windshield frame are of solid nickel silver. A rear stop light is incorporated with the tail lamp. Anti-rattle collars have been added to the foot pedals in the toe board. Rubber bumpers have been placed on the frame over the rear axle. A stronger and more effective muffler is being used.

All the seats are wider and the backs are higher. The upholstery is deeper and a new type of Marshall upholstery spring is used. The floor boards of the tonneau have been leveled, thus adding leg room. An option of black enameled or dual tone, hand buffed leather on the open models and mohair or broadcloth on the closed models is offered. Numerous paint options are also offered.

Sport Sedan on New H. C. S. Chassis

This body model lists at $3250. It is mounted on the new Series IV chassis in which numerous mechanical improvements have been made. An option of mohair or broadcloth upholstery is offered

Standard Produces Special Bus Body

DETROIT, Aug. 17—The Standard Motor Truck Co. has brought out a special ten-passenger bus body. The bus is designed to meet the demand for an inter-city or sight-seeing bus.

The new body is mounted on the standard model 75 chassis and will sell for approximately $2,500, f.o.b. Detroit. The body contains a number of innovations, particularly in the rigid top construction, side curtains with glass lights, three full size doors on each side and provision for storing side curtains when not in use.

Editorial Notes

Window Display

ONE of the General Motors units—Chevrolet—has taken an interesting step in deciding to provide window display information for its dealer organization. It is planned to dress a window in the General Motors building in Detroit every month and to show all Chevrolet dealers how it is done, by distribution of photographs and detailed descriptions of the display.

The experiment is one which will be watched with much interest. There have been manufacturers, particularly of such products as tires, who have undertaken a regular window display service for their dealers, but most of the efforts along this line have been spasmodic. There has been no general attempt to disseminate display suggestions among the retail trade.

It is said that Chevrolet will advertise the utility of the car as a means of promoting outdoor recreation. It can hardly be expected that all dealers in this car will be able to make use of all the window display suggestions brought forth, but at least something should be accomplished by a persistent campaign encouraging better display, with frequent suggestions of a practical nature.

There is hardly a dealer, except those who sell cars from repairshops, but can do something in the way of display of the product he sells. Even some garagemen with car agencies have found it possible to build half partitions around their street front windows and to show one or two cars in an attractive setting.

The industry will progress and dealers themselves will profit more rapidly as the display idea takes stronger hold on the dealer community. The right kind of display fosters desire of ownership and also strengthens the dealer's standing. It is a logical impression that an establishment where a neat, clean, attractive display is made is one where other things are done well and where the interest of customers will be fairly and adequately served.

The Bus Business

THERE are accumulating indications that the bus business is to be a growing and substantial branch of the motor truck business of the future. There is gradually being created a network of passenger-carrying buses both in city and rural service throughout the country. In addition, there is ample evidence that the bus business is becoming more and more substantial, which promises more satisfactory business for dealers and manufacturers selling to this type of customer.

In the early days a good many bus lines were started on a "shoe string" and dealings with bus purchasers with little or no financial responsibility caused many dealers to suffer losses and turned them against the bus business. There are still bus operators and would-be bus operators in this class, whom dealers must avoid if they are going to maintain their bus sales on a profitable business, but it is encouraging to note that the number of responsible individuals and corporations going into the bus field is increasing every day and the business is on the way to stabilization in the fairly near future.

Some excellent merchandising work has already been done by distributors and dealers in selling buses for long distance passenger carrying, including transportation of students to and from schools and the so-called jitney work in cities. Some distributors have given dealers excellent co-operation in helping them to make sales of this sort. There is plenty of room for this sort of co-operation and also for close co-operation on the part of truck manufacturers with distributors and dealers in handling the intricacies of bus installation, which will exist in a degree until there is further progress toward standardization of bus types.

The present status of the bus business suggests that no truck dealer can afford to regard it as something not worth going after. It can be made profitable both from a sales and service standpoint and particularly in the latter phase of the work is there opportunity for a progressive dealer with good service facilities to make profits maintaining buses, which must be kept continuously in operation and whose owners are willing to pay good prices for service work which will accomplish this result.

The truck dealer, or the passenger car dealer with a truck department, who will build his motor truck business on the basis of selling vehicles both for passenger and freight haulage and providing adequate maintenance facilities, will find his business one which will grow rapidly as the use of trucks for highway transport inevitably increases.

CLEVELAND automobile dealers are taking advantage of a Merchants and Manufacturers' Exposition to be held in September to stage an exhibit of closed cars. They have combined and purchased a unit section of the exposition in which a limited number of models of cars sold by the co-operating dealers will be shown. This is just one way of promoting fall sales. Is there an exposition or a fair or some other public occasion to be held in your community at which you could promote fall business?

SOME tire dealers are openly advertising that they don't cut prices, but that they stand back of the goods they sell with their reputations as merchants and with service facilities. They are getting business, too, which suggests that there is more than one way to combat the "gyp."

How They Get Rid of Used Cars in China

A Shanghai Dealer Says They Sell Them to Men in the Hire Car Business

Dealers have an interesting method of disposing of used cars in China. There may be a suggestion in the story for some towns in this country where jitney and rental service is not well developed. At any rate, we think readers will enjoy the following letter:

Editor, MOTOR WORLD: In Shanghai, in addition to the eight "legitimate" garages (if I may borrow a stage term) there are approximately 100 of these more or less hole-in-the-wall garages, ranging all the way from very small one car outfits to somewhat pretentious establishments.

Their genesis is this: The owner, usually a former chauffeur or mechanic of one of the larger garages, manages to get hold of one used car. With this he establishes himself in a hole-in-the-wall and begins the operation of a hire car business. He takes Chinese out for joy rides. In many instances he induces his patrons to club together to pay for the ride, which accounts for the fact that every day you can see these cars literally packed with Chinese, honking about the city. As his business grows he buys another car, and then another, until in some instances he has a whole fleet. Then, morning, noon and night they operate what is known here as "tiffin" cars for taking a load of people back and forth at tiffin, or lunch time, and home at night for a contract monthly price. These customers are recruited from the ranks of those who do not own cars themselves but who are willing to pay a little more in order to escape the discomforts of street car riding.

You will have guessed from this that they must wear out a lot of used cars.

They do. They wear them out so rapidly and in such numbers that in this town there is practically no used car problem.

No used car problem. Get that?

Now it occurs to me that this institution could be transplanted to America, and that if fostered by both the manufacturers and the large retail motor car merchants it would, in time, relieve the used car situation by what after all is said and done remains the only method for real and lasting benefit, namely, by creating a new army of car users to wear out the used cars. That is simple and elemental. The best solution of the used car problem is to destroy the used cars through increased use.

You will ask: How could this plan be applied in America?

Picture me, for instance, a large dealer in an American city, distracted by the use of the used car problem. I am talking to one of my employees whom I have called into the office. The talk runs about as follows:

"Bill, I've got a scheme that will help both of us. You have been with me a long time. You are a good man, a good mechanic, a good driver. Now I'm going to set you up in business for yourself. Over here on ———— street I have rented a small building, and I also have had some letterheads printed, with your name at the top as proprietor, and giving the address and telephone number. Now I want you to take that Honk Honk Special out there—the one we got stung on so badly on that trade-in the other day—and take it out to this place and go into the hire car business. With these letterheads, on which we will have suitable letters typed, I suggest that you circularize every person in the neighborhood who does not own a car, telling them you have this car, and that you want to take them out riding. Try to get two families to club together, so that the cost to each one will be nominal. Use the telephone. Tell one man that you have another who is willing to go 50-50 with a neighbor. Suggest weekly, or bi-weekly, or tri-weekly, or even daily rides on a time schedule—a certain hour for the Brown and Robinson couples, and a certain hour for the Smith and Jones families.

"Approach four or five men who do not own cars with a proposition to take them to their offices, four trips daily. You will be able to find men who are willing to pay more than what it costs them to ride on street cars because of the saving of time and greater comfort. Make arrangements with mothers to take their children to school. You can pile a flock of them into the car, and argue safety. Solicit the women for afternoon shopping tours. Solicit the hospitals to send their convalescents out with you on bright afternoons. Make up your mind that you are going to devise ways and means to keep the car going. You can do it. It only requires a little thinking, a little ingenuity.

"All the time you will be building a clientele from which you will get calls for hurry trips.

"The big idea, Bill, is to make motor car users out of non-users, to induce more people to ride in motor cars. Primarily, it is a selling proposition. Bear in mind that many, many factors are in your favor. Everybody wants to ride in a motor car. Very well, let's give them rides at the lowest cost at which that pleasure can be had. Remember this, that America is becoming more and more an outdoor nation, which is in your favor.

"Motoring for the masses, Bill! Let that be your slogan. Now what do you say to that?"

Wear the cars out. Make users out of non-users. That's the answer if there is an answer. There is a limit to the number of cars, used or new, that can be sold, but the number of people that can be made to use cars is limited only by the number of people, men, women and children in the country able to pay for a ride.—Arthur West, Editor, The Oriental Motor; News Editor, The China Press, Shanghai.

Write to Motor World About It

This page every week is devoted to discussions of topics of the trade by Motor World readers. Have you a suggestion to overcome a difficulty or improve some condition within the industry? Write to Motor World about it.

Are Used Cars Merchandise?

Editor Motor World: Read the announcement of the coming National Used Car Conference with interest and I am sure that some good will be accomplished. It has occurred to me repeatedly that if the automobile is merchandise, it must be sold according to the well established practices of successful merchandisers in other lines.

If the used automobile is merchandise, why is not a suit of clothes or a pair of shoes? You say they are. Well, if they are, why does not the shoe merchant or the clothier establish a used department and increase his volume of sales?

Is not the answer that new and used merchandise cannot be handled successfully in the same establishment? There is no other answer to the problem, is there, speaking from a strictly merchandising standpoint?

Finally, if 2,000,000 cars wear out every year, is there any need from a production standpoint of the dealer attempting to handle used cars? Why not let the used car find its way into the channels of trade where it belongs, along with other used merchandise?—Pacific Coast Dealer.

Open Service Court Increases Business

Making It Easy for Motorist to Have Minor Adjustments Made Quickly a Profitable Feature

THE open court service station, which provides quick service for the motorist, is appreciated and often results in an appreciable increase of service work.

One of the strongest arguments in favor of the open court service station in connection with the dealer's service station is the effect it has in convincing the owner that he can have his car cared for promptly and delivered when wanted.

The owner is attracted by the open service court and he finds it easy to drive in. With an adequate force of testers and mechanics at work in the court, the motorist is encouraged to drive in to have minor adjustments made and squeaks removed. Such work when promptly attended to creates a good feeling on the part of the service customer.

One firm which has used the open service court idea with considerable success is the Hudson-Brace Motor Co., in Kansas City. This dealer has a service court which occupies a plot of ground 97 by 92 feet adjoining its service station. One wall of the court has a shed roof. Four employees were added to the force to care for the business that developed here and a steady increase of patronage was observed from the beginning.

Providing a place where the motorists may get immediate attention to small jobs without the bother of driving in has succeeded in putting the service station in direct touch with more than 80 per cent of the Hudson and Essex owners of the territory. They stop in at short intervals now not only to have squeaks removed and small adjustments made, but for gasoline and oil and this constant contact is responsible for a large number of resales and tips from owners on which additional car sales are made.

Ideas On Selling and Management

You will find them on this and the opposite page—ideas that will make dollars or save dollars for the

Car Dealer Truck Dealer

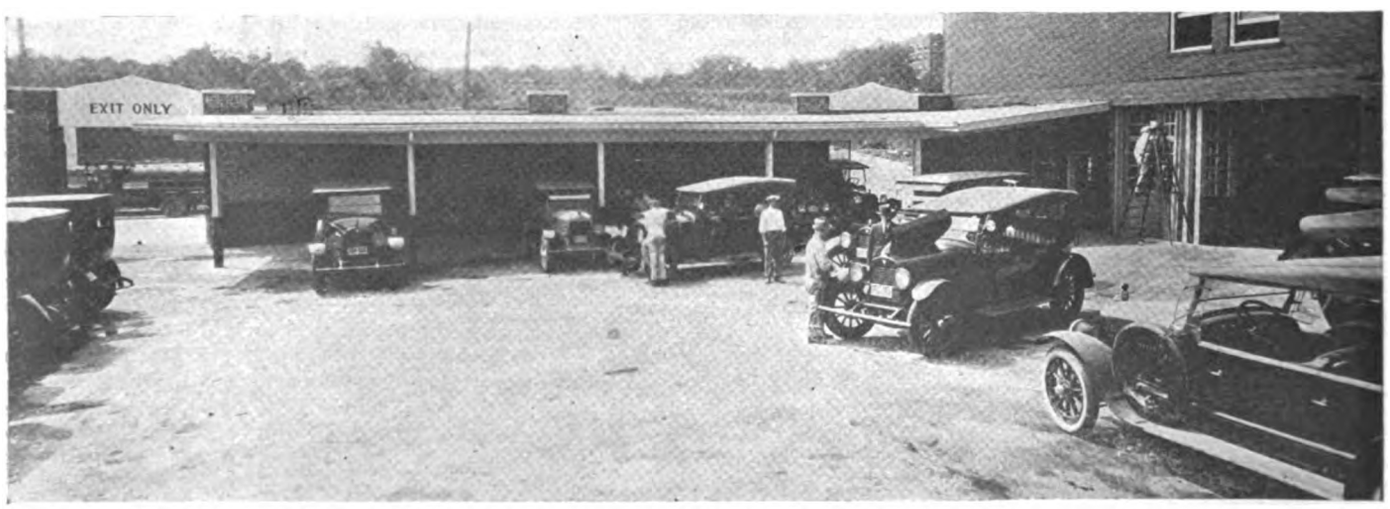
Some of our readers are contributors to this section of Motor World. Have you developed a plan that might help some other men? If you have, will you write it out and send it in?



A Sales Campaign Idea

CRAWFORD'S Auto Shop of Birmingham has on a sales campaign that is scored by using a large cardboard representation of a race track. Every salesman is represented by a miniature automobile, with his name tag on it. The track is divided into sections representing fifty miles each. The sale of a second hand car is indicated by an advance of thirty miles; touring cars and roadsters advance a car forty miles; coupes and sedans fifty miles; trucks seventy-five miles; tractors 100 miles. The winner of the race will get a prize of $50. In order to qualify for the prize, however, it is necessary to sell eighteen cars.

Introducing a New Model to the Salesmen

THE arrival of a new model in the salesroom may very properly be made the occasion for a special meeting of the salesmen and a means of working up new sales energy and enthusiasm. One idea for such a meeting, which worked out very successfully when staged recently by H. O. Harrison Co., Hudson and Essex distributor of San Francisco, consisted of passing slips of paper to the salesmen, who were asked to write down what they thought a new model displayed should sell for in San Francisco. The guesses were placed on a blackboard and averaged, showing a figure of $2,900, while the actual San Francisco price was $2,595. The comparison of what the salesmen thought the car would sell for, with the very much lower price announced by the firm, was one means of inspiring enthusiasm of the sales force.

Open Service Court for Quick Repairs

This is the open service court used by the Hudson-Brace Motor Co. in Kansas City. It proved a popular feature of the business and brought many owners into frequent contact with the service station

How to Sell Accessories to Clock Watchers

Signs on the Garage Timepiece Make Time Fly and Customers Buy

HAVE you ever thought of using the merchandising opportunity your garage clock offers? You know, probably only too well, that the waiting customer is mighty interested in the clock, and it usually is the object of his gaze several times in the course of a fifteen-minute wait. Why not set the customer thinking about something you have to sell while he's watching the clock by placing a selling sign just above or just below the timepiece.

Here are some signs that are used by one garageman—and he says they are responsible for a large number of sales and considerable good-will on the part of his customers each week:

IT'S TIME YOU KNEW
why we boost the ——— spotlight.
Ask to see it.

FROM TIME TO TIME
you need little accessories and supplies.
We'll appreciate that business.

NOT FOR AN HOUR
would you do without ——— shock absorbers after you've used them once.

IT'S CORRECT
The ——— lens we sell is legal everywhere.

TIME IS TELLING
The number of our patrons is growing —must be good service.

IN GOOD TIME
Have your car inspected
and trouble *prevented.*

THIS TIME
May be your first here—
Come back again.

JUST A SECOND
